HISTORY

OF THE

CITY AND COUNTY OF SAINT LOUIS.

CHAPTER XXV.

ST. LOUIS AS A CENTRE OF TRADE.

ST. LOUIS being located in the heart of the Mississippi valley, in which are produced immense supplies of breadstuffs, meats, fruits, and vegetables, accessible by fifteen thousand miles of navigable rivers, with her grand network of railroads penetrating all portions of this vast valley, furnishing quick and cheap transportation for all the products of the soil, it must be apparent that at no other place in the world where labor is remunerative can staple provisions of the same quality be furnished cheaper than at St. Louis.

Next to provisions in the cost of family expenses is that of house-rent, or, differently stated, the expense of living in one's own house. The house represents capital, and it costs the owner as much to live in it as it does the lessee, in either case the net rental being measured by the net interest the money would produce.

In furnishing cheap, comfortable, and healthy houses St. Louis offers rare inducements. There was a time when this was not the case, and rival cities offering greater inducements in this regard were largely benefited thereby. When the heavy business was transacted chiefly on the Levee and Main Street, the choice residence property was drawn within narrow bounds and held at high prices; and before sewerage and drainage had transformed vast acres into choice building sites, before railroad transportation, steam and horse, had equalized values at remote points from business centres by furnishing cheap conveyance to and from all points within the city limits, cheap homes were not easily obtained in St. Louis. But a new and brighter era has dawned upon her. Cheap homes can now be furnished within easy access of business, shop, and foundry, on finished streets, with gas and water, on or convenient to street cars. Building lots thus situated

can be bought and comfortable dwellings erected thereon cheaper in St. Louis than in any city in the United States having a population of one hundred and fifty thousand.

To this fact more than any other may be attributed the rapid growth of St. Louis during the last few years, and it is also the best guarantee of her future prosperity. Cheap homes are the want of the million; they not only reduce the expenses of living, but the people become owners of their own homesteads, and once having an interest in the soil their local and business interests become more closely identified with the city's welfare, making her population more permanent and at the same time contributing to her revenue.

Persons of limited means, mechanics and laborers of industrious and saving habits, can by small monthly or quarterly payments in a comparatively short period become owners of their own homes without waiting to provide all the money before purchasing. The making of debts is not generally to be commended; but to a moderate extent in the purchase of a home, where full consideration is received, they are not only commendable but tend to stimulate energy, and the money thus paid is better secured against loss than if invested in any other manner. In addressing the Social Science Association of Philadelphia, Mr. Cochran truthfully said,—

“ People who own the soil naturally feel that they have a greater interest in the community, in its welfare, peace, and good order, and they are fixed more permanently to it as a place of abode; and the laborer or mechanic who is working to secure or pay for a home is inspired with more ambition than one whose abode is in tenement-houses, which can have no attraction to any man or his family. The system of separate dwelling-houses for every family is in itself promotive of greater morality and comfort, but the opportunity

of poor men to secure the ownership is an honorable incentive to industry and frugality."

The means of locomotion within the city, the accommodations for visitors, the capital of banks, and

the transportation facilities other than rail and river, as collected in 1882 for the board of equalization, present the St. Louis of to-day as being in the following condition :

STREET RAILWAYS.

The territory of which St. Louis is recognized as the natural commercial and business metropolis is indicated in the following table, with the miles of railroad they had in the years 1870 and 1879, respectively:

States.	Miles in 1870.	Miles in 1879.
Kentucky (one-half).....	558	797
Tennessee (one-half).....	746	850
Mississippi (one-half).....	495	570
Louisiana (one-half).....	225	272
Illinois (one-half).....	2411	3,789
Missouri.....	2000	3,740
Arkansas.....	256	804
Texas.....	711	2,591
Kansas (one-half).....	750	1,052
Total.....	8052	14,465

In the ten years from 1870 to 1879 there was constructed in the territory we have set down as tributary to St. Louis six thousand four hundred and thirteen miles of railroad.

The increase of population in the territory of which St. Louis is the natural commercial metropolis in the ten years from 1870 to 1880 was as follows, the figures in all instances being from the United States census:

States.	1870.	1880.
Kentucky (one-half).....	660,505	824,354
Tennessee (one-half).....	629,260	776,231
Mississippi (one-half)....	413,961	565,796
Louisiana (one-half).....	368,957	470,051
Illinois (one-half).....	1,269,945	1,539,384
Missouri.....	1,721,295	2,168,804
Arkansas.....	484,471	802,564
Texas.....	818,579	1,592,574
Kansas (one-half).....	182,199	497,983
Total.....	6,549,192	9,237,741

All this territory, with New Mexico and Indian Territory still farther south, constitute a part of the vast back country of St. Louis. When it is considered, therefore, that this city has such surroundings as have been here described; that she is the very centre of the most productive agricultural region of the whole earth; that she is in immediate proximity and of convenient access to an inexhaustible deposit of the purest iron ore in the world; that she is at the head of navigation from the south, and at the foot of navigation from the north; that she is sustained and impelled forward by the immense, illimitable trade of

the great Father of Waters and his tributaries; that she has the material around her for building up the most extensive and most profitable manufacturing establishments that the world has ever known; that all the necessaries of life, the cereal grains and pork particularly, are produced in all the region roundabout in such profusion that living must be always cheap, and that consequently she can support her population though it should increase to almost indefinite limits, when all these facts are considered, who can feel disposed to set boundaries to her future progress?

It will be seen in view of the territory thus tributary to St. Louis that she draws from a greater variety of resources, from a greater extent of country, that she is the centre of more mineral wealth, more agricultural resources, and that she has the opportunity and is fast endowing herself with the instrumentalities for obtaining a vaster internal commerce than any other city in the Union. Her manufactures are varied in kind and character, and conducted with less expense than those of any of her sister cities. Her population has been steadily swelled by the influx of emigration; her wares and merchandise find their market in every hamlet of the country, and compete in Europe with those of older countries. Her credit, whether municipal, individual, or corporate, is unimpeached and treasured as the most valuable of her jewels. It should be borne in mind in estimating St. Louis' position among the great centres of trade in this country that the territory strictly belonging to the system of rivers which empty into the Gulf of Mexico has an area of 1,683,000 square miles, including eighteen States and two Territories, with a population of 22,000,000, which is increasing at the rate of about thirty-two per cent. every ten years; and that this great region produced 300,000,000 out of the 450,000,000 bushels of wheat grown in the whole country in 1880, besides 1,200,000,000 bushels of corn out of a total produce for the same year of 1,500,000,000 bushels. The collection of this grain into the granaries of St. Louis is being carried on by the energetic men who have banded together to accomplish the great object of improving the trade and importance of their city. Elsewhere the transportation facilities and the storage capacity of the city have been fully described. This business, for which rail and river are competing, is vast enough for the capacity of both, and must in a short time be greatly in excess of the terminal facilities afforded by existing lines of communication. But St. Louis has also determined to become the leading cotton market, and in view of the railroad development ministering directly to her, it is certainly no vain assertion to say that her posi-

tion is now first among the cotton markets of the world. The opening of Northern Texas and the whole of Arkansas to immediate connection by rail with the Missouri commercial metropolis, and the probable increase of cotton culture in the Indian Territory, will give a back country capable of producing millions of bales annually for St. Louis to draw upon. She has already become the successful competitor with Houston, Galveston, and New Orleans for the distribution of the crop of the Southwest, and the encouragement received has justified her enterprising citizens in constructing the most complete and extensive warehouses for cotton storage in the world. The trade of St. Louis now controls the cotton trade in certain sections of Arkansas and the southern portion of Missouri, and has made such seductive bids for the crop of Texas that many counties in that State regard St. Louis as their most remunerative market.

It was said of St. Louis in 1849 that "her commercial prosperity is founded very largely, if not chiefly, upon what is called the 'produce trade,' " and the territorial limits of this trade were Illinois, Iowa, and Missouri.¹ Thirty years afterwards St. Louis competed, as we have seen, sharply with Chicago for the trade of Northern Missouri, Kansas, Southern Nebraska, Colorado, the Territories tributary to the traffic of the Union and Central Pacific Railroads, and for the transcontinental trade towards the Southwest, embraced in the southern and central portions of Missouri, the State of Arkansas, the larger part of the State of Texas, and the northwestern section of Louisiana, with the Indian Territory, and with California by the Southern Pacific Railroad. New Orleans finds in St. Louis a rival for the trade of Western and Northern Louisiana. The trade of the States east of the Mississippi and south of the Ohio finds competition at St. Louis with New Orleans, Louisville, Cincinnati, and Chicago, as well as the principal cities of the Atlantic seaboard. The trade limits of St. Louis east of the Mississippi and north of the Ohio cover Illinois, Indiana, and Ohio, and include the through traffic with the States of the Atlantic seaboard and with foreign countries. It is within these vast territorial limits that St. Louis gathers the surplus products of the people, and distributes to them the supplies and general merchandise of her energetic tradesmen, merchants, and manufacturers.

The railroads which converge upon and centre at St. Louis are the following :

¹ Governor Allen's address to the directors of the Pacific Railroad.

West Roads.

- Chicago, Alton and St. Louis Railroad (Missouri Division).
- Missouri Pacific Railroad.
- St. Louis and San Francisco Railroad.
- St. Louis, Wabash and Pacific Railway (West Branch).

South Roads.

- St. Louis, Iron Mountain and Southern Railroad.
- Missouri, Kansas and Texas Railroad.
- Belleville and Southern Illinois Railroad.
- Louisville and Nashville Railroad.
- Cairo and St. Louis Railroad.

East Roads.

- Ohio and Mississippi Railroad.
- Chicago, Alton and St. Louis Railroad (main line).
- Indianapolis and St. Louis Railroad.
- St. Louis, Vandalia, Terre Haute and Indianapolis Railroad.
- St. Louis, Wabash and Pacific Railway.
- Illinois and St. Louis Railroad.

North Roads.

- St. Louis, Wabash and Pacific Railroad (Iowa Division).
- Chicago, Burlington and Quincy Railroad (St. Louis Division).
- St. Louis, Keokuk and Northwestern Railroad.

The variations of the receipts and shipments of the commerce of St. Louis with the north are shown in the following table :

Year.	Received. Tons.	Shipped. Tons.
1871.....	297,680	93,842
1872.....	363,006	79,200
1873.....	353,206	80,806
1874.....	368,076	116,267
1875.....	286,318	122,751
1876.....	324,947	128,629
1877.....	233,158	114,827
1878.....	382,628	126,601
1879.....	445,621	132,760
1880.....	604,173	157,803

Turning to the east, we find a larger commerce even than that with the north. The total receipts from and shipments to the east were for the last decade :

Year.	Received. Tons.	Shipped. Tons.
1871.....	1,219,245	545,636
1872.....	1,341,545	688,264
1873.....	1,568,719	699,048
1874.....	1,540,632	746,037
1875.....	1,542,866	750,527
1876.....	1,510,527	1,026,291
1877.....	1,634,860	927,448
1878.....	1,770,548	1,119,406
1879.....	2,041,440	1,225,895
1880.....	2,508,704	1,325,004

From the south St. Louis received as well as shipped the following commerce :

Year.	Received. Tons.	Shipped. Tons.
1871.....	1,109,801	695,531
1872.....	1,392,080	836,089
1873.....	1,339,688	838,123
1874.....	1,196,534	767,819
1875.....	1,371,670	738,632
1876.....	1,310,534	696,577
1877.....	1,339,649	798,802
1878.....	1,290,606	832,018
1879.....	1,649,272	995,346
1880.....	1,853,577	1,492,216

The western commerce of St. Louis is exhibited for ten years in the following table :

Year.	Received. Tons.	Shipped. Tons.
1871.....	555,996	395,371
1872.....	605,652	406,393
1873.....	784,620	320,695
1874.....	793,216	307,878
1875.....	595,441	328,635
1876.....	974,467	408,678
1877.....	901,206	409,443
1878.....	1,056,225	417,209
1879.....	1,215,715	608,860
1880.....	2,023,930	818,182

For the better comparison of the extraordinary growth of the commerce of St. Louis during the last decade, the following table groups the tonnage of all the sections :

Year.	North.	East.	South.	West.	Total.
1871....	391,552	1,764,887	1,805,332	951,367	4,913,102
1872....	442,206	2,029,809	2,228,169	1,012,045	5,712,229
1873....	434,012	2,267,767	2,177,811	1,105,315	5,984,905
1874....	484,343	2,286,069	1,964,353	1,101,094	5,835,859
1875....	409,069	2,293,393	2,110,302	1,024,076	5,836,840
1876....	453,576	2,536,318	2,007,111	1,333,145	6,380,150
1877....	347,985	2,562,308	2,138,451	1,310,649	6,359,393
1878....	509,229	2,889,954	2,122,624	1,473,434	6,995,241
1879....	578,381	3,267,335	2,644,618	1,824,575	8,314,909
1880....	761,976	3,833,708	3,345,793	2,842,112	10,783,589

In these ten years the commerce of St. Louis increased northward from 391,522 tons in 1871 to 761,976 tons in 1880; towards the east from 1,764,881 tons in 1871 to 3,833,708 tons in 1880; towards the south from 1,805,332 tons in 1871 to 3,345,793 tons in 1880; towards the west from 951,367 tons in 1871 to 2,842,112 tons in 1880; and the total grew from 4,913,102 tons in 1871 to 10,783,589 tons in 1880.

The rapidity of the growth of this commerce will be more easily comprehended by considering the proportion of tonnage for the years 1880, 1879, and 1878:

DIRECTION.	1880.		1879.		1878.	
	Tons.	Per Cent.	Tons.	Per Cent.	Tons.	Per Cent.
North.....	761,976	7.07	578,381	6.95	509,229	7.28
West.....	2,842,112	26.35	1,824,575	21.95	1,473,434	21.06
South.....	3,345,793	31.03	2,644,618	31.80	2,122,624	30.35
East.....	3,833,708	35.55	3,267,335	39.30	2,889,954	41.31
Total.....	10,783,589	100.00	8,314,909	100.00	6,995,241	100.00

It will be observed from these tables that the commerce of St. Louis towards the east was larger in 1880 than in any other direction, and a much larger traffic passes over the great bridge than is transported on the river. In direct trade with foreign countries in 1880, the value of eastward shipments by rail *via* Atlantic ports was seventy per cent. greater than the value of the shipments southward *via* the

Mississippi River, the values standing for eastward or *via* Atlantic ports at \$17,000,000, and southward or *via* New Orleans at \$10,000,000.

As illustrating the course of the internal commerce from St. Louis, the following movements of cotton, grain, flour, provisions, and live-stock will be found instructive :

Articles.	Direction.	1880.	1879.
Cotton, bales.....	Shipped south.....	5,417	7,208
" ".....	" east.....	466,975	317,269

The percentage of the shipments of *cotton* towards the south in 1880 was 1.13, and towards the east 97.65, and 1.22 in other directions; of *wheat*, 54.82 per cent. went south, and 43.55 per cent. went east, 1.63 per cent. in other directions; of *corn*, 73.77 per cent. went south, 26.13 per cent. went east, 0.10 per cent. in other directions; of *flour*, 41.01 per cent. went south, 58.07 per cent. east, and 0.92 per cent. in other directions; of *grain*, etc., 58.45 per cent. went south, 40.47 east, and 1.08 in other directions; of *hog products*, 75.38 per cent. went south, 22.67 per cent. east, and 1.95 per cent. in other directions; of *cattle*, 0.77 per cent. went south, 95.84 per cent. east, and 3.39 per cent. in other directions; of *sheep*, 6.38 per cent. went south, 77.40 east, and 16.22 in other directions; of *hogs*, 0.56 per cent. went south, 98.52 per cent. east, and 0.92 in other directions.

The steady expansion of the commerce of St. Louis is shown by the increase during 1880 over 1879 of the shipments of flour and grain from St. Louis to the east and to the south, the former of which increased 1,602,976 bushels, or 8.9 per cent., and the latter 13,243,108 bushels, or 87.05 per cent.; in 1879 the shipments to the east exceeded those to

¹ Including wheat, corn, rye, oats, barley, and flour, at five bushels to the barrel.

the south by 2,818,836 bushels, but in 1880 the shipments to the south exceeded those to the east by 8,821,296 bushels; in 1879 about 53 per cent. of the shipments was to the east, but in 1880 nearly 59 per cent. of the total shipments was to the south; the total shipments for 1880 exceeded those for 1879 by 14,645,559 bushels. The receipts of flour at St. Louis in 1880 exceeded those for 1879 by 100,000 barrels; those of wheat increased 4,000,000 bushels; of corn, 9,000,000 bushels; of oats, 600,000 bushels; and of barley, 730,000 bushels; while the receipts of rye decreased 250,000 bushels as compared with 1879.

There is a wide disparity of opinion in regard to the limits of the territory actually tributary to St. Louis, and consequently the extent of the products controlled by that city. We wish to present both views, that which is less favorable to the pretensions of St. Louis and that which is more favorable. We will state in advance that we incline to accept the claim for the wider horizon and the broader destiny. No city has a grander geographical site, and none a more generous and nobler population. If these two, working together in steadfast co-operation,—intelligence reverently and diligently utilizing and applying the gifts and largess of nature, the stored-up forces and conserved energies of immemorial ages,—cannot make a great city and a great centre of trade, then nothing can. Anyhow, it is proper that a city should have implicit confidence in its resources. As Col. George E. Leighton, president of the Missouri Historical Society, said, in his very intelligent and thoughtful address at the last annual meeting, Jan. 16, 1883, "A living interest and belief in the real greatness of a city will alone make it great. Such a feeling is contagious, and if we but do our part, we can impress ourselves and others with the belief that we have in St. Louis a city worthy of our interest, and of our labors to make it attractive in all those directions which ennoble, dignify, and refine our lives, as well as in those which minister to its material progress."

Mr. Joseph Nimmo, Jr., chief of the Bureau of Statistics of the Treasury Department, Washington, in his very comprehensive and suggestive report on the "Internal Commerce of the United States," submitted to Secretary of the Treasury Windom, July 1, 1881, attempts to define the "territorial limits of the commerce of St. Louis." What he says is as follows:

"It is deemed proper in this connection to present a general description of the range of the commercial activities of St. Louis, such as was presented in a preceding report on the internal commerce of the United States, with such modifications as the

changed conditions of trade and of transportation have rendered necessary.

"The limits of the trade of St. Louis cannot be precisely defined, nor can the limits of the trade of any other great commercial city, as each city is either directly or indirectly the competitor of every other commercial city. St. Louis has direct trade with San Francisco, with St. Paul, Minn., with Chicago, with New Orleans, with the principal Atlantic seaports, and with many of the principal ports of Europe. This is also true of other great commercial cities, both at the West and on the seaboard. But in the sense of being the principal market for the sale of general merchandise, and for the purchase of surplus agricultural products of the surrounding country, the territorial extent of the commerce of St. Louis may be described as follows:

"The commerce of St. Louis west of the Mississippi River and north of the State of Missouri is quite small, the city of Chicago having secured the principal control of that trade by means of the system of east and west roads centring in that city.

"St. Louis competes sharply with Chicago for the trade of Northern Missouri, Kansas, Southern Nebraska, Colorado, the Territories tributary to the traffic of the Union and Central Pacific Railroads, and for the transcontinental trade with the States of the Pacific coast, and mainly controls so much of the trade towards the Southwest as is embraced in the southern and central portion of Missouri, the State of Arkansas, the larger part of the State of Texas, and the northwestern section of Louisiana. For the trade of Kansas, the northern part of Texas, and the Indian Territory, St. Louis meets an active competition in the commercial enterprises of Chicago.

"The advent of railroads as highways of commerce has led to many changes, not only in the limits of the commerce of cities, but also in their relation to each other. This fact is strikingly illustrated with respect to the commerce of St. Louis and of New Orleans. Twenty years ago almost all the commercial interests of these two cities were mutual and reciprocal, but to-day, with respect to the large and rapidly-growing southwestern commerce, St. Louis is a formidable rival of New Orleans. This new condition of affairs has resulted mainly from the construction of the St. Louis, Iron Mountain and Southern Railroad and connections, and the Missouri, Kansas and Texas Railroad. These lines, by their extension into Arkansas, Western and Northern Louisiana, and Texas, have not only invaded a section formerly embraced within the trade limits of New Orleans, but they have been the instrumentalities through which a very large commercial development has taken place within this highly productive section. The railroads referred to have invited a large immigration into these States, and trade and industry have thus been greatly promoted. Not only are the surplus products of a large part of the State of Arkansas, as well as of parts of Louisiana and Texas, shipped to St. Louis and other northern cities for a market, but, in return, general merchandise is shipped to those States.

"By the completion of the railroad line from New Orleans to Houston, the former city has become a direct competitor with St. Louis for a large part of the traffic of the railroads of Texas. The competition of New Orleans for the trade of Texas will undoubtedly become sharper upon the completion of the railway line designed to connect that city with Shreveport, La., at which point connection will be made with the Texas Pacific Railroad and its connecting lines.

"For the trade of the States east of the Mississippi River and south of the Ohio River, St. Louis meets the active competition of the trade of New Orleans, Louisville, Cincinnati, and Chicago, and of the principal cities on the Atlantic seaboard.

The trade of St. Louis with those States has exhibited no material increase for several years.

"The trade limits of St. Louis east of the Mississippi River and north of the Ohio River, not including the through traffic with the States of the Atlantic seaboard and with foreign countries, embrace a considerable portion of the State of Illinois and extend into Indiana and Ohio. This is a commerce almost entirely by rail, only a very small percentage of it being carried on by means of boats plying on the Mississippi and Illinois Rivers. All this trade, with the exception of that in the immediate vicinity of St. Louis, is highly competitive as between Chicago, Toledo, and St. Louis. This applies both to the purchase of agricultural products and to the sale of supplies and general merchandise. The state of the markets at these rival cities determines the course of trade of this section at all times.

"The commerce of St. Louis with the States and Territories already referred to has as its distinguishing characteristics the purchase of the surplus products of those States and Territories and the sale of merchandise for consumption within such territorial limits. But the commerce of St. Louis with the Atlantic seaboard States and with foreign countries presents itself under an entirely different aspect."

Mr. Nimmo at this point speaks of the railroads which centre at St. Louis and the sharp competition of the east-bound trunk lines, a matter which it is not necessary to discuss now or here. There are two reasons for this: in the first place, the rates of competition are so fluctuating and uncertain that there is

no standard, as there is also neither good policy, established policy, honor nor honesty in the competition for freight from the west to the Atlantic seaboard cities. These things will finally adjust themselves, and in the final adjustment it will be "devil take the hindmost." But in the mean time, so long as "pooling" corrects distance, no scale of rates can be permanently laid down. We have nothing but expedients, and very temporary ones at that, and St. Louis can afford to wait until time, which adjusts everything else, has adjusted this also. In the second place, St. Louis possesses a regulator of freight rates to eastern seaports which, she is fain to believe, will finally reconstruct everything, and especially readjust the "differential rates" entirely in her favor. This regulator is the Mississippi River, which, no matter what railroad managers may say, intends to have a potential voice in the final adjustment of freight rates from western trade centres to European markets, and will not be ignored, belittled, or frightened by any of their "statements."

The area of country really and actually tributary to St. Louis, the more sanguine friends of its commerce in the future claim, is as follows:

STATES AND PARTS OF STATES TRIBUTARY TO ST. LOUIS, THEIR POPULATION, RAILROADS, AND PRODUCTS, 1879-80.

¹ All the Texas railroads are tributary to St. Louis, so also are the Texas cattle and other live-stock.

Cotton and other products are given in other tables. The above table is supposed to represent the States which send or are to send their products to St. Louis. The States and Territories which St. Louis supplies more or less with goods, either of her own manufacture or through the jobbing trade, are exemplified in a statement of Mr. E. C. Simmons, president of the Simmons Hardware Company of St. Louis:

"We purchase goods at many points throughout the Northern as well as Eastern States, from the Mississippi River east to Providence and Boston. There are also many manufacturers of goods in our line here in St. Louis from whom we draw supplies. We have goods manufactured at several of the principal penitentiaries of the country. We also still import largely of

certain lines of goods chiefly from England and Germany, and some from France and Switzerland. All of our goods, both domestic and foreign, are shipped to us direct on through bills of lading.

"The range of our sales is very wide indeed. We sell goods as far east as Indiana, north as far as Wisconsin and Minnesota, Dakota, Idaho, and Wyoming, west as far as Colorado, Utah, Montana, Nevada, Arizona, New Mexico, and California, and south to the Gulf of Mexico. We also have trade in Alabama and Georgia, Tennessee and Kentucky, with some scattering trade in North Carolina and Virginia, Ohio and Michigan.

"This widely extended business is chiefly done through commercial travelers or agents employed by our house. The whole territory is divided up into districts, each district being in the particular charge of one of our commercial travelers, who is held responsible for the maintenance and extension of trade within his district. He is also expected to keep the house informed in

regard to the competition which he meets from every point, from other business houses in this city and in other cities, also as to crops and facts of interest touching the influence of competing rail rates. The limits of our trade depend very largely upon the rates for transportation which we have to meet from competing business houses in other cities.

"At present we have thirty-one commercial agents employed.

"Nineteen-twentieths of our trade is by rail. The great advantage afforded by rail transportation is the readiness and quickness with which goods can be distributed. All we have to do is to ship goods by rail on a through bill of lading to a remote point. They may pass over three or four different railroads, but the railroad companies attend to transshipment from the line of one company to that of another.

"Insurance is a thing that bears heavily against water shipments. Merchants will buy goods from points where they will reach them quickest. Take, for instance, Corsicana, Texas. The all-rail rate from St. Louis is \$1.25 to \$1.50 per one hundred pounds, and from New York by Morgan line it is but fifty to seventy-five cents per one hundred pounds; still, on account of the quicker transportation, the merchants buy most of their goods in St. Louis, and ship by rail. In our trade east of this point we find a very sharp competition from Chicago, but we do not meet much competition from Chicago in Missouri south of this point, or in the Indian Territory, Arkansas, or Texas. All that we regard as especially our territory.

"Throughout the States south of the Ohio and east of the Mississippi River, viz.: Kentucky, Tennessee, Mississippi, Alabama, Georgia, and Louisiana, and some little in North Carolina, we meet the competition of Louisville and Cincinnati merchants, and also a very vigorous competition from New York. Our best trade may be said to be in Iowa, Illinois, Missouri, Kansas, Arkansas, and Texas."

The foregoing statement in regard to the range of the business of a single house, both in its territorial extent and in the degree to which its management involves the exercise of executive and administrative ability, affords a striking illustration of the manner in which the wholesale or jobbing trade is carried on at the present time. In the range of its activities and in the methods employed, the commerce of the present day is widely at variance with all ideas of trade which prevailed even thirty years ago. At all the points where purchases are made by the business house above referred to, purchases are also made by merchants doing business in a hundred rival towns and cities. Throughout almost the entire area in which the sales of this business house are made, competition is also met from business houses in Chicago, Louisville, Cincinnati, New York, Boston, Philadelphia, Baltimore, and many other towns of lesser magnitude.

St. Louis competes with Louisville and other cities in the manufacture of tobacco, selling all the Missouri product. In the sale of dry-goods, clothing, and groceries, she competes, on their own territory, with Galveston, New Orleans, Mobile, Nashville, Louisville, Cincinnati, and Chicago; New York, Philadelphia, Boston, and Baltimore sometimes invading her territory. In the distribution of corn whiskey, as well as

in its manufacture, she competes with Cincinnati and Louisville, Indianapolis and Peoria. In the manufacture and distribution of malt liquors, St. Louis controls the whole Southern and Western trade, in conjunction with Cincinnati and Milwaukee. The drug trade of the lower Mississippi, Texas, Arkansas, Kansas, etc., is controlled by St. Louis. In wood and willowware, St. Louis has all the South and West, even Tennessee. One house in this city is known to be the largest distributing house in the United States. In queensware, St. Louis supplies the Southwest. In stoves its only rivals are Cincinnati and Pittsburgh.

It is thus apparent that St. Louis has a *productive* commerce as well as a *distributive* one. This is greatly in her favor, as the productive trade is more profitable as well as more durable and certain. Properly defined, distributive commerce includes all trade which is accompanied by a movement to or from the city, considered of commodities that are neither altered nor produced within its limits. With relation to this form of commerce a city is a point of exchange. Productive commerce includes all trade which exists or arises between a city and its markets as a result of manufacturing or altering commodities within its boundaries. With relation to this form of commerce a city becomes a manufacturing centre.

Now, since the influences which are favorable to the distributive trade of a city form only one set of advantages necessary to make that city a desirable manufacturing centre, and since it is possible that a city may be very desirable as a point of production without having any of the elements to make it a successful point of exchange, it follows that a city may have at least two well-defined areas of trade, one for its productive and the other for its distributive commerce. And it will, therefore, be desirable to learn the position occupied by each of these elements in order to arrive at the commercial situation and prospects of the city under consideration.

In a given area the relations of commerce to avenues of transportation are so intimate and so reciprocal, either capable of acting towards the other as cause or effect, that an understanding of the one not only involves a knowledge of the other, but an intelligent consideration of either is best promoted by making it an exponent of the other, and dividing the former into such areas or epochs as naturally pertain to its correlative.

The history of railroad progress in the territory south of the Ohio River and south of the State of Missouri shows that prior to the latter part of the year 1860 there were no through rail trunk lines running north and south in any part of said territory.

The trunk lines of transportation in this section were water highways, and while the railroad interests of the whole country were rapidly developing during the twenty years previous to that date, yet they had not become the leading commercial highways. Hence in the following remarks on commercial influences we designate the period prior to 1860 as the era of water transportation, or the era of western development.

For a like reason, since the year 1860, as the tendency of railroads in this southern territory has been so largely towards the formation of through trunk lines, both by the construction of missing links and by the consolidation of local roads, and as the movements of commerce since that date have taken place so essentially over railroad highways that water avenues have assumed a secondary position and influence, the period covered by the last twenty years may be commercially termed an era of railway transportation.

During the era of western development the commerce of the entire United States followed essentially an east and west movement, and this movement still, as applied to the total commerce of our country, is probably the largest one.

During the era of railroad transportation, most of the changes in the commercial highways of the interior have tended to foster a north and south movement of commerce, and the development of that movement has been so rapid that it promises to become a formidable rival to the ancient monopoly.

It is a universal accompaniment of distributive commerce that as railroads extend facilities for its movement, they are liable at the same time to give like facilities to smaller as well as larger centres. Hence the very instrument which tends to develop a city's distributing powers places the means at the disposal of its tributaries to make of themselves active competitors. In other words, an extension of railway facilities in a country tends to increase the number and decrease or rather equalize the size of distributive centres. This tendency is mostly a subordinate one, but it is not on that account to be lost sight of.

Furthermore, in a distributive commerce avenues of transportation are always the elements of primary importance in marking out its course and defining its limits, while with productive commerce transportation avenues may be secondary considerations.

A town may be a very active distributing centre, and all of the elements of its prosperity appear to be permanent, but every change in its railway outlets and avenues must vitally affect its welfare for better or worse, according to the nature of the change.

Examples of towns almost annihilated by changes in transportation facilities are frequently to be found

in the South, *because in the South commerce has been almost wholly distributive.* The town of Jefferson, Texas, furnishes a notable example. From 1865 to 1870, when she formed the terminus of navigation on Red River, and supplied with merchandise a section through Texas, Arkansas, and the Indian Territory, extending northwest, west, and southwest for two or three hundred miles, she had ten thousand people, and every prospect seemed to promise her lasting prosperity. The Texas and Pacific Railroad with its through connections was formed, passing through the town itself, while already to the west the Houston and Texas Central, with its supplementary connection, the Missouri, Kansas and Texas Railroad, had cut off its far western trade, so that to-day Jefferson is a way station, with deserted wharves, and her population of barely two thousand people are selling whole blocks (whose stores used to rent for one hundred and fifty and two hundred dollars per month) for the bare bricks which their walls contain.

It is true, therefore, that centres of distributive commerce are built upon foundations of sand, whilst a city grown great through a productive commerce will always possess a material element of prosperity; also that the trade limits of a distributing centre more nearly correspond with the area whose crops it markets than do such limits of a productive commerce, the latter being almost wholly independent of that area as defining its extent and location.

Again, the distributive commerce of the interior consists most largely of an east and west movement,—*i.e.*, exchanges between points east of the western boundary of Pennsylvania and north of Mason and Dixon's line, and points west of the western boundary of Pennsylvania and south of the Ohio River and State of Missouri.

The era of railway transportation has been also one essentially of the building up in the West of manufacturing industries, giving to small towns a commercial significance which makes them important competitors for trade in the South.

A single accompaniment of productive commerce may here be mentioned, which will show how largely the fostering of such commerce adds to the wealth of a city. The figures given are underestimates rather than overestimates, and they embody the principle:

A ton of cast iron is worth, say.....	\$35
If made into wrought iron it may have a value of....	80
If the wrought iron be converted into steel it is worth	120 to 200
If the steel be manufactured into agricultural tools	
it is capable of bringing, say.....	400
If, instead, it be converted into knife-blades, they	
will sell for.....	30,000
Or, finally, if it be made up into the balance-springs	
of watches its value may become over.....	100,000

The factor of profit which is thus under proper circumstances capable of converting thirty-five dollars' worth of cast iron into one hundred thousand dollars' worth of watch-springs is LABOR; and it is evident that, if these operations were carried on in a single town, the added wealth which would result to that town from the entering of a single ton of metal into its productive commerce would be many thousand per cent. of the original value of the material. The mere handling of this ton of metal, or the result of its entering into the distributive commerce of the city interested, could hardly under any circumstances amount to twenty-five per cent. of its original value.

And while the above may be, and undoubtedly is, an extreme case, it is nevertheless a possible and an actual case in some localities; and the principle embodied in this single instance is true of by far the largest proportion of manufactured articles, viz.: that the labor entering into their production bears a larger ratio to their value than the actual cost of material.

This is the sort of trade which has made Boston and Philadelphia so rich, and contributes annually such vast sums to the grand resources of Great Britain. It is the sort of trade which St. Louis expects to control when her resources are more fully in play.

In the mean time, the actual movements of produce and merchandise at St. Louis, as distinguished from the possible and prospective, have been as follows, taking the census year for convenience of comparison:

GRAIN SHIPMENTS from St. Louis towards the east by rail, and towards the south by river and by rail, each year, from 1871 to 1880, inclusive.

The total tonnage of freights received at and shipped from St. Louis each year from 1871 to 1880, inclusive, is indicated in the following table:

Calendar Year.	Tons Received and Shipped.	Calendar Year.	Tons Received and Shipped.
1871.....	4,913,102	1876.....	6,380,150
1872.....	5,712,229	1877.....	6,359,393
1873.....	5,984,905	1878.....	6,995,241
1874.....	5,835,859	1879.....	8,314,909
1875.....	5,836,840	1880.....	10,783,589

But St. Louis is not content with these results, gigantic as they are, and rapid as has been the growth and development of the trade of which they are the indices. Dr. Samuel Johnson, when he was witnessing the sale of the plant and effects of Thrale's brewery, was asked what he could find in such a scene to interest him. "I see all around me, sir," he answered, "the *potentiality* of great riches." That is what St. Louis beholds in her exceptionally great resources and favorable site, and her people will never rest while these things, possessions and promises, remain undeveloped and unutilized.

All the cotton received at St. Louis, no matter what its destination, and no matter how consigned, *breaks bulk there*, is handled, compressed, and re-shipped. Thus St. Louis makes some profit out of every bale received. Before Chicago, by means of her railroad, lake, and canal facilities, secured the lion's share of the east-bound carrying trade in breadstuffs and provisions, and so had her fortune made, every pound of Western produce and Western merchandise, destined no matter where, up the river or down, broke

bulk at St. Louis, and that city made a profit in it. This trade, this control of trade, St. Louis seeks once more to restore by renewing the supremacy of what was its source and medium, the Mississippi River.

This is not a dream. It is not one of Governor Allen's "barren idealities." On the contrary, it is a legitimate trade expectation, which may be realized at almost any moment. St. Louis had this control of trade once through superior facilities and unrivaled cheapness of transportation. The same facilities exist now in a much greater degree, and the cheapness also. The opportunity to make full use of them has not quite arrived, on account of various causes and obstructions.

But in the mean time certain facts stand out in *alto relievo*, and none of the commercial rivals and competitors of St. Louis can deny them.

1st. Chicago and New York dread the completion of the Welland Canal, because by that route grain from the former city can be delivered in Liverpool *via* the Strait of Belle Isle at rates with which New York cannot compete. In other words, Chicago, to maintain her grain trade, must transfer it from New York to Montreal.

2d. But that route is closed five months in every year by ice.

3d. St. Louis is not afraid of the competition of Montreal and the Welland Canal, because she can deliver grain in Liverpool cheaper by the Mississippi River route than it can possibly be delivered by any other route. This has been proved, and will be

demonstrated again still more conclusively. At present all that need be shown in this connection is results, accomplished facts.

SHIPMENTS OF BULK GRAIN BY RIVER FROM ST. LOUIS TO NEW ORLEANS FOR ELEVEN YEARS, FOR EXPORT.

Mr. Joseph Nimmo, Jr., in his notable report of 1881 on the internal commerce of the country, says that

“The regulating influence of the interior water lines is limited and conditioned by the fact that it is operative with respect to the internal commerce of the country mainly through the great interior markets, and notably those of Milwaukee, Chicago, St. Louis, Peoria, Toledo, Detroit, Louisville, and Cincinnati. This results from the fact that the movements of commerce are directed by the trade forces rather than by the transportation forces of the country. In the transportation of the surplus products of the Western and Northwestern States to the seaboard and to foreign countries, the regulating influence of the Mississippi River is rendered effective mainly through the markets of St. Louis, and the regulating influence of the northern water line is rendered effective mainly through the markets of Milwaukee and Chicago, but also to a considerable extent through the markets of Duluth, Detroit, and Toledo.

“The competition of commercial forces exerts an important influence in determining the relative magnitude of the various trade currents of the country. The constituent elements of the trade forces of cities are, first, a large community of intelligent and enterprising merchants having an extensive knowledge of commercial affairs; and, second, the requisite capital in the hands of these men available in the pursuits of trade. These forces at Chicago, at Milwaukee, at St. Louis, and at other commercial cities of the interior arrest the surplus products of the West in their eastward or southward movement, such products usually reaching those cities by rail. At these points the option is first presented of transportation by water or by rail. A thousand trains a day may pass through towns situated on the lakes or on the rivers where these agencies and facilities for carrying on a large commerce do not exist, and yet the water lines will exercise no perceptible influence over the rates charged on the railroads. This is strikingly illustrated in the case of the railroads which cross the Mississippi River over bridges at thirteen different points between St. Paul and St. Louis. The river rates exert no marked influence over the rail rates from the fact that at very few of those points is there the controlling influence of a market for Western products with its constituent elements, viz., a body of men educated in the mercantile profession and controlling the requisite amount of capital actually employed in trade or invested in warehouses and other instrumentalities for the successful prosecution of trade. The rail-

roads are not at those points, in a commercial sense, tributary to the river, but, on the other hand, to the extent to which the river towns are local markets for the purchase of surplus products of the trans-Mississippi States, the river becomes tributary to the railroads.

“It is only at Chicago, Milwaukee, and a few other lake ports, and at St. Louis that direct competition between rail and water transportation presents itself to any considerable extent, in so far as relates to the regulating influence exerted by the two great water lines over the rates which may be charged on railroads. The extent to which the regulating influence of the two great interior water lines is rendered operative through the principal primary grain markets of the country is illustrated by the fact that of the total eastern and southern movement of grain, amounting during the year 1880 to 400,000,000 bushels, about 320,000,000 bushels, or 80 per cent., was marketed at the seven primary markets of the West, viz., Milwaukee, Chicago, Duluth, St. Louis, Peoria, Toledo, and Detroit; and that only about 80,000,000 bushels were shipped direct from the Western and Northwestern States to the Atlantic seaboard.

“Of the total grain receipts at St. Louis during the year 1880, amounting to 47,697,066 bushels, 40,121,733 bushels, or 84 per cent., was received by railroads, and only 7,575,283 bushels, or 16 per cent., by river; and of the total grain receipts at Chicago during the year 1880, amounting to 165,855,370 bushels, it appears that 159,129,984 bushels, or 96 per cent., was received by railroads, and that 6,725,386 bushels, or only 4 per cent., was received by lake and the Illinois Canal.

“About 90 per cent. of the grain, 85 per cent. of the provisions, and 8 per cent. of the cattle which reached Chicago during the year 1880 were actually marketed at that point; and of the shipment of those commodities from Chicago, 61 per cent. of the flour and grain and only 10 per cent. of the provisions were shipped by lake. No live-stock was shipped by lake.

“About 95 per cent. of the grain, 97½ per cent. of the provisions, and all of the live-stock which reached St. Louis during the year 1880 were actually marketed at that point; and of the shipments of those commodities from that city, 49 per cent. of the flour and grain, 38 per cent. of the provisions, and 1.23 per cent. of the cattle were shipped by river.

“The foregoing facts indicate that almost the entire work of gathering up the surplus products of the Western and Northwestern States is done by railroads, and that the option of transportation by water or by rail is almost entirely confined to shipments from Milwaukee, Chicago, and St. Louis.

“The following table serves to illustrate the comparative magnitude of the grain traffic of St. Louis which is diverted to the Mississippi River from the railroads extending east from that city:

Mr. Nimmo adds that,—

"From the time of the first settlement of St. Louis until about the year 1855, that city was entirely dependent upon the Mississippi River and its navigable tributaries for the means of transportation. During that period it had no competitor for the trade of the States and Territories west of the Mississippi River. A large part of the States of Illinois and Wisconsin was also embraced within the area of the commercial supremacy of St. Louis. But during the last twenty-five years a great change has taken place in the conditions governing the commercial situation and relations of that city, as the result of the extension westward of the railroad system of the country. By means of this extension of railroads all the Western and Northwestern States and Territories have been brought into intimate commercial relationships with the lake ports, with the Atlantic seaports, and with hundreds of interior manufacturing and trading points throughout the States both east and west of the Allegheny Mountains. This development of traffic over the east and west trunk railroads is unparalleled in the history of commerce.

"For several years the traffic passing over each one of the thirteen railroad bridges across the Mississippi River between St. Paul and St. Louis has greatly exceeded in magnitude and in value the traffic upon the river beneath them. Through these facilities of transportation tributary to Chicago and other lake ports, and also to Atlantic seaports, St. Louis was for several years practically cut off, even from the trade of important surplus grain and provision producing areas nearer to her markets than to those of the lake ports. It was clearly foreseen, therefore, that the growth of St. Louis, as a market for the purchase of grain and other products of the Western and Northwestern States, was dependent upon the securing of direct and independent railroad connections with all parts of those States; for since railroads had become the chief instrument of transportation in the gathering up of these products, it was evident that only a very small proportion of such products could find their way to the St. Louis markets by river. Such facilities for transportation by rail have within the last ten years been secured, a fact clearly developed by the statistics showing the rapid growth of the commerce of that city.

"The merchants of St. Louis, and her citizens generally, never lost faith in the possibility of developing a large commerce by river *via* New Orleans, especially in the exportation to foreign countries of the surplus products of the Western and Northwestern States. It has always been believed that the river route not only afforded a cheaper avenue of transportation for such traffic than the east and west trunk railroad lines, but that the increase of traffic upon the river would so much reduce the cost of transportation as greatly to increase the regulating influence exerted by the river rates over rail rates. Results already attained seem to prove the correctness of this view."

In regard to the transportation *facts* upon which some of these great expectations have been founded, we have the following:

"ST. LOUIS AND
NEW ORLEANS TRANSPORTATION COMPANY,
"St. Louis, Feb. 2, 1881.

"DEAR SIR,—As requested in your note of 24th instant, I make reply to the two inquiries propounded by Mr. Nimmo, of the Bureau of Statistics (in letter of January 20th), as follows:

"1st. I certainly do not believe that a tariff of 12½ to 15 cents per 100 pounds between Mississippi River points and the ports of the Atlantic seaboard could be maintained by any of the railway lines without losing money.

"2d. I say without hesitation, that with a rate of five cents per bushel on grain from St. Louis to New Orleans *via* river, there being at the same time an average difference of four cents in ocean freights against New Orleans as compared with the North Atlantic ports, *there would be* a most decided diversion of grain in the direction of New Orleans.

"Let me add, however, that in the uncertain condition of the river (as regards depth of water) during the period of navigation, the lowness of the rate of five cents per bushel cannot always be depended on, but with the depth of water which the contemplated improvements between Cairo and St. Louis will undoubtedly give, the time is not far distant when the rate named, *five cents per bushel*, may be continuously counted on.

"Very truly yours, H. LOUREY, *President*.

"GEORGE H. MORGAN, ESQ.,

"*Secretary Merchants' Exchange.*"

"St. Louis, Mo., Jan. 26, 1881.

"DEAR SIR,—Referring to letter to you from chief of Bureau of Statistics, dated Washington, D. C., Jan. 20, 1881, which letter you refer to me, I give it as my opinion that a tariff of 15 cents per 100 pounds on grain from St. Louis to the Atlantic seaboard could *not* be maintained by railway without loss to the companies carrying at such rate.

"The cost per ton per mile for movement of freight over the Pennsylvania Railroad and its connecting lines in the year 1879 was as follows, viz.: Over the Pennsylvania Railroad proper, 4.27 mills per ton per mile; over the New Jersey Division, 1.012 cents per ton per mile; over its lines west of Pittsburgh, 4.48 mills per ton per mile. Taking the average distances on the different divisions gives 4.89 mills per ton per mile, or \$5.20 per ton, or 26 cents per 100 pounds from East St. Louis to New York, reckoning by the shortest route, say 1063 miles.

"These figures, I am sure, are lower than the cost per mile of any other line between St. Louis and the seaboard, saying nothing about the longer distance to New York or Philadelphia by every other line. It is evident, therefore, that if it costs 26 cents per 100 pounds to transport property any given distance, a tariff of 15 cents for the same distance would be a losing one, as Bardwell Slote would say, 'by a large majority;' or if it costs 4.89 mills to transport one ton one mile, a tariff of 2.8 mills will be a losing one.

“As to the other question, viz., whether a tariff by river of five cents per bushel, St. Louis to New Orleans, and an average difference of four cents in ocean rates against New Orleans, any tariff above 15 cents per 100 pounds from St. Louis to the Atlantic cities will turn grain in the direction of New Orleans, I do not feel competent to answer. I should say, all other things being equal, it would. If the same time can be made or nearly so, the same regularity in delivery be guaranteed, the condition of grain on delivery be as absolutely depended upon, and the facilities for handling, transferring, etc., be equally good by river as by rail, I do not see why, at a greatly reduced tariff, the river should not command the business.

“Yours truly, N. STEVENS.”

These facts were first fully brought to the front in 1872 by the investigations of the Senate Committee on Transportation Routes to the Seaboard, of which Senator (afterwards Secretary) Windom was chairman. It was shown to this committee that, with a properly regulated and normal commerce, it was simply impossible for railroads, or a combination of lakes, canals, and railroads, to compete in cheap transportation with the Mississippi River and the ocean navigation from its mouth. It was shown that the actual cost of moving a bushel of wheat from St. Louis to New Orleans, twelve hundred and fifty miles, was only five and a quarter mills, .00525 of one cent.

It was also shown that in the final analysis freights by rail could never compete with water-borne freights. The following tables illustrate this conclusively. Rates vary and have changed materially, but ratios remain the same, or very nearly the same :

STATEMENT showing the value of a ton of wheat and one of corn at a given distance from market, as affected by cost of transportation respectively by canal, by railroad, and over the ordinary highway.

COMPARATIVE COST AND RECEIPTS OF TRANSPORTATION.

CLASSIFICATION.	Per Ton per Mile, Cost.	Per Ton per Mile, Receipts.
	Mills.	Mills.
Transportation by railroads.....	17.90	29.80
Transportation by canals, including deduction, lockage, etc.....	6.40	11.40
Transportation by Erie Canal, including deduction, lockage, etc.....	4.05
Transportation by rivers, steam-towage.....	2.26	2.90
Transportation by bays.....	2.27	3.73
Transportation by ocean.....	1.26	2.50

If the cost of transportation be thus proportioned, 17.90 by rail to 2.26 by river and 1.26 by ocean, she is confident that she controls the lowest rates by the surest routes. With a perfected barge system, the forwarding of the Mississippi River improvements, and the construction of the Florida ship canal, the great trade centre on the Father of Waters will return to its old-time supremacy in transportation and deliver grain and other produce in Liverpool five cents per bushel, forty cents per quarter, cheaper than it can be done from any other centre of distribution.

The consequence will be all grain and provisions will go to St. Louis for shipment. But another effect will be that the United States will succeed in driving all other competitors out of the grain and provision markets, and our sales on foreign account will be enhanced to that extent. Already, as the following table shows, we supply Great Britain with 65.4 per cent. of her total purchases of wheat and flour, against only 3.4 per cent. in 1866. With this new channel of trade adequately developed, we will supply the remaining 34.6 per cent., and all that will be an increment of the trade of St. Louis :

STATEMENT showing the quantity of wheat and wheat flour imported into the United Kingdom from 1860 to 1880, inclusive, with the quantity of the same imported from the United States.

1880.....	127,746,325	83,487,243	65.4	1.50

We are free to admit that there are serious drawbacks to the immediate realization of all these pleasant prospects, but none of them seem to belong to the class of any but the preventable diseases. Prudence, forethought, wise management in respect of legislation, economy of resources, careful selection of representatives, and liberal expenditure when great ends are to be accomplished will bring to pass every desirable result for a city possessing already such incomparable resources. But it will be wisest to consider these drawbacks and obstructions first, as the presentation of them may suggest the remedies which should be applied. The construction of the Eads jetties has already taken away one of these hindrances to commerce. The cutting of the Florida ship canal and the construction of the Tehuantepec ship canal or railway will remove others. The benefits derived from the jetties are very conspicuous. It was difficult to get sixteen feet of water on the bar in any of the passes in the mouth of the Mississippi. Now there is twenty-six feet regularly maintained. The charge for towage has in consequence been reduced from a dollar and a half per ton to one-third that figure, and there is a material reduction on account of insurance.

But there are other hindrances and obstructions not yet removed. The ice is often troublesome, not below Cairo, but between that city and St. Louis. The interruption to navigation from this cause, which at Chicago gives the railroads a monopoly of traffic for a hundred and forty days in each year, occurs nearly every winter. During the last seventeen years navigation has been suspended at St. Louis on account of ice as follows :

	Days Suspended.
Winter of 1865-66, navigation suspended.....	27
“ 1866-67, “ “	38
“ 1867-68, “ “	40
“ 1869-70, “ “	7
“ 1870-71, “ “	32
“ 1871-72, “ “	42
“ 1872-73, “ “	51
“ 1874-75, “ “	58
“ 1876-77, “ “	58
“ 1878-79, “ “	46
“ 1879-80, “ “	15
“ 1880-81, “ “	78
“ 1881-82, “ “	16

During the winters of 1868-69, 1873-74, 1875-76, and 1877-78, the river was open, and navigation was not suspended.

The navigation of the Mississippi River is at times affected also by low water, especially in that part of the river between St. Louis and Cairo. The enjoyment to the full extent of the advantages afforded by the Mississippi River requires the employment of steamboats and barges of large size and drawing when loaded about eight feet of water. At times, however, the river falls so as to admit only of the em-

ployment of boats and barges loaded to draw not more than four feet. This greatly increases the cost of transportation. The actual cost of transportation in vessels drawing only four feet is said to be nearly twice as great as when loaded to eight feet.

This subject was carefully considered by a select Committee of the Senate on Transportation Routes to the Seaboard in their report submitted April 24, 1874.

It was found that during the nine years from 1865 to 1873 the condition of river navigation below the city of St. Louis was as follows :

Average number of days less than 4 feet.....	34
“ “ over 4 and less than 6 feet.....	52
“ “ over 6 and less than 8 feet.....	103
“ “ over 8 and less than 10 feet.....	69
“ “ over 10 feet.....	136

It appears from the foregoing table that during nearly one-half of the year the commerce of St. Louis was more or less affected by low water.

The average stage of the river below St. Louis during the years from 1874 to 1880, inclusive, was as follows :

YEAR.	Less than 4 feet.	Over 4 feet and less than 6 feet.	Over 6 feet and less than 8 feet.	Over 8 feet and less than 10 feet.	Over 10 feet.
	Days.	Days.	Days.	Days.	Days.
1874	146	30	175	14
1875	No record.
1876	No record.
1877 ¹	64	80	59	126
1878 ²	51	92	87	119
1879 ³	4	81	79	55	105
1880 ⁴	20	66	73	46	156

The interruption to the navigation of the Mississippi River at St. Louis on account of ice and low water is of course detrimental to commerce. The average annual duration of the efficient commercial usefulness of the Mississippi River is, however, considerably greater than is that of the northern water line. The average time during which navigation is suspended by ice each year on the Erie Canal and on the Canadian canal is about five months. The average time each year during which navigation has been entirely suspended on the Mississippi River at St. Louis in consequence of ice during the last ten seasons was only thirty-five days, and the average time each year during which steamboats and barges could

¹ Closed for thirty-six days on account of low water.

² Closed for sixteen days on account of low water.

³ Closed for forty-one days on account of low water.

⁴ Closed for four days on account of low water.

not be loaded to eight feet, in consequence of ice and low water, during the seven years from 1874 to 1880, inclusive, was only about one hundred and twenty-six days, or about three and one-fifth months.

The suspension of navigation at St. Louis does not, however, at any time cause an entire suspension of the river traffic, as during such periods shipments are made by rail from St. Louis to Cairo, Ill., and to Belmont, Mo., at which points merchandise is transhipped to steamers and to barges. Navigation is seldom, if ever, obstructed below Cairo or Belmont, either on account of ice or low water.

The supposed injury to grain from the heat and humidity of the tropical belt between New Orleans and the Florida capes has been proved to be a fallacy, and prices are not affected by it. But the existence of yellow fever more or less nearly every season in the lower Mississippi is an admitted hindrance.

Improvements in sanitary measures and precautions are necessary to remove these obstructions. They are necessary equally to the commercial existence of the towns and cities which are exposed to these assaults of pestilence, and within two years very great improvements have been effected, especially in sewerage and drainage, at New Orleans and Memphis. Much still remains to be done, of course, but a good beginning has been made, and the work will go on.

The improvement of the Mississippi River has also been undertaken upon an expensive and comprehensive system, which, when it is completed, is expected to make this noble river safely and easily navigable at nearly all seasons. If that should be accomplished, it is hoped that a reciprocity treaty with Mexico, and an equitable trade treaty with Spain, in respect of our commodities in the ports of Cuba and Porto Rico, will give St. Louis, through her combinations of railroads and water routes, a most extensive and valuable trade in tropical products. Hon. W. M. Burwell, of New Orleans, in a communication made to the Windom Congressional Committee on Transportation Routes in 1873, said,—

“The subject upon which I am specially requested to report is in regard to the state of commerce between the valley of the Mississippi and the Spanish-American States. There are many of us who believe that the trade lines of latitude cross above us, and that a very large proportion of the western productions will move directly to Atlantic ports for exportation, as they will and have received the foreign importations through the same ports. I would say that in the estimation of many in this city, merchants and others, the most important object of improving the Mississippi River will be to establish a direct line of communication between the immense productive interior of the West and the consuming markets of and beyond the tropics. There is a physical impediment in the way which we ask Con-

gress to remove; but there are diplomatic impediments also, which are even greater, as far as that line of trade is concerned, than the physical impediments to which I referred. The diplomatic impediments consist in the want of reciprocal trade-treaties between the United States and the Spanish-American States that are adjacent to or lie south of us. Gentlemen know, and especially members of the Senate of the United States, better than we do, the precise state of the treaties between the United States and the Spanish-American powers, and they will remember that, with the exception of a few special conventions, there have been scarcely any changes made in the treaty relations of those two great interests since almost the origin of the government. Almost all our trade-treaties, as I understand, are based on the phrase of ‘the most favored nations;’ and while such are the terms of our commercial treaties with Spain, and while it is true that we can carry American provisions or American manufactures into Spanish possessions on the same terms with any other power, yet when the fact is that we are the only people producing corn and grain and hog products, that we do send to the Spanish-American possessions, it is perfectly plain that that which is a tax on the trade of the most favored nations is practically an oppressive tax upon the trade of the United States. The Spanish tax in Cuba is 40 cents on the bushel of corn, which is altogether equivalent to the entire cost of transportation from Iowa to New York. The tax there is \$55 on an American horse, \$19 on a mule, \$8 on a barrel of flour, and 3½ cents on lard; and it is plain that a tax of 80 per cent., which is the average upon the products almost exclusively marketed by Americans, is an excessive tax when contrasted with the American tax upon the products of Cuba. We, as I understand, only tax two of the principal products of Cuba. We admit her coffee duty free, and we impose a tax of something upwards of two cents on sugar, and a tax of some 75 per cent. on tobacco manufactured and not manufactured.”

Ex-President Grant has some very “advanced” and decided views upon this subject, and it is believed that, with a reciprocity treaty with Mexico and the navigation of the Mississippi properly improved, St. Louis could control the entire grocery trade of the Mississippi valley, and refine all the sugar consumed by thirty million people. The vessels taking corn, cotton, and grain and provisions to Europe could return *via* Trinidad and the Caribbean Sea, picking up cargoes of raw sugar on their way around the Gulf, and thus freight would be saved on both outward and inward cargoes. These countries, together with South America, have a commerce the total annual value of which exceeds eight hundred million dollars.

But it is imperative to improve the channel of the river before this commerce can be invited in. The general plan of the improvements which are now in process was succinctly sketched in a letter from Col. J. H. Simpson, United States engineer, to Hon. E. O. Stanard, of the Union Merchants’ Exchange, St. Louis, on Oct. 29, 1873.

But a much more comprehensive plan is under consideration, involving the expenditure, probably, of more than a hundred millions before the improvements

are completed for the whole river upon a scale commensurate with the commerce involved.

"No adequate estimate can be formed of the value of the commerce on the Mississippi River, nor of the value of the total commerce of the towns situated upon it. An idea of the magnitude of this commerce may, however, be formed when it is considered that the value of the commerce of the cities and towns on the Ohio River amounted to the enormous sum of one billion six hundred and twenty-three million dollars in 1873. The national government has provided no means of arriving at a knowledge of such important facts as this in regard to the internal commerce of the country. The collection of the necessary data from private sources, and from data prepared by boards of trade, State and city governments, would alone require the constant labor of one person for a year.

"Not only has the commerce of the Mississippi River been crippled by the existence of the bar at its mouth, but the value of the river above is greatly depreciated by obstructions which may be overcome very readily by engineering skill, and at an expense quite insignificant in comparison either with the present value of its commerce, or with the increase of trade which may be expected as the natural result of such improvements. Hitherto the improvement of the Mississippi has been carried on merely by sporadic efforts. Appropriations have from time to time been made and money expended, without any general plan as to the ultimate results which were to be attained. The committee recommend that the necessary surveys and estimates be made at the earliest practicable moment, in order to mature a plan for the radical improvement of the river, and of all its navigable tributaries.

"Such a plan should comprehend the establishment of a given depth of water on the Mississippi River in some such manner as the following:

"1st. Improvements designed to secure a depth of from eight to ten feet from St. Louis to New Orleans at the lowest stages of the river.

"2d. Improvements designed to secure a depth of five feet at the lowest stages between St. Louis and St. Paul.

"3d. Improvements designed to secure a depth of four and one-half feet in the river above St. Anthony's Falls.

"Having adopted a plan of this kind for the radical improvement of the river, all works should be carried out with this general object in view.

"It is much more practicable to establish such a plan now than it was a few years ago, for the reasons that the successes and failures of past efforts have enabled engineers to discover the nature of the difficulties which will be met, and to adopt the best methods of improvement. Diverse opinions still exist among some of our ablest engineers as to the best means to be adopted in specific cases, but it is believed that sufficient practical knowledge has already been gained to determine a general plan of future operations, both in regard to the Mississippi River and its principal navigable tributaries. The time has arrived for thorough measures, and the necessary plans and estimates upon which such measures must be based should be prepared at once.

"It is impossible to overestimate the commercial results likely to follow such improvements. With the well-established facts before us in regard to the much greater cheapness of transport by navigable rivers than by railways, it cannot be doubted that such improvements would increase the commerce of the Mississippi very greatly, and at the same time afford relief to a large area in the Western States now fettered in its growth and prosperity by the cost of transporting agricultural products to both home and foreign markets."¹

Such is the noble perspective of the aspirations of St. Louis for the commerce of the future: the centre of a valley of magnificent, continental proportions, gathering up the products of hundreds of millions of intelligent people, cultivating the soil of the most fertile of regions, supplying the world with their products, and supplying the producers in return with all the merchandise which enters into their consumption. These hundreds of millions of people will be brain-workers and machine-workers, and the volume of their products will be stimulated and augmented in proportion to the grand culmination of their intelligence, until human force will find itself the conductor of a grand and perfected mechanism of subsidiary forces such as the world never before saw at play.

Confidence of the Citizens of St. Louis in the Natural Advantages and Future Destiny of their City.—We may now proceed to consider how and how greatly the several constituents of a great and permanent volume of trade, production, conversion, and exchange have each in their turn, by the force of natural and acquired advantages, contributed to make St. Louis a trade centre. It is first to be noted, however, that from the very beginning the people of St. Louis have been conscious of its transcendent natural advantages and confident of its destinies as the trade centre of the America of the future. This has been the case from the time of Henry M. Brackenridge's first remarkable horoscope of the infant town's destiny down to the day of the abortive "convention" to make St. Louis the capital of the United States.²

² The enterprise was premature, and therefore not so wise as it might have been, but it has been laughed at probably more than it deserved. At present it may be said to sleep, for no one can pronounce it dead while the power, population, and wealth of the United States continue to gravitate so strongly towards the heart and centre of the valley of the Mississippi. The centre of population, which is now in Kentucky, just west of Cincinnati, is moving upon a parallel of latitude that will take it to St. Louis before A.D. 1900, and at that date more than two-thirds of the members of the House of Representatives will be elected from districts west of the meridian of Pittsburgh, which was a far western frontier town at the day when the site of the Federal city was chosen upon the Potomac. As a matter of record, some of the proceedings of the "Capital Convention" are worth preserving. It assembled in the hall of the Mercantile Library on the afternoon of Oct. 20, 1869, and was called to order by L. R. Shryock, who was followed in prayer by Rev. R. G. Bransk, of the Central Presbyterian Church. The States and Territories which were represented were Alabama, Illinois, Indiana, Iowa, Kentucky, Kansas, Louisiana, Colorado, Alaska, Montana, Nebraska, New Mexico, Oregon, Pennsylvania, Tennessee, Utah, and Missouri,—17. The delegates from the last-named State were Governor J. W. McClurg, John Hogan, E. O. Stanard, Enos Clark, B. Poepping, G. A. Mozier, George Thelenius, T. T. Tracy, M. L. DeMotte, James H. Birch, A. J. Harlan, H. J. Drumond, F. Muench, G. R. Smith, W. Galland.

¹ Such was the view of the Wisdom Committee in 1873.

We could produce, if it were necessary and we had the space, a long chain of testimony from the earliest period down to the present day to show how confident the thinking people of St. Louis have always been in

John D. Caton, of Illinois, was made president, with a vice-president for each State and Territory, and a staff of secretaries.

Mr. Medill, of Illinois, read the following as the report of the committee on resolutions:

"WHEREAS, The present site of the national capital was selected as the most central point when the people of this republic, only a few millions in number, inhabited only a narrow strip of country along the Atlantic coast; and,

"WHEREAS, The population of this republic has increased thirteen-fold since then, and spread over a vast continent of which the States in existence when the seat of government was located formed only the eastern edge; and,

"WHEREAS, The present location of the national capital is notoriously inconvenient in times of peace, and, as the darkest pages of our national history demonstrate, in times of war or domestic turbulence is so dangerously exposed as to require vast armaments and untold millions of money for its especial defense; and,

"WHEREAS, All the reasons which caused the location of the seat of government where it now is have by the enormous development of the country and a corresponding change in the wants of the people become utterly obsolete; therefore,

"Resolved, 1. That it is absurd to suppose that the handful of inhabitants in 1789, just emerging from colonial vassalage, before steamboats, railways, telegraphs, or power-presses were dreamed of, or a mile of turnpike or canal constructed, possessed the authority or desired to exercise the power of fixing the site of the capital forever on the banks of the Potomac, against the will and the interest of the hundreds of millions who might come after them.

"2. That the people have endured the present illy-located capital for three-quarters of a century, patiently waiting for the vast territory of the Union to be peopled and organized into States, and until the centre of population, area, and wealth could be determined, when a permanent place of residence for the government could be selected. That time has now come; all sectional issues are settled, all dangerous domestic variances are disposed of, a new era has been entered upon, and a new departure taken.

"3. That in the language of James Madison, in the Congress of 1789, 'an equal attention to the rights of the community is the basis of republics. If we consider the effects of legislative power on the aggregate community, we must feel equal inducements to look to the centre in order to find the proper seat of government.' This equal attention has not and cannot be given to the interests and rights of the people so long as the capital is located in an obscure corner of the Union.

"4. That the vast and fertile region known as the Mississippi valley must for all time be the seat of empire for this continent and exert the controlling influence in the nation, because it is homogeneous in its interests and too powerful ever to permit the outlying States to sever their connection with the Union. This vast plain will always be the surplus food- and fibre-producing portion of the continent, and the great market for the fine fabrics and tropical productions of other sections of the republic. . . . This immense basin must have numerous outlets and channels of cheap and swift communication by water and rail with the seaboard for the egress of its products and ingress of its exchanges. Therefore whatever policy the government may pursue that tends to multiply, improve, or enlarge

the city's future and its destinies. This has made them calm even to the appearance of apathy, equally in times of high tide and times of low, when prosperity was at its flush and when evil fortune and disaster were being drained down to the very dregs. They have never been in a fever nor in a collapse, because they have always felt secure. A few ex-

these arteries of commerce must result in common advantage to the whole Union, to the seaboard States equally with those of the centre.

"5. That the natural, convenient, and inevitable place for the capital of the republic is in the heart of the valley, where the centre of population, wealth, and power is irresistibly gravitating, where the government, surrounded by numerous millions of brave and Union-loving citizens, would be forever safe against foreign foes or sectional secessions, and where it would neither require armaments nor standing armies for its protection.

"6. That while advocating the removal of the seat of government to the Mississippi valley, we do not mean to serve the interests of any particular locality, but that we urge Congress to appoint a commission for the purpose of selecting a convenient site for the national capital in the great valley of the Mississippi, pledging ourselves to be satisfied with and to abide by the decision to be arrived at by the National Legislature.

"7. That in urging the removal of the national capital from its present inconvenient, out-of-the-way, and exposed location in the far East we are in earnest, and that we shall not cease in our efforts until that end is accomplished, firmly believing that the absolute necessity of the removal will become more apparent every day, and the majority of the American people will not long permit their interests and conveniences to be disregarded.

"8. That the removal of the national capital being only a question of time, we emphatically oppose and condemn all expenditures of money for enlargement of old government buildings and the erection of new ones at the present seat of the national government as a useless and wanton waste of the property of the people."

Mr. Clark, of Kansas, offered the following resolution:

"Resolved, That this convention do recommend and request all congressional nominating conventions in the various States, without distinction of party, to incorporate in their platform a demand for the removal of the national capital to a more central and convenient locality."

Mr. Jones, of Illinois, moved to strike out "without distinction of party." Adopted.

On the suggestion of Mr. Hogan, of Missouri, the following was added to the resolution:

"And that the State Legislatures instruct their senators in Congress to advocate and vote for such a proposition."

Mr. Carr, of Illinois, offered the following resolution:

"Resolved, That a standing committee of one from each State here represented be appointed by this convention, to which the president of this convention shall be added, to act as a permanent committee upon the subject of capital removal, with power to act on behalf of this convention, and to publish an address to the people of this country, with power to call another convention at such time in the future as they may deem expedient and proper."

An executive committee was appointed, of which the chairman of the convention was made president and L. U. Reavis secretary, and after a harmonious interchange of views and a good many speeches the convention adjourned.

amples, taken hap-hazard, will suffice to illustrate this equanimity and this unvarying confidence in their own resources.

From the *Missouri Gazette*, June 20, 1811 :

"We are happy to find that a spirit of enterprise and industry is every day manifesting itself among the people of this Territory. They begin to be convinced that the peltry and fur trade is diminishing in value, and that it is necessary to give up in part the old staple, and turn their attention to the more important one of lead. During the last two weeks several boats have left this place in order to enlarge the mineral establishments made many years ago by Julien Dubuque at a place called the 'Spanish Mines,' on the Mississippi.

"The present adventurers have become the purchasers of a part of these mines under an order of the General Court of this Territory, and have taken with them near one hundred hands, provided with all the implements necessary for mining and carrying on the lead business."

The same, March 1, 1809 :

"The culture of hemp has occupied the attention of our farmers, and a rope-walk will shortly be erected in this town. Thus we have commenced the manufacturing of such articles as will attract thousands of dollars to our Territory ; thus we will progress in freeing John Bull or Jack Ass of the trouble of manufacturing for us."

The same, July 17, 1813 :

"In despite of the savages, Indians and British, this country is progressing in improvements. A red and white lead manufactory has been established in this place by a citizen of Philadelphia by the name of Hartshog. This enterprising citizen has caused extensive works to be erected, to which he has added a handsome brick house in our principal street for retailing merchandise. We understand that his agents here have already sent several thousand dollars' worth of manufactured lead to the Atlantic States."

In 1816 a bank was found to be necessary. The citizens at once subscribed the stock and started one. It fell soon into financial straits. The citizens renewed its capital, doubled it, and started another bank with three times as much capital. The confidence with which J. B. C. Lucas and Auguste Chouteau kept themselves poor, almost penniless, by investing all their money in lands and never selling was matched by the composure of Manuel Lisa in risking all the profits of his fur-trade adventure in a waterfront merchant's mill, an experiment as yet untried. We have elsewhere quoted from Paxton's first St. Louis directory, 1821. In concluding his summary of beings and havings Paxton said, "St. Louis has grown very rapidly. There is not, however, so much improvement going on at this time, owing to the check caused by the general and universal pressure that pervades the country. This state of things can only be temporary here, for it possesses such permanent advantages from its local and geographical situation that it must ere some distant day become a place of great importance, being more central with regard

to the whole territory of the United States than any other considerable town, and uniting the advantage of the three great rivers, Mississippi, Missouri, and Illinois, of the trade of which it is the emporium." In 1831 the press said the same thing. The city was growing rapidly. Fine, substantial houses were being built. The arts and useful manufactures were multiplying and improving ; "mills, breweries, mechanical establishments, all seem to be advancing successfully for the good of the country, and, we hope, for the great profit of our enterprising and industrious fellow-citizens. The trade and navigation of this port are becoming immense. Steamboats are daily arriving and departing from east, west, north, and south, and as this place has decided advantages over all the ports on the Ohio River for laying up and repairing, we have no doubt that in a few years the building and repairing of steam-engines and boats will become one of the most important branches of St. Louis business. We have all the materials, wood and metal, in abundance and of the best quality. Already we have a foundry, which, it is hoped, will soon rival the best in Cincinnati and Pittsburgh, and many skilled and enterprising mechanics. A bright prospect is before us, and we look confidently to the day, and that a not distant one, when no town on the western waters will rank above St. Louis for industry, wealth, and enterprise." In 1835 again : "The prosperity of our city is laid broad and deep. Much as we repudiate the lavish praises which teem from the press, and little as we have heretofore said, we cannot suffer the occasion to pass without a few remarks on the changes which are going on around us. . . . A tract of land was purchased by a gentleman now living, as we have understood, for two barrels of whiskey, which is now worth half a million of dollars. . . . No one who consults the map can fail to perceive the foresight which induced the selection of the site on which the city is founded. She already commands the trade of a larger section of territory, with a few exceptions, than any other city in the Union. With a steamboat navigation more than equal to the whole Atlantic seaboard, with internal improvements projected and in progress, with thousands of immigrants spreading their habitations over the fertile plains which everywhere meet the eye, who can deny that we are fast verging to the time when it will be admitted that this city is the '*Lion of the West.*'"

In 1839, Rev. Dr. Humphrey wrote some "Letters by the Way," in one of which we find St. Louis described and its future once more prognosticated. Says the learned divine,—

"St. Louis is larger than I had supposed, and appears to be advancing more rapidly than any other town that I have seen in the West. The city proper now contains about fifteen thousand inhabitants, and there are nearly as many more without the limits in the immediate neighborhood. Many hundreds of houses were built last year, notwithstanding the pressure of the times, and many more are going up this year. Rents are enormously high, higher than in any eastern city, not excepting New York itself, and I believe higher than anywhere else on the continent of America. For a handsome two-story brick house, with one parlor in front, you would have to pay seven or eight hundred dollars per annum. St. Louis must, from its position, become a very large commercial city, and there is no prospect that any other town on the Mississippi above New Orleans will be able to compete with it. Already the landing, covered with iron and lead and all kinds of heavy goods, reminds you of one of the front streets of New York or Philadelphia. But why don't they build *wharves* here?"

"In the lower and much the oldest part of the town, where the French chiefly reside, the streets are narrow and filthy. The buildings are for the most part small, and constructed with the least possible regard either to elegance or comfort. Hogs and dogs seemed, the morning I passed through it, to have undisputed possession of the ground, and the latter had many a comfortable wallowing-place in front of the houses.

"St. Louis," says the reverend doctor, "like most of our young and rising towns, especially where there are oceans of territory, is without any public parks or promenades. A vacant square, however, was pointed out to me, in the heart of the city, which may be had at a fair price, though it will now cost much more than it was offered for two years ago. Surely nothing should prevent the corporation from purchasing it. Let it be handsomely laid out in graveled walks, and planted with shade-trees and shrubbery, and it would be worth more to St. Louis than if it were all covered over with gold. But even this would be inadequate to the rapid extension and growing wants of the place. It is a bad maxim, 'Let posterity take care of themselves.' Now is the time to secure fifty or a hundred acres for a grand park, as a place of common resort for relaxation, health, and pleasure. This might now be done within two miles of the heart of the city for a small sum. In riding out with a friend I saw three or four fine locations, covered with a thrifty growth of young trees, offering the city the strongest inducements to be beforehand with private purchasers. It would not be necessary to lay out a dollar in preparing and ornamenting the grounds for the present. But I repeat it, at the hazard of being set down as an enthusiast in matters of this sort, the purchase ought forthwith be made, and whatever the present generation of utilitarians may think, I pledge the little credit I have for forecast that a hundred years hence St. Louis will be prouder of her great park than of any thing else she will have to boast of."

What would the learned gentleman say to-day if he could visit St. Louis, and learn that the city has well-nigh on to an acre of park for each head of a family? Dr. Humphrey adds,—

"As a proof of the rapid increase of business and population in St. Louis, I may mention that one of the largest hotels I have ever seen is now going up. It appears to me to be quite as large as the Astor House in New York, and although it will cost a very large sum, I believe everybody regards it as a good investment. Certainly such a 'strangers' home' in this great thoroughfare of western travel will be highly appreciated by thousands. But where is St. Louis, in the west or the east or somewhere near the centre of the United States? I confess

I do not know. But my impression is that, making an allowance of one or two thousand miles, which cannot be of much consequence one way or the other, St. Louis will be found somewhere in the great West.

"Let St. Louis go on and lay all her foundations broad and deep. She has most unquestionably a high destiny before her, and who can tell how much the present generation may do in making it?"

In 1846 the *St. Louis Prices Current* thus estimated the general progress of the community:

"St. Louis seems to continue to be a favorite point for the location of the merchant, the tradesman, and others who, having left the home of their fathers, resolve to settle at some point in the 'Great West,' if we may judge from the great influx of inhabitants which pour into it and fix their residence here from year to year. The official statistics, in part reported to the City Council during the past year, warrant us in saying that the number of houses, factories, etc., which have been erected during the past year within the corporate limits is not less than seventeen hundred, and that its population has augmented full four thousand. We estimate its present population to exceed forty thousand, and augmenting with a rapidity unexampled in the annals of any city either east or west; and its trade and commerce keep pace with its influx of population, as will be shown by some few statistics annexed.

"The assumed value of real estate the past year is more than thirteen million dollars, being an increase over the value in 1830 of more than twelve millions; and the current city revenue of 1845 is estimated, per official data, at two hundred and twenty-seven thousand dollars, twenty thousand of which are received from our steamboat tonnage, and seventeen thousand from water revenues. These are some data on which the reflecting mind may estimate our progress and prosperity.

"During the past year the mercantile and trading interests have had no cause to complain. The merchant has found ready sale for his goods, the tradesman and mechanic have been fully employed, and the laboring classes who were not indisposed to work have had the opportunity to lay up ample stores to serve them during the inclement season now upon us. Our city has enjoyed during the past year its usual health, and while we acknowledge our dependence upon the Author of all our blessings, we should not be unmindful of the debt of gratitude we owe to Him from whom cometh every blessing."

In 1848 it was said that "the natural advantages of St. Louis, in a commercial and manufacturing point of view, are greater than those of any city in the West; and it is only necessary for the general government to pursue a liberal and equitable course towards her, and for her citizens to strengthen these advantages by their enterprise and public spirit, to make her (and that, too, in a very short time) the largest and most important inland city in the Union. Her immense resources are being daily developed and turned to advantage; her population and business are increasing beyond a precedent in the history of this country; her wealth and prosperity are exciting wonder and admiration, and commanding respect and attention from every portion of the United States, and wherever else her commerce and name has extended. Situated as she is, on the great Mississippi, in the centre of a fertile and healthy region of country, with the waters of four navigable streams sweeping her shores, and bearing the mineral and agricultural products of four large and populous States, which must necessarily pass through the hands of her merchants, in direct communication with all the important towns and cities in the West, enjoying also manufacturing facilities of the highest order, and holding in her natural grasp the commercial operations of several millions

of people,—these are resources of which but few cities in the Union, or perhaps in the world, can boast.

“Our city is rapidly improving in wealth and importance, even beyond the expectations of the most sanguine. Manufactories and machine-shops are daily springing up in our midst, and many articles hitherto imported for domestic purposes have now become important items of export. The value and quantity of manufactured articles annually imported from the Ohio are rapidly diminishing, and we look forward with a great degree of certainty to the time, and that at no very distant day, when St. Louis will not only prove the great commercial emporium of the Mississippi valley, but also the machine-shop of the entire West. Her facilities for the manufacture of many imported articles are even now greater than the cities from whence they come, and it is only necessary for our manufacturing resources to be properly developed to bring capitalists and mechanics hither, where their money and labor can be employed with certainty and profit.

“In 1840, with the exception of several flouring- and saw-mills of inconsiderable note, we were entirely destitute of manufactories, and even at a later date our establishments in this respect were scarcely worthy of attention. Since, however, cotton, woolen, soap, candle, starch, and various other manufactories have sprung into existence, and are now driving a lucrative and extensive business, to say nothing of the foundries (about eighteen in number), flouring-mills, machine-shops, etc., with which the city abounds. Our population in 1830 was estimated at six thousand six hundred and ninety-four, in 1840 at sixteen thousand four hundred and sixty-nine, and by the late State census at fifty-six thousand, showing that it has more than trebled in eight years.”

In 1849, the year of cholera and fire and financial depression, the voice of trade was as follows :

“We have repeatedly spoken of the great manufacturing and commercial facilities of St. Louis, and notwithstanding the misfortunes and afflictions of the past season, all that has been said of her wealth and constantly increasing commerce is being daily confirmed. Not a year passes but we are called upon to note new discoveries of mineral deposits, the increase or extension of manufactures, or marked changes in her extensive intercourse with different portions of the country; and by means of a wide-spread navigation, distant points, hitherto inaccessible, are being brought within the boundaries of her trade, and new commodities, either for consumption or export, are constantly arriving at her wharf. Her manufacturing interests, too, are not neglected, and there is a steady and uninterrupted increase of mills, foundries, machine-shops, and various minor mechanical works, for the consumption of coal, iron, lead, grain, etc., which bid fair to become permanent and profitable investments. As a commercial city, St. Louis ranks second in the West,—a distinction attained within the past ten years,—and if her progress is onward, as is generally conceded, ten years more will scarcely transpire before, in many of the most important branches of commerce and manufactures, she will be classed as the first. With a population of seventy thousand, she has continued to increase in strength and improve in size down to the present period, and in commencing the last half of the present century it may not be thought visionary to predict that before it expires she will be in direct communication with the lakes, the Eastern seaboard, and the Pacific, and thus become the central depot for the vast commerce of the two hemispheres.”

In 1858, upon occasion of the establishment of the overland mail to California, we read the following in the current news notes of the day :

“*Arrival of the Overland Mail.*—What has hitherto been regarded as a visionary and speculative enterprise has been established beyond all doubt, and St. Louis and San Francisco have been brought within twenty-four days’ travel of each other, on a stage line, and a route which will admit of easier and safer travel than did the trip from St. Louis to Philadelphia thirty years ago.

“When the Atlantic cable was laid it was hoped that daily communication had thus been established between Europe and America. In our opinion a greater enterprise has been accomplished in the establishment of an overland mail connecting the Atlantic with the Pacific, passing over our own soil, and affording a semi-weekly, soon to be converted into a daily, communication between the extremes of the republic. Nine years ago, when the discovery of gold in California led to the immense emigration to that State, it was regarded as an expeditious trip if made from the Mississippi to the Pacific in eighty to one hundred days. Thousands were occupied a much longer time, and hundreds perished by the wayside. The establishment of this mail route, and of the route from St. Joseph to Utah, and thence to Sacramento, has changed the whole current of things; and it is now demonstrated, on a first trial and under adverse circumstances, that it is practicable to carry the mail to San Francisco in twenty-four days, and this will be reduced, if necessary, below twenty days.”

In 1854 the city’s condition and prospects were described as follows :

“Here stands a city, enjoying far beyond any other city of the same magnitude or pretensions the advantages of that inland navigation, compared with which even our vast foreign commerce is sinking into insignificance. It has five thousand miles of that navigation belonging peculiarly to its own waters, with ten thousand miles of coast, yielding up the products of an immense and fertile region, for which it furnishes a thousand outlets. To these may be added the forty thousand miles more of navigable rivers which connect with St. Louis. Soon the vast means of communication furnished in this way to our city will be enlarged by the completion of twelve hundred miles of railroad already begun or projected within the borders of the State, and connected with a network of similar roads stretching to every point of the Union, in one direction to the Gulf of Mexico, in another to the head-waters of the Mississippi, and in a third to Labrador in the far east and to San Francisco in the far west. Through her gates will pour the commerce of the Pacific, of India, and of the isles of the ocean on the one hand, and the commerce of the Atlantic and of Europe on the other. Stripping from her all which may be considered as accidental or adventitious,—all of which jealous and more fortunate rivals may by possibility deprive her,—still she is left the commercial centre, the natural mart of seven hundred thousand square miles of territory, full of mineral and agricultural resources, and capable of sustaining in vigorous life a population of a hundred millions. . . . What shall forbid an accumulation here of inhabitants beyond anything of which we have authentic records, millions upon millions, until there shall have sprung up here a city containing hundreds of square miles, with an area even then affording but reasonable accommodations for the vast multitudes collected within it,—a city with quays and warehouses stretching interminably in lines which, still unbroken, fade out of sight in the dim distance? Of course, such visions relate to the future; but that future, midst the growth of such a nation as ours, cannot be long postponed. Meanwhile the present generation will witness a progress with which it may well be content. That progress, it is true, will depend much upon the

enterprise and energies of our citizens. We are fully aware of this truth, while we repeat the expressions of our confidence in that progress. For we fully rely on it that its citizens will be true to their city and themselves, alike the thousands who are now here and the hundreds of thousands still to come hither. That may be no idle dream which conceives for St. Louis the most exalted destiny, which, with a just, propetic forecast, transforms the humble hamlet of Laclède into the future metropolis of the New World."

In 1857 one of the "manifest destiny" writers of St. Louis (the greater part of them are of that order) wrote as follows:

"This city is beginning to receive the attention from abroad which her rapid growth, her extraordinary natural advantages, and her *approaching destiny* demand.

"Her present commercial importance, which is unsurpassed by any city in the valley of the Mississippi, is derived from river navigation alone; and her commerce from this source is drawn from the most extensive and the richest agricultural and mineral region in the world, scarcely one-tenth of whose wealth and latent resources are yet developed.

"There is nothing problematical therefore in this statement, the geographical fact speaks for itself. The commerce of St. Louis will be increased ten times its magnitude in less than twenty-five years from the one source which has made her now all that she is, *from river navigation alone*.

"To this advantage of river navigation, which is unequaled by any city in the world, and which must ever continue to be her most important and cherished source of wealth, is now being superadded that of railroad facilities. The commercial importance given to St. Louis by her river navigation will eventually insure to her an equal supremacy as the emporium of railroad intercommunication. The great lines of railway from the Atlantic border are all pointing to this city as a common centre, and she is sending out and receiving branches from the rich agricultural and mineral regions of the 'Great West.'

"St. Louis, from her unrivaled facilities for trade and manufactures, will occupy in the Mississippi valley as decided a pre-eminence in commercial importance as the city of New York now commands on the Atlantic seaboard. The main current of trade on this continent must forever set in the direction of east and west. St. Louis is the heart of this great current, while commanding a controlling point on the grand highway of commerce between the upper Mississippi and the great lakes and the Gulf of Mexico. She is in the latitude of thirty-eight and

a half, the most beautiful climate of the temperate zone, and her navigable waters are open to the commerce of the world during many weeks, and not unfrequently months, while more northern marts are bound in fetters of ice.

"To her well-known and pre-eminent advantages as the centre of commerce for the Mississippi valley, which is forever assured by geographical position, St. Louis is the emporium of one of the best agricultural and mineral regions in the world, which immediately surrounds her. Southern and Central Illinois and the rich mineral region of Missouri pour their undivided wealth of trade upon this city.

"There are other cities in the Mississippi valley which are distinguished by a commanding position for extended and lucrative commerce, and by the indomitable energy and admirable enterprise of their inhabitants. St. Louis, from her central position and extraordinary facilities of approach, is especially aided and strengthened by the prosperity of each one and all of these cities, while imparting to them a reciprocal benefit in the general increase of commercial facilities."

Yet, in 1881, Mr. Nimmo, of the Bureau of Statistics, while fully admitting the transcendent past, present, and future importance of the river navigation to the trade of St. Louis, could show that the railroads, for the time being at least, had carried off nine-tenths of this vaunted inalienable possession, the river trade. Note his figures: "A radical change," he remarks, "has taken place in the conditions governing the movements of commerce at St. Louis. Twenty-five years ago that commerce was almost exclusively confined to the Mississippi River and its tributaries, but at the present time railroads extend from the city in all directions. Each one of these railroads has become an important avenue of commerce." In proof of this, we find that of the total tonnage transferred during 1880 there was moved by river 1,981,385 tons; moved by rail, 8,852,204 tons.

These facts, as Mr. Nimmo truly says, indicate that the commerce of St. Louis has largely accommodated itself to the facilities afforded by railroad transportation. This he shows by the following table:

TONS OF FREIGHT received at St. Louis from the north, and of freight shipped from that city to the north, by river and by rail, from 1871 to 1880, inclusive.

CALENDAR YEAR.	RECEIVED.		SHIPPED.		TOTAL RECEIPTS AND SHIPMENTS.		TOTAL.
	By River.	By Rail.	By River.	By Rail.	By River.	By Rail.

1879.....	221,285	224,336	66,990	65,770	288,275	290,106	578,381
1880.....	226,095	378,078	55,260	102,543	281,355	480,621	761,976

It appears that the tonnage to and from the north by river fell from 315,854 tons in 1871 to 281,355 tons in 1880, and that the tonnage by rail increased from 75,668 in 1871 to 480,621 tons in 1880. The

river traffic constituted about 37 per cent. of the total northern traffic during the year 1880.

The following table illustrates the point still further:

TONS OF FREIGHT received at St. Louis from the south, and of freight shipped from that city to the south, by river and by rail, from 1871 to 1880, inclusive.

CALENDAR YEAR.	RECEIVED.		SHIPPED.		TOTAL RECEIPTS AND SHIPMENTS.		TOTAL.
	By River.	By Rail.	By River.	By Rail.	By River.	By Rail.	
	Tons.	Tons.	Tons.	Tons.	Tons.	Tons.	Tons.
1871.....	327,262	782,539	523,505	172,026	850,767	954,565	1,805,332
1872.....	308,480	1,083,600	578,596	257,493	887,076	1,341,093	2,228,169
1873.....	232,460	1,107,228	562,125	275,998	794,585	1,333,226	2,177,811
1874.....	176,120	1,020,414	476,735	291,084	652,855	1,311,498	1,964,353
1875.....	134,465	1,237,205	370,275	368,357	504,740	1,605,562	2,110,302
1876.....	159,485	1,151,049	383,485	313,092	542,970	1,464,141	2,007,111
1877.....	161,870	1,177,779	427,400	371,402	589,270	1,549,181	2,138,451
1878.....	187,910	1,102,696	434,490	397,528	622,400	1,500,124	2,122,624
1879.....	293,480	1,455,792	499,040	496,306	692,520	1,952,098	2,644,618
1880.....	238,940	1,614,637	820,555	671,661	1,059,495	2,236,298	3,345,793

And the summary completes the illustration and emphasizes it :

ACTUAL TONNAGE OF ALL CLASSES OF FREIGHT SHIPPED FROM ST. LOUIS DURING THE YEARS 1878, 1879, AND 1880. SHIPPED BY RAIL.

	1878.		1879.		1880.	
	Tons.	Per Cent. of Total.	Tons.	Per Cent. of Total.	Tons.	Per Cent. of Total.

And yet the river is ten times more valuable and more important to the trade of St. Louis, and especially to the city's position as a trade centre, than it was in 1857. It is needless to pursue this branch of the subject any further. The people of St. Louis have a

perfect confidence in their resources and in their ability to develop them. As they contend, in speaking of their ability to utilize their stores of fuel, for example : The output of coal in England to-day will load a railroad train sixty miles long. The coal basins of

the British Isles, when compared to the basins of this valley, are as one to twenty, or even fifty. The output here daily in the coming times will be simply enormous. The same remarks apply to the iron mountains and iron fields, lead, zinc, and copper fields. They are as fifty to one, compared to the mineral fields of the British Isles. The agricultural resources of this basin hold the same position. The railroad system of the British Isles has about reached its culminating point, as have all the developments of the mineral and agricultural resources of the island.

England has heretofore manufactured all the hardware and heavy goods for the nations of the world. Now, as these people will be large consumers in the future, and the great supplies of raw material, as cotton, iron, lead, zinc, copper, and other elements, are in this basin, it does not require the vision of a prophet to foresee that in the coming times the iron industries, tanneries, potteries, smelting-works, and a hundred other industries will grow up here and supply these foreign markets, and that St. Louis will be the importing, exporting, wholesale mart, general distributing point, and railroad centre of this great valley of the Mississippi, or basin of the continent.

And they meet the suspicion of indifference and lack of energy in this wise, to quote from a St. Louis newspaper of the day after Christmas, 1878,—

"Are St. Louis men unprogressive? Some of our contemporaries out West are disposed to 'poke fun' at St. Louis because of the apparently unprogressive and unenterprising character of those who are rulers in her marts of trade and banks. Well, perhaps it is a truth that St. Louis is provokingly slow, but it would be well to remember that St. Louis is exceedingly sure, that she does not act for to-day only, but for all time. The truth is St. Louis is a very solid city, that the actual financial condition of her business men is a little too good for a very aggressive campaign for traffic. We do not say that the city is in danger of permanent injury from the too prosperous condition of her citizens engaged in the business of merchandising, manufacturing, banking, building, and other industries. St. Louis is a conservative city, that we readily admit, but the conservatism of our citizens does not lead them to neglect the great interests which centre here, and which have thus far led to a great and substantial development. It is true, and we readily admit it, that the rather ultra-conservatism which prevails here sometimes delays the consummation of designs necessary to the continued prosperity of the city, and, to the extent of such delays, retards and injures its commerce. But the good people of St. Louis are neither blind nor destitute of ordinary intelligence. They know their interests, and will be very certain to guard them with jealous care."

We have spoken of the population of St. Louis, and the people and natives who compose it, more than once in the course of these volumes, but the subject will admit of further discussion. The figures of the census representing the city's growth have been given above, but a word or two of explanation is needed to

make them clear in their full exponential value. The returns of the census of 1880 were a source of disappointment approaching dismay. But this was because the census of 1870 was a fraud and delusion. This fact is now conceded upon all hands, and indeed has been conclusively demonstrated. There is no reason to doubt or question the substantial fidelity of the census of 1880. As Mr. Charles W. Knapp says, in the paper elsewhere quoted,—

"Look where you may for disproof of the census figures, you will find nothing to indicate St. Louis had much more than the 350,000 the census gives it. Inquire of the postal business and you will find that the Chicago office collected 9,000,000 pounds of mail matter and sold \$1,114,000 worth of stamps, while the St. Louis figures were only 4,250,000 pounds of mail matter and \$600,000 worth of stamps in the year ending with June, 1880. Count the names in the Chicago directory of 1880 and you will find 170,388, while the St. Louis directory had only 120,517. The Chicago directory contained 33.87 per cent. of its whole population, and the St. Louis directory would indicate, according to that percentage, a population of 355,822 for this city. Come nearer to the present and you will find that a school census taken in Chicago last July showed a population of 562,693, while the directory of this year shows 192,567 names, or 33.78 of the whole number reported by the school census, while the St. Louis directory contains only 139,151 names, indicating a population of 412,000 on the basis of the Chicago percentage. Doubtless this is a larger population than Boston can show, but it is not enough to advance St. Louis above the fifth place, nor are there any other collateral statistics that can be depended on which indicate that the Chicago figures are too high or the St. Louis too low. The relative number of pupils enrolled in the public schools of the two cities may seem to indicate a small difference in population, when it is found that the enrollment reported in Chicago in June, 1880, was 59,562, or 11.84 per cent. of its reported population, while the St. Louis enrollment was 51,241, which, on the basis of the Chicago percentage, would indicate a population of 431,934 for St. Louis. I warn you that only the most short-lived joy is to be got of such a calculation, however, for in June, 1882, Chicago had 68,266, or 12.21 per cent. of the population reported by the school census, while St. Louis had only 53,050, indicating only 437,320 population on the Chicago basis. It is so absurd to say that St. Louis has only increased 5886 in the past two years that you must see there are reasons why the school statistics are unavailable as an index to population. I was told at the office of the superintendent of schools that there is really no class of statistics more inaccurate, because of the manifest carelessness of the principals in their preparation, while, aside from that fact, the adequacy of the school accommodation influences the school enrollment even more than the increase of population, which cannot swell the school attendance if the schools are already filled to their full capacity. It is of no avail, therefore, to appeal to the school statistics to impeach the census, and we must let the figures of 1880 stand."

In spite, however, of the fact that St. Louis falls one hundred and fifty-three thousand below Chicago in population, and still more in manufactures and some branches of trade, as pork-packing and grain shipments, St. Louis shows more wealth, by nearly ninety millions of dollars, than the rival

city. This may be, and is in great part, from lower assessments, but that lower assessment simply means that people in St. Louis own their property while Chicago is owned by money-lenders in New York, Boston, and elsewhere in the East, who have mortgages upon all the land and improvements, railroads, mills, stocks, and bonds in Chicago, and get their percentage out of every man's earnings and income. St. Louis, moreover, is a larger produce market than Chicago, as the following table shows:

MONEY VALUE OF PRODUCE RECEIPTS, 1881.

	Chicago.	St. Louis.
Flour.....	\$4,780,285	\$9,412,800
Wheat.....	13,669,903	15,230,106
Corn.....	30,732,449	10,629,655
Oats.....	5,780,597	2,527,020
Rye.....	837,779	469,769
Barley.....	4,244,893	2,411,723
Cotton.....		20,000,000
Tobacco.....		3,000,000
Hay.....	1,000,000	1,600,000
Potatoes.....	1,900,000	1,100,000
Total.....	\$62,945,886	\$66,381,073

It is the largest wheat market in the country, and the largest flour market in the world. It is, moreover, as already shown, the largest interior cotton market in the country. These are consolations for the less accelerated growth of population; but, the fraud of 1870 eliminated, Mr. Knapp believes St. Louis to have grown more rapidly during the past decade than ever before. Thus, while St. Louis in 1800 had 957 people, in 1820 only 4598, in 1830 5852, the range with Chicago from that time forward was as follows:

	1840.	1850.	1860.	1870.	1880.
St. Louis.....	16,469	77,860	160,773	213,301	350,522
Chicago.....	4,479	29,963	109,260	293,977	503,053

(The population in 1870 is reduced 100,000 below census figures.)

On this basis the relative percentages of growth were as follows:

	Chicago.	St. Louis.	Difference.
1840 to 1850.....	569.00	373.00	196.00
1850 to 1860.....	261.00	106.00	155.00
1860 to 1870.....	173.00	32.67	140.33
1870 to 1880.....	68.61	66.82	1.79
1880 to 1882.....	11.85	18.81	6.96

In other words, it took the population of St. Louis ten years to recover from the effects of the civil war, during all which period Chicago was expanding and developing with acceleration. Nevertheless, St. Louis has entirely recovered from that period of *bouleversement* as respects population, and in another decade will have completely recovered as respects industrial growth and development of transportation facilities.

Mr. Knapp, however, who is as frank and candid in his statements as he is keen and searching in his analyses, warns his fellow-citizens that there are still some hindrances to progress, which must be removed

if they desire to see the city of their hopes grow and expand vigorously and equably. Prices are too high, he says.

"It is the same unvarying story, from the bootblacks and newsboys up to the merchant princes and millionaire bankers. We are overloaded with high taxes, high money, high freights, and high labor. Rents are higher, food is higher, clothing is higher, and even fuel is higher than in either Chicago or Cincinnati, and so handicapped we cannot make a fair race. I know your eyes are tired of figures, but pardon me just once more, for I think in the following table there is the suggestion of one of the first of the dead weights we must strive to remove.

"Tax rate on \$100 of assessed valuation, all taxes aggregated."

Boston.....	\$1.51	New York.....	\$2.47½
Brooklyn.....	2.57½	Philadelphia.....	1.90
Chicago.....	6.48	St. Louis.....	2.58"
Cincinnati.....	2.22		

Interest rates are too high also, he says, higher than in any other city of the first class; and where interest is high, either the security is not good or money is not plenty.

"High freights we must also make war against, and the railways be forced to remove the onerous and unjust bridge arbitrary charge, which, ranging from two to five cents per one hundred pounds, adds fifty-five to one hundred and twenty-nine miles to the actual mileage distance of St. Louis from eastern points. It may be we shall get relief from this only when a new bridge is built, but that may come at no distant day, for the Indiana, Bloomington and Western Railway, which is now locating an extension line to St. Louis, has under contemplation the construction of a bridge at Chain of Rocks, with a view to making its terminus on this side of the river, and billing freight to and from St. Louis, instead of East St. Louis, as all the other roads do. There is equally as much need for competition on the river; the barge rates especially having been maintained during the past summer at a mark which made the river route steadily more expensive than the lake and canal route from Chicago.

"I must stop here," says Mr. Knapp, in conclusion, "for, though I have named but a few of the forces operating to retard and limit the city's growth, these are fair examples. Such hindering obstructions as we may not hope to remove are, after all, of the kind that all other cities find in their way; and we must remember that the struggle for commercial supremacy is always a hot contest, in which victory belongs where energy and enterprise are most vigorously developed, so we need not despond because we cannot find an exclusive and easy path to metropolitan greatness devoted to our sole use. All progress is a battle with adverse influences, and we have the encouragement of past successes to persevere, bearing constantly in mind that the struggle will cease only when progress ends. Let, therefore, no faint-hearted yearnings for peace and quiet tempt us from the strife, but let us build up a sensible self-respect, encourage reasonable and intelligent confidence in our future, and stimulate a bold and aggressive policy, forcing competition at every point, with a fearless determination to grasp all that is possible. Remember that we have one great advantage in that there is no rival market as near to St. Louis as there is to every other leading city,—Milwaukee sitting almost in the doorway of Chicago, and Louisville in the back yard of Cincinnati, while New York, Philadelphia, Brooklyn, and Baltimore crowd under each other's noses. Chance having thus kindly seconded the favors of nature in our geographical situation, we have a better opportunity to combat the opposing

forces than most other cities, and it is only for us to make the most of it, to keep a sleepless watch ahead, and attack with united earnestness every impediment rising in the city's path."

The Growth and Population of St. Louis.—This history of St. Louis has been written in vain if the readers do not rise from its perusal firm in the conviction that the population of the city is stronger in character, energy, and social and civic virtues of every sort than it is in numbers. This point has been clearly and beautifully illustrated by Col. George E. Leighton, in his recent annual address as president of the Missouri Historical Society,—the address being a plea for more earnest support for the society and greater attention to and veneration for the memories and records of the men who founded St. Louis. A philosophical history of the place, he said, was needed :

"It is a work yet to do, to analyze the operating causes of our development. How the French trading post became the village; why the settlement of Laclède at St. Louis was more prosperous than that of Blanchette Chasseur at St. Charles, of Beausier Dunegant at Florissant, or that of Delor de Tregette at Carondelet, or that of George Morgan at New Madrid; how the village was socially and politically affected by the successive dominion of France, Spain, and the United States, or by the personal influence of the successive Governors of Upper Louisiana; how the first couriers from the Eastern States, like Easton and Bent and Clark, weak in numbers but strong in individuality, sowed the seeds of American manners and methods, and awakened the spirit of commercial life; how the succeeding emigration from the States, of which Benton, Hempstead, Barton, Riddick, Bates, and Charless were the representatives, impressed its social and political character; how the later emigration from New England, with its exalted appreciation of the value of educational and associated benevolent work, affected its development; how the German emigration, following the revolutionary movement of 1848, full of grand ideas of political and religious freedom, impressed its influence upon it; how this city affected and was affected by the civil war; the history of the development of our public works; the effect of the institution of slavery on the growth and development of the city, and many others which might be stated, are questions for exhaustive study, not to be solved by the mere compilation of commercial and manufacturing statistics or the mere narrative of concrete events.

"The colonists were represented by such names as the Chouteaus, Gratiots, Soularis, Vallés, Sarpy, Chenies; later, the Morrisons, who came from the French settlements; still later Irish enterprise was represented by the Mullanphys, Rankens, Dillon, the Campbells, the Walshes, Whittaker; Scotch thrift by McKenzie and Nicholson; German intelligence and mercantile sagacity by Palm, Kayser, Barth, Kim, Steitz, Angelrodt, Anheuser, Lemp; the Southern States by Benton, Gamble, Geyer, Polk, Charless, the Blows, Kennetts, and Blairs, Harrison, Lucas, Beverly, Allen, Hunt, McPherson, the Carrs, Von Phuls, Chambers, Paschal, Farrar; the Northern States by Bent, Easton, Carr Lane, Filley, Smith, Cavender, Rhodes, Blood, Field, Spaulding, Collier, Bridge, Dickson, Gale, Davis, the Lindells, Ames, Thomas Allen.

"Other names will readily occur to you, and if it were proper to allude to living men, the list could be indefinitely extended. Some men count for nothing in human progress; some men count for one, some for ten, some for one hundred. There will

be no dissent when I say that each of those I have named, and many others that could be named, counted for more than one in the forces which mark the progress and development of our commercial, industrial, and intellectual interests. Is it to be said of us that we will allow the record made by these men to pass into oblivion as those who knew them pass away? An hundred men fill their places to-day,—themselves to pass, by the same neglect, into the same oblivion. Is it of no importance to us that some permanent record should be made of their place in our local history? It is no record of such men that they lived and died. Municipal history, or State history, or national history is in its last analysis but the record of the men who have conceived and executed projects that lift the city, or State, or nation over the years and push it forward in the march of civilization."

All this is profoundly true, and it is the sort of truth which we should welcome, for it bears fruit when we act upon it as a guiding principle. Men are the authors of institutions, and these again reflect men. Growth, decay, birth, death, prosperity, and decline of cities, all are summed up in the character and qualities of the men who inhabit countries and the institutions they construct. St. Louis, Chicago, New York, San Francisco, all were inhabited by other races before the white man came to occupy them. But scarcely a trace remains of that former inhabitancy. Nature and natural forces were the same, climate and advantages of site were the same, man only was different. We must not forget this when we hasten to ascribe all things to nature, and are willing to leave all things with nature.

The population of St. Louis, as has been shown elsewhere, has always been curiously mixed. In 1800, French was the predominant, Spanish the official language, and French was still the common speech in 1818. In 1883, German is taught in all the schools alongside English, and in some quarters of the city it is the most familiar tongue and the one heard most often.

The following are the first American censuses of St. Louis :

1810. *Third United States Census, Missouri Territory.*—District of St. Charles, 3505; St. Louis, 5667; Ste. Genevieve, 4620; Cape Girardeau, 3888; New Madrid, 2103; Hope and St. Francis, 188; Arkansas, 874; total in Territory, 20,845.

1815. *December 9th, by John W. Thompson, Sheriff.*—Town of St. Louis, 2000; whole county, 7395; gain in two years, 1200.

1820. *August 1st, United States Census.*—Town, about 4000; whole county, 9732.

White male population in Missouri as reported to the Governor under the acts of Assembly of Jan. 18, 1814, and Feb. 1, 1817; also showing number of votes taken for members of the State Convention from the counties from which returns were received in May, 1820 :

COUNTIES.	Number of Free White Males in 1814.	Free White Males in 1817.	Free White Males in 1820.	Number of Votes for Members of Convention in May, 1820.
New Madrid.....	1548	669	No return.	314
Cape Girardeau.....	2062	2593	No return.	837
Ste. Genevieve.....	1701	2205	No return.
Washington.....	1010	1245	No return.	453
St. Louis.....	3149	4725
St. Charles.....	1696	2866	1664	628
Howard.....	3386	3862	1735
Cooper.....	2688	796
Montgomery.....	1090	359
Lincoln.....	772	248
Pike.....	1229	492
Jefferson.....	265
Franklin.....	1227
Madison.....	674
Wayne.....
Lawrence.....	1529
Arkansas.....	827

Of the character of the immigration about this period, the *Missouri Gazette* remarks under date of Oct. 26, 1816,—

“ Missouri and Illinois exhibit an interesting spectacle at this time. A stranger to witness the scene would imagine that Virginia, Kentucky, Tennessee, and the Carolinas had made an agreement to introduce us as soon as possible to the bosom of the American family. Every ferry on the river is daily occupied in passing families, carriages, wagons, negroes, carts, etc. Respectable people, apparently able to purchase large tracts of land, come on. We have millions of acres to occupy, provisions are cheap and in abundance.”

In 1819 the Irish were strong enough in St. Louis to meet in October of that year, organize a Hibernian or Erin Benevolent Society, and make arrangements for celebrating the next St. Patrick's day. The organization of that society was as follows: Jeremiah Connor, president; Thomas Hanly, vice-president; Hugh Rankin, treasurer; Lawrence Ryan, secretary; Robert H. Catherwood, Thomas English, Hugh O'Neal, Joseph Charless, Sr., and Thomas Forsythe, standing committee.

In 1828 there was another State census, with the results stated below, as given in a contemporary account:

“ According to the returns made to the secretary's office by the sheriffs of the different counties, the whole number of inhabitants in the State on the 1st of November amounted to one hundred and twelve thousand four hundred and nine. Under the next general census, even should the ratio of representation be increased to sixty thousand, the State will then be entitled to two representatives in Congress. We give below the aggregate number in each county of the State:

Jefferson.....	2,367	Franklin.....	2,852
Madison.....	2,276	Marion.....	2,409
Saline.....	1,659	St. François.....	2,030
St. Charles.....	3,514	Howard.....	9,730

Cooper.....	5,744	Ste. Genevieve.....	1,705
Boone.....	7,890	Washington.....	6,236
Wayne.....	3,009	Cole.....	2,478
Cape Girardeau.....	6,507	Galloway.....	4,517

 ----- 2,234

In St. Ferdinand township,—
 Free white males..... 1,024
 Free white females..... 919
 Slaves, persons of color, etc..... 496
 ----- 2,439

Total..... 11,880

A newspaper of that day, commenting upon the rate of growth exhibited by the above figures, said,—

“ After the cession of Louisiana to the United States, that part of the ceded territory north of the Missouri River was designated and known as the St. Charles district. This appellation it retained for several years, the body of country now the most flourishing part of the State forming but one county. Among the papers of the sheriff of 1805 is found a census of the inhabitants of the county, taken in that year, from which it appears that the total number then in that district was fifteen hundred and sixty-four whites, fourteen slaves, and seven free blacks. We have had the curiosity to contrast this census with that taken in 1828, and find that the same district of country now embraces seventeen counties, and is inhabited by a population of near seventy thousand persons.”

In 1836 the sheriff took a county census, and the population returned was,—

St. Louis City and suburbs.....	10,486	Maramec township.....	692
Bonhomme township....	2,271	Carondelet township.....	1,854
St. Ferdinand township	3,139	St. Louis township.....	1,127

The preliminary report upon the census of 1840 was the following:

“ GRAVOIS, ST. LOUIS Co., Oct. 30, 1840.

“ A. B. CHAMBERS, Esq.:

“ Dear Sir,—Agreeable to request, I herewith furnish you with a copy of schedule of mines, agriculture, commerce, manufactures, etc., exhibiting a full view of the pursuits, industry, and resources of the county of St. Louis, excluding the city and township of St. Louis, taken by me for the United States, as deputy, under the marshal of the Missouri district. I found but little difficulty in exacting answers to the many inquiries enjoined upon me by law to propound during the course of my avocations. You may, therefore, depend upon this statement being as near correct as was in my power to arrive at.

"The population of the county, excluding the city of St. Louis and township, is 11,380.

Value of the products of the dairy.....	\$12,283
" " " orchard.....	18,465
" home-made or family goods.....	13,495
" produce of market gardeners.....	20,331
" " " nurseries and florists.....	2,025

LIVE-STOCK.

Number of horses and mules.....	3,740
" " neat cattle.....	13,193
" " sheep.....	8,478
" " swine.....	22,649
Estimated value of other property of all kinds.....	\$11,233

GRAIN.

Number of bushels of wheat.....	58,677
" " " barley.....	1,865
" " " oats.....	91,956
" " " rye.....	5,638
" " " buckwheat.....	1,908
" " " Indian corn.....	451,144

VARIOUS CROPS.

Pounds of wool.....	8,651
" " hops.....	435
" " wax.....	1,758
Bushels of potatoes.....	81,310
Tons of hay.....	4,147
" " hemp and flax.....	9,905
Pounds of tobacco gathered.....	197,045
The number of bushels of bituminous coal raised is 233,000, capital invested.....	\$11,600
There are four tanneries, capital invested.....	2,500
Thirteen grist- and seven saw-mills, capital.....	12,050
Three distilleries.	

"Respectfully,
 "Your obedient servant,
 "JOHN C. DENT."

These figures caused some dissatisfaction, and led to the following in a contemporary journal:

"There are many causes that retard the growth and prosperity of towns and cities which might be removed by the judicious management of its citizens. One great barrier to the rapid growth of St. Louis and many other towns is the fact that many fine squares and lots of ground lie unimproved and unproductive. By reason of this much of the real capital of our citizens lies dead, and contributes nothing to the general prosperity of the community. Within the corporate limits of St. Louis there are unimproved lots and squares worth several millions of dollars, and which would sell for that money. This is so much dead capital, so far as the business of the community is concerned."

In 1845 another census was taken by the assessors of the wards. From this census it appears that the total number of inhabitants fell a fraction short of thirty-six thousand, divided among the several wards as follows:

First Ward.....	6,900	Fifth Ward.....	6,260
Second Ward.....	6,566	Sixth Ward.....	6,200
Third Ward.....	4,683		
Fourth Ward.....	5,321		35,930

It was about this time that James Gordon Bennett, in the flippant vein which he so much affected, and which he seems to have mistaken for wit, wrote the following sketch of his visit to St. Louis:

"St. Louis, Nov. 20, 1846.

"St. Louis, regarded as a business place, may present inducements almost unparalleled to business men. Its advantages and its situation render it so. Planted on a rocky foundation, the Mississippi passes by it quietly, while above and below this strange stream cuts a channel where it pleases. It is a city destined to command an influential place in the mercantile and manufacturing interest, while its growing morality will give it a high rank in the religious world. But of what a mixture is its population composed! And to what growth do mushrooms attain! I have spent much time in Gotham, in Philadelphia, and in Washington, where this vegetable is to be found of a pretty good quality, but I must confess, with all my Eastern predilections, that I am forced to give this Western city the credit of producing it in perfection. There are forty thousand people living here, and about four-fifths of them are descendants of the best families, and can trace their ancestry back to—Adam!

"Korponay is here, endeavoring to impress the public mind with the importance of the polka, bolero, mazourka, and other fancy dances. And he takes wonderfully, for I am told he had a juvenile pupil the other evening, learning the first principles of the former, and she was only turned five-and-forty. Her agility was regarded as something extraordinary, even here.

"The taste for literature is increasing vastly. The first of a series of lectures before the Mercantile Library Association was to be delivered a few evenings since. Present, twenty-five persons. It was postponed. Two squares below some sable minstrels were giving a concert to an audience of several hundreds of the *élite*. Serenades are popular, and in Fourth Street sojourners are greeted nightly with heavenly strains from violins and flutes.

"On the score of economy the fathers of the city cannot be excelled. Such a thing as lighting the streets at night, except by the moon, is considered a work of supererogation. And then it helps trade, for each citizen is provided with a lantern to thread the streets when the 'moon's in her shroud.' There was a man killed a night or two ago by falling into a quarry in the upper end of the city. That's nothing, however: he was a stranger, and might have made inquiry. The city authorities are old residents,—what need have they for light? Street crossings are too much of a novelty, and none but old persons and crippled ones get more than ankle-deep in mud when that commodity abounds, as it does always after a little rain.

"The summer season, as elsewhere, is the best time, in the surrounding country, to see and appreciate the beauties of nature. Naturalists have a great field for research. Mosquitoes, ranging in size from a pin's head to a large pea, can be taken in coveys without difficulty. Their music at night is a most excellent imitation of the sounds produced by pumping an accordeon without touching the keys, and if one is unprovided with a bar—an article of bed-furniture indigenous to the West—there is little work left for 'cuppers, leechers, and bleeders' in the morning. Another of the 'beauties' is that pendulum of nature, vibrating between heat and cold, the ague. But, as in other cases, its familiarity has bred contempt, and it is considered beneath the notice of the people. In my travels, a short time ago, I stopped to refresh at a public-house. The landlord was sitting over the fire with a blanket over his shoulders. 'How are you?' 'Very well, sir.' 'Is it sickly about here?' 'Oh, no, nothing of the kind.' 'What ails you?' 'I have a touch of the ague.' 'How long have you had it?' 'Thirteen months.' 'Can I get something to eat?' 'Not now, stranger; this is shake day, and the whole family is taking turns.' I mounted my horse and departed."

The corporation census of 1847 was a very gratifying one,—

First Ward.....	9,970	Fifth Ward.....	6,667
Second Ward.....	7,645	Sixth Ward.....	11,453
Third Ward.....	5,744		
Fourth Ward.....	6,354		47,833
Increase from 1845.....		11,903	

This was a visible growth. It could be felt as well as seen, and a journal of the day said,—

“In a city like St. Louis, where the community is composed of the most heterogeneous materials, gathered literally from the four quarters of the globe, it takes some little time for people to find out ‘who’s who’ and ‘what’s what.’ The man born in St. Louis, perhaps when it was a small town of a few hundred inhabitants, now finds himself in the midst of a great city, surrounded by thousands of strangers, and knows not whence they came, what their character may be, or whither they are going. And the people from other countries, other States, and other cities, who now mostly compose this vast community, are alike strangers to each other. It follows, therefore, as a necessary consequence, that society here is somewhat mixed, that it is in a sort of chrysalis state, that an elevated standard of morals and customs is yet to be formed.”

This shows that the great immediate increase of population was apparent to the people themselves, and that the ancient ease and familiar acquaintanceship were disturbed by the great and sudden influx of strangers and aliens. The *Republican* of Nov. 30, 1848, says of the enumeration of the people made that year that,—

“according to the census recently taken by the sheriff of the county, the total number of free white males it contains is 37,045; free white females, 31,222; number of free white persons who have been taught to read and write, 42,469; deaf and dumb persons, 23; blind, 18; free persons of color,—males, 382; females, 486; slaves,—males, 1981; females, 2346; and the grand total is 73,364.

“The city of St. Louis contains a population of 55,952, of whom 28,779 are free white males, and 24,490 free white females; there are 10,435 male children under eighteen years of age, and 10,434 females under the same age; of free negroes there are 367 males and 472 females, and of slaves, 698 males and 1146 females.

“Carondelet contains a population of 523, Bridgeton 405, and Florissant 423 souls.

“The State census was taken in 1844 by the sheriff, and the county then contained a population of 47,668 souls. Of this number the city of St. Louis had 34,140, leaving for the remainder of the county 13,528 souls, the balance of the increase in the four years being all in the city of St. Louis. The total increase in the four years is 25,696, of which 21,812 is the increase in the city of St. Louis.

“We observe, on a comparison of the census of 1844 with that of 1848, that the number of free negroes has increased, while that of the slaves has diminished. In 1844 there were 673 free negroes, while the census now completed makes the number 868. In 1844 the number of slaves was 4512, now there are 4327, a decrease in the slave population of nearly 200.

“There is a slight increase of population in the several incorporated towns outside of St. Louis. In 1844 Carondelet contained 468 souls; now it has 529.”

In this year of 1848 the great German immigration began to flow into St. Louis. The revolution begun in Paris with the dethronement of Louis Philippe, and continued in Italy by Garibaldi, in Germany by all the forces of society except the nobles, the army, and the bureaucracy, and broken in Hungary by the active interposition of Russian armies, had failed also in Germany, but not until it had shaken the thrones of the Hapsburgs and the Hohenzollerns. The revolutionists were forced to fly and expatriate themselves; Illinois was enriched with men like Gustav Koerner, and St. Louis reinforced by a Schurz and a Sigel.

The German immigration to the State began sooner than that to the city. Flint mentions a German colony to which he preached in the interior of Missouri between 1812 and 1820. Indeed, there was a very large plantation of Germans on the Red River, in Arkansas, in the first half of the eighteenth century, under the auspices of the Regent Duke of Orleans, and the descendants of some of these must have penetrated into Upper Louisiana. The first vineyards at Hermann, in Gasconade County, according to Michael Poeschal, were begun in 1841. In 1845, fifty thousand vines were planted; in 1849 there were over seven hundred thousand.

In St. Louis there were many intelligent and enterprising Germans prior to the great influx which began in 1848. The greater part of these were in trade, though many prosecuted intellectual pursuits with characteristic vigor and success. Charles Muegge’s oil-cloth factory was started in 1841; Thomas J. Meier’s cotton-factory—a pioneer enterprise of great value and importance—in 1839. But 1848 is the year in which the tide set in. The soil and climate of Missouri suited the Germans, always inhabitants of the interior; they found themselves heartily welcome, protected and befriended, and abundant labor waiting for them. They did not fear the competition of slavery, and the “peculiar institution” never interfered with them, reduced the value of their work, or traversed their opinions. The arrivals of Germans at the port of St. Louis were:

March 18, 1848, to same day 1849.....	9,000
“ “ 1849, “ “ 1850.....	14,403
“ “ 1850, “ “ 1851.....	10,815
Total in three years.....	34,218

Of these about two-thirds found employment in St. Louis. In 1851 this city was counted as the principal port for the debarkation of Germans to the valley of the Mississippi, great numbers coming by way of New Orleans. It was at this time that the well-known and most useful German Society of St. Louis

was incorporated, its objects being to protect and defend the immigrants from Germany, provide them employment when needed, and care for the sick and destitute. Nobly has it done its work, burying the dead, finding homes for the orphan, and securing medical attendance, medicine, and hospital room for indigent invalids. The trustees named in the original act of incorporation of this society were John Wolff, Adolph Abeles, Thomas J. Meier, Edward Eggers, Henry W. Gempp, Andrew Krug, Charles Muegge, Louis Speck, and John C. Meyer; J. Reichard, secretary and agent. The Germans in St. Louis to-day, forming a large proportion of the population, and including many of the best and most wealthy citizens, do not need an association of this sort to protect them. They constitute a potent and fully recognized industrial, mercantile, social, and intellectual force in the community. They are leaders in opinion and leaders of men. The German press of St. Louis is a power throughout the country. It has contributed statesmen, soldiers, and scholars to reinforce the national wealth. A German of St. Louis has been mayor of the city, another senator in Congress, ambassador to foreign lands, member of the cabinet, moulder of parties, and leader of men. The *St. Louis Journal of Speculative Science*, the only periodical in the country devoted exclusively to the exploitation of metaphysics, is a direct product of German thought and German culture, and it is claimed that St. Louis is the only place on this continent where the philosophy and the comprehensive philosophical system of George Wilhelm Friedrich Hegel is read, understood, and appreciated.

At the same time as this German immigration, St. Louis received an accession of population from the French West Indies, as is told in a paper read before the Missouri Historical Society in 1878 by Mr. Collet, the author being Mr. Edward De Laureal. This paper is in substance as follows:

"Guadeloupe had scarcely recovered from a terrible disaster which had covered the entire colony with ruins.

"On Feb. 8, 1843, about ten o'clock in the morning, Pointe-à-Pitre, the capital of the colony, was destroyed by an earthquake more violent than previously known. What the reeling earth spared the fire seized upon. The number of dead crushed beneath the ruins or calcined by the flames was so great that there were not sufficient persons to bury them, and as a matter of necessity the remains were transported to the open sea and entombed in the deep.

"Their wounds scarcely healed, they began to breathe, when of a sudden they found themselves menaced with ruin from another cause. A political upheaving threatened to destroy in their hands the very instruments of all prosperity.

"In the month of March, 1848, a sinister rumor spread like a pall over the country, and caused a thrill of terror through-

out. A war-vessel appeared on the horizon. It came to announce to the country momentous news. A revolution had broken out in France, the king, Louis Philippe, driven from his throne, and been obliged to take refuge in England. The people, sovereign by revolt, had proclaimed the republic, and constituted a republican government in the Hôtel de Ville at Paris. The authorities of Guadeloupe, as well as those of all the other French colonies, were enjoined for the future to obey no other orders than such as emanated from the republic, one and indivisible.

"These news, however we may look at them at a distance and after a lapse of twenty-nine years, when received in the colony were of a nature to trouble the country and to excite the population to deplorable excesses.

"Many colonists yet living who had passed through the ordeal of the first French republic felt the presentiment of what was to be dreaded from another, the outcome of the barricades. If the colony were not as completely upturned during the short duration of the second essay at republicanism, it was not the fault of those who made it their business to persuade the blacks that the supreme object of liberty was not only enfranchisement from all labor, but to trample in the dust that which they had heretofore respected.

"The new agents of power in the colony, doubtless to give proof of their zeal, casting aside every precaution so indispensable nevertheless in such grave circumstances, suddenly proclaimed the abolition of slavery. This precipitation was most ruinous to the country. Of a sudden the master and the slave found themselves face to face in a position embarrassing to both parties, impossible yet to define distinctly, and which created a real social peril.

"After the first moments of astonishment at their new respective situation there were compromises between the newly enfranchised and the proprietors, who had at heart the continuation of work, compromises which, without satisfying the laborers, were initiative to the ruin of the proprietors.

"In presence of this state of things, which could not last long, in presence of the alarming rumors which night and day kept the population on the alert, a common thought came at the same time to the heads of families, who, without exchanging views, felt the urgency to fly from a coming danger.

"This unanimous thought had America for its object. By a singular chance St. Louis, in Missouri, was the converging point of all projects of emigration. Consequently, in the month of July, 1848, there were seen disembarking on the Levee of St. Louis the first families wandering in search of a security which their native country no longer offered them.

"Soon these families were followed by a great number of other emigrants, so that in 1849 an agglomeration of French from Guadeloupe formed almost a little colony. They had just reason to congratulate themselves on their reception on American soil.

"But almost immediately after their arrival the emigrants were doomed to undergo a rude trial. The cholera, which during the spring and the summer of 1849 desolated the city of St. Louis, did not spare them. Their numbers were sadly diminished.

"But this time again courage was not wanting in the colonists from Guadeloupe. Then were these people, accustomed to the elegance of luxury, the comforts of an easy life, seen to make courageously the sacrifice of their past in burying the souvenir in the depths of their hearts, to begin a life of fatigues, of rude occupation to which they were far from having been accustomed. More than one mother of a family, thrown entirely upon her own efforts, by a prodigy of economy and courageous patience, was enabled to bring up her family and to place her

children in a position to contract alliances with honorable families of her adopted city.

"To-day the fusion is complete, and the descendants of the French colonists coming from the West Indies, strangers to their maternal tongue, no longer make use of any other language than that of the country of which they are citizens, or are in any respect distinguishable from those around them."

The numbers of this immigration have been left to conjecture or the imagination. The allusion to the cholera year of 1849, however, recalls a period of great suffering to St. Louis, and great afflictions, under which its people bore up as if conscious of their destiny. The pestilence was followed by the most destructive fire which ever raged in St. Louis, and the press of the period, in commenting upon it, said, "Emerging as we are from two calamities which have no parallel in this country, suffering alike in the destruction of property and the still greater destruction of life, having lost in a single night houses and goods enough to constitute a town of very considerable size and commerce, and in two months buried five or six thousand human beings, it may be pardoned those who have so far survived these calamities to look around and ahead at their condition."

That condition was not pleasant to contemplate. Just before the outbreak of cholera a corporation census had been taken, yielding the following statistics of the population in February, 1849:

Ward 1.....	9,972	Ward 5.....	16,933
" 2.....	10,193	" 6.....	12,930
" 3.....	10,233		
" 4.....	9,221	Total.....	63,482

In 1850 the regular government census showed a falling off of 6668, chiefly in consequence of the epidemic. The figures are,—

"White males in St. Louis County, Missouri:

20 years and under	30.....	17,187
30 "	" 40.....	11,413
40 "	" 50.....	4,573
50 "	" 60.....	1,804
60 "	" 70.....	624
70 "	" 80.....	160
80 "	" 90.....	32
90 "	" 100.....	6
100 and upwards	2
Age unknown.....	15
		<hr/> 35,816
Females.....		20,987
Total.....		<hr/> 56,803

"Suppose the number of males between twenty and twenty-one to be equal to one-tenth of the number between twenty and thirty, and that number will be 1718, which taken from the whole male population over twenty-one will leave 34,088 over twenty-one.

"Assuming that there were 34,088 over twenty-one years of age, calculate from census returns of 1850 the number under that age, so as to get a proportion upon which to proceed in the calculation at this time.

"White females in St. Louis County, Mo., according to census (U. S.) 1850:

20 years and under	30.....	10,189
30 "	" 40.....	5,917
40 "	" 50.....	2,785
50 "	" 60.....	1,346
60 "	" 70.....	572
70 "	" 80.....	142
80 "	" 90.....	27
90 "	" 100.....	3
100 and upwards.....	0
Age unknown.....	6
Total.....	<hr/> 20,987

"These figures include foreigners not naturalized, but as the census referred to is that of 1850, all not naturalized at that time have since taken out their papers."

The excess of males over females revealed the recency of a large proportion of the city's population. In spite of losses by the cholera, however, the St. Louis press was not afraid to make comparisons, and this is the way it was done:

Cities.	1830.	1840.	1850.	Ratio for last ten years. Per cent.
New Orleans.....	49,826	102,193	119,461	17
Cincinnati.....	24,831	46,338	115,436	149
St. Louis.....	4,977	16,469	77,860	373
Louisville.....	10,341	21,210	43,196	104
Pittsburgh.....	12,568	21,115	46,601	130

"A like ratio of increase between 1850 and 1860 as there was between 1840 and 1850 would produce the following results in 1860:

Cities.	Ratio of increase from 1840 to 1850.	Results.
New Orleans.....	17 per cent.	190,769
Cincinnati.....	149 per cent.	287,433
St. Louis.....	373 per cent.	368,271
Louisville.....	104 per cent.	88,119
Pittsburgh.....	130 per cent.	107,182

"It is hardly right to suppose that the ratio of increase will continue as large as the cities grow in size, but it is altogether reasonable to believe that their relative ratio will be nearly preserved, which is sufficient to show that St. Louis is destined to be the largest city in the valley of the Mississippi in 1860, if she be not now, upon two years' increase.

"It is to be remembered that in the census of 1850, St. Louis lost some eight or nine thousand population from the fact of her outgrowing her chartered limits. All north of Rocky Branch, including Bremen and Lowell additions, were left out, and on the west all beyond Eighteenth Street and Second Carondelet Avenue, which, if included, would swell her population more than a tenth, and also her percentage of increase.

"It is also well to remember that her census was taken the year immediately following the two greatest calamities that ever befell her,—the cholera and the great fire of 1849,—and before she had time to recover from their effects.

"If her chartered limits embraced the whole city, she is now probably the largest city in the great valley.

"This is no sudden or impulsive start in her growth, for she held nearly the same relative position towards her sister cities of the valley between 1830 and 1840, as the following will show:

"New Orleans increased from 1830 to 1840,	105 per cent.
Cincinnati " " " "	86 per cent.
St. Louis " " " "	231 per cent.
Louisville " " " "	105 per cent.
Pittsburgh " " " "	68 per cent."

The city census of 1851 is very interesting as showing the nationality of the inhabitants and the rapid accession of immigrants from foreign countries.

"The population of the city proper is 77,716. We now give the divisions of that population as ascertained by the census. It will be seen by the following summary that more than one-half of the population is of foreign extraction :

	German.	Irish.	English.	Other Nations.	Free Negroes.
First Ward.....	3,792	699	202	276	13
Second Ward.....	3,124	1,151	277	489	352
Third Ward.....	2,147	1,732	536	656	227
Fourth Ward.....	1,528	3,330	528	310	464
Fifth Ward.....	3,858	1,948	481	277	96
Sixth Ward.....	4,385	2,417	897	451	107
	23,814	11,277	2,921	2,459	1,259

"The whole number of foreigners is 40,471; the number of free negroes, 1259. It appears from the records of the county courts that the whole number of free negroes licensed to remain in this county from September, 1841, to December, 1850, amounts to 575, leaving 684 in the city and county without license and in violation of law."

To the 77,716 people in the city proper were to be added the residents of "Bremen" and other suburbs, 5028, making a total population for the city of 82,744, and yielding an aggregate for city and county of 104,834.

Sheriff Wilmer's census, completed on Dec. 17, 1852, resulted in :

Population of the city.....	94,819
" " county.....	29,034
Total population of the city and county.....	123,853
White males in the city.....	51,251
" females ".....	40,791
" males in the county.....	14,843
" females ".....	11,500
Free persons of color, male and female, in the city and county.....	1,341
Slaves, male and female, in the city and county...	4,069

Comparative tables showing the increase from the month of June, 1850, when the United States census was taken :

	In 1850.	In 1852.	Increase.
Total city population.....	77,465	94,819	17,354
" county ".....	27,369	29,034	1,665
Slaves in city and county.	5,914	4,069	1,845

At that time the California gold fever was raging and diverting population from all its ancient channels, but it did not long affect Missouri and St. Louis. In April, 1855, the newspapers of the day reported the subsidence of the wave and the beginning of a reaction. Said they,—

"The first effect of the gold discoveries in California seven years since was to attract a large emigration from the Western States. For some years previously we had lost many citizens, who thought they could see in the wilds of Oregon better opportunities to improve their condition than they could find on our own teeming soil. But the Oregon emigrants comprised among their numbers a good many whose exit from among us was not a very serious loss, thriftless men, who did well if they produced as much as they consumed, and whose reluctant labor yielded but little for export. A large proportion of the emigra-

tion to California was of a different character. Men of substance, activity, industry, and energy, some of our best farmers, our best mechanics, our ablest merchants, sought the land of gold. This drain on the population of the West could not but be seriously felt in many localities, and though many went intending to return, and though many have since gotten home again, it is unquestionable that the population of Missouri did not increase so rapidly from 1843 to 1854 as it would have done had gold never been discovered in California.

"We are happy to record, however, that this great exodus seems to be over almost if not entirely. We hear no more the notes of preparation for the great journey over the plains, of caravans of hundreds and thousands leaving homes and friends for new and untried scenes. On the contrary, we find that emigrants to Western Missouri and Kansas and Nebraska are coming in, as they used to do in the days of the 'Platte Purchase,' fifteen years ago, and our western borders are now fast making up the losses incurred by the 'California fever.'"

In 1860 the Federal census was as follows for St. Louis County :

Townships.	1860.	
	White.	Colored.
Bonhomme.....	3,131	498
Central.....	5,272	576
Carondelet.....	3,827	166
Maramec.....	2,060	408
St. Ferdinand.....	3,926	863
St. Louis,—		
First Ward.....	21,750	95
Second Ward.....	13,686	110
Third Ward.....	10,185	337
Fourth Ward.....	14,618	837
Fifth Ward.....	12,172	517
Sixth Ward.....	7,664	394
Seventh Ward.....	12,731	374
Eighth Ward.....	22,451	312
Ninth Ward.....	19,705	115
Tenth Ward.....	22,516	206
Eleventh Ward.....
Twelfth Ward.....
Total.....	175,692	5308

The falsification of returns in 1870 makes that census worthless, except for classes of comparison and ratios. Its results are given herewith :

TABLE SHOWING THE WHITE AND COLORED POPULATION OF ST. LOUIS COUNTY.

" Natives.....		198,615						
" Foreign.....		112,249						
Grand total.....	310,864	310,864						

The above exhibition of nationalities was thus commented upon and analyzed by an intelligent journalist at the time the statistics were made public,—

“St. Louis is indeed a cosmopolitan city, if there is any on earth. There is still a preponderance of about 85,000 natives over those born in other countries, of whom, however, 22,000 are negroes; but if the children born in St. Louis of foreign parents and who still speak foreign idioms were counted among the foreigners, the two categories would stand in a much closer proportion. At the time the last census was taken there were 198,615 natives and 112,249 foreigners in this city, the census-takers having, with propriety, classed as foreigners only those who were born abroad.

“Now, according to nativity, there are 176,570 whites and 22,045 colored Americans against 59,040 Germans, 32,239 Irish, and 6568 English and Scotch, the balance hailing from almost all countries on earth, even Australia, the Sandwich Islands, and China not excluded. A glance over the statistics of our school population proves the fallacy of these figures, so far as the ethnological character of the city is concerned. Of the 24,347 pupils enrolled in 1870 in our public schools, 10,600, or a little over two-fifths of the whole number, were children of German parents, while only 512, or one out of forty-eight, were born in Germany. Doubtless, therefore, the new arrivals are mostly adults; but inasmuch as the first generation born of foreign parents in this country retain more of the peculiarities of their ancestors than they get from the people into which they will be fused in the end, the ethnological character of St. Louis at present is not exactly determined by the statics of the places of nativity.

“Considering, therefore, the above-stated school statistics, and taking into account the fact that about twice as many of the children in the city of German parentage attend no school at all, or are enrolled in the various parochial schools, the German population, according to the standard of language and habits, amounts at least to 90,000.

“It is evidently more difficult to find the elements for a similar calculation in regard to the immigrant Irish, English, and Scotch population, and those smaller numbers from various other countries. A large majority of these speak English, which enables them to amalgamate sooner with the American nationality. But even of these a sufficient number retain their native peculiarities in such a degree as to warrant the belief that, ethnologically speaking, the population of St. Louis is very nearly equally divided between natives and foreigners.

“No doubt this proportion will increase somewhat in favor of the foreign population during the next ten years, the amalgamating power of the native inhabitants notwithstanding. Not only that the native population has no means to make up for the regular influx from abroad, even if, as it is supposed, it will be smaller than previously, but during the first generation the foreigners increased in a larger ratio by births than the natives.

“The increase of our population, however, has its rational limit, and the moment the limit is approached, the ethnological character of St. Louis will become more stationary and uniform.

“After the second generation people of every extraction acquire many of the physical and moral characteristics of the predominant race. The ratio of births gets to an equilibrium; the large proportion of German children visiting the public schools gives predominance to the English language; the accumulation of wealth in the hands of families of foreign extraction makes them build larger houses and in a style which is

more in harmony with the tastes and wants of the older inhabitants.

“The increase of the colored population from about 5000, which it was previous to the war, to upwards of 22,000 went on without much disturbance in regard to the economical features of our population as a whole. The growth of the city has been so wonderful during the last ten years that this great influx of colored people, which otherwise might have been a source of annoyance, remained almost entirely unobserved. It is probable that if the statistics had not authoritatively given the number of negroes in St. Louis at 22,045, very few of our citizens would have believed that more than about one-half of that number were living among us. The cosmopolitan character of St. Louis is evidently a source of much good to the country. It shows in a microcosmos the manner in which people, composed of every nationality, may profit from each other's peculiarities, bear their idiosyncrasies, and bring them down to a common level upon which all may safely stand and mutually support themselves. People learn to respect the qualities and honest habits of others, and to emulate each other in energy and in their desire to promote the welfare of the whole. The natives learn how to embellish their family life by the introduction of fine arts, and the foreigners how to give up personal and national whims for the public good and mutual good understanding.”

The census of 1880 yielded the figures given below :

Increase in the Value of Real Estate.—The history of the rapid increase of values of real estate in St. Louis is worth writing, for two reasons. In the first place, it is almost as full of wonders as the tale of

the building of Aladdin's palace, in respect to the sudden and almost miraculously rapid advances in values. In the second place, it helps to prove the point we have been contending for throughout this entire chapter,—that the people of St. Louis have from the beginning almost been conscious of the city's great destinies. Mrs. Hunt, the daughter of Judge J. B. C. Lucas, was fond of telling how her father used to point to a piece of real estate at Pittsburgh which he could have bought for a song, and which sold for over a million. The incident simply illustrates that confident belief entertained by Judge Lucas in the future of St. Louis which kept him a poor man all his life, and reduced him, while the owner of millions in land, to an income of less than two thousand dollars a year even at the day of his death. Henry W. Williams, who knows as much, probably, about real estate as any single person in St. Louis, prepared a very curious paper in 1860 for Mr. Edwards' "Great West" about "the advance of real estate in St. Louis," an article from which we borrow largely. Mr. Williams says,—

"The rise of real estate in St. Louis has been so fabulous that it has become a theme of wonder and interest. We could not make this history complete did we not give some account of the progressions, and to make the relation more varied, more extensive, more authentic and interesting, we have solicited the aid of those gentlemen that are known to the community as most conversant with all of its features, and, without comment or alteration, we give to our readers the communications which have been addressed to us relative to our inquiries."

And here is one of his examples,—

"ST. LOUIS, March 24, 1860.

"DEAR SIR,—In compliance with your request, I have tried to bring to mind as far as I could the value of real estate in this city during the past forty-two years. I have not been a speculator in lands, but have bought for my own use. In the year 1822 I purchased a lot on Third Street, between Plum and Cedar Streets, 75 feet front by 150 in depth, for the sum of \$225 the lot. In the year 1846 I sold the same lot for \$3000, and it is now held at a bid of \$17,000. In 1834 I bought a lot on Main Street, between Spruce and Myrtle Streets, 40 feet front, running to the river-bank, for \$350, and in 1852 I sold it, with a two-story house on it, for \$10,000. The same property is now worth \$35,000. In 1845 I bought a lot on Second Street, between Lombard and Hazel Streets, 150 feet front, running to the river, for \$800, and in 1855 I sold one-third of it for \$42,000, and held the balance at \$100,000. In 1849 I bought a house and lot on Walnut Street, between Sixth and Seventh Streets, for \$6000. In 1856 I was offered \$15,000 for it. I have known similar sales.

"Yours truly, W. RISLEY."

Here follows another,—

"ST. LOUIS GAS-LIGHT COMPANY,
"ST. LOUIS, Feb. 9, 1860.

"DEAR SIR,—At your request I refresh my memory to give you, as far as I can in my opinion, the value of property in St. Louis for some twenty-five to thirty-five years back. The first sale which I can recollect was made by grandmother Dubruil, of a lot on the corner of Second and Pine Streets, 70 feet front by 150 deep, to M. Papin, for \$700. This was, I think, in 1822 or 1823. My mother bought, in 1822 or 1823, a lot 70 feet front by 150 in depth, corner of Second and Olive Streets, southwest corner, with good stone house, log kitchen, barn, and good fences, all for \$1500. The above are now worth from \$1500 to \$2000 per foot.

"In 1826 my grandmother's property on Second Street, block 61, I believe between Chestnut and Pine Streets, was sold by the administrator, 50 feet, corner Second and Chestnut, by 150, for \$10 per foot. The remainder, about 18 feet, with a first-rate stone house and kitchen, was bought in by my mother for benefit of estate for \$3000, and sold by her to Mr. Gay in 1830 or 1831 for the same price, so that property had not risen in that locality from 1826 to 1831. Property even in the business parts of the city had but a nominal value till about 1832 to 1833. It may have commenced rising a little in 1831, but so slightly that it was not noticeable, and did not really seem to rise till 1835. From this period it went up in the business parts of the town pretty rapidly till 1838 or 1839, the commencement of bank disasters. From that period to 1842-43, though there may have been no fall, there was no demand, and, to my knowledge, no sales.

"In 1836 or 1837 I heard Mr. Lucas offer land about Lucas Place for two hundred dollars an acre. He sold lots to Benoist, Bogy, and others on Eighth Street, between Pine and Locust Streets, for ten dollars per foot.

"After the crash of the banks, from 1837 to 1841, property had but a nominal value; it commenced rising about 1842 or 1843, and went up gradually till 1845, from which time it improved more rapidly till the great fire in 1849. From the latter date it rose very fast to the present time, and still continues rising, notwithstanding the cry of croakers to the contrary, and, in my humble judgment, will continue onward till the great valley of the Mississippi is filled up and densely populated. Country property rose but little until the building of plank and macadamized roads, but went up magically after the commencement of our railroads.

"To resume, in my opinion there was but an imperceptible, if any, rise in property in the city till 1834 or 1835, when it continued to rise slowly till the great crash in 1838 or 1839. It went up again about 1842 or 1843, slowly till 1849, and from that period to date very rapidly.

"Hoping the above may add a little light to your valuable researches, I remain, dear sir, yours truly and respectfully,
"LOUIS A. LABAUME."

"ST. LOUIS, March 9, 1860.

"DEAR SIR,—I will try to comply with your request in relation to the relative value of property in St. Louis during the last few years.

"I will give you the facts of a few prominent points, by which you will be able to judge of intermediate points.

"Early in 1840 property on the corner of Fifth and Market Streets sold for \$100 per foot; the same will now readily sell for \$1000 per foot.

"In 1840 I bought lots on Olive Street, between Seventh and Eighth Streets, at \$40 per foot, which would now sell for \$350 per foot. About this time I could have bought of Judge J. B. C. Lucas property on Olive Street, between Eleventh and

Twelfth Streets, for \$10 per foot, which is now worth \$300 per foot. And on the same street, between Fifteenth and Sixteenth Streets, \$5 per foot is now worth \$200 per foot.

"In 1842-43 property sold in Christy's addition, west of the St. Louis University, between Twelfth and Sixteenth Streets and Christy Avenue, at from \$4 to \$10 per foot. The same would sell to-day for from \$125 to \$200 per foot.

"In 1843-44, on Franklin Avenue, and south of it, in Mills' addition, property sold about Twenty-third Street at from \$3 to \$5 per foot is now worth from \$50 to \$75 per foot.

"In the neighborhood of the market on Seventh Street property could have been bought in 1844 at from \$10 to \$20 per foot. The same will now sell for from \$250 to \$300 per foot. Looking southwardly, property sold about this time at a very low figure, but has rapidly risen to figures quite as high as in any other direction.

"From 1840 to 1850 the tendency was north. About 1850 a very rapid advance took place to the south and southwest. From about 1854 to 1860 a great rush took place to the northwest, in the direction of fair grounds.

"North St. Louis, about Bremen, toward 1850 began to make rapid strides.

"In 1849 Lowell was first offered. It had been bought only one year before for about \$200 per acre. In May, 1849, it sold for from \$5 to \$10 per foot on Bellefontaine road. It is now selling at from \$20 to \$30 per foot, or about \$4000 to \$5000 per acre.

"Thus if you take a stand-point about the court-house you will find the progress resulting about the same, though something in favor of the northward. Westwardly you will find quite an equal advance.

"In Stoddard's addition, which is only about ten years old, property sold at from \$5 to \$20 per foot. It will now sell at from \$50 to \$125 per foot.

"As you will observe, the wave of progress has fluctuated in every direction, first in one and then in another, but finally it gains an equilibrium, as things have become established.

"Thus you will see that those who invest money in St. Louis have only to wait a little and a short time brings about vast results. And the only way to judge of the future is to look at the past; according to this rule, the destiny of St. Louis is bound to be the great central city of the United States.

"Truly yours,

"W. HALL."

"Many other instances might be cited," Mr. Williams adds, "showing an increase in the value of the real estate of the city of from thirty to fifty per cent. per annum; but I have already wearied your patience, and close, regretting that the pressure of business has prevented my giving you a more connected and coherent statement of my recollections."

The history of real estate movements and operations, in the early periods of the city especially, has been given pretty fully in preceding chapters, and there is no occasion to do more than supplement these facts in the present chapter with illustrative cases. The system of bringing land into market under advantageous and attractive bids, matured by Chouteau and Lucas, was speedily copied by their enterprising rivals in business. The following is from an advertisement of Louis Labaume's in 1812, 15th of June:

"L. Labaume, Real Estate Agent. To the Public: The subscriber has laid off in town lots part of the plantation on which he resides, situated on the banks of the Mississippi, about a mile north of St. Louis; each square is three hundred and sixty feet in front by three hundred feet back, being sub-divided into six lots, each of one hundred and twenty in front by one hundred and fifty in back. The streets running parallel with the Mississippi are sixty feet wide, and the cross streets forty-five. One square is reserved for public use, and another for schools, etc. He will dispose of the rest on the most reasonable terms for cash and property, and will give some credit on giving good security. The beauty and conveniences of the place is inferior to none in the country. Those inclined to purchase will please apply to

L. LABAUME."

This is cleverly done, and proves that Mr. Labaume was an apt pupil in the methods for disposing of real estate at good figures. His heirs, however, will scarcely forgive him for selling when he did. A corner lot of that estate will now sell for three times as much as Mr. Labaume was offered for the entire property.

Auguste Chouteau, unlike Judge Lucas, was always ready to sell his lots in St. Louis at an advance, and when he saw the chance to buy others. He liked to turn over property frequently, "to realize on it" now and then, as the phrase goes, showing that he was a person of less faith than John B. C. Lucas, but perhaps a more useful man to have about a growing and ambitious town; for, much as such places need buyers, they need sellers still more, people who are willing to let their real property change hands at reasonable eurrent figures, and without nursing it for their grandchildren. Chouteau built, traded, developed industries, turned his money over and over again, and was not afraid of taxes. For years he was the largest taxpayer in St. Louis. Lucas, on the contrary, was always on the lookout for cheap lots, bought to hold, and did not improve. Cheap lots could be got without much trouble. The *Missouri Gazette*, of Oct. 9, 1819, says,—

"At the March sale of public lands in this district, one hundred and seven thousand acres were disposed of at the average price of two dollars and ninety-one cents per acre."

At this time the values of land everywhere in Missouri, and not excepting St. Louis, were greatly unsettled by frauds and fraudulent claims and the long and costly processes of litigation. The liberal land grants under the Spanish *régime* in its last year had opened the way to this, and the trouble was aggravated by speculators who were seeking to locate New Madrid lots (land granted by the United States in cases where property was injured by the earthquakes of 1811-13) even upon the very boundaries of St. Louis. The landshark of that day, rapacious monster, stopped at nothing to insure his claim. Theft, perjury, forgery, murder, all the crimes in the statute-book were com-

mitted to get property for nothing, and to dispossess rightful owners of their estates and improvements. The simple French *habitans*, the land commissioners, and the courts were no match for these confederated thieves, with their wholesale forgeries and their gangs of hirelings ready to swear to anything. Bryan and Rose, in their interesting "Pioneer Families of Missouri," have preserved the affidavit of one of these suborned perjurers, given at Kaskaskia in August, 1807:

"I, Simon Toiton, being in my sober senses, having taken no drink, and after mature deliberation, having been apprised that I had given a great number of depositions relating to land titles, as well those derived from donations as from improvements; that by means of these depositions great quantities of land have been confirmed to different persons in whose favor I have given these depositions, I do consequently declare, as I have already declared to several persons, that I am ignorant of the number I may have given, since I was drunk when I gave them, a failing to which I am unfortunately addicted; and that when I am in that state any one, by complying with my demands, may do what they please with me. If this work had been proposed to me when in my senses [*hinc in manuscript*]. I declare that I recollect that on the last day of November, 1806, I was sent for. Before setting out I drank a quart of liquor; and that there might be no want of it, I took it again on my arrival; before beginning the certificates I took another quart, and this continued until midnight nearly. I recollect at that time to have given twenty-two or twenty-three depositions; that is to say, I copied them from models, to which I made them conform, observing to these persons that what I did could have no validity. They told me not to mind that, that it would be of service to those for whom I made them, and that I ought not to fear anything or make myself uneasy. I declare solemnly that all these last depositions are false, as well as those I had given previously to that time, no matter in whose favor I may have given them; because, to my knowledge, I have never given any except when I was in liquor, and not in my sober senses. I furthermore declare that I am not acquainted with any improvements in this country."

It was by this sort of fraud and villany that land titles were confused in Missouri, and many honest and deserving proprietors swindled out of their property. Here is an instance in point:

"In the year 1785 the government of Spain granted to Angelica Chauvin a concession of forty by forty arpens of land near the then post of St. Louis, bounded by land granted to one Louis Robert on one side, and the king's domain lengthwise the river Des Peres. The concession was sold by the grantee to Jean F. Perry, a meritorious citizen. The government of the United States came, under treaty obligations to the Spanish government, to respect all concessions of land similar to the one to Madame Chauvin, and to fully and faithfully discharge that obligation Congress in 1805 created a board of commissioners charged with that duty. This board of commissioners was composed of eminent men of the highest integrity, but they were by law restricted to the consideration only of concessions accompanied by specific and authentic plats showing the corners and locations of grants presented for confirmation.

"In the year 1811 the board met and confirmed to Jean F. Perry, assignee of Angelica Chauvin, forty by forty arpens of land, the concession being first presented and then the plat, and

ordered the same surveyed according to possession (the possession of the grantee). In the year 1812, being one year after the confirmation of the claim, Perry died, leaving four orphan children, all girls; and in the language of Mr. Griswold, 'here the monster slept!' Yes, slept for twenty years, until the children grew up to be women and were married. During this lapse of time the cormorants were busy with their New Madrid 'floats,' and before the children grew to be women had succeeded in spreading them all over their land, although that land never belonged to the United States."

This piece of property was so long in dispute that immense values and interests became involved in its settlement; the interposition of Congress was sought, and finally the claimants were thrown out in favor of the possessors. This instance is not adduced by way of pointing an injustice or a grievance,—we have nothing to do with the merits of any particular claim,—but to show how delays and litigation affected the titles and values of property. No one buys a lawsuit if he can help it, and when he does buy one he always insists upon its cost being counted in the bill. It is beyond a doubt that disputed and defective titles had a very depressing effect on the values of real estate in St. Louis for many years, and interfered materially with the extent and rapidity of transfers.¹

¹ It is only proper to give the other side of this Chauvin claim,—the side of the occupants whom it was sought to oust. The following statement of the case was published in 1853:

"A grant was made to Madame Chauvin in May, 1784, of sixteen hundred arpens of land, about six miles west of St. Louis, on both sides of the River des Peres, or, in the words of the grant, 'said river running through it from north to south, to be improved within a year and a day.' In June, 1785, her grant was canceled for *non user*, and the land specifically granted to one Tayon. Tayon went to St. Charles, and Governor Trudeau granted to Madame Papin three thousand two hundred arpens, including the above sixteen hundred arpens. Tayon came back, told the Governor his grant had been invaded, but as he did not wish to disturb the occupant, would be satisfied with a floating right for the sixteen hundred arpens; he got this, and sold it to Mr. Chouteau, the brother of Mrs. Papin, and this float was afterwards located.

"J. F. Perry bought of Mrs. Chauvin, in Illinois, her right, and presented it to the old board of commissioners for confirmation. They rejected the claim. Subsequently it was presented again and confirmed, 'to be surveyed conformably to possession, and at the expense of the claimant.' This was in 1811; the survey was made and approved in 1832, and the very place of Madame Chauvin's possession pointed out to the surveyor and marked on the plat, and this survey took the eastern half of the Papin tract, showing that Tayon knew what he stated when he got his float. But the Papin survey was before this, confirmed earlier, and hence the Chauvin survey could not hold, although Gen. Ashley, then in Congress, tried to get it patented.

"It has slept since, sometimes in the hands of Elliott Lee, Jesse G. Lindell, Daniel D. Page, and others, until it turns up to belong to Joshua R. Stanford, of Illinois, who appointed A. H. Evans his agent to locate the claim.

"This ingenious man fixes his corner for the sixteen hundred arpens of land on the River des Peres, and there turns the claim upon its *axis*, and rolls it round so that its southeast

The holder of a New Madrid certificate having got an act of Congress passed authorizing him to locate it, actually attempted for that purpose to take possession under this warrant of Duncan's Island and the water-front of St. Louis. Much of the city property and school property was squatted upon in the same way, with a network of claims and a regiment of claimants, so that in most cases, after years of costly litigation and delay, the authorities found it cheaper to compromise than to make good their complete title. The schools in this way, as fully described elsewhere, lost a great amount of valuable property.

Another thing which had an injurious effect on the value of property was the unsettled condition of the city's estate in the commons and common fields. It would be mere repetition to state here what has been so fully set forth in other chapters about these tracts of land and the disposition made of them. But the fact that the city held all this land, and would of course some day sell it, put St. Louis in the position of a powerful and favored competitor with every dealer in real estate in the community. The city could sell on terms which no ordinary operator was able to offer. It could hold on as long as it pleased, sell all or as much as it pleased, give what times of payment it pleased, in short, could bull or bear the market at its option. No operator in real estate was either able or willing to lock horns with such a gigantic and powerful opponent, and as long as the city held the commons it had the speculation in real property at its mercy.

corner shall settle in the Chouteau mill tract, just across the Widow Camp's lot, and then run off north and west for quantity, running over the Grand Prairie common field lots to a little north of the St. Charles road, and going west from about the Prairie House so as to overlay John Lay, and just escape the *Côte Brillante* tract, and so avoid the place where Tayon said the land was, and where Jean F. Perry had it surveyed.

"This claim has been rejected in every court where they have tried to introduce it, rejected by the surveyor-general here, rejected by the commissioner of the general land office at Washington, and is now tried to be pressed upon the Secretary of the Interior by the employment of Col. Benton as its advocate. Col. Benton is the member of Congress from this district, and we should like to know how much he is to receive for the effort to divest hundreds of owners of lands in the Grand Prairie.

"Mr. Geyer, in the performance of his duties as a lawyer, we have understood, was offered one-half of this claim if he would make it stick anywhere save where Perry had located it, but he could not do it. The influence of Col. Benton, representative in Congress from this district, is invoked in the hope of getting a different decision from that which has been rendered by the courts and the commissioner of the general land office in the case. We shall see how it works upon the secretary of the interior."

The commons embraced under various surveys about three thousand eight hundred and thirty-seven acres of land, lying (as described in 1859)

"south and southwest of the city, and embraces such localities as the House of Refuge, the Lafayette Park, etc., but a more accurate recital of its boundary lines may not be without interest. The southeastern boundary, then, begins, leaving the riverbank, about a half-mile below the 'Sugar Loaf,' or, to be more precise, at a point three to four hundred feet below the residence of Charles L. Tucker, Esq.; thence it follows the river-bank to a point nearly opposite the Workhouse; thence, leaving the river, and being bounded on the east by lands of Messrs. Kayser, Kennett, and others, it proceeds northerly into the present First Ward of the city, following a straight line, through the property of Thomas Allen, Esq., Henry G. Soulard, Esq., and others, between Eighth and Ninth Streets, to its intersection with Hickory Street; thence westwardly along Hickory Street to a point between Morton Street and St. Ange Avenue, about opposite the terminus of Fourteenth Street; thence northwardly again to Chouteau Avenue; thence westwardly with Chouteau Avenue to its intersection with Grand Avenue; thence with Grand Avenue southwardly to the Stringtown road, and with the Stringtown road southwardly again to the vicinity of tracts held by Messrs. Chartrand and Delore, a little below the house formerly kept by Peter Delore; and thence finally in an easterly direction to the point of beginning on the river. These limits, it will be perceived, embrace many of the most elevated plateaus, and withal one of the most charming districts in the suburbs of the city proper."

The common fields are described at the same date:

"There were a number of these common fields about St. Louis,—the Prairie des Noyer fields in the south, beginning at or near the present Grand Avenue, running westwardly for depth, and (by way of some sort of definite location) intersecting what are now the suburhan grounds of Henry Shaw, Esq.; the Cul de Sac common fields, a little north of Prairie des Noyer, and embracing and extending north and south of the grounds of John S. McCune, Esq., Dr. Barret, the Rock Spring Cemetery, etc.; then the St. Louis common fields, beginning eastwardly at Third Street, and extending from say the St. Charles road to a distance below Olive Street; and finally the Grand Prairie fields still farther west."

Successive acts of Congress of June 13, 1812, and May, 1824, and of the Missouri Assembly in March, 1835, authorized their sale, with reservations for schools. It was put to vote at the latter date whether the commons should be sold, and whether a half, fourth, or tenth of the proceeds should go to schools. The ballot decided in favor of sale, and of appropriating one-tenth to the school fund.

The act provided a sub-division of the common into parcels of not less than one nor more than forty acres, besides which the buyers of common lots were not to pay the amounts which they had bid on the respective lots, but to pay an interest or rent of five per cent. a year on the amount of purchase-money for the period of ten years, after which, on paying the full amount bid, the purchasers were to receive their deeds. Buyers who preferred it were permitted to continue

the payment of such rent for the space of fifty years, after which, and every fifty years thereafter, their lots would be revalued, and a rent of five per centum per annum paid on these revaluations. It will be conceded that the terms of payment under this rule were liberal and accommodating enough to the speculators in common grounds. Accordingly, under these terms, the common was advertised for sale in 1836, and very nearly all, if not quite all, the lots sold. It appears that the affair went off spiritedly, and the prices ranged from fifty to one hundred and fifty dollars per acre, the average being about one hundred dollars. On reflection, the buyers, with few exceptions, seemed to unite in the opinion that these prices were excessive, and that their common purchases were a common grand "take in." From the date of sale the Board of Aldermen was flooded with the petitions of the buyers for release from their purchases, and for a long while, and until the city had again secured the title to nearly the entire common, the authorities were engaged in forfeiting these first sales of 1836.

The question of selling the common was then allowed to sleep until about 1842, when only a few of the forfeited lots were resold. In 1854 the City Council, under further authority of the Legislature, passed another ordinance making new and different arrangements for the sale of the common. The ordinance appointed a "Board of City Common," with authority to sub-divide the common into lots twenty-five feet front by one hundred and twenty-five feet deep; to intersect it with streets and avenues of no less width than sixty feet, and alleys of twenty feet, and with power to sell from time to time at auction sale, on terms of one-sixth cash and the remainder in equal annual installments of one, two, three, four, and five years, the interest on the deferred payments to be six per centum per annum. Under this ordinance five sales took place, the first being in June, 1854, and the last in July, 1859. The amounts realized in these sales sum up as follows:

First sale, June, 1854, aggregate proceeds,	\$210,000
Second " Oct. 1854, " "	160,000
Third " May, 1855, " "	145,000
Fourth " Oct. 1856, " "	100,000
Fifth " July, 1858, " "	55,000

making a total of \$670,000. Of this amount one-tenth, or \$67,000, was paid to the public schools, who in some instances took land instead of money, and from what remained, \$453,000 went to the sinking fund, and \$150,000 to the purchase or the improvement of public parks; this disposition of the proceeds being directed by the ordinance which authorized the sales. To show how "circumstances alter cases,"

and how opinions and values change with time, in these latter sales of 1854, 1856, and 1858 there were sums paid for the purchase of single lots 25 feet front by 125 feet in depth which at the first sale of 1836 would have purchased *twenty-seven and a half acres*, or more than one acre to every foot front. Or, to change the comparison, if the sum of \$1375 invested in 1856 for a single lot of 25 feet front had been judiciously invested at the sale of 1836, as it might have been in numerous parts of the common, it would in 1859 have been worth to the party investing from \$144,000 to \$150,000, but it was the good fortune of the city, and the evil fortune of the buyers, that, as stated above, the original sales were nearly all forfeited.

The last sale took place Oct. 4, 1859, and a contemporary report of it said that,—

"The sale of common lots by the city, effected by Messrs. Papin & Brother last Tuesday, was a complete success. The lots advertised were all, or nearly all, sold, and the prices realized were satisfactory. Lots on Maramec Street, opposite Mr. John Withnell's, brought from \$14 to \$21 per foot, averaging over \$17 per foot. On Kansas, Michigan, and other avenues which intersect block 80 the average was about \$10 per foot. Block 80 itself realized about \$48,000. Afterwards on Carondelet road the lots brought from \$12 to \$16.50 per foot, on Michigan Avenue \$8 to \$15 per foot, and on the various other thoroughfares from \$5 to \$16 per foot. In all 306 lots were sold. The attendance was large, numbering from 250 to 300 bidders. The sale was prolonged until eight o'clock in the night, at which hour three lots were sold on Lafayette Avenue, opposite Chris. Stechlin's brewery, for \$77.50 per foot. The aggregate amount of sales was 7684 feet front, producing \$80,601."

It was after these sales had gotten under way that real estate values in St. Louis began to "jump," as will be seen by the following table:

ASSESSED VALUE OF REAL ESTATE IN ST. LOUIS.

For the year 1842.....	\$12,101,018
" " 1850.....	29,676,649
" " 1852.....	38,281,668
" " 1853.....	39,397,186
" " 1854.....	41,104,921
" " 1855.....	42,456,757
" " 1856.....	60,689,625
" " 1857.....	73,662,043
" " 1858.....	82,160,449
" " 1859.....	92,340,870

We do not, however, by any means wish to imply that the real estate interest was stagnant previous to this. On the contrary, there had been, as has already been shown, a steady and rapid rise in values all along. It has been satisfactory as regards St. Louis; it would be enormous in respect to any other community, Chicago excepted. A few salient facts culled from various sources will illustrate this.

Augustin Langlois conveyed to Albert Tison, Nov. 29, 1804, in the Carondelet portion of St. Louis, two

hundred arpens, "just as it is from top to bottom," for fifty-five dollars.

The first recorded conveyance of a lot within the limits of the old French village of St. Louis under the jurisdiction of the United States government was on Jan. 15, 1805, when Francis Liberge, Jr., sold to Dominick Huge a lot two hundred and forty feet front on Second Street, between Market and Chestnut Streets, and one hundred and fifty feet deep westward. The price for this piece was stated in the deed to be four hundred dollars.

A tract of fifteen or sixteen acres a little northwest of the old City Hotel, corner of Third and Vine Streets, was bought at an early day by a Mr. Earl, of Baltimore, for one hundred and fifty dollars. He did not consider it worth the taxes, and let it go.

In 1805, Joseph Lacroix sold to Louis Lemonde, for forty dollars, forty arpens, or nearly thirty-five acres, situated in the vicinity of the present Lindell and Laclède Hotels.

The first acquirement of the well-known Lucas estate was recorded on Dec. 14, 1807. The deed shows that Pre. Duchouquette sold "to John B. C. Lucas, first judge of the Territory of Louisiana, residing in this town of St. Louis, a house built of logs stuck into ground, a barn built of cedar wood, the house being underwalled and covered with shingles, the whole lying and being situated on two sites of the ordinary size and dimensions in this town." The deed further recites the location, which was on the north side of Chestnut Street, from Second to Third Street. The sale was "in consideration of six hundred dollars' worth of peltry, that is to say, two pounds and a half of shaved deerskin and marketable per dollar." Judge Lucas paid one-third of the six hundred dollars in cash, and gave a note for the balance. Judge Lucas died in 1843, owning, according to inventory in the Probate Court, \$57,688 of personal estate, five lots in the old town of St. Louis, all that portion of the then city from Fourth to Eighth Street, between Walnut and Market, fifty acres from Eleventh to Seventeenth Street, between Market and St. Charles Streets, and four hundred and eighty-eight acres in other parts of St. Louis County. The assessed value of the entire real estate in 1842 was \$136,890 for city and \$150,000 for country property.

The first assessment of property for taxation in the town of St. Louis of which there is any record was in 1811. The total assessed value of real and personal property was \$134,516; the rate of taxation was one-half of one per cent., and the amount of taxes paid was \$672.58. The heaviest tax-payer within the town was Auguste Chouteau, and his

property was valued at \$15,664. This Chouteau also owned about \$61,000 worth of property in the county outside of the then town, but which in latter years became a part of the present city. Other large property-owners of that time, whose estates were not then in the city, but subsequently added, were Judge J. B. C. Lucas, valued at \$10,555; John O'Fallon, \$2450; William Clark, \$19,930; William Christy, \$16,000; and Henry Von Phul, \$8175.

In 1816 a lot sixty-five feet front on Main Street, between Locust and Vine, and running through to Second Street, was bought for \$1200. In December, 1850, a little more than one-third of the same lot sold for \$56,000. Prior to this time it had yielded an immense rent for many years.

In other parts of the town of St. Louis at that time (1816) property was sold at merely a nominal figure, by the arpent or lot. There was scarcely any enhancement in the value of property from that time until the years 1829 and 1830.

In the year 1829 we find that a lot on the corner of Morgan and Fifth was sold for three dollars and fifty cents per foot. In the year 1832 property on the corner of Fifth and Cerre Streets was sold for two dollars and fifty cents per foot. In the same year ninety-five feet on the northeast corner of Seventh and Spruce Streets was sold for one dollar and eighty cents per foot. It was worth from three hundred to four hundred dollars per foot in 1859. In the same year (1832) property on the corner of Fifth and Gratiot Streets was sold for two dollars per foot.

In the year 1835 property on the corner of Wash and Sixth Streets was sold for the sum of seven dollars and fifty cents per foot. In the same year a lot at the corner of Hickory and Seventh Streets was sold for one dollar per foot, and the whole of block 157 was sold for the sum of three hundred dollars. In the same year the lot on Broadway opposite Franklin Avenue, upon which Wimer's new building is now situated, was sold for ten dollars per foot.

In the year 1836 property on Seventh Street, between Wash and Carr, was sold for six dollars per foot.

In the same year, property on Green Street, between Tenth and Eleventh, sold for three dollars per foot; on Eleventh, between Green and Morgan Streets, for three dollars per foot; on Austin Street, between Twelfth and Fourteenth, for about sixty cents average per foot; on Market Street, between Third and Fourth Streets, at twenty dollars per foot; and on the corner of Clark Avenue and Seventh Street, for six dollars per foot.

In 1837 property on Twelfth Street, between

Brooklyn and Howard Streets, was sold for five dollars per foot.

In 1841, at the northwest corner of Broadway and Jefferson Streets, at eight dollars per foot.

In the same year, on the corner of Chambers and Ninth Streets, for five dollars per foot.

Property on Olive Street, in the vicinity of Twelfth and Thirteenth Streets, sold as late as 1844 for from twelve to thirteen dollars per foot.

Take Stoddard's addition, for instance, which was sold in the fall of 1851. Property on the corner of Locust and Beaumont Streets was then sold for fifteen dollars per foot; on the corner of Washington Avenue and Garrison Avenue for five dollars and seventy-four cents per foot; on the corner of Franklin Avenue and Ewing Avenue for fifteen dollars per foot; on the corner of Lucas Avenue and Ewing Avenue for ten dollars; on the corner of Lucas and Leffingwell Avenues for the same price, and at the same ratio throughout the whole addition.

Eight years later this property was held at sixty to one hundred dollars per foot. On Chouteau Avenue land worth twenty dollars in 1851 was held at above one hundred and fifty dollars in 1859. It was noted this latter year that there was a regular and systematic ratio of property value enhancement, and the reason assigned for this—undoubtedly the true reason, too—was that, unlike many cities, St. Louis had not grown to her proud position in a day or a year. Nor will she, like many of them, cease to enlarge and prosper at the option of speculators. Manufactories and business of every kind and character have steadily increased and kept pace with this immense enhancement in the value of property. Buildings have been constantly going up, yet not fast enough to accommodate the immense emigration constantly swelling the population. In fact, the city has never been so prosperous, and the future is even more promising than the past has been satisfactory. There is to-day more foreign capital in the city and State seeking investment in real estate, business, and manufactories than there has ever been in any previous three years together. There is a larger margin for speculation in real property in St. Louis than there has ever been.

Real estate is enhancing in value more and more rapidly every year, and it must continue to do so until the vast territory stretching as far west as the Rocky Mountains shall be densely populated and pours its immense harvests annually into our markets. It is true that it requires more money to invest largely than it did a few years ago, but the profits are greater in proportion to the investment than they ever were.

There is not a single city in the Union where rents yield such a percentage on the value of the property, and yet any number of houses in any locality could readily be rented, if they were finished, at the same profits.

Continuing these illustrations, we find it noted that "when Mr. Cozens made the survey, property on Lindell Avenue, west of Grand, could have been bought at from three to five dollars per front foot; it is now worth in many places one hundred and fifty dollars. He has seen property on Fifth Street sell for two dollars and fifty cents and three dollars per foot,—two hundred and two hundred and fifty dollars a lot were high prices; now the same property is valued at over fifteen hundred dollars per front foot. In the early '40's Henry Chouteau sold at auction two hundred feet front on Seventh Street, corner of Spruce, at fifty cents per front foot. In Stoddard's addition, along in the middle '50's, property sold at six and twelve dollars per front foot; to-day the same property is worth from one hundred and fifty to two hundred dollars. Mr. Cozens laid out in 1861-62 the Camp Jackson tract, which took in from Garrison Avenue, or Thirtieth Street to King's Highway, south of Olive, through which Pine and Chestnut Streets were projected. At the first sale, about 1863, property in that tract brought from ten to fifteen dollars per front foot; to-day it is worth from one hundred and fifty to two hundred dollars.

"In 1841, with Mr. Brown, Mr. Cozens laid out William Christy's western addition, from Fourteenth Street west to Jefferson Avenue, and between St. Charles Street and Cass Avenue; John Mullanphy's estate, north of Cass Avenue, from Broadway west to Jefferson Avenue; a sub-division for L. A. Benoist, W. G. and G. W. Ewing, on the south side of Cass and east of Jefferson Avenue, property in which sold for from one to five dollars per front foot."

Here follow some newspaper clippings:

1843.—"The value of the real and personal property in the city of St. Louis reported by the late assessment is \$11,721,425.91. The reports from the treasurer say it will be necessary to levy a tax of one per cent. on the assessment to meet the demands of the current year."

1844.—"The total value of the taxable property of this city as assessed during the present year, and just approved by the board of aldermen, is \$14,843,700. Last year the assessed value was about \$11,000,000.

"It will be seen by an advertisement in this paper that Mr. Lucas designs to offer at public sale a large number of his lots, situated in the rear of the Planters' House, and in what must be the most fashionable and agreeable part of the city. The location is between Market and Olive Streets, and extending from Thirteenth to Sixteenth Streets."

1845.—"Add the three districts together, and the total number of houses erected in 1844 in the corporate limits of St. Louis

may be set down at eleven hundred and forty-six. Of these many were churches, public edifices, and costly private residences. But great as the improvement was in 1844, unless some very unexpected reverse comes upon us, the amount to be expended in building in 1845 will quite equal it.

“Mr. Lucas intends, we understand, this season to make an improvement which will add greatly to the value of the property in that quarter, and increase the population west of the proposed improvement.

“We understand that he will open Twelfth Street, one hundred and forty or sixty feet wide, from Market to St. Charles Street, the breadth of five blocks. Fifty feet or so in the centre of the street will be reserved for a market-house which he will erect this season at his own cost, leaving a wide street on each side of the market.”

1849.—“The assessment of the real estate in the city of St. Louis for the year 1849, as appears from the assessor’s books, is as follows :

	Old Limits.	New Limits.	Total.
First Ward.....	\$404,024.61	\$2,651,677.96	\$3,065,702.57
Second Ward.....	2,729,208.92	660,539.47	3,389,948.39
Third Ward.....	4,726,991.43	2,063,716.70	6,790,708.13
Fourth Ward....	4,035,483.83	1,516,578.44	5,552,062.27
Fifth Ward	1,192,470.69	2,075,483.15	3,267,953.84
Sixth Ward	323,388.66	6,995,988.62	7,319,377.28
	<hr/>	<hr/>	<hr/>
	\$13,421,568.14	\$15,963,984.34	\$29,385,552.48

1850.—“We have said that we reckon the buildings erected this year by the thousand. By reference to the published tables it will be seen that their number reaches two thousand four hundred and fifty. The money expended on their construction amounts to the sum of \$7,173,155.”

1851.—“*Large Sale of Land.*—The large sale of land which has been going on for two days past in the ‘Union Addition’ to St. Louis, or ‘Capitol Hill,’ was closed yesterday. One hundred and sixty lots were sold, and the aggregate of the sales is \$88,063.44. This addition is situated near the new reservoir of the city water-works, in the most elevated part of the city, and full two miles from the court-house.

“The Stoddard sale, conducted by Leffingwell & Elliott, was closed yesterday, the gross amount being \$701,676. The whole tract is now disposed of, and we learn that many persons who had gone to the ground to bid failed to secure any lots. So great an amount of property has never been offered or sold in this city at one time, and the aggregate returns of purchasers evince the confidence of strangers as well as our own citizens in the stability and prospects of our city.”

1855.—“The sale of the Centre Market property, owned by the city, took place yesterday, and was attended by a great number of persons. The whole property produced over \$174,000.”

It was about this period that the citizens of St. Louis began to turn their attention to suburban properties and the construction of suburban villas and cottages. The country in the vicinity of the city has long been noted for its beauty and its adaptedness to the elegant ease of country-seats owned by the wealthy and the luxurious.

The whole territory environing St. Louis is very elevated, undulating gently and gracefully, in such manner that there is no road leading from the city which does not for many miles reveal an innumerable succession of beautiful building eminences. The

valleys which intervene, the vigorous and stately oak groves decking the hill-tops occasionally or lining the margin of chance brooks, the rich rolling meadows, the extensive and trim gardens, atoning by their careful cultivation and their freshness for the disorder of the gardener’s hut attached to them, with here and there at rare intervals the elegant cottage and finely-embellished grounds of some wealthy merchant from the city,—all combine to make a picturesque and attractive landscape. An afternoon ride over the Bellefontaine road, the Carondelet road, the Manchester road, or over Grand Avenue sustains the assumption that there is no city of the West, at any rate, whose suburbs reveal greater natural beauties than those of St. Louis.

But until the periods referred to, these beauties had been lost upon the wealthy, since they had developed no fondness for suburban or country life. Now, however, this began, and elegant mansions and villas began to spring up about Compton Hill, Côte Brillante, and the Carondelet road, and later along the railroads leading into the city.

About this time, also, the people began to take note of the *pace* at which real estate values were being accelerated, and to look upon holdings of city lots as about as rapid a means of getting rich as any one need employ. They recalled, for example, that

“in the year 1840, St. Louis, although a place of importance, evinced nothing foreshadowing her present prosperity. Manufactories of all kinds were few, her mercantile operations limited, and real estate was held at merely a nominal figure. She was, in fact, dependent entirely upon other places for almost every article for home consumption. In 1836, only four years previous to the time of which we speak, property was offered on the corner of Eighth and Pine Streets for ten dollars per foot, and could not be sold from the fact that every one regarded the price as enormously fictitious. The whole western part of the city, say from Eighth Street westwardly, was then a common, and few imagined that it would ever be used for anything else. In 1839 the eastern half of the block where the Planters’ House is now was sold for the sum of one hundred and fifty dollars per foot. Every one regarded the purchaser as ‘done for’ in that speculation. The property would to-day (the year 1859) sell for fifteen hundred dollars per foot. The best property on Main Street would not sell for more than three hundred dollars prior to the great fire of 1849.

“In the years 1839 and 1840 property on Lucas Place could not have been sold for three dollars per foot, and a sale was effected by Messrs. Belt & Priest a few days since at the round sum of two hundred and fifty-one dollars per foot. But we are asked the question, How do you account for this rapid enhancement in the value of real estate? Is it permanent, and will not this state of things terminate in total bankruptcy if it continues? They who propound such questions know little of the illimitable and inexhaustible resources of our great city. St. Louis, although in its infancy, possesses the power of a giant. The history of the world fails to present a single example of a city growing to such greatness when fostered by its commercial position alone. It cannot be claimed that the country back of St.

Louis has aided her much, for by far the greatest portion of it is an unbroken wilderness.

“The maximum value of real estate in St. Louis has not been attained. There is to-day a larger margin for speculation and an inevitable certainty of a more rapid increase than there was ten or twenty years ago. We are gratified that Eastern capitalists have become awake to this fact, and are investing largely in real estate in our city. We invite more capital; there is room for immense amounts to be lucratively invested. We invite emigration; we invite labor. Come one, come all, there is bread and work for us all.”

And all this is just as true of 1883 as it was of 1859. The maximum value of real estate in St. Louis is still to be attained, and the increase to-day is more rapid than it was twenty-five years ago.

The civil war set things back a whole lustrum, but did not destroy nor even injure the roots of progress and development. These, indeed, seemed to strengthen and pierce deeper and take firmer grip of the soil during the period when they were prevented from sending shoots upwards. By 1870 all activities had been resumed, as the following record of building in that year shows :

	Brick.	Frame.	Stone.	Iron.	Total.
January ...	\$170,700	\$1,200	\$171,900
February....	495,900	5,500	501,400
March.....	565,000	2,700	\$90,000	657,700
April.....	604,775	10,600	\$50,000	665,375
May.....	46,496	13,500	59,996
June.....	401,175	55,000	456,175
July.....	727,330	2,250	729,580
August.....	346,434	100	346,534
September..	408,250	850	8,000	417,100
October.....	521,400	1,200	1,000	523,600
November..	217,625	625	10,000	228,350
December..	130,000	130,000
Total.....	\$4,636,085	\$38,525	\$133,000	\$90,000	\$4,887,710

The total number of building permits granted during the year was 1228. From this amount there should be deducted 200 for small additions not properly classed as buildings. This leaves 1028 buildings. To this add 500 buildings erected aside from permits granted, and also including cases where permits cover more than one building, and there is an approximate number of buildings erected during the year of 1528. The total estimated building outlay was equivalent to \$5,687,710, expended in buildings during the year.

Operations so extensive and so costly as this required, of course, great economy in the regulation of expenditures and the selection of materials. Fortunately, St. Louis is very rich in cheap and handsome building materials of every sort. Nowhere can better lime, sand, and bricks be found, taken right out of the soil on which the city is built. As early as 1839, Samuel Head began to quarry and manufacture marble from a quarry under the city, as is recounted in the following letter from Mr. Garesché :

“On my arrival in this city, I was struck with the marble appearance of the stone, but was unable to procure a person who understood polishing it; in the mean time, Mr. Samuel Head, a young man lately come to this place, whose business it was, worked this stone, and demonstrated to the inhabitants of St. Louis how useless it was to send to the eastward for mantel-pieces or other marble monuments when they were treading over a soil so rich in that species of mineral. This marble vies with the most beautiful for the fineness of its polish, nor are its variegated accidents or color inferior to any. It contains abundance of calcareous spar, and some, probably, oxide of iron, which shows itself in scarlet spots of the most gaudy hue. This ledge, about four feet in thickness, stands between two strata of limestone. The undermost has been used to this day as a fine building material. It is that of which our curbstones are made and our streets are macadamized. It receives also a very fine polish; it is then of a cream color, with light gray veins. Under this stratum is one of silex. Mr. Head has also discovered in the same quarry another kind of marble of a nankeen hue, with black veins running through, pretty much in imitation of scales of a fish. The last specimen has, however, been found in but small detached pieces. There is scarcely any doubt when the subject is further investigated but what some new discoveries will be made. The banks of the river for some considerable distance appear to be of the same nature, and must contain the same or some other mineral wealth, which may become a source of profitable exportation to the community at large.”

St. Louis possesses the advantage of being built in a location and upon ground where the best of bricks are easily attainable at low prices. It is worthy of note that the appearance presented by the walls of the many thousands of fine residences and business houses attracts the attention of every visitor to the city. To build up a city like St. Louis, almost entirely of brick, requires a large supply of suitable clay for their manufacture, but, as great as the draft has been, the supply is as yet comparatively untouched, and as demands are made and investigations prosecuted, the quality increases in value and importance, and foreign markets, that but a few years ago furnished clay for crucibles used in smelting furnaces, fire-brick, etc., now use that of St. Louis for their supplies, thereby acknowledging the superiority of the clay found in St. Louis over that of other sections. So important is this branch of trade becoming, that several firms make this traffic an especial business, and are almost daily filling orders for Cincinnati, Louisville, Boston, New York, Philadelphia, Pittsburgh, and other large manufacturing cities in our own country, while orders have also come from Stourbridge, England, from whence clay used to be shipped to different cities of this country.

The manufacture of brick enters very largely into the active use of capital, and, like every other branch of industrial manufacture, has undergone many changes and has been attended with many improvements within the period of time that has passed since the St. Louis trading-post began to give way be-

fore the march of progress, and the manufacturers of the rude pieces of tempered earthen mortar they called brick—some of which may still be seen in some of the pioneer brick houses of St. Louis—would look with wonder upon the almost scientific nicety and difference in shape of the brick now made as compared with those they fashioned, if it were possible for them to be raised from their sleep of death and shown through some of the St. Louis brick-yards. But, notwithstanding the many different kinds of brick-making machines that have been invented, the old hand process seems to be regarded with a very great degree of partiality, as affording a better and more perfect brick for building purposes than any machine ever yet introduced, although some of the machines turn out an excellent quality. With machinery, brick can be made much faster than by hand, but it is maintained by many builders and owners of houses that the rapidity with which they are made renders it impossible for them to be made perfect and solid in every respect, and particularly so with those made from dry clay. A smooth, even surface and solid formation are the qualities requisite to a good brick, and in many localities clay from which such bricks can be made is scarcely attainable. Its absence accounts for the rough, cracked, and almost shale-like appearance of many of the walls of brick houses to be seen in many sections of the country.

In some places it is impossible to find a clay that will not crack either in sun-drying or burning, however well-tempered the mortar may have been, and instances have been known where kilns, in which a hundred thousand had been set, would not turn out more than twenty-five to fifty thousand merchantable brick. In such cases heavy pecuniary loss was unavoidable, and hence the importance to brick-moulders of finding clay that would withstand the action of the sun when turned out in the yard to dry, or of the fire while kiln-burning. In the earlier times slop brick—that is, brick made by rolling the mortar in water and casting it in wet moulds—were more generally made than any other kind, but the difficulty of obtaining a smooth surface, a very desirable consideration, was a great objection to that style of brick, and it gradually gave way to other methods, as did also the old way of preparing the mortar by tramping it with horses, oxen, or even, in some instances, by men and horses. But these methods of brick-making gave way to sand brick. These are made by rolling the mortar in sand on the moulding-table and casting it into moulds, which are also well sanded by being dipped in a box of sand by the off-bearers after every turning out on the yard. It is very justly maintained that

this process secures more smoothly-surfaced, nicely-cornered, and more solid brick than those moulded in slop or water, and that it also secures a brighter, better color in burning. This process of brick-moulding is universally followed by the different hand brick-yards of St. Louis.

White Brick.—A great part of this brick formerly used was brought from other sections, Milwaukee, Wis., being the most noted place of the manufacture of that variety. Within the last twenty years, however, it has been satisfactorily settled that in St. Louis there is even a better quality of clay for their manufacture than that used at Milwaukee, and their manufacture has begun on a large scale. The bed of clay from which they are made is supposed to be inexhaustible.

This clay burns to a beautiful white, producing a brick every way equal to, and in certain respects superior to, those made at Milwaukee. Their color when properly made is lighter and more uniform, while the shrinkage is uniform, far more so than in the Milwaukee brick. From tests made by the engineers of the water-works and others, their tenacity is shown to be equal to any in government reports, sustaining flatways two thousand pounds on supports six inches apart with a fulcrum in the centre. Their manufacture was attempted before the late war, and about one hundred thousand made and burnt, but on account of the war the enterprise was abandoned until 1867. Pressed white brick, it is said, are much less expensive than stone fronts and look nearly as well, and it is therefore a source of congratulation that they are manufactured in St. Louis instead of imported from Milwaukee.

Fire-Clay.—The increase in the establishment of furnaces requiring the use of fire-brick, crucibles, retorts, etc., has necessarily increased the demand for these articles. In the earlier periods of the manufacturing interests of our country, clay for the manufacture of crucibles, retorts, etc., as well as some of the manufactured articles, were brought from Stourbridge, England, and Germany. The cost of either the clay or the manufactured article was a matter of no little moment, and hence the discovery of fire-clay in this country became a matter of congratulation to manufacturers, and as investigations and discoveries have been extended, beds of the purest and best of this material have been found, and now, instead of importing it either from Germany or England, it is exported from America to all the manufacturing points of Europe; but while it is found in many sections of our country, none rank higher among manufacturers than that found at

Cheltenham and vicinity, four miles from St. Louis. The properties of the best pot- and fire-clay consists of the following percentage of component parts :

Silica.....	64.05
Alumina.....	23.15
Oxide of iron.....	1.85
Carbonate of magnesia.....	.95
Water.....	10.00
	100.00

An analysis of the Stourbridge clay (for a long period of years regarded as the most nearly perfect of any offered to the trade), made by Willis (see Watt's Dict. Chem., Eng. Ed., vol. ii. p. 653), showed the following proportion of ingredients :

Silica.....	67.34
Alumina.....	21.01
Oxide of iron.....	2.03
Alkalies.....	1.38
Water.....	8.24
	100.00

An analysis of the Cheltenham clay, by Professor A. Litton, shows that it is much nearer a perfect article, taking the analysis of the best pot-clay, as submitted by Richardson, as authority, than that known as Homer's best pot-clay from Stourbridge, England. The analysis of both the crude and washed clay is as follows :

Crude Clay.

Silica.....	61.02
Alumina.....	25.64
Oxide of iron.....	1.70
Lime.....	.70
Magnesia.....	.08
Potassa.....	.48
Soda.....	.25
Sulphur.....	.45
Water.....	9.68
	100.00

Washed Clay.

Silica.....	59.60
Alumina.....	26.41
Oxide of iron.....	1.61
Lime.....	1.00
Magnesia.....	.07
Potassa.....	.29
Soda.....	.16
Sulphur.....	.38
Water.....	10.48
	100.00

Of the exact date of the finding of the clay at Cheltenham we are not fully advised, but Paul M. Gratiot engaged in the manufacture of fire-brick in a small way as early as 1837-38. His works were situated on what is now known as the Glassby heirs' farm, on King's Highway, and near the residence of Hon. John S. McClure. Since then, however, the discovery of immense beds of the clay have been made, and several large fire-brick manufactories erected, employing a large capital and several hundred mechanics, laborers, etc.

No substance has ever been found anywhere that approaches the Cheltenham clay. This clay on being first brought to the surface and exposed to the light has an appearance similar to that of stone, but after being exposed to the weather for a few days it disintegrates and falls to pieces. One-third of the material thus unearthed is preserved from exposure to the weather, and this portion of it is burned or calcined, this process being necessary to the proper working up of the material. After being burned it is passed through a process of grinding or reduction from its large lumps to a certain degree of pulverization necessary to the manufacture of fire-brick or whatever else may be intended, and from the *Iron Age* we extract the following description of the process to which the clay is submitted. This description relates to other works, but embraces the same principles and machinery as that used in St. Louis. It says,—

“Much care has to be exercised in the selection of the clay and its combinations in proper proportions. The brick are to resist the intense heat of the puddling furnace, the iron cupola, the locomotive and boiler grate, as well as the continuous heat in other places where the action of fire is to be resisted. The brick made directly from the clay is found to be too solid and too liable to fracture from the heat. To remedy this and secure a porous article the pure and best fire-clays are calcined, then it is taken and crushed by means of large iron rollers. By this process it is reduced to a mass of small particles ready for mixing with the pure clays. When the proper ingredients are thus combined, the mixture is put into a large box or vat and let soak about a day. Then it goes through the pug-mill, by which it is ground fine. It is then ready to be modeled into any of the required shapes, and they are legion. After this has been done the bricks are placed on the drying floor, where they remain from six to ten hours. They are then pressed, to give them their regular shape. After pressing they are again placed upon a drying floor, where they remain until dry enough to be set in the kilns for burning. The brick from the modelers will have to be handled five times before they are ready for use. The two defects that have heretofore existed in pressing blocks flatwise and by hand are said to be, 1st, the blocks were not pressed hard enough; 2d, they came out of the mould of an uneven thickness. To remedy these evils machinery has been invented within a few years for pressing the blocks edgewise, so that they come out fully pressed and with a perfect uniform thickness. This make of blocks, therefore, has the advantage that they require no chipping or dressing in laying them up. This saves a great amount of labor in lining or relining furnaces. It also makes a much better job than when laid with uneven blocks.

“Next comes the baking process. Here the round kilns are used, which is the form preferred by the English and other foreign makers. These improved, circular, high-coned kilns are fired with anthracite coal, and have a large number of fire-chambers around, and the heat is drawn to the centre of the kiln. This arrangement makes the heat equal throughout the whole kiln, burning top and bottom brick alike. Between the fire-chambers and the bricks, after they are set in the kiln, are protection-walls that prevent the heat from striking them, carry it up to the top of the kiln, and then down through its centre, enabling it to escape through a flue or pipe leading

from the bottom underground to the smokestack of the manufacturing machinery. It makes heat fast and very intense, burning all the brick thoroughly and equally. Thirty-six hours of full heat are generally required to burn the brick, and about twenty-four hours are required to attain this heat. The time required for cooling, of course, varies with the season.

"A large number of the fire-bricks manufactured here are sent to the manufacturing establishments of the Lake Superior regions, while a great many are shipped to the South, and almost all other points where manufactories requiring intense heating apparatuses are established; and so superior are the manufactures of the St. Louis and Cheltenham works that wherever they have been introduced they have been awarded the premium, both as to the quality of the clay and superiority of manufacture. The clay is becoming an article of commerce in itself, and is sought after from the various manufacturing cities of our own country, while some orders have come from Europe. One or two firms exist in this city that engage exclusively in its traffic. It is usually put up in barrels, and is worth in this market sixteen dollars per ton. Fire-bricks made at the Cheltenham and Oak Hill Works have been submitted to the severest tests known to the business, and pronounced by experienced men to be of the very best quality. For retorts and crucibles, and everything else designed to be exposed to the action of a great heat, the fire-clay found in St. Louis County is unsurpassed, and is a source of wealth little dreamed of by the pioneer settlers of this part of the Mississippi valley. As yet it is not fully developed or worked to any extent by other than the establishments already named; but it is not saying too much to predict that the time is not far in the future when the establishments to be built up here to shape and convert into articles of usefulness will be equal to those of any part of the Old World, to which America looked for many years for her supply of clay for crucibles, retorts, etc., and thus add millions of money to our home capital, and increase our population by thousands."

According to the tax assessor's report for 1882, the valuation of the real estate in the city of St. Louis is as follows: In the old limits, or within the limits before 1877, there are 63,652 lots, valued at \$143,585,820, and 1417 acres, valued at \$3,440,270; total, \$147,026,090. In the area between the old and present limits there are 18,367 lots, valued at \$7,233,670, and 19,056 acres, valued at \$7,917,850; total, \$15,151,520. The grand total for the entire city for the 82,019 lots and 20,473 acres is \$162,177,610.

St. Louis now has about one-third of its area covered with building and park improvements. There are about three hundred and thirty miles of improved streets, two hundred and fifteen miles of public and district sewers, two hundred and thirty miles of water-pipe, eighteen street railroads, having nearly one hundred and thirty miles of route through the city, and sixteen steam railroads centering at Union Depot.

The United States government now owns property in real estate and buildings in St. Louis to the value of \$5,787,800, and the St. Louis school board owns property valued at \$2,382,342. The valuation of property owned by private schools and convents is

\$1,418,465, and by church corporations, \$3,610,586. The total amount of real estate exempt from taxation in the city is about \$35,000,000.

The increase in the assessed value of real estate in St. Louis in 1882 was about fifteen per cent. as to the entire city. In the central part of the city twenty and twenty-five per cent. increase was made, while in the suburban sections five to ten per cent. additional value was placed on real estate. But few owners made petitions appealing from these additional valuations.

Below are given samples of the assessments on Washington Avenue and Olive Street for the past two years, from which some idea may be obtained of the increased values.

Washington Avenue.

Between Fourth and Fifth Streets:

Ames' estate, 90 feet front, valued at \$187,500 in 1881, and \$190,000 in 1882.

William G. Clark, owner, 112 feet front; increased from \$155,750 to \$174,500.

Mercantile Block, 18 feet front; increased from \$17,720 to \$26,520.

Between Fifth and Sixth Streets:

Mary F. Barrett, 71 feet front; increased from \$82,140 to \$94,860.

John H. Beach, 23 feet front; from \$20,570 to \$23,180.

Alford Bradford, 70 feet; increased from \$94,800 to \$105,800.

Charles Bradford, 30 feet; from \$43,200 to \$48,200.

State Savings Association, 27 feet; from \$19,280 to \$21,000.

Between Sixth and Seventh Streets:

Ames' estate, 90 feet; from \$87,200 to \$100,000.

New Lindell Hotel Company, 182 feet; from \$474,150 to \$587,000.

Between Seventh and Eighth Streets:

Gerard B. Allen, 235 feet; from \$94,580 to \$138,080.

George W. Bull, 22 feet; from \$17,930 to \$22,240.

Between Eighth and Ninth Streets:

First Methodist Church, 94 feet; from \$35,880 to \$38,000.

Between Ninth and Tenth Streets:

Esther Collins, 24 feet; from \$32,330 to \$37,500.

Olive Street.

Between Fourth and Fifth Streets:

Third National Bank, 37 feet; from \$97,000 to \$103,750.

Between Sixth and Seventh Streets:

Provident Savings-Bank, 25 feet; from \$39,500 to \$44,500.

John B. Sarpy, 50 feet; from \$46,330 to \$52,900.

Between Sixth and Seventh Streets:

Alice Bacon, 25 feet; from \$13,870 to \$15,200.

Between Seventh and Eighth Streets:

T. Benoist, 44 feet; from \$33,040 to \$40,000.

Between Eighth and Ninth Streets:

Laura A. Blossom, 25 feet; from \$12,290 to \$15,450.

Odd-Fellows' Hall Association, 127 feet; from \$54,000 to \$60,000.

Between Ninth and Tenth Streets:

Gerard B. Allen, 100 feet; from \$70,500 to \$92,500.

Pelagie Berthold, 50 feet; from \$23,500 to \$26,500.

Between Tenth and Eleventh Streets:

Mary A. Calhoun, 24 feet; from \$8250 to \$12,250.

Between Eleventh and Twelfth Streets :

Daniel Catlin, 24 feet ; from \$8720 to \$9720.

Nathan Cole, 29 feet ; from \$11,410 to \$12,800.

John Byrne, Jr., the pioneer, perhaps, in what has grown to be the colossal real estate business of St. Louis, was born in New York City, Aug. 3, 1805. His parents were John Byrne and Margaret O'Donnell, both natives of County Donegal, Ireland. Little is recorded of his boyhood, except that he was educated at Georgetown, D. C., leaving school in 1819 and removing with his parents to Mobile, Ala., where, although a mere boy, he was immediately associated with his father in mercantile pursuits, for which he early exhibited a special aptitude.

On the 5th of March, 1832, he was married to Sarah M. Fitzsimmons, a native of Asheville, N. C., and of Irish parentage. This union has proved a long and happy one, and on the 5th of March, 1882, the couple had the pleasure of celebrating their golden wedding, amid the congratulations of a large company of their friends in St. Louis.

The ruin wrought by the panic of 1837 compelled Mr. Byrne to seek a new location. Accordingly he removed to St. Louis, where he established a modest dry goods house on Market Street. Few of those then engaged in business in St. Louis are now living, but one of the few is Eugene Kelly, who kept a store within a few doors of his, and who is now a wealthy banker of New York.

In 1840, Mr. Byrne opened a real estate office in a little building on Chestnut Street, near Fourth. Although the honor has been claimed for others, he was perhaps the pioneer in this business, and H. W. Leffingwell appears to have been the next person to engage in this as yet untried field.

Mr. Byrne's industry and fidelity to the interests of his patrons were speedily recognized, and he soon had the satisfaction of seeing his business established on a substantial basis. Its increase has been singularly uniform, a result due perhaps to his conservatism, which prevented his engaging in the wild speculations that proved so ruinous to others in the real estate trade. This caution begot confidence in him and gained him custom, and some of the largest estates in St. Louis have passed through his hands. It is now forty-two years since the business was inaugurated, and the generous competence which Mr. Byrne is now enjoying in the evening of his days is the fitting reward for years of watchful and incessant industry.

Although not a politician, Mr. Byrne has not declined to serve the public when called upon. At one time he was a member of the Board of Education,

serving with Chancellor Eliot, and proved himself a progressive friend of the public school system.

He is a devoted member of the Catholic Church, and was one of the founders of the St. Vincent de Paul Association. When he arrived in St. Louis he says the population was only eighteen thousand. The court-house was the only public building, and that was unfinished. The only Catholic Churches were the cathedral and the chapel of the St. Louis University, and the only two Catholic institutions were the St. Louis University, under Father Ellet, and the Convent of the Sacred Heart.

Mr. Byrne was a director in the Central Savings-Bank, and when it failed he lost his investments and the deposits of his house. He is now a director in the Safe Deposit Company.

Mr. Byrne has had two children. Mary Elizabeth was born in New York in 1833, and in 1856 was married in St. Louis to Dr. F. L. Haydel, of St. James Parish, La. Dr. Haydel has been associated with his father-in-law for many years as superintendent of his business.

The fate of James Fitzsimmons Byrne was a tragic one. He was born in St. Louis, May 27, 1842; attended school at Antwerp, Belgium, for four years, and on June 8, 1864, was drowned in the Rhine at Bonn, Prussia. He was a young man of exceptional promise, and his sudden death fell with crushing weight upon his parents.

Although now considerably beyond the Scriptural limit of "threescore years and ten," Mr. Byrne has not until lately exhibited any marked decay of body or mind. He appears occasionally at his business, and attends to many details, and still manifests considerable interest in affairs. Of a retiring nature, he has always shunned publicity, and would prefer, if judged at all, to be judged by his deeds. According to such a standard; there are few of the business men of St. Louis who have accomplished more, not merely in winning success in business, but in demonstrating the fact that enduring success is the natural result of patient, painstaking, and unostentatious labor.

Marcus A. Wolff, another prominent real estate agent, was born in Louisville, Ky., May 14, 1831. His father was born in London, England, of Polish parents, and came to this country when only nineteen years old. He was a mechanic in moderate circumstances. Eventually he married Miss Susan Franklin, of Kentucky. The elder Wolff was a man of sound common sense, and, so far as he was able, gave his son a good common-school education. When the boy was only ten years of age, however, necessity compelled him to leave school, in order to contribute

John Byrne Sr.
"

ST. LOUIS BANK NOTE COMPANY

Respectfully
Marcus A. Hoff

to his own support and to that of the other and younger members of the family.

Hoping to better his condition, his father removed to St. Louis, and Marcus found employment as a newsboy and in various capacities in the newspaper offices. The papers of the city then were the *Missouri Republican*, the *Evening Gazette*, the *Missourian*, and the *Reveille*. For several years he was a carrier on the *Evening Gazette* and the *Reveille*, and in 1847 he went on the *Republican*, working at the press and carrying papers. The chief incidents of the latter engagement were the fire that destroyed the office of the paper and the cholera epidemic of 1849. While the malady was raging young Wolff gave a signal display of energy: three of the carriers of the paper were stricken down, and he insisted upon delivering the papers on their routes in addition to his own, and for some time did the work of four men, beginning at one o'clock A.M. and walking continuously until noon. Such service won the gratitude and respect of his employers and the admiration of his acquaintances. In this eminently practical school Mr. Wolff completed his business education.

In December, 1852, he married Miss Eliza J. Curtis, of St. Louis, and about the same time obtained a position as teller and clerk in a private banking-house, in which position he soon acquired the reputation of being the best judge of bank-notes in the city, a distinction to be proud of, for in those days there were about twelve hundred banks throughout the country issuing notes of differing denomination. By judicious investment of his savings he was enabled in 1859 to establish himself in business as junior member of the real estate firm of Porter & Wolff. The house soon became known as one of the most successful in St. Louis. In 1868, Mr. Porter retired, and Mr. Wolff continued the business, having purchased his partner's interest. In 1872 the firm of M. A. Wolff & Co. was established. Under Mr. Wolff's energetic management the business grew rapidly, and has long been perhaps the largest and most prosperous of its kind in St. Louis.

Pre-eminently a business man, Mr. Wolff has never held office, although a staunch Democrat, and often solicited to allow his name to be used. But recognizing the fact that his own prosperity depended on that of the city, he has always taken a deep interest in whatever promised to advance her progress. He was one of the original stockholders in the Boatmen's Savings Institution, and holds or has held an interest (mostly as director) in the following institutions: Second National Bank, East St. Louis Elevator Company, Hope Mutual Insurance Company, St. Louis

Distillery Company, Rapid Transit Company, South St. Louis Street Railroad Company, and Real Estate Exchange. Generally, it may be said that no legitimate enterprise promising the advancement of the city and State has yet been inaugurated in which he has not manifested a deep interest.

Mr. Wolff is of a social nature, and is a Mason, Knight Templar, Knight of St. Patrick, and a member of the St. Louis Legion of Honor and other societies. Throughout his life he has been industrious, prudent, and saving, and as a consequence has amassed a handsome competency. His residence at Côte Brillante is one of the most attractive in the city.

Still in the prime of life, Mr. Wolff has lost none of the spirit and dash that characterized his early career, and appears good for many years to come.

CHAPTER XXVI.

THE MISSISSIPPI RIVER AND ITS TRIBUTARIES.

As the commercial metropolis of the Mississippi valley, St. Louis lays under contribution not only the great Mississippi River, but all the numerous streams which swell this mighty current. Situated twenty miles below the mouth of the Missouri and one hundred and seventy-four miles above the mouth of the Ohio, St. Louis holds, as has been frequently pointed out in this work, the key to the industrial development of that vast and fertile region which is drained by the Mississippi, the Missouri, the Ohio, and the numerous smaller rivers, and her commercial existence is indissolubly linked to that of the great valley.

"Many years ago the late Governor Clark and myself," says Hon. Thomas H. Benton,¹ "undertook to calculate the extent of boatable water in the valley of the Mississippi; we made it about fifty thousand miles! of which thirty thousand were computed to unite above St. Louis, and twenty thousand below. Of course, we counted all the infant streams on which a flat, a keel, or a bateau could be floated, and justly; for every tributary of the humblest boatable character helps to swell not only the volume of the central waters, but the commerce upon them. Of this immense extent of river navigation, all combined in one system of waters, St. Louis is the centre and the *entrepôt*, presenting even now, in its infancy, an astonishing and almost incredible amount of commerce, destined to increase forever." The Missis-

¹ Letter to the St. Louis delegation to the Chicago Convention, dated June 20, 1847.

issippi, the conduit of them all to the ocean, must ever remain the central figure in the group. Rising in Lake Itasca, about three thousand two hundred miles from the Gulf of Mexico, near the "divide" which turns the water-fall of that country into the Red River of the North, it flows for over one thousand miles through a rich and abundant land, until its waters are broken by the Falls of St. Anthony, near which the thriving cities of Minneapolis and St. Paul are located. The river at these falls is eighteen hundred feet wide, and its waters are precipitated over a ledge of limestone rock seventeen feet in height, forming a dam, the water of which supplies power to many manufacturing establishments in Minneapolis, the chief of which is that of flour. For continuing the improvement of these falls, twenty-five thousand dollars was appropriated by the River and Harbor Act of 1882. St. Paul, near these falls, is seven hundred and ninety-eight miles from St. Louis, and is the head of steamboat communication with St. Louis, though the river is navigable far above the falls.

Not the least of the remarkable features of the Mississippi River are the physical characteristics which it has stamped upon the delta which it has created and through which it flows. The scientists who have made a study of this river regard the delta of the Mississippi as beginning near the village of Commerce, about twenty-eight miles above the mouth of the Ohio, where the rock *in situ* is first encountered on both sides of its channel, and supposed to underlie its bed. If that be assumed as a fact, it involves the further assumption that at some remote period there existed a cataract or rapids of far greater descent than that at Niagara somewhere above the mouth of the Ohio River. The elevation of the low-water surface of the Mississippi about Cape Girardeau is two hundred and eighty-five feet above the level of the ocean, and if ever the level of the sea extended up to that point, the Mississippi must then and there have precipitated its waters over a ledge two hundred and eighty-five feet high. If we imagine a great plane, extending from the mouth of the Ohio, six hundred miles in length and thirty to forty in width, with its northern extremity elevated two hundred and eighty-five feet, we shall have some idea of the delta which the river has created in the progress of time. This plane, containing forty thousand square miles, has been formed in the course of ages from the material washed down from the uplands by the river and its tributaries. The river has therefore raised above the sea the soil which constitutes its own bed, and flows down this plane of its own creation in a serpentine course, frequently crowding the hills and

bluffs. The actual distance from the mouth of the Ohio to the gulf is in round numbers five hundred miles, the length of the Mississippi from the same point to the gulf is eleven hundred and seventy-eight miles, and the average descent at high water is three and a quarter inches per mile. The course of the river is therefore lengthened out nearly seven hundred miles, or more than doubled by the remarkable flexures of its channel, and the rate of descent is reduced by these flexures to less than one-half the inclination of the plane down which it flows.

The Mississippi bears along at all times, but especially in the periods of the floods, a vast amount of earthy matter suspended in its waters, which the current is able to carry forward so long as the water is confined to the channel. But when the water overflows the banks its velocity is checked, and it immediately deposits the heaviest particles which it transports and leaves them upon its borders, and as the water continues to spread farther from its banks, it continues to let down more and more of this suspended material, the heaviest particles being deposited on the banks, and the finest clay conveyed to positions more remote. The consequence is that the borders of the river which received the first and heaviest particles are raised higher above the general level of the plane than the soil which is more remote, and that while the plane of the delta dips towards the sea at the rate of eight inches per mile, the soil adjacent to the banks slopes off at right angles to the course of the river into the interior for five or six miles at the rate of three or four feet to the mile. The lands immediately on the borders of the river are extremely fertile, and often highly cultivated, but as they are all subject to inundation during the high floods of the river, they are guarded by artificial embankments. The water pressing upon these embankments often produces breaches or crevasses through them, and rushes in a deep column into the low grounds, and sweeps over every improvement. The width, depth, and area of cross section of the Mississippi below St. Louis will be found in the following table, from the memoir of Charles Ellet, Jr. :

Points on the River.	Width, Feet.	Depth, Feet.	Area of Cross Section, Square Feet.
At Cape Girardeau, 1½ miles above...	2500	66.5	165,544
Above mouth of Ohio, 2 miles.....	1530	77.5

Sauvé's plantation.....	2375	135.3	182,031
McMaster's plantation.....	2425	100.0	166,172

The average area of high-water section of the whole from the mouth of the Ohio to New Orleans is two hundred thousand square feet. The estimate for the discharge of high water by the Mississippi at the top of the flood of 1854 was one million two hundred and eighty thousand cubic feet *per second*.

At the time of the Revolution there were able men who conceived that the Atlantic States, hemmed in by the sea and by a chain of mountains, embraced too great a diversity of surface and products, and were too widely scattered not to present discordant elements and jarring interests, which could only be reconciled and held in check by a powerful centralized government. They could not imagine that the barriers of the mountains would be overleaped, and that other States would spring up in the remote West; that their descendants would intermingle on the Pacific coast with the people of Asia, and claim the Sandwich Islands for their neighbors; that Mexico would present but a feeble barrier to their interminable progress, or that States would flourish in the Mississippi valley, in which one of the States, Missouri, unexplored at the period of the Revolution, has a population, resources, and wealth greater than all the original thirteen when their independence was achieved, and a city, St. Louis, is more populous, wealthy, and enterprising than all the cities of the Atlantic coast at the same epoch.

The distances from St. Louis to points on the upper Mississippi are as follows:

Allegheny.....	400
<hr/>	2,100
The Illinois.....	300
Rock River, Galena, Wisconsin, and St. Croix.....	500
<hr/>	12,200
Making the total river navigation..	12,200

At Fort Snelling the *St. Peter's*, or *Minnesota* River empties into the Mississippi, eight hundred and thirteen miles above St. Louis, and is navigable for sixty miles. By the River and Harbor Act of 1882 the Secretary of War is directed to cause examinations and surveys to be made of "the source of this river, near the foot of Big Stone Lake, with a view to its being added to the reservoir system of the Mississippi and its tributaries." The *St. Croix* River, with its large lumber trade, is about two hundred miles in length, and enters the Mississippi at a point seven hundred and sixty-five miles above

St. Louis; the chief river points on the *St. Croix* are Hudson, Stillwater, Osceola, and St. Croix Falls.¹ The *Chippewa* River empties into the Mississippi six hundred and eighty-six miles above St. Louis, near the end of Lake Pepin, upon which a harbor of refuge at Lake City is to be constructed under the River and Harbor Act of 1882. This river is navigable for steamboats about seventy miles, and upon its surface large quantities of timber are annually rafted to St. Louis; its length is three hundred miles, and its chief tributaries are the Clearwater and Red Cedar Rivers. For the improvement of the *Chippewa* River thirty-five thousand dollars was appropriated by the River and Harbor Act of 1882.

The *Wisconsin* River empties into the Mississippi four miles below Prairie du Chien, and five hundred and thirty-eight miles above St. Louis. This river is navigable for steamboats as far as Portage, where the canal connects it with the Fox River, which flows into Green Bay, and connects the Mississippi system with the lake system of navigation. The length of the *Wisconsin* is six hundred miles, and it receives the waters of many tributaries, some of them streams of considerable volume. The *Fevre* River, upon which Galena is situated, enters the Mississippi a few miles below Duluth, and is navigable a part of the year to Galena. The *Wapsipinicon* River, at a point seven miles below Camanche, and three hundred and eighty-three miles above St. Louis, empties into the Mississippi. Its length is two hundred miles, but it is not navigable. The *Rock* River, rising in Fon du Lac County, Wis., near Lake Winnebago, flows south-westerly, and enters the Mississippi River two miles below Rock Island, at a point three hundred and fifty-two miles above St. Louis. Its navigation is dependent upon high water, and extends two hundred and twenty-five miles.

The distances on Rock River from Watertown to the Mississippi are:

	Miles.	Total.
From Watertown to Jefferson.....	16	16
To Fort Atkinson.....	8	24

The *Iowa* River takes its rise in Hancock County, Iowa, and is navigable for small steamboats in the

¹ Thirty thousand dollars was appropriated by the River and Harbor Act of 1882 for improving this river.

high-water season for eighty miles from its mouth, on the Mississippi River, two hundred and ninety-four miles above St. Louis, near New Boston. Its length is about three hundred miles, and its course southeasterly.

The *Des Moines* River, rising in the southern part of Minnesota, flows through an exceedingly fertile and productive country for four hundred miles, of which two hundred are navigable. It enters the Mississippi near Alexandria, Mo., about two hundred and seven miles above St. Louis. The distances upon this river are:

Quincy, Ill., one hundred and sixty-seven miles above St. Louis, on the Mississippi, is situated in one of the finest agricultural sections of the country. Hannibal, Mo., one hundred and forty-seven miles above St. Louis, is an important point for the shipment of pork, hemp, tobacco, and other produce. Both of these thriving cities are important centres of the trade and commerce of St. Louis.

The *Illinois* River empties into the Mississippi at Grafton, Ill., forty-three miles above St. Louis. The Kankakee and Des Plaines Rivers uniting at Dresden form the Illinois, which, receiving the waters of Vermilion River, then becomes navigable for steamboats during a part of the year. The productiveness of the country through which the Illinois flows makes the commerce of that river very valuable. The distances from St. Louis to trading-points on the Illinois River are as follows:

The *Missouri* River unites with the Mississippi twenty miles above St. Louis. The springs in the Rocky Mountains from which its head-waters flow are not more than a mile from those which supply the Columbia River, which empties into the Pacific Ocean. The *Jefferson*, *Gallatin*, and *Madison*, three small streams, unite to form the Missouri. The "Gates of the Rocky Mountains," which, rising perpendicularly from the water's edge to the height of twelve hundred feet, compress the river into a breadth of four hundred and fifty feet, are four hundred and forty-one miles from the extreme point of navigation of the branches. The "Great Falls," a series of rapids, having a fall of three hundred and fifty-one feet in sixteen miles, are one hundred and ten miles below the "Gates." These falls are broken into four leaps, of which the first in the descent of the river is twenty-six feet; the second, forty-seven feet; the third, nineteen feet; and the fourth, ninety-eight feet. Below the falls navigation is unobstructed by any permanent barrier, and only impeded by low waters after the July flood has passed down. The great number of islands and sand-bars that have formed in the river render the channel intricate and difficult for navigation, which, with the numerous "snags," make steamboating extremely hazardous. The first important tributary, the *Yellowstone*, is as yet not of any material importance from a commercial point of view. It is navigable for a considerable distance by the steamboats of the upper Missouri, and when the country through which it flows shall have been settled and cultivated, the trade of the *Yellowstone* will doubtless become very valuable.

The *Platte*, or *Nebraska* River enters the Missouri seven hundred and forty miles from St. Louis. Formed by its North and South Forks, which rise in the Rocky Mountains, the *Platte* flows easterly for two thousand miles, but is shallow, and, except in the great freshets of the spring, is not navigable.

Sixteen miles above Kansas City and four hundred and seventy-three from St. Louis, the Little Platte from Iowa enters the Missouri. It is two hundred miles in length, shallow, and not of much importance commercially.

One of the largest tributaries of the Missouri is the *Kansas*, which enters that river near Kansas City, four hundred and fifty-nine miles from St. Louis. Rising in the Rocky Mountains, and flowing eastward through the rich State of Kansas, its length is twelve hundred miles, nine hundred of which, with some improvement, might be made navigable. It is one thousand feet wide at its mouth, and has many tributaries, of which Solomon's Fork, seven hundred miles long, and Smoky Hill Fork, eight hundred miles long, are the largest.

Grand River enters the Missouri three hundred and one miles from St. Louis. It is two hundred and forty miles in length, and navigable one hundred miles between the Missouri and Madison, Iowa.

Five miles below Cambridge, Iowa, and two hundred and sixty-nine above St. Louis, the *Chariton* River from Iowa enters the Missouri. It is navigable for thirty miles, and its length is one hundred miles.

Eight miles below Arrow Rock and two hundred and forty miles from St. Louis, the *La Mine* River enters the Missouri. It is navigable for about thirty miles.

The *Osage* River is about five hundred miles in length, and runs through a very fertile and productive country, and enters the Missouri one hundred and sixty-nine miles from St. Louis. It is navigable for about two hundred miles.

The *Gasconade*, rising in Wright County, Mo., runs nearly two hundred miles, and empties into the Missouri one hundred and twenty-nine miles from St. Louis. It is important only as supplying water-power, and is not navigable.

The *Ohio*, which enters the Mississippi at Cairo, one hundred and seventy-four miles below St. Louis, is formed at Pittsburgh, one thousand and nineteen miles from Cairo, by the junction of the Allegheny and Youghiogheny. The Allegheny, which is the proper continuation of the Ohio, rises on the borders of Lake Erie, where its tributaries terminate in Lake Chautauqua, one thousand three hundred feet above the level of the sea, and seven hundred feet above the level of Lake Erie. A boat may start from these sources, within seven miles of Lake Erie, in sight sometimes of the sails which whiten the approach to the harbor of Buffalo, and float securely down the Conewango or Cassadaga to the Allegheny, down that river to the Ohio, and thence uninter-

edly to the Gulf of Mexico. In all this distance of two thousand four hundred miles the descent is so uniform and gentle, so little accelerated by rapids, that when there is sufficient water to float the vessel, and sufficient power to govern it, the downward voyage may be performed without difficulty or danger in the channels as they were formed by nature. Steamboats have ascended the Allegheny to Olean Point, two thousand three hundred miles from the mouth of the Mississippi, and two hundred and fifty miles above Pittsburgh. From the junction of the two principal tributaries of the Ohio at Pittsburgh, to Point Pleasant, where the Great Kanawha River from West Virginia enters the Ohio, there are only small and unimportant streams entering the Ohio. Point Pleasant is distant from St. Louis nine hundred and forty-two miles. The Great Kanawha is navigable for small boats, and the products of salt, coal, and iron which in great quantities are sent down that river find at St. Louis a market. The salt manufactures along the Great Kanawha amount to eight million bushels annually.

Improvement of the Mississippi and Tributaries.—Prior to the construction of the New York and Canadian canals, and the opening of railways between the Western and Eastern States, the Mississippi River and its navigable tributaries were the only highways of commerce between the vast territory embracing the Western States and the other States of the Union. The closing of the mouth of the Mississippi during the civil war, the general paralysis of Southern industry and trade incident to that war, and the increase in the size of ocean vessels turned the current of commerce from the southern to the eastern route, and from the bosom of the Mississippi to the canals and railways that led to Northern Atlantic cities. This deflection of the commerce of the Western States from the southern to the northern routes diminished, without destroying, the value of the Mississippi River as a great commercial highway. The relative economy of water over rail transportation for heavy freights, and the failure of the railways to supply sufficient cheap transportation to meet the demands of a rapidly increasing commerce between the great central basin of this continent and the markets of the world, created that public sentiment, to which Congress has within a few years past responded, for the improvement of the navigation of the Mississippi and its tributaries. Previous to the public recognition of the vast importance of this national undertaking, the prevention of "inundations of the delta of the Mississippi" had attracted attention, together with the practicability and cost of improving the

navigation of Western rivers, as incidental rather than primary reasons for those improvements. The memoir of Charles Ellet, Jr.,¹ was prepared under the authority of an act of Congress directing the Secretary of War to institute such surveys and investigations as were necessary to the preparation of adequate plans for protecting the delta from inundations, and increasing the depth of water on the bars at the mouth of the Mississippi. Mr. Ellet, though not an officer of the government or in the employ of the War Department, was called to this important duty, and authorized to make such investigations as would enable him to devise and report suitable plans for the protection of the delta from inundations by overflows.

As early as 1841 the attention of Congress was called to the condition of the Mississippi above the mouth of the Ohio. From 1836 to 1841 it was said that more property had been destroyed from the mouth of the Ohio to St. Louis by snags than on all the other parts of the river and its tributaries.² Notwithstanding the general government had provided snag-boats for the lower river, the manifest neglect of the Western rivers was entailing an annual loss of millions of dollars upon the commerce of the West, owing to the dangerous and destructive condition of the then only commercial highway for that great section of the country. A theory of constitutional construction intervened to obstruct the work of improvement, which became so obviously absurd that to avoid its inconveniences Mr. Calhoun designated the Mississippi River as an "inland sea," to the improvement of which the powers of the general government might be applied. Notwithstanding the vast extent and wonderful fertility of the country which those rivers drain, the nature, variety, and location of the products seeking transportation, and the almost incalculable commerce which demanded the facilities of easy and safe movement, their navigation was left unimproved until the competition of the railroads gave weight and influence to the demands of an injured public.

In 1870, Congress, in addition to the usual appropriation for river improvements and surveys, made an

¹ "The Mississippi and Ohio Rivers: containing plans for the protection of the delta from inundations; and investigations of the practicability and cost of improving the navigation of the Ohio and other rivers by means of reservoirs, with appendix on the bars at the mouth of the Mississippi, by Charles Ellet, Jr., Civil Engineer."

² John A. Seudder, before the Senate Committee on Transportation Routes to the Seaboard, in 1873, said, "I suppose there are five thousand wrecks between this (St. Louis) and Cairo alone. I speak now of all the boats that are sunk." P. 615.

allowance of funds for the survey and examination of various small streams tributary to the Mississippi and its great branches. Among the streams to be examined were the Cuivre River in Missouri, the Current River in Missouri, Black River, Missouri and Arkansas, White River, flowing through the same States, the Fourche la Faire in Arkansas, and Bayou Bartholomew in Louisiana. The surveys of these rivers were made by Brevet Maj. Charles J. Allen, Engineer Corps, who in that year reported to Gen. William T. Reynolds, U. S. Engineer Corps, in charge of Western rivers at St. Louis. In addition to the examination of these rivers, the same Congress which authorized this work ordered a complete survey of the Ouachita River from Trinity, La., to Camden, Ark., a distance of three hundred miles. This survey was made in order to ascertain the practicability of improving navigation on that stream by the construction of locks and dams.

The opening up of the Little Missouri River for the navigation of light-draught steamboats, a work of immense value to all that section of country adjacent to its waters, as well as to the general interests of Western commerce, was accomplished that year. The country through which it flows is a very productive region, but the fact that it was in a measure cut off from markets prevented its development. Cotton, the chief product of this rich region, had to be hauled on wagons a distance of one hundred miles, which placed an embargo on its production.

The work, however, accomplished by Maj. Allen, in which St. Louis is most deeply interested, was his thorough and complete survey of that portion of the Mississippi River extending from the mouth of the Missouri to the mouth of the Maramec, which includes the harbor of St. Louis. A careful examination of the bars, chutes, and bank abrasions was made, and the particular force of the current in certain localities was ascertained.

During the season of 1871,¹ Gen. Reynolds re-

¹ The *snag-boat* fleet in 1871 under the command of Gen. Reynolds was composed of the "Thayer," the "Octavia," the "S. H. Long," the "R. E. DeRussey," and the "J. J. Abert." The "Thayer" operated in the Missouri, between St. Joseph and Omaha, from the time the river opened until the close of September, when she was sent to the upper White, Black, and Little Red Rivers.

The "R. E. DeRussey" operated in the Missouri, between Kansas City and St. Joseph, from early in the season until the 1st of September.

After her arrival at St. Louis she was loaned to the city authorities to remove obstructions in the harbor, the city paying all her expenses. This was a benefit to the city and no loss to the general commerce, for the reason that the appropriation was not enough to keep the boats at work until the 1st of July.

moved over four thousand snags, roots and all, from the streams, as well as "rack heaps" destroyed and wrecks removed, and thousands of trees cut to prevent their becoming snags, and aid given to vessels aground or in distress, which was always rendered when possible and never charged for.

In the upper Ouachita and Little Missouri, where snag-boats could not go, flat-boats drawing not over ten inches of water were set at work "cutting" snags which their light power could not pull out. The work was done under the superintendence of experienced pilots of those streams, and at a low stage of water. This was the only cutting that was done, excepting in the case of chutes, in two or three cases, when they were so low that the yawl only could go through. This method was adopted to render the chute available when a rise should come.

Under the law of Congress² allowing the employment of civil engineers for the purpose of executing the surveys and improvements of Western and Northwestern rivers, much work has been done on the navigable waters of the Mississippi valley.

In 1845 the Memphis Convention, for the purpose of bringing the condition of navigation on Western rivers to the attention of Congress, was held. John

The "Long" operated in the Missouri, from Kansas City to Hermann, until about the 1st of September, when she was withdrawn. After she reached the Mississippi she worked a few days in the St. Louis harbor, and on the 1st of November was ordered below, between Memphis and the mouth of the Arkansas.

The "J. J. Abert" worked in the Missouri, below St. Aubert, until the middle of August, when she came into the Mississippi, and worked between the mouth of the Missouri and Memphis.

The "Octavia" was employed the entire season between Keokuk and Cairo, endeavoring to keep a good depth of water between these points, until it was necessary to send her into the Missouri to help the "DeRussey" and "Abert" out of that river.

The work of the "Octavia" was of great service between St. Louis and Keokuk, but owing to the nature of the river from St. Louis to Cairo the benefit was not so great. Channels across the worst bars were cut several times during the season, but they soon filled up.

The amount available for running and operating the dredge and snag-boats after using enough for repairs was only one hundred and fifty thousand dollars. With this they were run about nine months each, which, as there were five boats in all, was an average cost of about three thousand four hundred dollars per month, or less than one hundred and twenty dollars per day.

The Missouri from Omaha to the mouth, the Mississippi from Keokuk to Vicksburg, the Arkansas from its mouth probably to Little Rock, the Ouachita from its mouth to Camden, the White from its mouth to Jacksonport, the Little Red, Black, and St. Francis Rivers from their mouths as far up as the boats can go well, were all passed over by the snag-boats at least twice, and the greater part of the distance four or more times during that season.

² March 29, 1867; Rev. Stat., Sec. 5253.

C. Calhoun presided, and was made chairman of the committee to memorialize Congress. In that memorial Mr. Calhoun took the broadest ground in favor of the improvements being made by the Federal government without regard to their cost.

A convention was held in Chicago July 4, 1847, to consider the subject of the improvement of the Mississippi River and its principal tributaries, to which delegates from St. Louis were appointed.

These delegates prepared an able report upon the subject, which was published in pamphlet form,¹ from which it appears that there were 1190 steamboats and 4000 keel- and flat-boats engaged in the commerce of Western rivers, employing 61,650 persons, the cost of which is set at \$16,183,561, and the running expenses at \$32,725,000. The cost of river transportation was summed up as follows:

Cost of running 1190 steamboats.....	\$32,725,000
Insurance, at 12 per cent.....	1,942,627
Interest, at 6 per cent.....	971,313
Wear and tear, at 24 per cent.....	3,885,254
Tolls on Louisville and Portland Canal	250,000
Cost of flat-boats (included because sacrificed at New Orleans).....	1,380,000
Total cost of transportation.....	\$41,154,194

This vast sum was an annual "tax upon the surplus produce, enterprise, industry, and trade of the country." The aggregate annual tonnage transported was set at 10,126,160 tons; and the "grand aggregate value of commerce afloat upon the navigable waters of the valley of the Mississippi" was estimated by this committee at \$432,621,240, "being nearly double the amount of the whole foreign commerce of the United States." Taking into consideration the loss of steamboats and cargoes, the committee regarded it as not "too high an estimate to put down the actual losses at two millions of dollars per annum. This is annihilated,—so much destroyed of the wealth of the country,—amounting every ten years to a sum equal to the purchase-money paid by the government for all Louisiana."

This was the era in Federal politics when the authority of the general government to undertake works of internal improvement was denied by a powerful and often successful party. It was also a time when the discipline of party was stronger and more binding than the interests of States and sections. That theory as well as discipline may be said to have departed

forever from the politics of the country, since the River and Harbor bill of 1882 appropriated nearly \$20,000,000 for the improvement of the rivers and harbors of the country, of which \$4,123,000 was for the Mississippi River. Up to 1873 the United States government had expended for the improvement of rivers and harbors on

The Atlantic coast.....	\$9,587,173
The Gulf coast.....	579,706
The Pacific coast.....	638,003
The Northern lakes.....	10,437,158
The Western rivers.....	11,438,300
Total.....	\$32,680,340

Above the Falls of St. Anthony to Leech Lake, a distance of six hundred and seventy-five miles, the Mississippi may be navigated in certain conditions of the rainfall. A reconnoissance of this part of the river was made in 1869 by Francis Cook, civil engineer, under the direction of Gen. G. K. Warren, of the United States Engineer Corps. In his report of Jan. 22, 1870,² Mr. Cook presents much valuable information in regard to the improvement of the upper Mississippi, and revives the "reservoir" plan of Mr. Ellet for supplying the river both above and below the Falls of St. Anthony during dry seasons. A lockage at Sauk Rapids of eighteen feet will connect the reaches of the river and extend the navigation to Little Falls, where a lockage of fourteen feet will form a connection with another navigable reach extending to the mouth of Pine River, where the removal of bowlders and the opening of cut-offs will extend navigation to Pokegama Falls. At that point a lockage of thirty feet will open the navigable waters above to Lake Leech and Winnebagoishish Lake. Thus continuous navigation will be had for six hundred and seventy-five miles above the Falls of St. Anthony. The natural reservoirs that would supply the Mississippi River, both above and below the Falls of St. Anthony, during the seasons of low water are to be formed by constructing a dam at Pokegama Falls, by which a supply of 37,057,638,400 cubic feet of water could be obtained, and a dam raising Lake Mille Lacs two feet would increase that amount 10,036,224,000 cubic feet. The estimated cost of these reservoirs was one hundred and fourteen thousand dollars, and they would supply to the upper Mississippi a permanent depth of from four and a half to five feet during the entire season. In a report to the War Department, Dec. 22, 1873,³ Maj. F. W. Farquhar, of the United States Engineer Corps, recommended that a complete survey be made of the navigable portions of the Mississippi

¹ "The Commerce and Navigation of the Valley of the Mississippi, and also that appertaining to the city of St. Louis, considered with reference to the improvement by the general government of the Mississippi and its principal tributaries, being a report prepared by authority of the delegates from the city of St. Louis for the use of the Chicago Convention of July 5, 1847."

² Ex. Doc. 235, Forty-first Congress, Second Session.

³ Ex. Doc. 145, Forty-third Congress, First Session.

River above the Falls of St. Anthony, and urged the further improvement of the river between St. Anthony and St. Cloud. These improvements have all been undertaken by the general government, and for continuing operations on the reservoirs at the head-waters of the Mississippi, Congress appropriated, Aug. 2, 1882,¹ three hundred thousand dollars. By the same act twenty-five thousand dollars was appropriated for the removal of snags, ten thousand dollars for continuing the improvement of the Mississippi River above the Falls of St. Anthony, and twenty-five thousand dollars for improving the falls.

Upon the Mississippi between St. Paul and St. Louis two dredge-boats have been employed since 1867, operating chiefly upon sand-bars, removing snags and overhanging trees. The Rock Island Rapids² have been improved by excavating a channel so as to give a width of two hundred feet and a navigable depth of four feet at extreme low water, and a canal 6.7 miles in length was constructed at Keokuk Rapids. This canal is from two hundred and fifty to three hundred feet in width, with a minimum depth of five feet. The act of Aug. 2, 1882,³ appropriated two hundred and fifty thousand dollars for continuing the improvement of the Mississippi River from St. Paul to Des Moines Rapids, and thirty thousand dollars for the construction of a dry-dock at the Des Moines Rapids Canal, and thirty thousand dollars for improving Des Moines Rapids Canal. "The widening of the channel at Rock Island,"⁴ said a committee of St. Louis business men in a letter to a committee of Congress, "the completion of the canal at Des Moines, the construction of the wing-dams before alluded to, the removal of wrecks and snags, and the construction of the Fort St. Philip Canal would, we believe, result in the utilizing of this great waterway from St. Paul to New Orleans, and reduce the cost of transportation to a uniform cost not exceeding the lowest average as shown by the tables of freight accompanying this report. In the opinion of this committee, the removal of wrecks and snags between St. Louis and New Or-

leans is of vital importance to the commerce of the river. Wrecks between St. Louis and Cairo, sunken many years ago and forgotten, are so numerous that, from the extra hazard they present, our rate of insurance is not only increased upon boat hulls and cargoes, but steamers with thin hulls and light draught are refused insurance at any rate. It is necessary, therefore, to construct much stronger and more expensive hulls, and necessarily of deeper draught, than would be acceptable to underwriters were these wrecks and snags removed." The opinions of these leading commercial men, as well as the reports of engineers, at length created so strong a public sentiment in regard to the improvement of the Mississippi River that Congress, by the act of June 18, 1879, created the Mississippi River Commission, to examine and report such plans, specifications, and estimates as would render the river, when the work was completed, fully equal to the demands of commerce. For the commencement of this great work there was appropriated by the act of August, 1882, the sum of \$4,123,000 for the improvement of the Mississippi River "from the head of the Passes to Cairo," and \$600,000 for improving the river "from Cairo to the Des Moines Rapids." The estimates of the cost of the various improvements of the Mississippi and its tributaries, made by the Merchants' Exchange of St. Louis, amounted to \$16,010,000, and are supposed to cover the entire cost of the radical improvements of these rivers, with the exception of the Ohio.

The improvement of the latter river so as to secure a uniform depth of six feet at low water from Pittsburgh to Cairo has long been recognized as being demanded by the vast interests that line the banks of that mighty stream. The length of the river between those points is nine hundred and twenty-seven miles. Six States border upon it, viz.: Pennsylvania, West Virginia, Ohio, Kentucky, Indiana, and Illinois, and the territory drained by it embraces 214,000 square miles. W. Milnor Roberts, in 1868, estimated the value of the commerce of the cities and towns on the river at \$1,623,000,000. The coal and other mineral interests are of immense value and importance. The coal area embraces a territory of 122,000 square miles, and the shipments of coal by the river in 1873 amounted to 60,000,000 bushels, or 2,300,000 tons. Almost all the coal consumed in the cities, towns, and country bordering on the Mississippi River and its navigable tributaries below St. Louis, consumed by steamers on the Mississippi River, and to a great extent by ocean-steamers from New Orleans, is shipped on the Ohio River. During a single rise in that river forty-six fleets, composed of three hundred and sixty-

¹ River and Harbor Bill.

² In 1836, Lieut. R. E. Lee was in charge of the improvements, and continued work thereon until 1839. No appropriation was made from 1839 to 1852, when, under an appropriation by Congress, the work was intrusted to Lieut. Warren, of the topographical engineers. In 1856, Maj. Floyd was put in charge of the work, and since then it has been prosecuted under the supervision of engineers of the United States.

³ River and Harbor Bill.

⁴ Letter signed E. O. Stanard, chairman, Erastus Wells, W. H. Stone, Lewis V. Bogy, R. P. Tausey, Webster M. Samuel, George Bain, H. C. Haarstick, Isaac M. Mason, Myron Coloney, George H. Morgan, in report of Transportation Committee, page 598.

nine barges, and carrying 4,156,000 bushels of coal, started from Pittsburgh within three days.

A board of commissioners for the improvement of the Ohio River was created in 1872 by the joint action of the States of Pennsylvania, Ohio, West Virginia, Kentucky, Tennessee, Indiana, and Illinois, which presented a memorial to Congress Dec. 16, 1872, asking the general government to undertake the work, which was stated to be "not one of engineering but of finance." The difficulty which embarrasses the navigation of the Ohio arises from a descent of four hundred and twenty-six feet between Pittsburgh and Cairo, in consequence of which the current varies from one and a half to three and a half miles per hour. In 1870, W. Milnor Roberts, United States engineer, suggested a plan of improvement, the estimated cost of which was twenty-three million seven hundred and seventy-seven thousand six hundred and sixty-two dollars, and Gen. G. Weitzel, major of engineers, and W. E. Merrill, major of engineers, as a board of commissioners, appointed by the War Department April 16, 1872, reported a plan of improvement Jan. 31, 1874.¹ With the exception of the purchase of the Louisville and Portland Canal around the falls of the Ohio and making the same free, very little of any importance and nothing of any permanent value has been done towards the improvement of the Ohio River by the Federal government.

The improvement of the Illinois River was begun as early as 1836 with the construction of the Illinois and Michigan Canal, which was to extend from Chicago to the Illinois River at La Salle, a distance of about one hundred miles, but in the general financial crash of 1837 the work was suspended. The bonds issued for the construction of the canal were owned principally in England. In 1844 a proposition was made to the English bondholders that if they would advance sixteen hundred thousand dollars for the completion of the canal it should pass into their hands, and its revenue go, with what lands² the State owned,—the avails of the bonds being paid into the canal funds to reimburse the State,—to pay the bonds, interest and principal. In accordance with this suggestion the English bondholders appointed two trustees and the State one, under whose control the work remained until May 1, 1872. The original plan of building the canal was to give it an incline from the Chicago River to the Des Plaines River at Lockport, and then supply a portion of the water by pumping-works at Bridgeport, at the commencement of the canal. The city of

Chicago, under authority from the State, removed the "bench," or summit level, thus securing a constant flow of water from the Chicago River to Lockport. A distance of twenty-seven miles was thus deepened to eight feet, at a cost of about three millions of dollars. The original design of this canal was to connect the navigable waters of the Illinois River with Lake Michigan. The tolls and revenues of the canal were never sufficient to pay even the interest on the bonds, owing to the fact that the Illinois River of late years has had less water in it than when the canal was projected. Though the improvement of the Illinois River had been urged upon Congress for many years, it was not until about 1865 that an appropriation of eighty-five thousand dollars was made for that work, but very little was done under that appropriation, the money being diverted by the Secretary of War to the improvement of the Rock Island Rapids. In 1869 the Legislature of Illinois appropriated four hundred and fifty thousand dollars for the work, and in the same year Congress appropriated two millions for Western rivers, of which sum eighty-five thousand dollars was expended on this river. In 1870, Congress appropriated one hundred thousand dollars for the work. In 1873 the estimated cost of its completion was two million two hundred thousand dollars, and by the River and Harbor bill of 1882 there was appropriated one hundred and seventy-five thousand dollars for continuing the work, which is now being carried on by the general government. In addition, the further improvement of the navigation of the Illinois River is contemplated by the construction of the Hennepin Canal from Hennepin to Rock Island. The estimated cost of this work is four million five hundred thousand dollars,³ for which the River and Harbor bill of 1882 appropriated the sum of thirty thousand dollars, with, however, the proviso "that nothing herein shall be construed to commit the government to proceed with the construction of the said improvement." The improvements of this river now completed and in contemplation will form with the Hennepin Canal a continuous line of canal and slack-water navigation from Chicago to the Mississippi River, as follows:

Illinois and Michigan Canal, Chicago to La Salle...	96 miles.
Slack-water, Illinois River, La Salle to Hennepin...	19 "
Hennepin Canal, Illinois to Mississippi River.....	65 "
Total.....	180 "

The improvements of the upper Mississippi now in progress will, when completed, afford seven hundred and sixty-one miles of continuous navigation between

¹ Ex. Doc. No. 127, Forty-third Congress, First Session.

² Lands donated in 1831 by United States along the canal.

³ Mr. Utley, of the Board of Canal Commissioners of Illinois: Transportation Report, p. 234.

St. Louis and St. Paul for barges, which can pass through the Hennepin and the Illinois and Michigan Canals to the city of Chicago, thus affording competition with all railroad lines which cross the Mississippi River between St. Paul and St. Louis.

Beyond the removal of the snags by the government snag-boats, nothing has been done for the improvement of the navigation of the Missouri River. The Missouri River Improvement Association in 1881 addressed a memorial to Congress upon the subject, but it is conspicuous by its absence from the bulky volume of the River and Harbor bill of 1882.

The Fox and Wisconsin Rivers have formed an important highway for two hundred years. It was by pursuing this route that Marquette in 1673 discovered the upper Mississippi, and along these rivers the French missionaries and traders made the earliest settlements in the West. In the ordinance for the government of the Northwestern Territory, adopted July 14, 1787, it was provided that the navigable waters leading into the Mississippi and the St. Lawrence, and the carrying places between the same, should be common highways and forever free. The same provision is embodied, in substance, in the act of Congress of Aug. 7, 1789, after the adoption of the Constitution; in the act of Congress establishing a Territorial government for Wisconsin, approved April 20, 1836; in the act admitting Wisconsin as a State, Aug. 6, 1846, and in the Constitution of the State of Wisconsin. A preliminary survey of the cost of the improvement of these rivers was made by Capt. Cram, of the United States Topographical Engineers, in 1839. By the act of Congress Aug. 8, 1846, a grant of land was made to the State of Wisconsin for the purpose of improving the navigation of these rivers, and for constructing a canal through the divide, or "portage," to unite them, in which the declaration was reasserted that this channel should be free to the commerce of the United States. The State of Wisconsin, by its Board of Public Works, and afterwards by corporations duly authorized, undertook the improvement of these rivers, in the prosecution of which over two millions of dollars, including the proceeds of the sale of the lands granted by Congress, were expended. The Fox River was improved so as to pass at low water boats of four feet draught from Green Bay to Lake Winnebago, and boats of two and a half feet draught from Lake Winnebago to the Wisconsin River. Little or no work was done on the latter river.

The improvement utterly failed to meet the requirements of commerce, because it did not admit of the passage of boats from the Mississippi up the

Wisconsin River. On the Fox River the improvement aided in the development of that portion of the State,—a development which is traceable not only to the utilization of the water-power, but probably in a greater degree to the competition, although necessarily small, existing between water and rail. In 1870, Congress directed the Secretary of War to adopt such a plan for the improvement of the Wisconsin as should be approved by the chief of engineers, and authorized him to appoint arbitrators to ascertain the sum which ought to be paid for the transfer of all rights in the works of improvement then held by the corporation created under the laws of Wisconsin. The sum fixed upon was one hundred and forty-five thousand dollars. By the act of July 7, 1870,¹ Congress further directed that all tolls and revenues derived from the improvement, after providing for current expenses, should be paid into the treasury until the United States was reimbursed for all sums advanced for the same with interest thereon, after which the tolls were to be reduced to the least sum which, with any other revenue derived from the improvement, would be sufficient to operate and keep the improvement in repair. In 1871, Congress made the appropriation of one hundred and forty-five thousand dollars, and the deed of transfer was executed and delivered to the United States. Subsequently appropriations amounting to four hundred thousand dollars were made. The report of Col. Houston, then engineer in charge,² in 1873, says, "The work now in the hands of the government is different from any other work of this character, and the appropriation that was made last year (1872) is too small an appropriation to carry on the work to advantage." In the River and Harbor bill for 1882 the sum of two hundred thousand dollars was appropriated for continuing the improvement.

The efforts to improve navigation at the mouths of the Mississippi have a history running through more than a century and a half,—a history made up in large part of controversy and discussion among engineers, wherein almost every fact advanced by one was controverted by another, and every theory advocated was subsequently assailed or exploded. The vexed question has at last been definitely settled, and it is only necessary now to present in chronological order the historical facts in connection with this vast enterprise.

In 1722 the present South Pass was examined by M. Pauger, an engineer in the employ of the Western Company, and described as being "straighter

¹ Rev. Stat., Sec. 5249.

² Evidence before Committee on Transportation, pp. 229-32.

than the ancient pass, but narrower." It was added that "at the outlet of this Pass there is a bar upon which there is but nine to ten feet water, and which is about one hundred *toises* wide." According to this engineer, there was an average draught on the bar of the South Pass, one hundred and sixty years ago, of about ten English feet. From the year 1764 to 1771, we learn from Gault's map, made from the Admiralty surveys, that the depth on the bar at the Pass was from eight to nine feet English. From that time to 1838 there are no data as to the depth of water. In that year (1838) a survey was made, under the direction of the special board of United States engineers, by George G. Meade, who ascertained that "eight feet could be carried over the west and principal channel." After the Meade survey a spit of sand formed directly in the mouth of the Pass, which entirely closed up the entrance, so far as commercial purposes were concerned.

The Northeast Pass, or a branch thereof called the Southeast Pass, was in the early period of the navigation of the river the principal avenue of its commerce. But this preference was probably due rather to its position, favoring vessels from the east, than to the actual depth of water at its mouth. The earliest notices of the bars speak of the entrance to the river as if there were but one that was used by the shipping, and Mr. Ellet says "it cannot be doubted that the Southeast Pass, or the Northeast Pass (which were in fact at that day, as they were fifty years later, but two distinct channels through the shoal water at the outlet of the Northeast Pass), is the channel to which these early notices apply."¹ The following allusion to this outlet is from a dispatch from Bienville, then Governor of the province, to the French minister in 1722: "I have had the honor to inform the Council by my last letters concerning the entrance to the river, and to assure them that vessels drawing not over thirteen feet (French) could then enter at full sail *without touching*, and that it would not be difficult to render the Pass practicable for vessels of the largest size, the bottom being nothing but a soft and movable mud." Mr. Ellet adds that "Bienville would have undertaken to deepen the water on the bar if the engineers who were specially charged with such works had concurred with him in opinion upon the practicability of the enterprise." The difference of opinion among engineers which existed at that early day has continued for a century and a half, and postponed the

work until Mr. Eads forced it through by assuming all risk, and undertaking its construction upon the terms of no pay without success.

As early as 1722 the engineer, Pauger, expressed the opinion that the deposit from the river "could be broken and carried off by stopping up some of the Passes of the Mississippi, by means of old vessels sunk to the bottom, together with trees, of which a prodigious quantity descends during the two first months of the year," and he proposed a system of *dikes and brushwood* for establishing the current of the river. This plan of improvement by dikes and brushwood, suggested in 1722 by M. Pauger, was assailed as useless and impracticable by Charles Ellet, Jr., in his memoir on the Mississippi and Ohio Rivers:

"If we increase the velocity of the fresh-water currents by contracting the channel, or by stopping up the secondary outlets, we shall certainly increase the depth and velocity of the column of fresh water flowing into the gulf on top of the seawater. But *that* will not sweep out the bar. No part of the fresh water comes within eight feet of the top of the bar which it is expected to remove.

"The immediate effect of this increased force of fresh water will be to carry the upper portion of the salt water immediately below it farther out, and to transfer the place of deposit to some other point still on the bar, but nearer the sea, just as it is now transferred sometimes from above the head of the Passes, where it is occasionally found in extreme low water, to within half a mile of the edge of the gulf, to which point it recedes in common high water. But this will not prevent an under current of salt water from flowing in and an upper current from flowing out, nor will it prevent deposits from taking place at the points where the direction changes, though with the same volume of water it will change the position of that deposit."

Mr. Ellet further contended that

"while the effect of increasing the velocity of the current by contracting the embouchure of the river will not be felt in the removal of the bars, this increase of current will take place at the surface, and hence act with increased power upon the very works by which it is produced. These works must rest on foundations of loose mud, which has been deposited in the existing order of things. There is, therefore, reason to believe, at least to apprehend, that any material increase of littoral velocity would carry off this deposit, undermine the works, and consequently overthrow them."

In this opposition to what is now known as the jetty system Maj. C. W. Howell, of the United States engineers, concurred in his letter to Capt. J. H. Oglesby, president of the New Orleans Chamber of Commerce, saying,—

"The theory is attractive from its apparent simplicity, and for the same reason is the first to claim the attention of dabblers in hydraulic engineering, who either do not know, or else lose sight of the condition essential to its successful application. The principles of these conditions are two: 1. That the character of the bed and banks of the river at the point of application be such that scouring will be effected in the bed in preference to

¹ Appendix to "Memoir on Mississippi and Ohio Rivers," p. 329.

the banks; in other words, the banks must be firm enough to withstand the action of the current, and the bottom yielding enough to permit scour.

"The second condition is that there shall exist a current (littoral), passing the outer extremities of the jetties perpendicular to them, capable of sweeping to one side or the other all deposit made about the jetty-heads and tending to form a new bar outside.

"No such current has been discovered at the mouth of the Mississippi, although carefully sought. In default of it jetties would have to be built farther and farther out, not annually, but steadily every day each year, to keep pace with the advance of the river deposit into the gulf, provided they are attempted, and the attempt warranted by having the relative character of bed and bank favorable.

"For the reasons that these two conditions are not to be found at the mouth of the Mississippi, careful engineers have time and again pronounced the application of jetties at either Southwest Pass or Pass à l'Outre not worthy of a trial at government expense. If enthusiastic jetty men wish to pass from theory to practice, they can always gain consent to spend their own money in building jetties at Southwest Pass, and if they succeed in doing good they will have a fair claim on government for recompense. . . . Jetties have been attempted there, and not only reported a failure by the inspecting officer, but abandoned by Messrs. Craig & Righter, who made the attempt.¹

"The full particulars of this may be found in Ex. Doc. No. 5 H. R., 36th Cong., 2d sess. The practical experience gained by that failure, I presume, will deter the government, though it will not deter adventurous jetty men, from sinking more money in such attempts."

The "adventurous jetty men" were Capt. James B. Eads and his associates, who, as is well known, have made the jetty system a grand success. It is not necessary to recapitulate here the controversy which, in the newspapers as well as in Congress, have agitated the whole Mississippi valley concerning this method of deepening the water at the mouth of the great river.

The various modes which have been attempted of increasing the depth of the channel through the Passes have been the following :

1. Dredging. Under instructions of the War Department, Capt. Talcott attempted in 1839 to open the Southwest Pass with the ordinary bucket-drag. The gulf waves in a single storm swept in "twice as much mud" as he had taken out.

2. By rake and harrow. This method was once tried under the direction and at the expense of the government by a tow-boat association, but their efforts were equally fruitless. The channel was temporarily opened to a depth of eighteen feet, but again suddenly closed by a gulf storm.

3. In 1836 the government entered into a contract with Messrs. Craig & Righter to open a channel one thousand feet wide and eighteen feet deep, which was to be executed by closing all the Passes except those designated for navigation. The contract was abandoned.

4. In 1868-70 the government caused to be constructed a

¹ Craig & Righter built but one jetty, and not jetties, as appears from a foot-note to page 455, stating that "the contractors (Messrs. Craig & Righter) merely built one insecure jetty of a single row of pile-planks, about a mile long."

steam propeller dredge, at a cost of three hundred and fifty thousand dollars, which was placed under the command of an officer of the navy. This experiment was faithfully made, but it "failed to maintain a much greater depth of water than that which nature has prescribed as the regimen depth of the Pass." The results of this mode were at least but temporary, and to have been of any service would have had to be continued from year to year, while the labors of an entire season were liable to be destroyed at any time by a single storm.

5. By the Fort St. Philip Canal, which was strongly recommended by a majority of the board of engineers appointed by the War Department. This canal was proposed as early as 1832, since which time many surveys and reconnoissances have been made as to its proper location, expense, and commercial practicability.

A report of the United States board of engineers in 1874 favored the canal scheme and opposed the jetties, holding that the cost of producing a depth of twenty-seven feet would be twenty-three million dollars.

In February, 1874, James B. Eads proposed to Congress to open the mouth of the river, making a depth of twenty-eight feet, for ten million dollars, at the entire risk of himself and his associates, not a dollar to be paid until a depth of twenty feet was secured. The controversy created by Capt. Eads' proposition became quite warm and personal. A committee of civil engineers was appointed to investigate the question, and particularly the European jetties and their effects.

The result of their investigation was favorable to the jetties, and on March 3, 1875, the President signed the bill entering into a contract with Capt. Eads to deepen the mouth of the river. South Pass, which had previously had a depth of nine feet, was chosen, and work begun in June, 1875. By May, 1876, when very little work had been done, it was found that one million nine hundred thousand cubic yards of material had been scoured out, and that the minimum depth was 16.9 feet. Even with this showing many persons still failed to have confidence in the jetties, and stories of new bars, mud, lumps, etc., were told almost every day in the local press. In November, 1877, the dredge-boat "Bayley" was used in scouring the channel of the jetties.

A survey made Dec. 15, 1877, showed a channel twenty-two feet deep, and more than two hundred feet wide, existing from the deeper water in South Pass to the deeper water in the gulf. On this showing the first award of five hundred thousand dollars, under the contract made between Eads and the government, was paid over to him. Work was continued on the jetties in 1877 and 1878, in which year it was completed, the concrete and crib-work at the sea ends being erected.

The following table will show the depth in the

channel at ten thousand feet from East Point, the worst part of the Pass, at various times:

June, 1875.....	9.2 feet.	February, 1879.....	22.2 feet.
May, 1876.....	15 "	March, 1879.....	24.8 "
August, 1876.....	19.8 "	June, 1879.....	28 "
July, 1877.....	20.3 "	July, 1879.....	30.5 "
June, 1878.....	21.9 "		

In the summer of 1881 the least depth in the channel in South Pass, not in the jetties, was 26½ feet, 97,000 feet above East Point and at Bayou Grande; and 29 feet at Picayune Bayou, and at a point 90,000 feet above East Point. At no point in the jetties proper is the depth of channel less than 30½ feet.

James B. Eads, whose name is permanently associated with three gigantic enterprises,—the building of the jetties, the construction of the gunboat fleet at St. Louis during the war, and the crection of the great bridge across the Mississippi,—may justly be regarded as one of the foremost engineers of his day, and it is quite within bounds to say that no man has ever surmounted greater mechanical difficulties or wrested a larger measure of success from doubtful and hostile conditions. Two of the three great experiments whose practicability he so signally demonstrated may be classed among the wonders of the age, for it is a matter of history that the construction both of the Mississippi bridge and jetties was regarded by leading engineers and scientific men as impracticable, dangerous, and altogether beyond the limits of reasonable calculation. With that unbounded faith in the correctness of his own judgment and that indomitable courage and endurance which have ever been recognized as the first essentials to success in all great undertakings, Capt. Eads maintained his position in the face of criticism, detraction, personal abuse, and determined professional hostility working through various channels, and at last, by sheer pluck and persistence, fully vindicated the soundness of his views and covered his critics with confusion.

Capt. Eads was born in Lawrenceburg, Ind., May 23, 1820, and his early education was acquired in the schools of Louisville and Cincinnati. Before he had succeeded in mastering the rudiments, however, his father experienced reverses which necessitated his withdrawal from school, to which he never returned. At a very early age he developed a taste for mechanics and a fondness for experimenting with machinery, which was afterwards to become the ruling passion of his wonderful career. Among the anecdotes related of him is one to the effect that when only nine years old, having embarked on an Ohio River steamboat, he exhibited such an intelligent interest in the engine

that the engineer volunteered to explain to him the details of its mechanism and operation, finding in him an absorbed and quickly responsive pupil. Four years later the boy was able to construct a miniature working steam-engine without assistance.

In September, 1833, when only thirteen years of age, he arrived in St. Louis under very unpropitious circumstances, the steamboat on which his father

James B. Eads

with his family had embarked to seek a home farther West having been burned, thus rendering the family destitute. In order to contribute something to the common fund, young Eads sold apples on the street, and succeeded not only in providing for his own support but also in assisting his mother. After a while he obtained a position with a mercantile firm, the senior partner of which, Barrett Williams, having discovered his mechanical tastes and aspirations, gave him free access to his library, where he eagerly embraced the opportunity to study mechanics, machinery, and civil engineering. After spending some time in this occupation he obtained a position as clerk on a steamboat, which he retained two years, and during this period obtained a valuable fund of information concerning the great river whose restless current he was afterwards to bridle and control at will. In 1842 he entered into a partnership with Case & Nelson, boat-builders, for the purpose of recovering steamboats and cargoes which had been wrecked or sunk

in the river. At first the operations of the firm were limited, their machinery and appliances being very primitive and quite inadequate to the work which they undertook to perform. Such were the energy, versatility, and industry of Capt. Eads, however, that the business rapidly expanded, until, in the space of about ten years, it extended the entire length of the Mississippi, and the property of the firm had increased to half a million dollars. In 1845, Capt. Eads severed his relations with Messrs. Case & Nelson and established a factory for the manufacture of glassware. To Capt. Eads belongs the credit of having made the first glassware west of the Mississippi. The enterprise not proving remunerative, however, he returned to his old business of recovering steamboat property, etc., from the river.

In the winter of 1855-56, Capt. Eads submitted to Congress a proposition to keep the Western rivers open for a term of years by removing all obstructions and keeping the channels free. A bill embodying his proposal passed the House of Representatives, but was defeated in the Senate. In 1857 he retired from active business on account of ill health, but on the breaking out of the war his large and varied experience in navigating the Mississippi and its tributaries, his thorough knowledge of those rivers, his immense industry and energy, and his almost intuitively sound judgment were promptly placed at the disposal of the Union government. While a staunch supporter of the war measures of the Lincoln administration, Capt. Eads by no means approved the enforcement of harsh and arbitrary measures of coercion, and, as elsewhere narrated, at a crisis when peculiar courage was required to assume such a position, took strong ground against the levying of contributions on Southern sympathizers, and headed a movement for raising a fund to take the place of that which the military authorities had determined to exact from alleged friends of the Confederacy in St. Louis. When the government took into consideration the feasibility of forming a gunboat fleet on the Mississippi, Capt. Eads was summoned to Washington for consultation, and in pursuance of his advice the construction of a number of ironclads was undertaken. Capt. Eads received the contract for building the first seven of these vessels, and accomplished the gigantic task with conspicuous ability and success. His labors in this connection have already been fully set forth in this work in the chapter on the civil war.

Capt. Eads' next great feat was the construction of the bridge across the Mississippi. He was the originator and creator of this vast enterprise, and as its chief engineer personally superintended the prosecution

of the work,—a work attended by innumerable difficulties, delays, and embarrassments,—which he conducted to a triumphant consummation by the steady and persistent exercise of his rare energy and indomitable will.

Even when most actively engaged with the multifarious duties of this grave trust, and weighted down with its responsibilities, he found time and thought to give to the important problem of securing a sufficient depth of water at the mouth of the Mississippi for vessels of the largest draught. After long and mature deliberation he came to the conclusion that the only practicable method of securing this object was by an elaborate and costly system of jetties, which he defines as being "simply dikes or levees under water, . . . intended to act as banks to the river to prevent its expanding and diffusing itself as it enters the sea. It is a notable fact that where the banks of a river extend boldly out into the sea no bar is formed at the entrance. It is where the banks or *faucis terræ* (jaws of earth) are absent, as is the case in delta-forming rivers, that the bar is an invariable feature. The bar results from the diffusion of the stream as it spreads out fan-like in entering the sea. The diffusion of the river being the cause, the remedy manifestly lies in contracting it or in preventing the diffusion."

In 1852 a board of engineers composed of Maj. Chase and Capts. Barnard and Beauregard, of the army, and Capt. Latimer, of the navy, recommended that in order to increase the depth of water at the mouth of the Mississippi the process of stirring up the bottom of the river by suitable machinery be tried, and that if this failed, dredging by buckets be employed. If both failed, they recommended that jetties be constructed at the Southwest Pass, to be extended annually into the gulf as experience should show to be necessary. Should it then be needed, they advised that the lateral outlets should be closed, and, finally, if all these expedients failed, that a ship-canal might be resorted to.

Dredging, as we have seen, was tried without success, and repeated experiments with other plans resulted in nothing until, in 1875, Capt. Eads began the construction of his jetty works, the contract having been awarded to James Andrews & Co. within two months after the passage by Congress of the act authorizing the experiment. On the 23d of March, 1875, a complimentary banquet in honor of Capt. Eads was given by leading citizens of St. Louis at the Southern Hotel, at which the mayor of the city presided. In the course of an address on this occasion Capt. Eads said,—

"If the profession of the engineer were not based upon exact science, I might tremble for the result, in view of the immensity of the interests which are dependent upon my success. But every atom that moves onward in the river, from the moment it leaves its home and crystal springs or mountain snows, throughout the fifteen hundred leagues of its devious pathway, until it is finally lost in the vast waters of the gulf, is controlled by laws as fixed and certain as those which direct the majestic march of the heavenly spheres. Every phenomenon and apparent eccentricity of the river, its scouring and depositing action, its curving banks, the formation of the bars at its mouth, the effect of the waves and tides of the sea upon its currents and deposits, are controlled by laws as immutable as the Creator, and the engineer needs only to be assured that he does not ignore the existence of any of these laws to feel positively certain of the result he aims at. I therefore undertake the work with a faith based upon the ever constant ordinances of God himself, and so certain as He will spare my life and faculties for two years more, I will give to the Mississippi River, through His grace and the application of His laws, a deep, open, safe, and permanent outlet to the sea."

That this prediction of Capt. Eads, so confidently uttered, was no empty boast or over-sanguine declaration has been amply demonstrated by the magnificent success which has crowned his labors. At the present time the largest ocean vessels sail in and out the mouth of the river without danger or difficulty, and to the energy, skill, and wonderful prescience of James B. Eads is due the completion of a work of improvement which has already contributed immensely to the prosperity of the Mississippi valley.

Capt. Eads' fertile brain is never at rest, and is constantly employed in devising great enterprises. Of these the most conspicuous in recent years is a plan for the construction of a railway for the transportation of ships across the isthmus of Panama, thus obviating the necessity for the proposed ship-canal,—a scheme which he has advocated with characteristic ardor and great ability, and which is still fresh in the public mind. In the summer of 1875 the *Scientific American* suggested his name as a candidate for President of the United States, and the nomination was indorsed by a number of leading journals throughout the country as being that of a man whose genius, experience, and wonderful achievements eminently fitted him for so exalted a station. Capt. Eads, however, has no political aspirations, and can well afford to rest content with the laurels he has earned.

In 1845 he married Martha N., daughter of Patrick M. Dillon, of St. Louis (who died in 1852), and subsequently his present wife, Mrs. Eunice S. Eads. He has five daughters, three of whom are married respectively to John A. Ubsdell, of New York, and Estill McHenry and James F. How, of St. Louis.

In recognition of his achievements in his profession the Missouri State University conferred the degree of

LL.D. on Capt. Eads, and the St. Louis Academy of Sciences twice elected him its president. Besides these positions he has filled many other offices of trust and honor in various important corporations, among which may be mentioned the National Bank of the State of Missouri, the St. Louis, Kansas City and Northern Railway, the St. Charles Bridge Company, and the Third National Bank.

In St. Louis Capt. Eads enjoys the universal respect and esteem of the community, which is justly proud of one whose career has been almost without a parallel in this country, and whose success in the face of herculean difficulties has extorted the admiration of even his opponents.

The Harbor of St. Louis.—Almost coincidently with the arrival of the first steamboat at St. Louis in 1817 a sand-bar formed in the bend at the lower end of the town, which gradually extended up as far as Market Street, making a naked beach at low water. Another bar soon formed in the river at the upper end of the city, west of Bloody Island. Thus, at the very outset of the commercial progress of St. Louis, the current of the Mississippi, cutting deeper and deeper into the American Bottom on the eastern side of Bloody Island, was threatening the city with the diversion of its channel to the east side of the island, leaving St. Louis "high and dry," with a sand-bar in front of it.

In this crisis it was generally predicted that the city would amount to nothing in a commercial point of view, and the timid refused to make investments in real estate, fearing that the town would be left without the facility of availing itself of the benefits which the new steam system of navigation promised.¹

¹ "Pursuant to the notice given by the Board of Aldermen, November 20th," says the *Republican* of Dec. 4, 1832, "a large number of our most respected citizens assembled last evening, at an early hour, in the city hall, to consider the propriety of taking measures for the removal of the sand-bar in front of the city. The meeting was called to order by Mr. P. Ferguson, and on motion, Thornton Grimsley, Esq., was called to the chair, and Nathan Ranney was appointed secretary.

"The meeting was addressed in a plain and lucid manner by the following gentlemen: Hon. James H. Peek, P. Ferguson, Mr. Tabor, A. L. Maginnis, Mr. McKee, J. F. Darby, W. K. Rule, R. Simpson, and Thomas Cohe, when a report of a committee previously appointed by the board of aldermen to examine the channel of the river was called for and ordered to be read.

"On motion of J. F. Darby, seconded by R. Simpson, it was resolved that a committee of seven gentlemen be appointed to draft resolutions expressive of the sense of this meeting, whereupon the chair named the following gentlemen to constitute the said committee: A. L. Maginnis, Gen. Bernard Pratte, James Clemens, G. Paul, A. Gamble, G. Morton, and J. F. Darby, Esqs.

In 1833 the city authorities, becoming alarmed for the commercial prosperity of the city, undertook the removal of the sand-bars, and with that view employed John Goodfellow to plow them up with ox-teams and plows, thus loosening the sand, which high water was expected to wash away. The idea was suggested by Col. Thomas F. Riddick, and the means were supplied by Gen. Bernard Pratte and some other wealthy citizens. About three thousand dollars was expended in the plowing process without making any impression upon the sand-bar.

Steamboats had grounded, and could not land as high up as Olive Street, and daily indications were given that the river would ultimately sweep around to the eastern side of Bloody Island and leave the Missouri shore.

The mayor of St. Louis in 1835 was John F. Darby, who, fully realizing the danger that threatened the present and future welfare of the city, induced the Board of Aldermen to petition Congress for aid to improve and construct the harbor of St. Louis. The representative of St. Louis in Congress at that time was Gen. William H. Ashley,¹ who by constantly urging the committee of the House of Representatives to which the petition was referred, of which Patrick Henry Pope, from the Louisville, Ky., district was chairman, finally secured the reporting of a bill recommending the improvement of the harbor, and appropriating one hundred and fifty thousand dollars for that purpose. Col. Thomas H. Benton, then in the United States Senate, hampered and hindered by his

"After the committee had retired for a short time it returned, and submitted the following resolutions, which were unanimously adopted:

"1. *Resolved*, That in the opinion of this meeting the increase of the sand-bar opposite this city would be alike injurious to its health and commercial prosperity.

"2. *Resolved*, That in the opinion of this meeting the course pursued by the corporate authorities of this city for the removal of the grievance complained of is justly deserving of and hereby receives its decided support, and that this meeting cordially approve of the city authorities effecting said removal by procuring funds for such object, whether by loan or otherwise, and that they also concur in requesting the corporate authorities to solicit the aid of the State and general government therefor."

¹ Gen. Ashley was warmly attached to the people of St. Louis, where he had lived so long and had so many devoted friends. This circumstance gave great encouragement and hope. His daring adventures, perils, and enterprises in the Rocky Mountains, whereby he had accumulated great wealth, the elegance of his entertainments at Washington, and his gentlemanly bearing, all had given him a position of commanding influence, and made him one of the most popular men in the House of Representatives; and although he was no speaker himself, his pleasant demeanor and his genial manner were so winning, that a dozen members of eloquence and ability on the floor were always ready to spring to their feet and advocate his measures.

allegiance to the Democratic party, which, since Gen. Jackson's veto of the Lexington and Maysville road bill, had opposed all internal improvements by the general government, could not very zealously advocate the bill for the improvement of St. Louis harbor, though he offered no opposition to its passage.²

The work of preserving the harbor of St. Louis was to be done under the supervision of Gen. Charles Gratiot. Mayor Darby immediately opened correspondence with Gen. Gratiot, urging him to visit St. Louis and examine the harbor. This visit was made, and the river fully examined. Gen. Gratiot was introduced by Mayor Darby to the Board of Aldermen, on which occasion the Hon. Wilson Primm, then president of the board, addressed him in happy terms, alluding to his association and connection with the city and its inhabitants.

Gen. Gratiot, immediately upon his return to Washington, sent Lieut. Robert E. Lee to St. Louis, charged with the immediate supervision of the work of preserving the harbor. This was in 1837, and the work was continued by Lieut. Lee, with Henry Kayser as his assistant, until 1839, when the appropriation made by Congress was exhausted.

In December, 1837, Lieut. Lee wrote as follows concerning the St. Louis harbor:

"The appropriation for the improvement of the harbor has for its object the removal of a large sand-bar occupying, below the city, the former position of the main channel of the Mississippi, which, gradually augmenting for many years, has now become an island of more than two hundred acres in extent, and reaching from the lower part of St. Louis to two miles below. The extensive shoals formed around its base extend on the east to the middle of the river, and connecting with the mainland on the west afford at low water a dry communication between. A flat bar projects from the upper end to the foot of Bloody Island, opposite the town, which at low stages of the river presents an obstacle to the approach of the city, and gives reason to apprehend that at some future day this passage may be closed. This is rendered more probable by the course of the river above. The united waters of the Missouri and Mississippi for some miles below their junction sweep with great velocity along the Illinois shore, where they are deflected to the other side. The

² In 1847, Col. Benton wrote a letter to the St. Louis delegation to the Chicago Internal Improvement Convention, defining his position upon the question of internal improvements, saying, "I have always been a friend of that system, but not to its abuses; and here lies the difficulty, the danger, and the stumbling-block to its success. Objects of general and national importance can alone claim the aid of the Federal government; and in favor of such objects I believe all the departments of the government to be united. Confined to them, and the Constitution can reach them and the treasury sustain them; extended to local or sectional objects, and neither the Constitution nor the treasury could uphold them. National objects of improvement are few in number, definite in character, and manageable by the treasury; local and sectional objects are innumerable and indefinite and ruinous to the treasury."

main body, passing west of Cascarot (now Cabaret) Island, joins with the lesser portion at its foot, and the whole is compressed in a narrow gorge (opposite Bissell's Point). Spreading out in the wide area below, the main current still keeps to the Missouri shore, while a large part of the river directed toward the Illinois side is fast wearing away its bank and cutting out a large channel east of Bloody Island. . . . The two channels again uniting at the foot of Bloody Island, the whole body of water sweeps down the Illinois shore, and, its velocity becoming again increased by the narrowing of its bed, the abrasion of its bottom recommences, all the deep water being here on the Illinois side and all the shoal on that of Duncan Island. . . . But in order to arrest the wearing away of the eastern bank of the river and to protect the Illinois shore, it will be necessary to divert from it the force of the current. This may be done by running a dike from above the small slough on that side, parallel with the western shore, sufficiently far to throw the water west of Bloody Island. . . . The same effect would be produced by throwing a dam across directly from the head of Bloody Island to the Illinois shore. . . . In addition to these works, the head of Bloody Island will have to be protected, from its head to the centre, so as to secure it from the action of the current."

The report also recommended a dike extending down stream from the foot of Bloody Island. In the following year Capt. Lee reported the commencement of the work, and said that, with the small part of the work actually completed, about seven hundred feet of Duncan Island had been washed off.

The work under Lieut. Lee during two years turned the current of the Mississippi back to the Missouri side, washed out the sand-bars, and deepened the water in the harbor, but dikes were required to be built to preserve and protect what had already been accomplished.

Dr. William Carr Lane succeeded to the mayoralty of St. Louis in 1839, and the city authorities, without assistance or aid from any quarter, continued the work in the improvement of the harbor under the direction of the able assistant of Lieut. Lee, Henry Kayser. But they were harassed and annoyed by injunctions of certain parties in Illinois; and the mayor and some of his subordinates were indicted on account of the work being done on the Illinois shore by some of the public functionaries of that State, from which, so long as the work was under the direction of the general government, they were exempt. Still the work in the face of all these trials progressed.¹

¹ In 1846-47 the St. Louis authorities and the owners of the land on the Illinois side projected a dike, and agreed to extend it from the west side of Bloody Island to the main Illinois shore near where Vaughan's dike now is. It was begun in 1847, and prosecuted at great expense, which was borne exclusively by St. Louis.

In September, 1848, Governor French, of Illinois, directed the State's attorney at Belleville to ask the court there for an injunction against the work on the dike, which was yet incomplete. The injunction was asked and granted on the ground of the invasion by St. Louis of the State rights of Illinois.

An appeal was taken by St. Louis to the Supreme Court of the

In 1840, Mr. Darby was again elected mayor, and the work on the harbor was continued by the city government. The application was renewed to Congress for aid in behalf of the city, for further appropriations to continue the harbor improvements, but without success. The work was continued by the city for about fifteen years, under the supervision and management at first of Henry Kayser, and subsequently of Gen. S. B. Curtis.

In 1844, Capt. T. J. Cram, United States Corps of Topographical Engineers, wrote as follows of St. Louis harbor:

State of Illinois. That tribunal having expressed the opinion at its December term in 1848 that not the judiciary but the Legislature could properly determine what the interest of the State of Illinois required in the premises, the Legislature of 1848-49 was appealed to by St. Louis, in the celebrated case *Illinois vs. St. Louis*. In January, 1849, a joint resolution was passed authorizing the city of St. Louis to construct a highway over the dike then in progress of construction. The work was at once resumed, and progressed until June, 1851, when the dike and road, made of stone and earth, near completion, were swept away by the flood of that year. After the water abated, however, in the fall of 1851, one-fourth of a mile north of the site of the first dike and nearly parallel, another, the present dike, was projected. It was laid out by L. M. Kennett, mayor of St. Louis, and the city engineer, Gen. Curtis. It was finished in 1856, in the same status in which it now is. Its cost was one hundred and seventy-five thousand dollars. The land belonged to the Wiggins Ferry Company.

Thus the channel on this side was stopped, and by the increased volume and velocity of the St. Louis channel, Duncan's Island was removed therefrom, and the port of St. Louis restored.—*History of East St. Louis*, by Robert A. Tyson, page 28.

The *Republican* of March 24, 1852, speaking of Duncan's Island, said,—

"This bone of contention between this city and a number of claimants is about to be lost among the things that were. Some two years past the tongue of land from Duncan's Island reached as high almost as Market Street, and while the Levee about that point had become perfectly inaccessible to boats, the sand continued still to accumulate and the island to extend upwards. Every one can call to mind the apprehended total ruin of the South Levee from this cause, and property-owners in lower St. Louis know best the disastrous consequences which such damages would have involved. The dikes and other works about Bloody Island have effected a thorough change in the river at that locality. Duncan's Island having been curtailed materially of its proportions, has become almost unrecognizable. Two or three days since we strolled along the Levee, witnessing the vast and costly improvements which have sprung up on every side. We were surprised to see the head of Duncan's Island entirely washed away and its uppermost limits removed somewhere opposite the gas-works. A large body of water fills the slough, still washing away the island on its west side, while the main current of the river, which strikes directly against the head, is carrying it away at the opposite east side. The river along the whole southern landing is more than deep enough for the largest class of steamers. Whatever may be said of the works in our harbor, the owners of property in South St. Louis have had material cause to know their efficiency in averting a great evil, for which nothing could have repaid them."

"In so far as the general natural main tendencies of the direction and force of the currents in different reaches of the river are being exerted, that portion of the river represented on the chart west of Bloody Island and forming the harbor of St. Louis, I regret to say, must be regarded in the condition of fast becoming a mere slough. . . . In the last six years, since the survey of Capt. Lee was made, the abrasion east of Bloody Island has been such as to wash away a strip three hundred feet wide and fifty feet deep. . . . It appears that in 1839, 1840, and 1841 an extent of nine hundred and twenty-five feet of the dike recommended by Capt. Lee was constructed, extending from the foot of Bloody Island, in order to wash away the bar, costing about forty-six thousand dollars, when the work was stopped for want of funds and left to its fate, before it had been carried to one-half of Capt. Lee's estimated cost. Of all the piles that were driven, only forty-two could be found standing in November, 1843. The work seems to have been constructed by driving two rows of piles from twenty to forty feet apart and distant in the same row from each other six to ten feet, and the space between the rows of piles filled with brush and stone, battened from the piles outwards, one foot in three. The idea of a dam directly across from the head of Bloody Island to the Illinois shore seems to have been abandoned, and the oblique dike commenced starting from the Illinois shore near Venice, and extending in the direction as recommended in Capt. Lee's report. The funds for this work were furnished by the city of St. Louis, and executed at a cost of sixteen thousand dollars, exclusive of machinery. Commencing at the upper extremity of this work, about twelve hundred feet have sunk four and a quarter feet below its original level or been swept away by ice and drift or by the force of the current. There for an extent of eleven hundred feet it has either been swept entirely away or sunk eleven feet below its original level. In the next reach of four hundred and thirty-five feet it has either been swept away or sunk nine and a quarter feet. In all the remainder of the work, twelve hundred and sixty-five feet, quite to its lowest extremity, where it extended into the strongest part of the current, it must have been swept away or sunk fifteen feet below its original level. Throughout the whole of this dike there are but few piles found standing. The city has also expended about eleven thousand six hundred and seventeen dollars in the construction of cross-dikes of stone, thrown without piles or brush, to protect the west bank of Bloody Island from abrasion. It is observable that in most of these cross-dikes, which were extended from the shore perpendicular to the thread of the stream, the water has cut into the bank on their down-stream sides, in virtue of a current setting along the lower face of the dike directly into the bank. Also the bed of the stream has immediately below the dikes been made deeper by the plunge of water passing over their summits, as is always the tendency under the fall over a waste weir."

Capt. Cram quotes from the reports of Capt. Lee, in 1840, to show what had been the effect of the work begun in 1837. The report said,—

"The pier on the Illinois shore (*i.e.*, from Venice south) has served to throw the main body of water west of Bloody Island, which has cut a broad and deep channel through the flat shoal that extended from the head of Bloody Island to the Missouri shore. As this channel enlarges that east of the island diminishes, and between the pier and head of Bloody Island is becoming more and more shoal. The pier from the foot of Bloody Island confines the water to the Missouri shore, and directs the current against the head of Duncan Island. A large portion of the head and eastern face of this island has been washed away during the past year. The deep water now extends close to it,

and admits the largest boats to the lower wharf of the city. The depth of the river on the Illinois side is diminishing. . . . Both piers, however, require to be finished. The upper ought to be strengthened and extended down the river and the lower completed."

The appropriations recommended, however, were not made, and the work went to pieces. Capt. Cram says (1844),—

"Had ample means been appropriated and expended according to the views of that officer, in all probability the harbor would have needed little more, except to fill up for the subsequent settling of the work, the damage occurring from ice, abrasion, and driftwood. These would have cost considerably more than generally supposed, but I think that plan, if pursued to completion and to have been successful, would ultimately have resulted in a completely connected work, extending from near the foot of Kerr's Island quite to the head of Bloody Island, then along the west shore of that island by a revetment to connect with the dike, making two miles of dike-work, one mile of revetment, and nine hundred and twenty-five feet of dike." . . .

The report of the city engineer in March, 1846, stated that in 1842 the lower part of the harbor was so obstructed by bars that the ferry-boat was compelled to land at the foot of Vine Street. In the winter of 1845-46, although the water was two feet lower than had ever been known before, the boat could use her landing at the foot of Market Street, showing a decided improvement instead of impairment of the wharf front, as had been charged by parties hostile to the plan of the city extending the dikes at Hazel and Mulberry Streets. He further said,—

"The improvement of the harbor requires, first, a regular shore on the Missouri side, which in time will be afforded by the improved Levee; second, a regular and nearly parallel shore on the Illinois side; third, regulation of the bed of the river above the city so as to direct the water into the channel under favorable conditions. The first is the work of the city, the latter two are and should be in the hands of the United States."

Congress at this time seemed entirely willing to make what at that time would have been considered liberal appropriations for the harbor of St. Louis and other public works, but all bills of this character were consistently vetoed by President Polk. As a result of the vetoes the question of internal improvements became a political issue of no little importance in the Northwest and West. Additional appropriations being unobtainable, inquiry was made as to what had become of the unexpended appropriation of 1844. From all that can now be ascertained the balance, twenty-two thousand seven hundred and nine dollars, was never expended.

The controversy, already alluded to, with the Illinois authorities in regard to the river-front of East St. Louis being happily ended by the joint resolution of the Illinois Legislature, the construction of the dike

opposite Duncan's Island was resumed in the spring of 1851. The river was then five thousand two hundred feet in width opposite the lower part of the city, and it was proposed to narrow it to eighteen hundred feet. In 1852, chiefly as a result of the efforts to close Bloody Island chute, which had not then fully succeeded, the east side had been removed until the island extended but five hundred feet east of the proposed wharf line. A small strip of the island was joined to the main land by cross-dikes in 1852-53.¹

From that time and up to 1866 the chute west of the island was unnavigable. In 1866 the city engineer advocated straightening the river from the city to Carondelet by a front line passing through the island. About this time the west chute became the main channel, and the wharf line was left as established in 1864 to the then city limits at Keokuk Street. As this line ended seven hundred and fifty feet from the shore, its adoption involved the widening of the chute by washing away the west side of the island. Several small spur-dikes were pushed out from the Missouri shore behind the island previous to 1858, but not far enough to exert any controlling influence during the time when it was uncertain which plan would finally be adopted. After the extension of the city in 1870, absorbing the old town of Carondelet, the extension of the line in front of the newly-acquired territory was brought forward, and a project submitted by the city engineer accepting the line as then established by ordinance, nearly in the middle of the channel, affording an opportunity to make many blocks of ground.

The project of making the west chute the permanent channel was acquiesced in by all. The board of engineers in their report of April 13, 1872, had indorsed it to the extent of saying by implication that the United States should close the eastern channel if observation showed danger of the river leaving the channel to the west. Before this proposed extension of the wharf line was formally laid before the City Council, an ordinance was passed ordering the construction of a dike at the foot of Bryan Street. As no necessity was apparent for this dike, it is not unreasonable to suppose that it was moved and passed with a view chiefly to commit the city to the proposed

line. Work on this dike was prosecuted so vigorously that the first intimation of its commencement to many was the complaint made by boatmen that the channel was obstructed, but the work had progressed far enough to cross the main channel, which had been along the main Missouri shore. The work being done in the spring, or at the season when the general tendency of the river is to rise, the conditions were unfavorable to the ostensible purpose of the dike, which was to compel the washing away of the west side of the island.

As the stage of water afforded a free discharge of the obstructed water by way of the eastern chute, that channel was deepened, and eventually became the main channel.

Growing out of the discussion which followed the return of the channel to Cahokia chute, an urgent demand for the closure of that chute was made by all parties interested, for once all agreeing in desiring this action, and a survey was made by United States engineers in the summer of 1874, with special reference to this matter. The construction of a dam across Cahokia Creek was authorized by Congress. The act of Congress making appropriations for this dam specifically limits it to a low dam, although it was clearly stated in the report that as such it would necessarily fail to accomplish all the requirements of the case.

Very little has actually been done towards the permanent improvement of the harbor below the arsenal. The plans contemplate considerable reclamations of ground from the river, which must be a slow process. These proposed reclamations extend from above the arsenal to near Dover Street, from Fillmore to Stein Street, and from Stein Street nearly to Jefferson Barracks. When complete the alignment of the wharf south will be convex from Market Street to Bryan, a distance of sixteen thousand feet, and concave from there to Jefferson Barracks, thirty-six thousand feet.

On the east side of the river the corrected width is defined only at the Illinois and St. Louis Railroad dike, opposite Chouteau Avenue and opposite Marine Avenue, by the revetment of part of Arsenal Island, opposite Carondelet, by the incline of the East St. Louis and Carondelet Railroad, by the Waterloo Ferry dike and the coal-dump of the St. Louis and Cairo Narrow-Gauge Railroad. Farther down the United States dikes for the improvement of Horsetail Bar, with two thousand four hundred feet of partially-constructed training-wall, are steps toward the definition of a line extending to the head of Carroll Island.

Arsenal Island belongs to the city of St. Louis, having been purchased from the school board for thirty-three thousand dollars in 1866. It was pat-

¹ The *Republican* of Feb. 25, 1874, gives the following as the measurements of the river: "At the foot of Pine Street it is 1560 feet wide; foot of Wash Street, 1500 feet; at Biddle Street, 1500 across to Bloody Island; North Market to the main shore below the dike, 3900; Warren Street to the end of the long dike, before the government commenced work, 2380 feet wide; to the shore below the dike, 3500 feet; from Destrehan to the Venice Ferry landing, 2580 feet; from Angelica Street to Bishoff's dike, 1450 feet."

ented to the school board in 1864 by J. M. Edmunds, commissioner of the general land office at Washington. All of the land within the island previous to this time was known as "Quarantine Island," and sometimes called Arsenal Island. The total number of acres contained in the island at that time was 119.57. The deed to the city was signed by Felix Coste, president of the school board, and George M. Fitchenkamp, secretary. During the civil war the upper portion of the island was used as a burial-ground by the government. After the city got possession it was used for a smallpox hospital. Many of the old graves, not otherwise removed, were washed away by the encroachments of the river.

Going back to the surveys, the first shore line we have a record of (in 1862) was opposite the north line of the arsenal. The head of the island moved down three hundred feet by 1865, in which year the main channel was on the east side of the island. At that time one could go from the St. Louis side to the head of the island on a sand-bar during low water, from October to about March. The next survey was made in 1874, when it was found that the head of the island had moved down one thousand three hundred feet from the survey of 1865, making the retrocession of the island altogether since the survey of 1862 about one thousand six hundred feet, over one-fourth of a mile in twelve years. The survey of 1874 showed the channel to be located on the west side, between the island and the Missouri shore. The change of the channel at that time was caused by dikes built by the Cahokia Ferry Company for the purpose of making a steam ferry-boat landing at Cahokia.

The survey of this island by City Engineer John G. Joyce in 1880 shows that the head of the island has moved down four thousand eight hundred feet from the survey of 1862, nearly a mile. The channel still remains on the west side of the island. It is interesting to remark here that the dike built by City Engineer Moulton about 1867-68, at the foot of Bryan Street, diverted the channel from the west to the east side of the island, and also washed the head of the island down some three thousand feet. A correspondence sprang up about that time between the Governor of Illinois and Mayor Brown in reference to the Bryan Street dike, the Governor opposing the construction of the dike on account of the damage that would accrue to the farmers on the Illinois side in consequence of diverting the current to the Illinois shore; the result was that the building of the dike was stopped, and the general government had to erect a dike from Arsenal Island to the Illinois shore from the upper eastern shoulder of the island.

The survey of Mr. Joyce shows the acreage of Arsenal Island to be 247.32 acres. The revetment made by the United States government engineers along the west shore, extending from a little below the northern apex towards the southern extremity, with revetment and dike on the east shore, would justify the conclusion that there will be little, if any, washing away in the future; but, on the contrary, a steady increase. The dike which was built on the east side some two or three years ago, above alluded to, has already formed a sand-bar on its south and adjoining the island of some two hundred and sixteen acres, which will steadily increase by accretion. This in time will be as high as the island proper. The dike is bound to obstruct the current forever on that side, and its being built on a foundation of brushwood fastened by piling and the whole imbedded with rock, justifies the belief that it is a permanent fixture.

The improvements of the harbor of St. Louis have passed through two stages. The first, arising out of a difficulty in the way of approach to the harbor, has already been considered. This difficulty stood also in the way of all the commerce passing St. Louis, and therefore the improvement was in no proper sense a local one. The second stage dates from about 1841 or 1843, and is marked by the addition to the former difficulty of an apprehension that the harbor would be entirely lost; not only that the main channel would be to the eastward of the island, but that the Missouri shore would speedily become inaccessible to boats.

Upon the authority of Capt. Cram, it appears that the volume of water in 1843 west of the island was to that east of it as ten to six. In December, 1845, the same officer says, the quantity running into the city channel was to the quantity running into the Illinois as 1 is to 1.01. These changes rendered the closure of the chute east of Bloody Island a necessity to St. Louis, and the hope of being benefited by the misfortune of their rival accounts for the interest taken by Alton and Quincy in the matter of closing the chute much more satisfactorily than the pretended fear of injury from back-water caused by forcing the Mississippi to pass through a channel only four hundred and fifty yards wide.

In the years following the closure of the Bloody Island channel no matter of general interest arose until by the growth of the city and its trade the extension of wharf facilities was required, and a third stage in the development of the demand for harbor improvement was introduced by the necessities of the traffic across the stream, the number of persons and railroad transfers requiring that both shores should be permanently accessible at numerous points.

The central and south wharves have now plenty of water. Regarding the establishment of the present north wharf line and clearing away the bar in front of it, the report of Col. W. E. Merrill, United States Engineers, after showing that the Grand Chain dike should be abandoned, as it only made matters worse at Sawyer's Bend, has the following: "The central harbor being in good condition during the low stage, it is manifest that if we can make the northern harbor like the central we may expect the same results in it. In other words, if we can canalize this portion of the river to a sufficiently small section, giving it revetted banks, we may confidently expect a sufficiency of water. Moreover, when once this work is properly performed we need have no further apprehensions about the angle at which the river current enters the city limits. It will be forced through so narrow a channel as to make the variations of the current a matter of indifference. If we could succeed in getting the river to abandon the Sawyer Bend and to take the eastern channel by Cabaret Island we would doubtless attain our object, and a shoal extending from Venice westward would ultimately narrow the water-way to the prescribed width. But having concluded that no reliance could be placed upon any means under our control for effecting this change, it only remains to see if we cannot accomplish the same thing in a different manner. Our object will be to contract the water-way in the northern harbor so as to force the water to run in the channel which we wish, notwithstanding it comes from Sawyer's Bend. There is a permanent low-water channel already established in the northern harbor, though it is not alongside the northern wharf. Either the city must move to this channel or the channel must be made to come to the city. The former method would be more natural, and in an engineering point of view would be much preferable. Our studies have shown us that in its natural condition a river has no right lines, passing directly from a curve bending one way into a curve bending in the opposite direction. If, then, the northern wharf line were moved out to the edge of the bar and made to conform to the curve of the channel, we should have a naturally formed river from below the Grand Chain to the elevator. With shore lines thus established there would be no difficulty in making permanent revetments." After instancing a number of objections to this course, such as the abandonment of a line on which much work had been done, lengthening the sewers, damages to water-front owners, etc., the engineer's report says,—

"Under these circumstances the only course that seems left is to force the river to come to the wharf, which the city has

established. That this can be done I have no doubt, though the channel so formed will be an unnatural and, therefore, expensive one. . . . To force the water channel over to the city wharf we must drive it by a series of dikes. The dikes already constructed by City-Engineer Bisehoff will be the first of the system, the long dike extended will be the third, an intermediate dike at or near Venice Landing will be the second, and a fourth dike may be needed at the head of Bloody Island. I would recommend that they be raised to the height of fourteen feet above low water." . . .

It is upon this report of Col. Merrill that the city has based its latter-day wharf plans.¹

The present United States engineers are not so sanguine that the river can be brought to the wharf, but think the wharf must go to the river.

According to their reports, the complete improvement of the harbor of St. Louis requires, first, the fixation of the banks above the city so as to control the approach to the harbor and preserve the conditions of entrance invariable; second, the regulation of the width and depth in front of the city by regular permanent lines of definition at high and low stages.

¹ The *Republican* of March 20, 1857, speaking of the wharf, said,—

"The whole of this magnificent work, from Market Street to Loeest, has been completed and is now ready for use. Those who recollect the condition of the Levee when Mr. Kennett came into office, less than a year ago, can hardly realize the change which it has undergone. It was then a narrow, unpaved, and irregular spot, upon which business could be done only in the greatest confusion and with still greater delay. A narrow street afforded very little room for the receiving and discharging of freight, and the drays were so jammed together that it was impossible to get along. Now, thanks to Mr. Kennett's sound judgment, knowledge of the demands of commerce, and energy in carrying out his plans, he has, with the aid of the Council, built up and carried out a levee which has not its like in the United States. The work before him was enough to startle a man less bold and less confident of the ability to carry out his plans than himself. It was necessary not only to extend the wharf into the river, but also to fill up the ground several feet, and upon this a solid and durable pavement was to be laid. All this has been accomplished under circumstances of a very discouraging character. Merchants can now do their business with some comfort, the boats can discharge and receive their freight in one-half the time and in good condition, and the draymen can pursue their laborious calling without delay and without being constantly jammed against each other. For this improvement the community is indebted to Mr. Kennett. Before he came into office it was going on at a snail's pace, and upon so narrow and contracted a plan that no advantage could have been derived from it, even if it had been paved.

"If Mr. Kennett is continued in office—and the citizens will do great injustice to themselves if they do not elect him without a serious contest—seven additional blocks south of Main Street will be completed before the end of the summer, and then what a magnificent levee it will be! The work is going on as rapidly as possible; it gives employment to hundreds of men, and the sooner it is all completed the sooner the city will be able to effect a reduction in the rates of wharfrage."

"The first requires the revetment of the right bank for the whole length of Sawyer Bend, and possibly a section of the Illinois shore opposite to and above the Chain of Rocks, also the closing of Cabaret slough by a high embankment and revetment of the head of the island. Besides the work here named it is improbable that any will be required for many years upon that part of the city front above the water-works. The concave bank insures the permanent location of the channel close to the Missouri shore, and the west side of Cabaret Island is more likely to receive accretions than suffer abrasion. Therefore, unless by the growth of new interests or unforeseen expansion of those existing, a necessity should arise for deep water on the east side, this part of the river may be considered the approach to the harbor, and, except the work named, may be left to nature. The extent of bank to be revetted in Sawyer's Bend is twenty-seven thousand feet.

"The regulated canalized river harbor will begin near the city water-works, and the upper limit may be fixed at the present Bischoff's dike, which now extends from the Illinois shore to within one thousand five hundred and seventy feet of the St. Louis wharf."

By the River and Harbor Act of 1882 it is provided

"that the unexpended sums heretofore appropriated for an ice-harbor at St. Louis, Mo., be and the same are hereby transferred and appropriated, to be expended, under the direction of the Secretary of War, for the improvement of the channel of the Mississippi River opposite the city of St. Louis, Mo., by repairing and raising the low dam across the channel east of Arsenal Island, known as Cahokia chute, and by the construction of such other works in or near said Cahokia chute as may be deemed advisable to accomplish the same purpose."

The harbor of St. Louis, extending from the Des Peres River on the south to the northern extremity of the city, is nearly fourteen miles in length, of which nearly four miles are paved, and embraces an area of water of nearly five square miles.

The total expenditures for the improvement of the harbor of St. Louis from October, 1840, to April, 1869, amounted to \$1,012,551.68.

Floods in the Mississippi and Tributaries, and the Levee System.—The Mississippi River and its tributaries drain an area above and including the Red River as follows:

	Square Miles.
I. The Missouri River and tributaries.....	519,400
II. The Ohio " " " ".....	202,400
III. The Upper Mississippi River and tributaries.....	184,500
IV. The Arkansas and White Rivers and tributaries.....	176,700
V. The Red River and tributaries.....	102,200
VI. The Yazoo, Obion, and Black Rivers and tributaries.....	29,300
VII. The St. Francis River and tributaries..	12,100
Total.....	1,226,600

The rainfall over this vast extent of country has been carefully investigated, and forty inches has been fixed upon as the annual downfall, which must, of course, be carried off, either by evaporation or drainage.

Supposing, says Charles Ellet, Jr., that "from any cause,—as the tillage of the prairies, the destruction of the vegetable growth, or the better drainage of the fields,—out of the forty inches of rain, *two-fifths* of an inch, or nearly *one per cent.* of the whole, should be discharged into the Mississippi in the course of sixty days of flood over and above the present discharge. If this slight increase of the total discharge were distributed uniformly over the whole period of sixty days of high water, it would require that the channel of the river should be competent to give vent to an increased volume equal to two hundred and twenty thousand cubic feet *per second*. If this increased volume be retained in the channel by levees, these levees must be raised six feet higher than the tops of the present (1854) embankments."¹ The object of the computations by which this conclusion was arrived at by Mr. Ellet was to show how sensitive is the discharge of the Mississippi River to every variation, however inconsiderable, of the drainage of the country; and to prove that if the evaporation be slightly reduced, or the drainage slightly hastened or increased by the causes which are progressing with increasing population and the extension of cultivation, then for every *fifth part of an inch* by which the total drainage is increased in the period of high water there must be experienced an average increase of *about three feet* in the heights of the floods, unless the water can find its accustomed vents into the swamps. This statement will aid in forming some estimate of the consequences which are to spring from the extension of society over the yet unpeopled West, and the cultivation of the vast territory which is drained by the Mississippi and its tributaries, increasing the amount of water poured down the lower Mississippi, while the population of that portion of the valley is closing the accustomed outlets of the river in the extension of the levees.

A great flood is the result of a simultaneous discharge of the great tributaries which ordinarily run off successively. The high water produced by the Red and Arkansas Rivers, in the ordinary course of things, has begun to subside before that of the Ohio, Cumberland, and Tennessee comes down; and these, again, begin to recede before the upper Mississippi discharges its volume; and this, in its turn, subsides before the snows of the Rocky Mountains are melted by the tardy sun in those high latitudes, and the water has time to flow off through the three thousand miles of channel intervening between the sources of those distant streams and the head of the delta. It is a

¹ "Mississippi and Ohio Rivers," by Charles Ellet, Jr.

part of the natural order of events that these great rivers should discharge successively. But when, under circumstances over which there exists no control, the ordinary order of successive discharge is changed for a simultaneous pouring out of all the tributaries, then comes the "year of great waters," like 1785, 1811, 1823, 1826, 1844, 1858, and 1881.

The first unusual rise of the Mississippi River of which we have any account took place in 1542. In March of that year, while De Soto and his followers were at an Indian village on the western side of the "Rio Grande," as the early Spaniards called the Mississippi, which from its elevated description indicates the site of Helena, in Arkansas, there was a rise in the river which covered all the surrounding country as far as the eye could reach. In the village (represented to have been on high ground) the water rose from five to six feet above the earth, and the roofs of the Indian cabins were the only places of shelter. The river remained at this height for several days, and then subsided rapidly.

The earliest authentic account of the American Bottom being submerged is that of the flood of 1724. A document is to be found in the archives of Kaskaskia, which consists of a petition to the crown of France, in 1725, for a grant of land, in which the damage sustained the preceding year (1724) by the rise of the water is mentioned. The villagers were driven to the bluffs on the opposite side of the Kaskaskia River, their gardens and corn-fields were destroyed, and their buildings and property much injured. We have no evidence of its exact height, but the whole American Bottom was submerged. This was probably in June.

There was a tradition among the old French people many years since that there was an extraordinary rise of the river between 1740 and 1750, but we find no written or printed account of it.

In the year 1772 another flood came, and portions of the American Bottom were again covered. Fort Chartres, in 1756, stood half a mile from the Mississippi River; in 1776 it was eighty yards. Two years after, Capt. Pittman, who surveyed the fort in 1768, states,—

"The bank of the Mississippi next the fort is continually falling in, being worn away by the current, which has been turned from its course by a sand-bank, now increased to a considerable island covered with willows. Many experiments have been tried to stop this growing evil, but to no purpose. Eight years ago the river was fordable to the island; the channel is now forty feet deep."

About the year 1770 the river made further encroachments, but in 1772, when it inundated portions of the American Bottom, it swept away the land to

the fort and undermined the wall on that side, which tumbled into the river. A large and heavily-timbered island now occupies the "sand-bar" of Capt. Pittman's time, between which and the site of the fort a slough runs.

The next period of extreme high water was in 1785, during which Kaskaskia, Cahokia, and large portions of the American Bottom were submerged. Concerning this great inundation we have but meagre information. This year, however, is known in the annals of Western history as *l'année des grandes eaux*,—the year of the great waters. In 1844 it was contended by some of the old inhabitants of Kaskaskia and Cahokia, who remembered the great flood of 1785, that the water attained a greater height than in the last-mentioned year. It is certain that at Kaskaskia the water attained a greater height in 1844 than was reached in 1785. This is not predicated upon the mere recollections of individuals, but was ascertained from existing marks of the height of the flood of that year after the subsidence of the water in 1844. It was then proved that in this last-mentioned year the water rose two feet and five inches above the high-water mark of 1785. The destruction of property by this freshet was comparatively small. The mighty stream spread over a wilderness tenanted only by wild beasts and birds, and the few inhabitants then residing within the range of its destructive sweep easily escaped with small loss to the highlands. Gen. Edgar once said that in Kaskaskia the water rose to the surface of the door-sill of the house of the late Robert Morrison, but that in one place, where the court-house stood a few years since, the ground was above the water. That season the inhabitants passed by means of water-craft through the prairies and lakes from Cahokia to Kaskaskia. This flood destroyed all the crops, and did much damage about the French villages on the American Bottom.

There were high waters so as to overflow the low grounds and fill the lakes and sloughs on the American Bottom at other seasons subsequent to 1785, but none that deserve attention until that of 1811. It was in the summer preceding the "shakes," as the earthquakes were called.

This flood resulted in part from the annual rise of the Missouri, as did the ones previously noticed. The flood in the Missouri always occurs between the 15th and 30th of June, and is caused by the snows melting in the mountains at the heads of the main Missouri. In some seasons the Yellowstone, which is in a more southern latitude, pours out a flood which reaches St. Louis about the last of May or 1st of June.

In 1811 the Mississippi River commenced rising early in May, and by the 15th the water had spread over a large portion of the American Bottom. The water began to subside, and by the 1st of June was only over the banks in low places. By the 6th of June the river again commenced rising, and continued to rise until the 14th, when it came to a stand. At this time the greater part of the American Bottom was under water, and Kaskaskia, Cahokia, Prairie du Pont, Cantien, and nearly all the settlements in the bottom were inundated, and the inhabitants had fled to the high lands.

The "common fields" belonging to Ste. Genevieve were on the bottom land adjacent to the river, much of which has since been swept away, the steamboats now running over the same spot. The water entirely submerged the field, and nearly covered the growing corn. A story is still narrated by the oldest inhabitants that at the time of the flood some of the panic-stricken inhabitants waited on Father Maxwell, the village priest, to "pray away the water." It is said he gave no direct encouragement at first, until he perceived the water at a stand, when he proposed to the corn-growers to drive off the waters by saying masses for a share of all the corn they raised. The bargain was struck, the masses were said, and the waters suddenly retired from their fields. The ground was soon dry and in good order, the corn looked green, and the priest, it is said, shared in the luxuriant crop.

There was considerable destruction of property by this freshet, and a great many cattle drowned. The height attained by the water during this freshet has never been precisely ascertained. But it is believed that the flood was not so great as that during *l'année des grandes eaux*.

The flood of 1811 was much greater than any that followed until 1823, when a sudden change in the temperature after a winter when the snowfall was unprecedentedly heavy throughout the Northwest and the fall of very heavy rains caused the Mississippi to commence rising rapidly about the 8th of May, 1823. It continued to rise rapidly until the 23d of the month, when it came to a stand. At that time the water entirely covered the American Bottom, and the citizens of Kaskaskia, Cahokia, Cantien, French Village, Wood River, Madison, and other settlements had been compelled to abandon their homes and seek refuge on the bluffs and in St. Louis. The houses in the lower part of St. Louis were surrounded by water. The Levee was submerged, and the river rose to the lower room in the old store at the foot of Oak Street (then kept by John Shackford) about five feet. The

water overflowed all the low grounds about East St. Louis.¹

The loss of cattle was very great, and the farmers suffered heavily throughout the American Bottom. The high land about where that part of East St. Louis known as Papstown is now built, and *la bute à renard*, or the Fox Mound, which had escaped submersion during the flood of *l'année des grandes eaux*, were the only dry ground in the American Bottom, except some mounds whose tops were of no great extent. In this, as in the flood of 1811, there exists no means of ascertaining the height which the river attained, nor are there the means of ascertaining the amount of destruction which was accomplished by this great freshet.

The season of 1826 was characterized by tremendous rainfalls throughout the whole Northwest, and the Mississippi was very high throughout the spring from about the 15th of April. Towards the close of May the river had overflowed its banks and spread for miles over the country. By the 8th of June Cahokia, Kaskaskia, Prairie du Pont, Cantien, and the common fields of Ste. Genevieve were submerged. The loss of stock and other property was very great. The inhabitants of the "bottoms" sought refuge either on the bluffs back in Illinois or among the hills of Missouri, or in St. Louis. There is, so far as we can ascertain, no record left of the height attained this year by the water in the river. The river came to a stand on the 10th of the month, and on the 11th was falling rapidly. By the 25th the river had reached an ordinary stage,—the great flood had been lost in the vast volume of waters of the gulf.

The winter of 1843-44 was not one of unusual severity, though there were tremendous snow-storms throughout the Northwest. The winter broke up early in May, but the weather continued cool, and the spring was characterized by the severest rain-storms ever known in the Northwest. Early in the season the river began to rise, and by the 1st of May was full almost to overflowing. The population of Missouri and Illinois had greatly increased, farming had improved the soil and largely facilitated the drainage of the land. Towns and settlements had sprung up everywhere, and along the river-banks centres of population had gathered and garnered great wealth.

¹ Many of the citizens of St. Louis recollect when the east bank of the river opposite Oak Street was where the island now is, which was farther up the river and nearer the St. Louis shore. There was a village of some twenty small houses at and above where the dike joins the island, and a ferry of the French fashion (two canoes with a light platform over them) crossed the river from that village to the foot of Oak Street.

When, therefore, they saw the mighty rivers bank-full in April they were not alarmed; and when on the 3d of May the great streams began to recede, all fear passed away with the decline in the volume of the waters. But thick clouds gathered, and deluges of water were poured out over the face of the whole country.¹ Little brooks became swollen creeks, and small creeks great rivers, and little rivers great floods, all pouring into the mighty Missouri and Mississippi their vast contributions to the overwhelming waters that rose above the barriers which confined them and deluged the fairest part of the great West.

By the 10th of May the river began rising, and by the 16th the flood began to create alarm at St. Louis. The *Republican* of the 17th of May calls it "a tremendous flood," and adds,—

"The waters were coming down upon us from every quarter. The Mississippi is now as high as it has been known for many years, and is still rising. Just above Oak Street it was last evening within six or eight feet of touching the curbstone. The cellars all above the wharf are filling with water. It was still rising last evening at the rate of twelve inches in twenty-four hours, and this notwithstanding an immense volume of water is pouring over the Illinois shore. The whole of the American Bottom, from Alton to Kaskaskia, will be, we fear, submerged. The people are deserting their homes in Illinois towns."

The river continued to rise throughout the 18th, 19th, and 20th, reaching the doors of the stores on Front Street north of Pine, and extending to the Pap house on the Illinois side, a distance of two and a half miles. The merchants on Front Street had all been compelled to move their stock of goods into the second stories. The waters came to a stand on the 21st, with prospects of a decline, which began rapidly on the 23d, and continued until the river was again within its banks on the 7th of June. But the flood from the Missouri was coming down. From the 3d to the 10th of June there was a continued succession of the most terrible rain-storms ever witnessed. These tremendous rains were general throughout the Northwest. The Mississippi again commenced rising at St. Louis on the 8th of June. The rise was steady, though not alarmingly rapid. The upper Mississippi, Illinois, Missouri, Des Moines, Gasconade, Osage, Kaw, Platte, and all the tributaries were pouring out their floods.

Steadily, slowly, but inexorably the great floods from the prairies, hills, and mountains came sweeping down to the lower valleys. Before the 12th of the month the river was again breaking over the banks in places.

¹ It rained continually for ten days. According to the estimate made by Dr. B. B. Brown, the quantity of rainfall was nine inches, being a greater quantity than that of the whole of the year 1843.

By the 15th the floods began to alarm the people of the valley, and "the great flood of 1844" had commenced its devastations.

There were five hundred persons in St. Louis who were driven from their homes by this flood.²

At Bon Secour there were camped, all in open camps, one hundred and twenty-two persons. Several of these families left their homes with from four to nine children, and with less than fifty pounds of flour and a small quantity of meat.

The water covered all of Illinoistown, rose above the first story of the houses, and reached within a few inches of the height attained in the freshets of 1823 and 1826. A considerable portion of the curbstones on Water Street were covered, and the water was running into the lower stories of the houses of Battle Row, corner of Laurel Street.

All the rivers above were reported to be rising, but the principal rise was from the Missouri, said to be the June freshet from the mountains. The Missouri, the upper Mississippi, and the Illinois, and their tributaries were overflowing their banks and rising rapidly, spreading destruction and consternation among the inhabitants of the bottoms, whose losses were very great. Many of their farms were completely under water, and their crops were entirely destroyed, and their stock either carried off by the flood or scattered over the country.

The Illinois River was within six inches of the high-water mark of the great flood that occurred seventeen years before, and at Naples it had overflowed the bank and the streets were under water.

On June 17th the river was about six inches higher than the water-mark of the month before. North of Locust Street, on Front Street, and above Vine Street the water rose over the sidewalks and into many of the stores, forcing the merchants to carry their damageable goods into the second stories, and to place the remainder on shelves and counters. On the 18th the steamer "Missouri Mail" brought the alarming news of a great rise in the Missouri, which on the 13th was rising at St. Joseph at the rate of seven feet in twenty-four hours.

The whole country between Weston and Glasgow was under water. Camden Bottom was covered to a depth of six to eight feet. The officers of the "Mail"

² "Nearly all the people of Brooklyn, Venice, Cahokia, and Six-Mile Prairie and other points along the river-banks are in the city. In the vicinity of Anderson's Mill, in the upper part of the city, there are upwards of fifty families and more than two hundred persons, many of whom are destitute, and all are without shelter, except such temporary covering as they have been able to erect."—*Republican*, June 24.

spent nearly one entire day in relieving and saving those who were in danger, and the accounts they related were peculiarly distressing; quite a number of persons were missing, many of whom were doubtless lost. Cattle in large numbers were seen floating down amidst the drift, their heads only visible. Many houses were also seen floating on the flood.

The editorial of the *Republican* of June 19th says,—

“We have taken some pains to ascertain with certainty the height of the present rise in the river compared with former freshets. We have been very unsuccessful. Within the memory of many of the oldest inhabitants there have been three extraordinary freshets,—one in 1811, one in 1823, and the last in 1826. If there were any others, we have not been able to learn the particulars. The freshet of 1811 appears to have been the highest. That year the Ste. Genevieve common fields, and in fact the whole bottom, was covered with water. Boats passed with ease to and from Ste. Genevieve to Kaskaskia. There is a great difference of opinion as to the height attained by the water in 1826. Some say it was higher than now; others insist that at present the water is higher than during that year.”

On Thursday, the 20th, the Mississippi was from three to six miles wide, and in many places nine. It covered all Front Street and the sidewalk; it was over the boilers in Cathcart's mill, and the steamer “Lightner” was resting her bow against the front of Henry N. Davis' store at the corner of Front and Morgan Streets. The water was up along Battle Row nearly to the door-hatches. At J. & E. Walsh's store, corner of Vine and Front Streets, the water was up to within about fourteen inches of the locks on the doors. At the corner of Pine and Front Streets it was just up to the top of the sill of the door of Mr. Collins' warehouse. At Market Street it was between nine and ten inches below the sill of the east door of Coons & Gallagher's store. The lower part of the city, in the vicinity of Mill Creek, was all submerged. The water covered Second Street below the bridge. Mr. Stiles and most of the people in that quarter, especially along Convent Street, removed, and the communication was maintained by means of boats.

Several houses up in the direction of the dam were several feet under water. Of course all the low lands in Soulard's addition and St. George's were overflowed.

On the Illinois side everything was under water; at Cahokia the inhabitants were forced to flee to the bluffs, and several houses in Illinoistown were moved from their foundations, and some overturned.

The “Indiana,” which made fast at the door of the female academy, brought up from Kaskaskia the Sisters of Charity at the convent and the priests connected with the church at that place, and several families and such furniture as they had saved. The town was from ten to twenty feet under water. Several

dwelling-houses that were most exposed to the current of the river, together with many barns, stables, and outhouses, were swept away.

The city engineer, about twelve o'clock on the 22d, ascertained that the water was over the city directrix, the curbstone on Front Street, east of the market-house, three feet four inches. This gave thirty-four feet nine inches plumb water above low-water mark. From half-past seven o'clock on Thursday morning until half-past seven Friday evening the rise was seventeen inches. This was an immense and unparalleled rise, and can only be properly estimated when the whole width of the river is considered. In many places it was from ten to fifteen miles wide. In Second Street the water extended from Hazel to the junction of Second and Fifth Streets, being in some places from four to five feet deep. The low land in front and all the low lands between Second and Third and Fifth Streets were several feet under water.

On June 22d the editor of the *Republican*

“took a trip across the river in the row-boat ‘Ripple,’ a boat which is owned and manned by a company of young gentlemen, amateur boatmen, and had a most pleasant time of it. We left the foot of Market Street and crossed to the ferry landing. From thence we passed over several streets of Illinoistown, and to ‘Old Pap's house,’ a mile and a half from the ferry landing. Thence we rowed through a corn-field and an oat-field to the railroad, passed along it some distance and through another field to the big lake near the Pittsburgh coal-mine, a distance of about nine miles. On our return we crossed to the east side of Bloody Island, and passed round the head of the island. Everywhere we witnessed the destruction of whole crops, the year's subsistence of the farmer and his family.”

For the twenty-four hours of Sunday, June 23d, the water rose fourteen inches, and reached the climax of the flood, where it remained nearly stationary until the 28th, when it commenced receding. In order to relieve the needs of the destitute the City Council by ordinance placed one thousand dollars at the disposition of the mayor and other officers. The number encamped was as follows: At Bon Secour, 122; at Mr. Cremer's, 45; at John Cohen's, 18; at John Sharp's, 5; at Carne's, 21; at Falling Spring, 31; at Edward Hebert's, 4; at Prairic du Pont, 41; at Joseph Boismenen's, 40; at the Grand Marias Pass, 40 families.

The water continued to recede with great rapidity. By the middle of July the river had reached an ordinary stage. The weather became settled, the atmosphere void of moisture. July, August, and September proved very dry, and before the close of the season the river had reached an exceedingly low stage.¹

¹ The following interesting account of the great flood of 1844 was written in July of the same year by the late Dr. B. W. Brooks, of Jonesboro', Ill.:

The long-continued and ruinous flood of 1851 did not begin to attract particular attention until "fearful accounts of the rise in the upper Mississippi," the river being over its banks in many places, reached the

"The Mississippi, being at a good boating stage of water, commenced rising rapidly on the 18th day of May, 1844, and continued rising at the rate of from two feet to thirty inches every twenty-four hours until the first day of June, at which time it was within eighteen inches of high-water mark in the years 1811 and 1826. It then commenced falling gradually until the 10th of June, at which time it had fallen some five or six feet, so as to leave all the farms free from water, which were previously about half covered with water generally, with the exception of Jacob Treese's farm and a few others. This rise was presumed to come out of the Mississippi River. On the 11th of June the Missouri flood came down, and the Mississippi commenced rising again, and continued to rise at the rate of from one foot to eighteen inches every twenty-four hours until it inundated the entire bottom, covering every farm in it from eighteen to thirty feet, that being the depth of soundings on the road from Jonesboro' to Littleton's old ferry, and to Willard's ferry. Horses, cattle, sheep, and hogs were destroyed in vast numbers, notwithstanding every exertion was used by the benevolent and enterprising citizens throughout the county. Wood-boats, ferry-flats, canoes, and skiffs, and divers rafts or other crafts, made upon the spur of the moment, were employed in collecting and boating the stock and household property of the alarmed and distressed citizens to the high lands. Many of the citizens living near the banks on the Illinois shore fled with their families in consternation to the Missouri shore, leaving all their horses, cattle, and household effects to their fate. This latter rise and overflow of the river continued until the 29th of June, when it came to a stand, the citizens baving in a great degree made an end of removing the effects of the suffering inhabitants to the neighboring hills. On the 1st of July the waters began greatly to recede, and continued to fall until . . . it became confined within the banks of the river. It is worthy of remark that about one-half of the houses in the Mississippi Bottom were removed from their foundations; all the fences wholly removed and washed away. All the warehouses on the bank fell into the river, and many dwelling-houses shared a like fate.

"This inundation was ten or twelve feet higher than that of 1811, or of 1826, and higher than ever known, except in 1785, when it rose thirty feet above the common level, and from the reports recorded in Beck's 'History of Illinois and Missouri,' it was the greatest flood known during the last one hundred and fifty years, at which period the Mississippi washed in a part of Fort Chartres. Mr. Cerré, the oldest French settler in St. Louis, says the inundation of the Mississippi and Missouri was not as high by some four or five feet in 1785 as it was this year, 1844, and all the old settlers of Kaskaskia agree in saying that the overflow of 1785 left one dry spot in the town of Kaskaskia, which was covered in 1844 with water five feet deep. The steamer 'Indiana' was chartered by the nuns to take the pupils of the nunnery to St. Louis, and received them on board at Col. Menard's door, and passed along the road to St. Louis, on which there was from six to fifteen feet of water, leaving the river far to the left the whole route. Some two hundred citizens went up from Kaskaskia on the 'Indiana,' and about three hundred found shelter on the premises of Col. Menard, and many more spread their tents along the bluffs.

"Millions of dollars will not cover the loss sustained by this flood in the States of Illinois and Missouri. Some of the most

newspapers of St. Louis of May 29, 1851. Two days after the river began to rise rapidly at St. Louis, and by sundown of the 30th was fifteen feet eight inches below the high-water mark of 1844, as marked

valuable farms in those two States have been rendered worthless for several years. The whole American Bottom from Alton to Cairo was submerged, containing seven hundred square miles of the finest land in the world. La Bute à Renard was the only point of land out of water in 1785: so says the *St. Louis Republican*.

"The great flood was occasioned by the swelling of the northern rivers which empty into the Missouri and upper Mississippi, and by the melting of the snow on the eastern declivity of the Rocky Mountains.

"The Spanish and Portuguese historians of De Soto's marauding expedition tell us that in March, 1542, all the high grounds on the west side of the Mississippi, from the mouth of the Ohio to Red River, were submerged several feet. There is a document in the clerk's office of Randolph County, Ill., at Kaskaskia, dated 1725, soliciting a grant of lots and lands from the crown of France, and urging as a reason the 'great flood' of the preceding year, 1724, which overflowed the village, destroyed the houses, and drove the inhabitants to the bluffs.

"The bottom lands along the Mississippi from Alton to Cairo, at the mouth of the Ohio, average five miles in width. Since the Mississippi was first discovered by Europeans, the waters had passed over all the low grounds from bluff to bluff several times. In 1785 this bottom was covered, and small boats passed from St. Louis to Kaskaskia over the land. In 1811, at the annual June rise of the Missouri, a part of the American Bottom and the common fields of Ste. Genevieve were inundated. In 1826 the river inundated the town of Illinois, opposite St. Louis, and also the lowlands along the American Bottom, but not as high by ten feet as this flood of 1844. The flood at St. Louis attained its greatest height on the 24th of June, 1844, and was thirty-eight feet seven inches above low-water mark at that city."

William L. Murfree, Sr., gives a graphic description of the flood of 1844 in *Scribner's Magazine*: "The shallowest water, for indefinite miles in any direction, was two feet deep, the nearest land 'the hills of the Arkansaw,' thirty miles away. The mules were quartered on the upper floor of the gin-house; the cattle had all been drowned long ago; planter, negro, and overseer were confined to their respective domiciles; the grist-mill was under water, and there was no means of preparing corn for culinary purposes except a wooden hominy mortar. The hog-and-hominy diet (so highly extolled by some people who have never lived on it) was adopted of necessity, the former being represented by mess-pork salter than tongue can tell. There were no visitors, except now and then a sociable snake, which, no doubt, bored by swimming around indefinitely in the overflow, and craving even human companionship, would glide up on the gallery of some of the houses. There was no means of locomotion except the skiff and the humble but ever serviceable 'dugout,' nowhere to go, and nobody within a day's journey otherwise or more comfortably situated. The only sense of sympathy from without was had from remote and infrequent glimpses of the gallant steamer 'J. M. White,' which, leaping from point to point, made better time from New Orleans to St. Louis than was ever made before or for many years after. That year nineteen plantations out of twenty failed to produce a single pound of cotton or a single bushel of corn, and when the flood was over and the swamp Noahs came out of their respective arks, they were, to say the least, malcontent."

on the column in front of the Centre Market, and eight feet and one-half inch below the city directrix, or the curbstone at the corner of Market Street and the Levee. The top of the stonework of the dike is two feet lower than the city directrix. A large portion of the east side of Duncan's Island, and seven houses, and a portion of the dike erected by the city between the island and the Illinois shore, were washed away. About one million feet of lumber from the upper part of the city was also washed away. Through almost all of June the river continued to rise, until June 23d it had risen four feet nine and a half inches below the high-water mark of 1844; from this date the waters commenced to decline.

The desolation which visited the States watered by the Mississippi, the Missouri, the Wabash, the Illinois, and their tributaries was beyond all calculation.

In 1854 the river was very high, the water almost entirely submerging the Levee at St. Louis. Great damage was done, especially in the lower portion of the course of the river. The destruction of property was immense in Mississippi, Arkansas, and Louisiana.

In 1858 the water rose to a point within about two and a half feet of the flood of 1844. Many towns were inundated, and vast destruction of property was effected. The water broke over the levee at Cairo, Ill., and completely submerged that city. The water in the Ohio was also very high. The planters in the delta and the farmers throughout the low country suffered immense losses.

In 1863 the river rose very high, and the flood swept away much property. The water came into the stores on the Levee at St. Louis. This was the last great flood until 1881, though the water rose quite high in 1867, and again in 1871 and 1875. But these floods did little damage in the upper valley. In Mississippi, Arkansas, and Louisiana great destruction was wrought in 1867, 1871, and 1875.

The flood of 1881 began in May, and on the 4th of that month, from the foot of Anna Street, on the St. Louis side, the only limit for the water was the bluff, three miles to the east. East Carondelet, as the little village opposite Carondelet is called, was flooded by the breaking of the dike at the head of the island, and the inhabitants took their children in their arms and sought safety on the high grounds. Many of them crossed in the ferry-boat and found quarters in Carondelet. Over a hundred persons were thus rendered homeless. From the arsenal, steamboats could be seen through the willows which were once on the bank of the river, plying in the overflow. The width of the river at that point was estimated at three miles.

The country surrounding the little town of Venice, opposite the north wharf, was inundated. Night-fall found East St. Louis still exempt from inundation, but the situation there was extremely critical, and the alarm among the inhabitants was general. At 2.35 o'clock, May 3d, the steamboats lying along the East St. Louis side of the river set up a combined whistling, which conveyed to people on the St. Louis side of the river the impression that the town of East St. Louis was in danger of being swept away, but whistling was the signal agreed on whenever the break should occur in the Madison County dike. Fortunately the alarm, though far from causeless, did not herald such great disaster. A break had occurred in the Chicago, Burlington and Quincy Railroad embankment, and a great volume of water poured through it, threatening to sweep down on East St. Louis and send the inhabitants fleeing for their lives. The water had two courses to take,—one up Cahokia Creek, where it would do no great damage immediately, the other down the creek, where it would drown out East St. Louis. When the possibility of the embankment's breaking had been canvassed beforehand, there was scarcely any one who did not suppose that the water would come down the creek, but, strangely enough, it took the other course, and the Ohio and Mississippi embankment for the time kept it away from East St. Louis.

The greatest actual damage which occurred in one place was the loss of the bridge, valued at twenty thousand dollars, across Cahokia Creek.

On May 5th the river had risen half a foot within twenty-four hours, and was above the high-water mark of 1876, and still rising. East St. Louis was in greater danger than ever.

The water on the 4th came near taking in completely what little of the levee-front it had left the day before. From Biddle Street to Locust sidewalks were only to be seen in spots. From Washington Avenue to Locust the water was running over the pavement and against the lintels of the houses. From Spruce Street to Chouteau Avenue there was no passage for pedestrians, and as early as six o'clock in the afternoon a skiff tied to the awning-post in front of 607 South Levee was floating over the sidewalk in a foot of water. Between East St. Louis and Fish Lake thousands of acres of wheat were under water. In East Carondelet there were some sixteen houses above water, each of which was crowded with those whose homes were submerged.

The floods on the Mississippi of which more particular accounts have been given were selected because of the exceptionally high stage of the water, but almost

every year witnesses very high water, and the annual loss of property is very great. These constantly occurring stages of high water, in which the *flood wave*, overleaping the banks, spreads over the adjacent country, have caused the construction of artificial banks along the tops of those created by the stream itself, and as these new banks have been extended along both banks of the river, they have assumed a regular system of protection, which is known as the levee system. This system, though located on the river *below* St. Louis, is yet of very great importance to the trade and commerce of a city whose situation naturally makes it the great commercial capital of the river-drained country. It was to find "means of obviating the disasters incident" to these floods, and "to prevent the overflow of these low grounds, or swamp lands generally, covering, as is supposed, nearly forty thousand square miles,¹ that the investigations made by Charles Ellet, Jr., were undertaken.

"The lands which are now annually overflowed may certainly be estimated at fully 16,000,000 of acres, which, if relieved by any effectual process, would be worth at the government price \$20,000,000; but converted as they may be into sugar and cotton-fields, would possess a value that it might seem extravagant to state, while the annual loss and distress inflicted on the present population by the inundations of the river can scarcely find a parallel in many localities, excepting in the effects of national hostilities."²

These levees extend on one side or the other about eighteen hundred miles, and represent in first cost and present value twenty million dollars. But even the present system is regarded as entirely inadequate, for the levees, which are constantly breaking or threatening to break, protect but a comparatively small strip along the main stream and its principal tributaries, whereas by protection against overflow and by proper drainage an enormous expanse of what is now waste swamp land would be brought into cultivation,—a stretch of country beside which the areas reclaimed from the sea in the Netherlands sink into insignificance,—while the work of reclamation, gigantic as it would have to be in relation to its results, in the amount of time and labor required, would be comparatively small beside the work of the industrious Dutch. There would thus be rendered available along the Mississippi not

less than two million five hundred thousand acres of sugar land, about seven million acres of cotton land, and one million acres of corn land, all of unsurpassed fertility. On the eastern side of the river is the great swamp of Mississippi, fifty miles wide, extending from just below Memphis to Vicksburg, one hundred and seventy miles in a direct line, and nearly four hundred miles along the river. On the other side is another vast and fertile region, embracing the lower part of Missouri, all the alluvial front of Arkansas and of Louisiana as far down as the mouth of the Red River. This land is not so favorably situated for reclamation as that on the eastern side, where there is no tributary of the Mississippi until the Yazoo is reached, within a few miles of the Walnut Hills, near Vicksburg. But on the west side are a number of tributary streams, themselves all liable to overflow, while all are subject to back-water from the Mississippi, which would make levees necessary as far as the line of back-water extends. Much fine land, however, has been reclaimed here, although the line of levees is more fragmentary than on the other side. Below the Red River there are no tributaries entering the Mississippi, and on the other hand the waters are depleted by numerous outlets to the gulf.

The levee system was begun in Louisiana in the early part of the last century, but the reclamation of swamp lands in Mississippi and Arkansas has originated in recent years. Congress,³ by a general grant of all the inundated lands to the States in which they lie, for the express purpose of making "the necessary levees and drains to reclaim swamp and overflowed lands," offered inducements to the States, and through the States to individual enterprise, to commence a vast system of embankment, with a view to the ultimate exclusion of the water of the Mississippi and its great tributaries from all the inundated lands upon their borders. To this legislation the State of Missouri responded by an appropriation of fifty thousand dollars to begin the work of reclamation at the head of the delta, where many hundreds of square miles of inundated territory might be reclaimed by art, and the land brought under cultivation. The State of Arkansas with equal promptness passed an act granting to all proprietors who may construct front levees the right to enter the donated lands where they may choose to select them, in payment for the cost of the levees which they might construct. The Legislature of Mississippi, even prior to the act of Congress, gave authority to the five northern counties of that State to levy a tax of ten cents per acre on

¹ "The area is as large as the States of New Hampshire, Vermont, Massachusetts, Rhode Island, Connecticut, and New Jersey combined. Less than eight per cent. of this area is now under cultivation. It is estimated that if protected and improved these lands would be worth \$2,043,858,251. As their present value is but \$107,623,333, the increase would be a sum nearly equal to the national debt. It is therefore claimed that the returns would justify the outlay of the largest sum which the improvement would be likely to cost."

² Ellet's "Memoir on the Mississippi and Ohio Rivers," p. 27.

³ Act approved Sept. 28, 1850.

all the lands in each of these counties, for the purpose of constructing front levees and shutting out the waters of the Mississippi from the great swamps extending back to the Yazoo. The State of Louisiana was not less prompt in this matter than the other States, and by the incorporation of the Louisiana Levee Company has provided both authority and power with appropriate means for restraining the waters within the banks of the river.

A discussion of the wisdom of the levee system is not within the province of this work, the aim of which is only to relate what has taken place, and not to forecast what may result from closing all the natural and existing outlets by which in former years the flood wave of the Mississippi found a vent.¹

But it cannot be denied that the reclamation of the drowned lands in the Mississippi valley will improve the climate of a vast region of country and make it more salubrious, adding vastly to the wealth of those States by giving value to the lands, and greatly increase their commercial resources by bringing immense regions of these vacant lands under cultivation, while improving the navigation of the river. An object of so much importance to the health and prosperity of so many people in so many States cannot be without great influence upon the trade, commerce, and prosperity of the city of St. Louis.

Ferries.—Prior to 1797 there was a ferry between the Missouri and Illinois shores, starting from a point below the town of St. Louis, but in that year a ferry between Cahokia and St. Louis was established, which seems to have been the only one for a considerable period.²

¹ In 1874 a national commission recommended an elaborate levee system. As this was regarded as but a temporary expedient, the commission appointed under the law of 1879 considered more comprehensive plans. Chief of these are two which are designed to make a subordinate element of the levees, and possibly to make it possible to dispense with them altogether. One of these is called the "outlet system," and is designed to carry off the superfluous waters by making large and adequate outlets, possibly diverting the Red River, so that it shall reach the gulf independently of the Mississippi.

² In "Annals of the West," page 122, the following reference to the ferry occurs:

"At that time [at the period of the foundation of St. Louis] a skirt of tall timber lined the bank of the river, free from undergrowth, which extended back to a line about the range of Eighth Street. In the rear was an extensive prairie. The first cabins were erected near the river and market; no 'Bloody Island' or 'Duncan's Island' then existed. Directly opposite the old Market Square the river was narrow and deep, and until about the commencement of the present century persons could be distinctly heard from the opposite shore. Opposite Duncan's Island and South St. Louis was an island covered with heavy timber and separated from the Illinois shore by a slough. Many persons are now living (1850) who recollect the only ferry from

About 1783, Capt. James S. Piggott established a fort not far from the bluffs in the American Bottom, west of the present town of Columbia, in Monroe County, which was called "Piggott's Fort;" and Governor St. Clair, knowing the character of Capt. Piggott's services during the Revolutionary war, made him presiding judge of the court of St. Clair County, the seat of which was at Cahokia. Capt. Piggott was not only a brave soldier, but a shrewd and enterprising man, and set to work at once to develop the resources of the little community. In the winter of 1792-93 he erected two log cabins on the site of East St. Louis, and continued the work of improvement during the winter months (in the summer the workmen would have been in constant danger from the Indians) until 1795. After the successful campaign of Gen. Wayne against the Indians, Capt. Piggott removed his family from the fort to the site of the future Illinoistown. Having completed a road and bridge over Cahokia Creek and established a ferry from the Illinois to the Missouri shore, he petitioned, on the 15th of August, 1797, for the exclusive right to collect ferriage in St. Louis, then under the dominion of the Spanish crown. His petition was in the following words:

"ST. CLAIR CO., TERRITORY OF THE UNITED STATES,
"NORTHWEST OF THE RIVER OHIO.

"To Mr. Zenon Trudeau, Commander at St. Louis:

"SIR,—Though unacquainted, through a certain confidence of your love of justice and equity, I venture to lay before you the following petition, which, from reasons following, I am confident you will find just to allow.

"The petition is that Your Honor will grant me the whole benefit of this ferry to and from the town of St. Louis. I do not desire to infringe upon the ferry privileges below the town, which have been long established, but that no person in the town may be allowed to set people across the river for pay (at this place), so long as you shall allow that the benefits of this ferry hath made compensation for my private expenses in opening a new road and making it good from this ferry to Cahokia Town, and making and maintaining a bridge over the River Abbe of a hundred and fifty feet in length.

"Your consideration and answer to this is the request of your humble petitioner; and as an acknowledgment of the favor petitioned for, if granted, I will be under the same regulations with my ferry, respecting crossing passengers or property from your shore as your ferry-men are below the town; and should your people choose to cross the river in their own crafts, my landing and road shall be free to them.

"And should you wish me to procure you anything that comes to market from the country on this side, I shall always be ready to serve you.

"And should you have need of timber or anything that is the product of my land, it may be had at the lowest rates.

"I am, sir, with due respect, your humble servant,

"JAMES PIGGOTT.

"Aug. 15, 1797."

Illinois to St. Louis passed from Cahokia, below this island, and landed on the Missouri shore near the site of the United States arsenal."

Although the Spanish commandant was anxious to have the ferry regularly carried on by Piggott, because it was of great use to St. Louis, yet he devised a plan by which it was done without having it said that he had granted the ferry-right to a foreigner, viz., he granted Piggott the ferry landing below Market Street, on which Piggott then erected a small ferry-house, which was occupied mostly by one of his ferry hands, who at any time could transport foot passengers in a canoe; but when horses, etc., were to be taken across a platform had to be used, which required three men to manage it.

This platform was surrounded by a railing, and floated on Indian "pirogues," made by hollowing out trees. The craft was "poled or paddled with long sweeps handled by Creoles." Not only was Piggott granted the right of establishing a ferry-house at St. Louis, but he was made a citizen of the town by the commandant, and clothed with other powers and privileges. At this time, it is said, the river was so narrow that persons wishing to cross from either side could easily make Capt. Piggott hear "the old-time shout of 'O—ver!'"

The ferry was managed by Capt. or Judge Piggott until the 20th of February, 1799, when he died, leaving his wife the executrix of his will. Mrs. Piggott rented the ferry to Dr. Wallis for the years 1800-2, and then to a Mr. Adams. About this time Mrs. Piggott married Jacob Collard, and removed from Illinois to St. Louis, Mo. Before leaving she leased the ferry to John Campbell for ten years from the 5th day of May, 1805. Campbell, however, procured a license for a ferry in his own name during the time of the lease, and hence for a short time it was called "Campbell's ferry." But after a lawsuit Campbell and confederates were beaten, and the ferry reconveyed to Piggott's heirs, one of whom, assisted by men named Solomon, Blundy, and Porter, operated the ferry until part of the heirs sold out to McKnight & Brady.

For some time the ferry-boats landed at Illinoistown, about the northwest end of Main and Market Streets, near which was the spot where the bridge constructed by Capt. Piggott crossed the River l'Abbe, more commonly known as Cahokia Creek. Although many tenants subsequently occupied the ferry tract of land, none of them had a fee title therein, the property being owned by the heirs of James Piggott or their assigns, who derived their title in part from a grant made by Governor William H. Harrison, of Indiana Territory, March 12, 1803, of a tract of land which afterwards became the site of East St. Louis.

On the 7th of December, 1808, the following announcement was made of the rates of ferriage:

"TO TRAVELERS.

"Rates of ferriage, as established by law, from St. Louis to the opposite shore.

For a single person.....	\$0.25
Horse.....	.50
Neat cattle, each.....	.50
Calash.....	.50
Wagon.....	.50
Lumber of any kind, per cwt.....	.12½"

In 1813 a rival ferry appears, from the subjoined advertisement published May 15, 1813, to have been established:

"We, the subscribers, take the liberty to inform the public that any person or persons who may think proper to cross with us at our ferry to St. Louis, and for which pay us the customary prices established by law, that we will return them back free of ferriage at all times when our boat is on the west side of the Mississippi River at St. Louis. This measure became indispensably necessary in consequence of an indirect course of conduct practiced towards us.

"BYRD & CHARLES LOCKHART,
"Lockhart's Ferry, opposite St. Louis."

The following offer to rent Piggott's ferry was made on the 30th of September in the same year:

"Ferry. On the 13th November next I will rent to the highest bidder the ferry opposite St. Louis; due attendance will be given by me at the house where John Porter now lives, and other particulars will be made known at the time of leasing.

"JOSEPH PIGGOTT."

On the 4th of January, 1815, five-sevenths of Piggott's heirs conveyed their interest in the ferry to McKnight & Brady, who had, under special contract, been running it on trial one year previous, and on the 4th of March, 1820, the other two-sevenths of Piggott's heirs conveyed their interest in the land and ferry to Samuel Wiggins, who, under special contract with them, had been running a ferry in competition with McKnight & Brady during 1819, and on the 19th of May, 1821, McKnight & Brady conveyed their ferry right to Samuel Wiggins.¹

Edwin Draper, writing of his own experience in crossing the Mississippi in 1815, says,—

"The ferry-boat in which we crossed was a small keel-boat, without upper deck or cabin, and was propelled by four oars by hand. The wagons, then the only means of land travel, were run by hand on to the boat, across which were placed broad planks transversely, resting on the gunwales of the boat, while the tongue of the wagon projected beyond the side of the boat, and as the latter swayed gracefully to the motion of the waves

¹ Another account states that "Pigot" (meaning, of course, not Capt. Piggott, but another member of the family) "operated the ferry in the same old fashion with canoes until 1815 or 1817. It probably passed then into the hands of Day, a squire and tavern-keeper in Illinoistown. In 1819, Day sold to Samuel Wiggins. Day had improved somewhat on the old system, and had run a boat operated by one horse, who, by a treadmill step, had worked stern- or side-wheels."

the tongue-chains would dip politely into the water, as if acknowledging the power of the mighty monarch they were daring to stride. The horses, wagon, and saddle, family, slaves, and dogs were stowed in the bottom of the boat between the wagons, and thus we triumphantly entered Missouri. Our crossing, with many other families, was detained several days by high winds and waves preventing the safe crossing of the boat. Whether this boat was merely improvised for the occasion, or was the regular class of boats then in use I do not know, but that was the boat then used. Since that date I have lived in Missouri to see and experience its many changes, and have been more or less familiar with its history. My first crossing of the great water certainly inspired me with some fear, but I did not know then but it was among the common products or everyday sights in this country. . . .

"The statement I make is this, that at the time I first crossed the stream in 1815 it was fully a quarter of a mile wider at St. Louis than it is at the present time. I do not state the exact number of feet and inches it has diminished, but about the above distance. How this wonderful change in the width of the river at your great city was brought about it is not my business or purpose to explain."

Another writer thus describes the old ferry a few years later :

"There were at that time two ferry-boats making regular trips, one at the foot of Market Street and one near Morgan Street. In front of the city was a sand-bar, which in 1819 reached from Market to Morgan Streets, and extended two-thirds of the way across the river.

"The ferries were owned by Mr. Nash and E. M. Van Ansel. One of the boats crossed above Bloody Island, and the other below. Skiffs and keel-boats were also much used in the transfer of freight and passengers. Mr. Day started the first horse ferry-boat about 1824, which was also the first one that had any cover or protection from the weather."

In November, 1816, five persons lost their lives by the upsetting of the ferry-boat. The newspaper account of the disaster at the time of its occurrence is as follows :

"On Tuesday morning last the ferry-boat which is accustomed to ply between this town and the opposite shore of the Mississippi upset in the middle of the stream, by which five persons lost their lives. The ferryman, Mr. Dubay, and his two assistants died on being taken ashore from the wreck ; Ezekiel Woolfort, son of Mr. Woolfort, of this place, and a Mr. Stark, of Bourbon County, Ky., sunk before the boats reached the wreck, and are not found. What adds poignancy to this unusual catastrophe, some of the ferrymen spoke after they were taken up, but died from excessive fatigue and cold, without an immediate remedy being applied, and which generally succeeds in cases of suspended animation.

"Dubay was a useful citizen, and attended to the town ferry with unprecedented attention. He has left a helpless family, whose situation claims the attention of the benevolent.

"Mr. John Jacoby, of St. Louis, has authorized us to offer a reward of fifty dollars for the body of

Mr. Stark, or if it should be taken up too far down the river for conveyance to this place, those to whose lot it may fall to pay the last sad offices to the deceased are informed that every expense will be paid for his decent interment. Mr. Woolfort will no doubt liberally reward those who will find and inter his son as above."

On the 17th of March, 1819, it was announced that application had been made "to the Legislature of Illinois at its present session for the privilege of running a ferry-boat from the town of Illinois to St. Louis by steam- or horse-power, and that Legislature, with a laudable view of encouraging useful improvements for public accommodation, have authorized the establishment of such ferry-boat."

Besides managing the ferry, Mr. Wiggins appears also to have kept a tavern in Illinoistown, and was evidently a thrifty and progressive citizen.¹

In 1820, Mr. Wiggins procured a boat which was worked by one-horse power, but still employed French Creoles from Cahokia to ferry passengers and horses over by means of canoes lashed together. The new boat was crushed in the ice in the winter of 1824-25, near the foot of Morgan (then Oak) Street. Mr. Wiggins then built a larger and better boat, which he christened the "Sea Serpent," of one-horse power, and from this until 1828 all the ferryage was performed by boats of this class. So largely did the business increase that he was compelled to enlarge his fleet, and two other boats, also of one-horse power,

¹ "After the establishment of the Piggott ferry successive attempts were made to establish towns, which bore various names. Some of these were laid out immediately on the shore of the river, and as there were no paved levees to protect the banks, the river kept constantly encroaching upon the land, and the towns were washed away. The first was named Washington. It was situated on the Illinois shore, eastward and opposite to the St. Louis grain elevator. It consisted of a tavern, owned by Mr. Samuel Wiggins, and four or five dwelling-houses. A gentleman now living near Belleville, once clerk of St. Clair County, relates an incident that occurred to him during the time when Washington was gradually washing away. He states that he had been to St. Louis with produce from his father's farm, fifteen miles eastward. He says, 'One night I slept in Wiggins' tavern. It was pretty close to the shore. A big sycamore-tree stood eight feet from the house on the bank. Along about midnight I heard water. It seemed from the sound to be under the house. I thought it must be the river. I partly dressed as quickly as I could, and ran out shoreward. Wiggins and everybody else that was in it ran out too, expecting the house to go. The big sycamore was gone. It had taken with it a piece of ground from under the house, and the river was running under the outer wall. But it stood till morning. I got breakfast there, when they moved it back farther from the river.' Subsequently all the town of Washington was washed away."—*Hist. East St. Louis, by Robert A. Tyson*, pp. 19 and 20.

LIPSAAY
OF THE
UNIVERSITY OF ILLINOIS

named the "Rhinoceros" and "Antelope," were added to the number, making three in all. In 1828 a new boat, with steam-power, named the "St. Clair," was added, and made two landings each day, calling at the foot of Market Street, then at Morgan, and thence across to the Illinois shore. In 1830 the business had increased to such an extent as to demand another boat, and the "Ibex" was added. In 1832, Samuel Wiggins sold his ferry franchises to Bernard Pratte, father of Gen. Bernard Pratte, John O'Fallon, John H. Gay, Charles Mulliken, Andrew Christy, Samuel C. Christy, Adam L. Mills, and William C. Wiggins. In 1838, John H. Gay bought the interest of John O'Fallon. Shortly after this Andrew Christy purchased the remaining interest of Col. O'Fallon, and afterwards the entire interest of Mr. Gay. At this time Mr. Christy and his sister-in-law, Mrs. McLane Christy, owned ten shares, over one-half of the stock.

Andrew Christy was born in Warren County, Ohio, in 1799, and when quite young removed with his parents to Lawrence County, Ill., where they located on a farm near Sumner, the county-seat of that county. In his youth Andrew engaged for a time in teaching school near Ridge Prairie, St. Clair Co., in the same State.

In 1826, in company with Francis and Vital, sons of Nicholas Jarrot, of Cahokia, he engaged in lead-mining at Galena, Ill., which business he pursued during several years. He then removed to St. Clair County, opposite St. Louis, and entered into business with his brother, Samuel C. Christy.

In 1832, as stated above, he and his brother, with Bernard Pratte and others, purchased from Samuel Wiggins the ferry franchise and boats belonging to the Wiggins Ferry Company, and continued a member of this company until his death. From 1835 to 1840 he was engaged in the grocery and commission business in St. Louis with Samuel B. Wiggins, in Chouteau's Row, on the street then between Market and Walnut Streets and Main Street and the Levee.

He represented St. Louis in the Legislature of Missouri in 1851.

Mr. Christy was a public-spirited man, and among the important enterprises which he was active in promoting were operations for the preservation of the harbor of St. Louis by turning the current of the river toward the Missouri shore, and thus preventing the shoaling of the water on that side. He was also identified with early efforts for the establishment of railroads leading to St. Louis. In short, he was a promoter of every enterprise that promised to advance the prosperity of the city.

By the exercise of his excellent judgment and keen

foresight, together with his indomitable energy, he accumulated a large fortune, which he bequeathed to his brothers and sisters, or their descendants. He was never married. Mr. Christy died of paralysis Aug. 11, 1869.

In 1832 the steam ferry-boat "Ozark" was added to the vessels of the ferry company; then, as the business increased, the "Vindicator" and the "Icelander" were put on, the latter being destroyed by fire in 1844. The "Wagoner" was built in 1846, and then the "Grampus." The "St. Louis" was added in 1848. Her boilers exploded Feb. 21, 1851, killing thirteen persons, including the engineer, a daughter of Mr. Jarvis, the pilot, and Captain Trendley's son, who had just arrived from California, having been in the city but two days. The accident occurred at the foot of Spruce Street, just after the boat left the landing. After the "St. Louis" there followed in turn, as occasion demanded, the "Illinois," "John Trendley," "Illinois, No. 2," lost in the ice in 1864, the "America," and the "New Era," which became the flag-ship "Essex" of Admiral Foote, and saw hard service in the civil war. In addition to these were the "Charles Mulliken," "Samuel C. Christy," "Cahokia," "Belleville," "Edward C. Wiggins," "East St. Louis," "Springfield," "Edwardsville," "Ram," "Lewis V. Bogy," and the tugs "H. C. Crevelin," "S. C. Clubb," and "D. W. Hewitt." The "Vindicator" was wrecked in 1871, and in 1875 the "S. C. Clubb" was nearly destroyed by fire, but was afterwards repaired.

Owing to the difficulty and danger experienced by the ordinary ferry-boats in crossing the river when encumbered by ice, the company, in July, 1839, contracted with a boat-builder at New Albany, Ind., for an ice steam ferry-boat, with which they would be "able to cross the river at all times, except when the ice is stationary." The vessel was to be constructed after plans prepared by Mr. Mulliken, of Mulliken & Pratte, merchants of St. Louis, with an iron bow, "in such a manner as to admit of her being driven through any amount of floating ice." The boat was completed in the following fall, and arrived at St. Louis on the 3d of December. She was about one hundred feet in length, forty feet beam, and four feet hold. Her hull was plated with sheet-iron one-sixth of an inch in thickness, with an iron cutwater seven inches thick. She carried four hundred tons and drew twenty-five inches of water.

In 1842 a new ferry company was formed, as appears from the following announcement in the *Republican* of February 5th of that year: "We understand that the new ferry company have contracted with the Dry-Dock Company for a ferry-boat. This company

have obtained the right of ferriage from the foot of Spruce Street, and from a road laid out by the authorities of St. Clair County to the river-bank."

In 1847 the landing-place of the ferry at St. Louis was at the foot of Locust Street, but complaint was made that this location was inconvenient, and that delay was caused by the crowding of other boats "into the landing at that point."

On the 22d of January, 1848, it was announced that a new steam ferry had been established at Car-

CAHOKIA IN 1840.

ondelet across the Mississippi River. This, it was added, would open a new line of travel to all Southern Illinois. The distance from the Kaskaskia road to the river was about two miles, and between these points a substantial road was built. "By this route," said the announcement, "travelers avoid the difficulties of crossing the American Bottom."

On the 7th of January, 1852, the *Republican* stated that the ferry company had "with their usual liberality placed their ferry-boats at the disposition of the railroad company for the transportation of persons to and from the demonstration to be made to-day. The boats will be free to persons going to or returning from the celebration."

In 1853 the Wiggins charter, granted in 1819, expired, and application was made to the Legislature for a renewal. Commenting upon this application at the time (Feb. 3, 1853) the *Republican* said,—

"Under their charter and various amendments since obtained they have been doing a highly prosperous business. They have managed to keep the field and destroy measurably all competition. They are now applying to the Legislature for an immense addition to their powers. They are asking the Legislature to re-charter them with a capital of one million, and with power to own fifteen hundred acres (three hundred of coal land), and also with power to build a city on Bloody Island, to charge wharfage fees, to build and to run any number of ferry-boats from

said island to St. Louis, and generally to engage in any business required by the exigencies of a city proprietorship.

"The city on Bloody Island, with all its wharves, lots, streets, and alleys, would probably belong for many generations to come to this incorporated company. St. Louis has felt, and Cairo has felt, and both cities now feel the evil of having a great mass of their property in the hands of one man or a few men."

When Samuel Wiggins sold his franchises to the company in 1832, he transferred to them about eight or nine hundred acres lying between Brooklyn and the Cahokia commons. The company leased the river front of the Cahokia commons, embracing between five and six thousand acres, and gave the Cahokians a free ferriage to and from St. Louis and three hundred dollars per year for twenty years. On the expiration of the lease the Cahokians re-leased a portion of the lands to individuals, the revenue of which went "to the support of schools and lawyers." The commons extended from the ancient city of Cahokia to the Pittsburgh coal landing at the dike opposite Chouteau Avenue, and were extremely fertile.

Notwithstanding the opposition to the company's application for a new charter and additional franchises, a perpetual charter for ferry purposes was granted to Andrew Christy, William C. Wiggins,¹

¹ William C. Wiggins, brother of Samuel Wiggins, was born in 1783 at Newburgh, N. Y., and the early portion of his life was spent in the cities of New York and Albany. He then removed to Charleston, S. C., where he lived ten years and was married. After this he returned to the city of New York, remained there some years, and in 1818 started for the West, arriving in St. Louis in the same year. In 1822 he took charge of the "Wiggins Ferry," of which he remained in charge for thirty years. He was the last of the original purchasers of the stock of the company, and realized from his exertions and industry a handsome fortune. Mr. Wiggins died on the 25th of November, 1853.

Samuel B. Wiggins, son of William C. Wiggins, was born in Charleston, S. C., Dec. 11, 1814. He first commenced business in Illinois, but subsequently returned to St. Louis and opened a house in company with S. C. Christy, under the style of Christy & Wiggins. When Mr. Christy retired, Mr. Wiggins carried on the business alone until he took his brother into partnership, the new firm being known as S. B. Wiggins & Co. After continuing for some time it was again reorganized under the name of Wiggins & Anderson, and was a prominent grocery and dry-goods firm. It was dissolved in 1859, and Mr. Wiggins withdrew entirely from active business life. During the period of his commercial career and afterwards he occupied various important positions in business circles. He was a director in the Southern Bank, in the Pacific Insurance Company, and for fifteen years in the Citizens' Insurance Company. For

Adam L. Mills, Lewis V. Bogy, and Napoleon B. Mulliken.

The company, although it enjoyed for many years a practical monopoly of the ferriage business, appears, on the whole, to have pursued a liberal policy. The entire river-front of East St. Louis, for a distance of four miles, was owned by it, and in 1875 its property was estimated to be worth several millions of dollars. The company contributed greatly to the development and growth of East St. Louis, and co-operated with the railroad companies in providing additional traveling facilities for St. Louis by granting suitable grounds for tracks, depots, warehouses, yards, and machine-shops. For eighteen years Hon. Lewis V. Bogy, afterwards United States senator from Missouri, was president of the company, and Capt. John Trendley,¹ after whom also one of the ferry-boats was named, served the company continuously from the 7th of May, 1825, for a period of more than half a century.

In 1865 the average number of passengers carried daily by the ferry fleet to and from St. Louis was from 1000 to 1500; bushels of coal, 10,000 to 15,000; transfer-wagons, 500 to 600; farmers' and market-wagons, 100 to 150; omnibuses, 30 to 40. The aggregate receipts for 1865 were very little less than \$300,000, while in 1873 the aggregate receipts were largely over \$500,000. At this time (1873) there were 10,000 shares, representing nominally a million of dollars, "but," remarked a newspaper writer, "if any one desires to know how much they are worth at a marketable or selling price over the par value of \$100, he can do so by wanting to purchase." In addition to the eight ferry-boats and three transfer-boats which the company then owned, the East St. Louis real estate and wharf franchises were very valuable. Much the largest amount of stock was held by the Christys, which had been sub-divided, and was then represented by perhaps twenty-five heirs. The sales of real estate subsequent to 1865 and up to 1873, none being sold prior to 1865, and all of it having been purchased by Capt. Samuel Wiggins at

several years he was president of the Wiggins Ferry Company, in which he was a large stockholder. He died on the 24th of July, 1868.

¹ A newspaper writer, describing the ferry at an early period, says, "There was no levee at that time, and the boat was landed under the cliffs and rocks. A road led down from the village (St. Louis) to the ferry landing. Capt. Trendley used frequently to run in under the cliffs to get out of a shower. The ferry landing at that early time on the Illinois shore was at the old brick tavern then kept by Dr. Tiffin (which has since been swept away), and about two hundred yards west of the Illinois and Terre Haute round-house. The fare at that time was a 'long bit' for a footman, a market-wagon seventy-five cents, and for a two-horse wagon one dollar."

the government price of one dollar and twenty-five cents per acre, amounted to almost one million dollars, and what was left was considered in 1873 to be worth more than the whole estimated value of 1865.

In 1875 the officers of the company were N. Mulliken, president; F. M. Christy, vice-president; S. C. Clubb, general superintendent; Henry Sackman, assistant superintendent; John Trendley, agent; first grade directors, N. Mulliken, F. M. Christy, S. C. Clubb, J. H. Beach, Ernest Pegnet. In 1882, Samuel C. Clubb, president; F. L. Ridgely, vice-president; Henry L. Clark, secretary and treasurer; E. C. Newkirk, assistant secretary; directors, Samuel C. Clubb, F. L. Ridgely, Charles Shaw, Ernest Pegnet, and Charles Wiggins, Jr.

The St. Charles ferry was established by Marshall Brotherton² and John L. Ferguson.

The South St. Louis and Cahokia ferry was established in 1870, and opened to travel on the 19th of June of that year. The following account of the inauguration of the ferry was printed in a St. Louis newspaper of the 20th:

"The tow-boat 'Florence,' Henry Kuter, captain, left the foot of Anna Street yesterday afternoon for Cahokia with a large excursion party on board. The occasion was the celebration of the opening of a ferry between South St. Louis and

² Marshall Brotherton was born in Erie County, Pa., Jan. 6, 1811, and when an infant was brought out into the wilds of St. Louis County by his parents. The family located upon a piece of ground not far from St. Louis, and Mr. Brotherton, the elder, lived there as a thrifty farmer up to the time of his death. James Brotherton, a brother of Marshall, was elected sheriff of St. Louis County, and Marshall, then a young man, removed to St. Louis and worked in the office of his brother as deputy. When James died, Marshall, who had made a very efficient officer, was elected sheriff, and occupied that office for several terms. He then engaged in mercantile pursuits in St. Louis, his business being mainly that of a lumber dealer. He was also interested in other matters, notable among them being a partnership with John L. Ferguson in the ownership of the St. Charles ferry. At various periods he held the offices of sheriff, county judge, fund commissioner, and president of the board of managers of the House of Refuge. About 1854 or 1855 he was put forward as a candidate for the mayoralty, but was not elected. He was uniformly successful in business, owing to his sound judgment, active habits, and great popularity. At the time of his death, which occurred in the latter part of November, 1875, his ferry interest and the North Missouri Planing-Mill, situated on the river-bank, at the foot of Bremen Avenue, were the only active operations which he still controlled. He was, however, president of the Bremen Savings-Bank, which position he had held ever since that institution was organized.

In early manhood Mr. Brotherton married Miss Ferguson, a sister of his partner, John L. Ferguson. His wife died a few years after they were married, and in 1840 or 1841 he married Miss Herndon, a daughter of Rev. John C. Herndon, by whom he had two daughters, afterwards Mrs. Oscar Reed and Mrs. Stephen M. Yeaman.

Cahokia. The South St. Louis and Cahokia Ferry Company was established in March last, with a nominal capital of two hundred thousand dollars, divided into shares of fifty dollars; each share to receive the benefit of one lot twenty by one hundred and forty feet in what is denominated Southeast St. Louis, to wit: a sand-bar, a portion of Cahokia commons, and so much of the Mississippi River as may be recovered by a contemplated dike from the main shore to Cobb Island 'by accretion.' The lease of these lands has been obtained by the ferry company for ninety-nine years. About seven hundred acres of land is comprised in this lease, for which the company is to pay twenty-five dollars per acre per annum, and the present inhabitants of Cahokia to pass over free during their lives. This privilege does not extend to their offspring, and it accordingly behooves the beneficiaries to live on to a good old age. The lease was made also on condition that one thousand dollars be expended by the company for improvements within eight months, and that at least one ferry-boat be put in operation within fifteen months.

"The officers of the company are Robert J. Rombauer, president; Henry Saenger, secretary and treasurer, with the following directors: George Bayha, E. W. Decker, George Rathwaite, Antoine Faller, John D. Abery, of East St. Louis; E. H. Illinski, of Cahokia; Francis Mohrhardt. The bargain on the part of the Cahokians was signed by Francis Lavallee, supervisor, and George Labenhoffer and John Palmer, trustees."

The officers of the Cahokia and St. Louis Ferry Company in 1882 were Julius Pitzman, president, and W. S. Hopkins, secretary.¹

In addition to the foregoing, the following ferry companies have offices in St. Louis:

Madison County ferry, landing foot of North Market Street; boats ply between St. Louis and Venice, Ill.; president in 1882, John J. Mitchell.

St. Louis and Illinois Railroad ferry, from foot of Chouteau Avenue to the coal dike, East St. Louis.

¹ In 1864 Arsenal Island, containing about one hundred and twenty acres of ground, was allotted by the Secretary of the Interior and the commissioners of the general land office to the St. Louis public schools, and in 1866 the school board sold it to the city for thirty-three thousand dollars. It was occupied for hospital purposes by the city until 1869, when the hospitals were removed to Quarantine. In 1874, Benjamin Segar settled on the island, and put part of it in cultivation, and continued to live there under a lease granted him by the city. The island for a number of years had been moving down stream, and finally fronted on a parcel of ground in the Cahokia commons on the Illinois shore, owned by Judge Rombauer, as trustee for the Cahokia Ferry Company. When the island had reached a point in front of the ground mentioned, the ferry company claimed the right to extend their north and south lines across it to the water's edge on the western side thereof, and to take possession of so much of the island as was contained within those lines, and they entered on the island and built a wire fence on their north line. This fence was torn down as soon as its existence came to the knowledge of the city authorities, and sign-boards were erected warning all persons from trespassing there. Subsequently an action was instituted in the Circuit Court at Belleville by Judge Rombauer, as trustee, against M. Segar, the tenant of the city, to recover the possession of the fifty acres of ground embraced within the lines spoken of.

The St. Louis and Illinois Coal Company and Ferry was originally chartered in 1841 under the style of the "St. Clair Railroad Company," and under that name continued until 1865, when the present company was organized, and became the purchasers of the franchises of the St. Clair Railroad Company. The incorporators were William C. Anderson and John D. Whitesides. The company does a general coal transportation and ferry business. Joseph W. Branch was elected president in 1865, and has ever since continued to hold that position. The present capital stock is one million five hundred thousand dollars. The board of directors consists of the following: Joseph W. Branch, Adolphus Meier, C. S. Greeley, W. A. Hargadine, N. Campbell, John D. Perry, George Knapp. The officers are Joseph W. Branch, president; Adolphus Meier, vice-president; P. T. Burke, secretary and treasurer.

Waterloo Turnpike Road and Ferry Company, W. H. Grapevine, superintendent; ferry landing, foot of David Street; transfer, foot of Franklin Street, Carondelet.

The Great St. Louis Steel Bridge across the Mississippi River.²—The first proposition for the erection of a bridge across the Mississippi River at St. Louis was made by Charles Ellet, Jr., in 1839.³ Mr. Ellet proposed a suspension bridge having a central span of twelve hundred feet, and two side spans of nine hundred feet each; but the city fathers stood aghast at the enormous estimate of the cost, seven hundred and thirty-seven thousand six hundred dollars, for a highway bridge alone. Mr. Ellet revived his project in September, 1848, but nothing was accomplished. In January, 1853, it was stated in one of the St. Louis newspapers⁴ that "some years ago Mr. Charles Collins obtained the passage of a law authorizing the building of a suspension bridge across the Mississippi at St. Louis, and if he had lived there is every reason to believe that he would have accomplished it; but with him died all the enterprise of the northern part of the city, and nothing has been heard of it since."⁵

² For the history of the construction of the great bridge, the author is mainly indebted to Professor C. M. Woodward, of Washington University.

³ The first bridge to span the Mississippi River was a wire suspension bridge at Minneapolis, Minn., built in 1854 by Thomas M. Griffith, at a cost of nearly fifty thousand dollars.

⁴ *Republican*, Jan. 13, 1853.

⁵ "Yesterday," said the same paper of March 17, 1854, "we examined the drawing and profile of a bridge for the Mississippi River, drawn by B. Andreas, engineer, corner of Second and Chestnut Streets, over Ellis & Hutton's. He has located it across the river at or near the shot-tower above Carondelet, and has

ST. LOUIS BRIDGE.

In 1855,¹ Josiah Dent organized a company, with Maj. J. W. Bissell as engineer, and a second plan for a suspension railway bridge was proposed. The cost was estimated at one million five hundred thousand dollars. For the want of financial support the scheme was soon abandoned. The incorporators of the company, which was known as the St. Louis and Illinois Bridge Company, were: St. Louis, John How, J. H. Lucas, John O'Fallon, Samuel Gaty, Andrew Christy, Josiah Dent, S. J. Smith, D. A. January, William M. Morrison; Illinois, J. A. Matterson, Curtis Blakeman, J. D. Morrison, S. B. Chandler, William C. Kinney, Gustavus Koerner, William S. Wait, Vital Jarrot, William N. Wickliffe, John M. Palmer, John D. Arnold, Joseph Gillespie.

In 1867 the time seemed to have arrived for commencing operations in earnest. Strangely enough, after nearly thirty years of inactivity, two rival companies appeared in the field; one was regularly organized (in April, 1867) under the laws of Missouri, and included among its managers several prominent citizens of St. Louis; the other claimed an exclusive right under a charter granted by the State of Illinois, and was controlled by a well-known bridge-builder of Chicago. James B. Eads was the chief engineer of the St. Louis company (known as the St. Louis and Illinois Bridge Company); L. B. Boomer was manager of the Illinois company, which was known as the Illinois and St. Louis Bridge Company.

The Illinois company was incorporated Feb. 21, 1867, the incorporators being Joseph Gillespie, John M. Palmer, Jesse K. Dubois, William Shepard, John Williams, William R. Morrison, L. A. Parks, Levi Davis, T. B. Blackstone, H. C. Moore, Peter H. Willard, R. P. Tansey, Gustavus A. Koerner, C. P. Heaton, L. B. Boomer, Fred. T. Krafft, L. B. Parsons, John Baker, and A. H. Lee.

The officers were L. B. Boomer, president; R. P. Tansey, secretary; directors, L. B. Boomer, R. P.

made his drawings to correspond. We understand that his plan is made with strict regard to the measurement of the river at that point in width and the elevations on either side. He proposes to cross the river by five spans, each three hundred and fifty feet, the base of the carriage-way to be sixty feet above the high water of 1844, or one hundred and twenty feet above ordinary low water, the bridge to rest on piers of rock or cast iron. The superstructure is to be of lattice-work of wrought iron, well secured together, with two ways in breadth and two for use, one placed above the other, the low ways for railroad tracks and the upper for the ordinary travel of horses, carriages, wagons, etc."

¹"Last winter," said the *Republican* of July 11, 1855, "the Legislatures of Missouri and Illinois, anticipating the necessity which might exist for bridging the Mississippi at this point before the time for reassembling should again come round, passed the requisite legal provisions for such a purpose."

Tansey, George Judd, William R. Morrison, and C. Beckwith. The location selected by the Missouri Company was at the foot of Washington Avenue, where the width of the river at ordinary stages is but little over fifteen hundred feet, and the plan consisted of three steel arches, supported by two masonry piers in the river and an abutment on each shore. All the foundations were to be sunk to the rock, which was known to be nearly ninety feet below low-water at the site of the east pier. The Illinois company, on the other hand, had selected a location about half a mile above, and proposed to build an iron truss-bridge, the longest spans of which should be three hundred and fifty feet, supported by piers formed of cast-iron columns, those nearest the Missouri shore to be sunk to the rock, and those on the east side bedded in the sand fifty or sixty feet below low water. For a time the contest between these two companies was very sharp, though confined principally to the newspapers and the courts. In March, 1863, the controversy was terminated by the nominal consolidation of the two companies, and the actual absorption of the Illinois company by its rival, to which the former had sold out, the new corporation taking the name of the Illinois and St. Louis Bridge Company. The officers of the old St. Louis company retained their positions in the new organization, and Capt. James B. Eads continued as chief engineer and a principal stockholder.

From the first Capt. Eads was the leading spirit in the enterprise. As chief engineer during the entire period of seven years (from 1867 to 1874) occupied by the building of the bridge, he was responsible for every novelty, both of design and execution, and his personal genius impressed itself upon every detail of the structure.

Col. Henry Flad² was Capt. Eads' first assistant

² Henry Flad, one of the most distinguished engineers of the West, was a graduate of the University of Munich, and his first professional engagement was in connection with hydraulic works on the Rhine. He came to America at the time of the German revolution of 1848, and for a period of eleven years was connected with some of the most important railroads in the country. In 1854 he removed to Missouri, and was employed as resident engineer of the Iron Mountain road, a considerable portion of which was constructed by him. He also made surveys for several other roads in Missouri.

In connection with Mr. Kirkwood, he made plans for the water-works of Compton Hill and Bissell's Point, and a large measure of the success of that great improvement is due to his skill. After the completion of this work he filled the office of commissioner of water-works for eight years. At the outbreak of the war he entered the army as a private, but his skill as an engineer soon brought him into prominence, and he rose rapidly to the rank of colonel of engineers.

Col. Flad's name will always be associated with that of Capt.

throughout, and brought to the work great practical experience, a ready power of analysis, and mechanical ingenuity of a high order. He was ably seconded by Walter Katte. The theory of the structure was the joint product of Charles Pfeifer and Professor William Chauvenet, of Washington University.

The presidents of the bridge company in order were Charles K. Dickson, William M. McPherson, and Gerard B. Allen. J. C. Cabot was the first secretary, J. H. Britton the first treasurer. Dr. William Taussig held the position of chairman of the executive committee through all the administrations.¹

All the great foundations of the bridge, two abutments and two river piers, stand on the solid rock which underlies the ordinary river-bed. The construction of these foundations was the most difficult part of the work. To interfere as little as possible with the navigation of the river, and to diminish the cost of the foundations, the arches were designed with long spans, and the two channel piers were given great stability. The contract for the whole of the masonry work on the bridge was awarded in August, 1867, to James Andrews, of Allegheny, Pa.

The first stone in the western abutment pier was laid on the bed-rock Feb. 25, 1868; the first stone was laid on the caisson of the east channel pier Oct. 25, 1869, and the first stone on the caisson of the west channel pier was laid the 15th of January, 1870.

During the first half of the year 1868 the minutest details of the work were critically examined by the board of engineers. The mathematical calculations and investigations were conducted by Col. Flad and Mr. Pfeifer, and then submitted to Capt. Eads, and by him referred to the analysis and examination of Professor W. Chauvenet, LL.D., chancellor of Washington University. In this way the most wonderful mathematical exactness was secured. By the middle of the year the drawings and all the details of the bridge had been gone through with by the engineers, and the mighty structure was complete in the mind of the chief engineer and his assistants.

Eads in connection with the St. Louis bridge and tunnel. He had charge of all the details of their construction, and it is a matter of history that on every occasion Capt. Eads insisted upon a division of the honors of their united success in this great undertaking. Among other works of Col. Flad may be mentioned the lowering of the track of the Missouri Pacific Railroad through the city, and the concentration of tracks at the Union Depot.

¹ A "History of the St. Louis Bridge, containing a full account of every step in its construction and erection, and including the theory of the ribbed arch and the tests of materials," written by Professor C. M. Woodward, was published in 1882, by G. I. Jones & Co., of St. Louis.

The foundation of the west abutment was laid in a coffer-dam at a depth of fifty-five feet below extreme high water. The other great piers were "sunk" to much greater depths by the aid of compressed air. The west pier stands on the rock ninety-one feet below high water; the foundation of the east pier is one hundred and twenty-seven feet below high-water mark, and the east abutment extends one hundred and thirty-five feet below the surface of extreme high water. The sinking of these piers was a great feat of engineering and full of interest. The sinking of the east pier is thus described:

The caisson of the east pier was built of iron, and was eighty-two feet long, sixty feet wide, and nine feet deep.

The roof and sides were made of thick iron plates riveted air-tight and strengthened by girders and brackets. A temporary wooden bottom was used until the admission of compressed air from powerful air-pumps kept the interior free from water down to the "cutting edge" of the caisson. The masonry of the pier was laid upon the roof of the caisson, which it completely covered. The weight of the masonry soon caused the caisson to sink deep in the river, rendering an increased air-pressure necessary to keep the caisson free of water and to support the load above. On the roof of the caisson a coffer-dam was constructed to exclude the river. The caisson was furnished with bearing-timbers along its walls and under its roof, and when it reached the river bottom they rested evenly upon the sand and gave sufficient support to allow the masonry to be built above the surface of the river. At this point the guides and suspension rods which had been used to control the motion of the caisson were removed, and the further progress of the pier was effected by undermining the bearing-timbers and letting the whole mass go down as additional masonry was laid in the open air above.

The space within the caisson was known as the "air-chamber," and it is evident that workmen were needed inside, and that there must be ready means for passing in and out.

Entrance to and exit from the air-chamber was through "air-locks," seven in number. These air-locks were in form vertical cylinders, made of one-half inch plate-iron. The central lock, which was six feet in diameter and six feet high, was wholly within the air-chamber. In fact, the roof of the caisson formed its upper base. Adjoining this lock was a second iron cylinder five feet in diameter and five feet deep, sunk through the roof of the caisson and entirely open at the top. The air-lock had two strong, tight-fitting doors, one communicating

with the open air-cylinder just mentioned and swinging into the lock, the other opening into the air-chamber and swinging from the lock. Workmen generally passed in and out through the central lock.

The method of going in or out was very simple. The outer door of the air-lock being open, and the inner one, of course, closed, the party of visitors, for example, descended into the open cylinder near the central lock, crawled through the opening into the lock, and closed the door. A cock was then opened which allowed the compressed air from the chamber to enter the lock. When the air-pressure within the lock equaled that in the chamber, the other door readily swung open and the party entered the air-chamber. The time required in entering depended upon the pressure in the chamber and the ability of the persons in the lock to endure the change. If the air was let on rapidly, and the pressure was considerable, the sensation produced was very disagreeable. The compression of the air in the lock was attended by the evolution of heat, and though the air was saturated with moisture as well as warm, there was no difficulty connected with one's breathing. The only serious difficulty to a visitor was felt in his ears. The pressure upon the exterior of the drum was very painful unless soon balanced by internal pressure. This could generally be produced by vigorously blowing the nose, thus forcing air into the interior cavity of the ear. Capt. Eads found that the act of swallowing would often give relief, and had a pail of water and a cup placed in the lock. In some cases, however, these simple remedies were of no avail, and intense pain was the result. In that event the air was admitted very slowly.

In returning from the chamber the operation was equally simple. The party entered the lock, closed the inner door, and opened a cock which allowed the air of the lock to escape to the outside. As soon as the air-pressure was reduced to that of the atmosphere, the outer door was readily opened. The phys-

ical effects of reducing the pressure were very different from those experienced when going in. The expanding air absorbed heat, and one literally felt the chill to the very marrow. So much vital heat was lost that in some cases the effect was very disastrous. There was much in the habit of undergoing these changes. Certain air-lock men, whose duty it was to take visitors, engineers, and workmen in and out, became so used to sudden changes that they could,

Extreme High Water.

SECTION OF EAST PIER AND CAISSON.

without apparent injury or even inconvenience, endure surprisingly rapid changes of pressure.

As the caisson continued to sink it was necessary to remove the sand from the air-chamber. This was done by means of the "sand-pumps," an exceedingly ingenious device invented by Capt. Eads. The sand mixed with water was thrown out in jets with great rapidity. A three-inch pump was capable of discharging sand at the rate of three hundred cubic yards in

twenty-four hours. The pier settled on the average about fifteen inches per day.

No difficulty was experienced in causing the caisson to settle evenly and gently. The sand was trenched beside the bearing-timbers, thus allowing a slight lateral motion of the sand as it yielded to the pressure. It was soon learned that the admission of water into the air-chamber, consequent upon a slight reduction in the air-pressure, had the effect of increasing the mobility of the sand so as to bring the caisson down with an exceedingly gradual motion.

The progress of the east pier down through the sand is clearly shown in the illustration on the preceding page. It gives a cross-section of the pier through the main stairway, a circular well through which the workmen descended to the air-chamber. A sand-pump is represented as at work within the caisson, and men are supplying it with sand.

The intensity of the air-pressure in the air-chamber of the east pier reached a maximum of about sixty-five pounds per square inch, or about fifty pounds above the normal. The physiological effects of long exposure to this pressure and of sudden release from it were at times very severe. During the construction of the deep piers over one hundred men were violently attacked with cramps and chills, and thirteen died from them.

The caissons were constructed at Carondelet, under the direction of the chief engineer and Capt. William L. Nelson and H. G. McComas, the great caisson for the last of the channel piers being completed and launched Oct. 18, 1869.

The whole time occupied in sinking the east pier to the rock was one hundred and twenty-six days, during several of which it was too cold to lay masonry, and at other times it was impossible to furnish stone on account of the ice.

The west pier was sunk in seventy-seven days.

The east abutment, the largest and deepest of all, was sunk in one hundred and thirty-four days. The caisson of the latter contained many improvements over the others. All the large piers are faced with gray granite down to low water. All the piers had reached the rock-bed by the beginning of 1872, and before the close of that year the masonry was completed, including the approach arches across the levees in St. Louis and East St. Louis.

The size of the foundations is shown as follows:

	Extreme height from base to top of cornice.	Cubic yards of masonry.
West abutment.....	112 feet 8½ inches.	12,643
West pier.....	172 " 1 "	14,170
East pier.....	197 " 1½ "	17,820
East abutment.....	192 " 9 "	24,093

The plan of the superstructure of the great bridge (which was contracted for Feb. 26, 1870) is as bold as the foundations and even more original. It consists of three magnificent steel arches, supporting two railway tracks, and a broad paved causeway for high-way traffic on the top of the structure.

The spans of the side arches are each five hundred and two feet in the clear, and the central arch stretches five hundred and twenty feet over deep water. Each arch consists of four equal ribs placed side by side at intervals of sixteen and half feet, twelve feet, and sixteen and a half feet, these distances being between centres.

Each rib consists of two parallel members or systems of tubes, twelve feet apart, connected by a single system of bracketing, in appearance like a curved triangular truss. Each tube is eighteen inches in external diameter and about twelve feet long, and is perfectly straight, with slightly beveled ends. The tubes of each member are securely coupled together by two enveloping half-cylinders, and the steel pins which receive the brace-bars on their ends pass through both couplings and tubes. A tube consists of six bars of steel, rolled in the shape of straight staves, from one and three-sixteenths to two and one-eighth inches in thickness, and snugly inserted in an envelope of steel one-quarter of an inch thick.

The tubes are exquisitely made, and the arches as beautiful as works of art.

The lateral or wind bracing consists of a series of diagonal steel ties and wrought-iron tubular struts between the ribs, and an upper truss between the two roadways. The latter truss for the centre span is of iron, forty-nine feet wide and five hundred and forty feet in extreme length.

The erection of the arches was effected by a method entirely new and of a most interesting character, invented by Col. Henry Flad. Only the briefest account of its successful execution can be given here.

The end tubes of each rib screw into massive wrought-iron "skew-backs," which are bolted to the masonry by long steel bolts six inches in diameter. In the case of the channel piers the anchor-bolts are over thirty feet long, passing quite through the masonry and securing the skew-backs on both faces. In this way the ribs were made self-supporting, as they were built out from the masonry. In some instances nearly a hundred feet was thus built without additional support. The weight of the unfinished ribs, however, caused the outer ends to fall below their normal positions, and it was necessary to draw them up by cables passing over towers erected on the masonry. These cables were strained, as occasion re-

quired, by powerful hydraulic jacks, which lifted the towers. The cables lifted the deflected arches to their normal position (and even above it), and allowed the ribs to be built still farther out. The deflected ends of these second extensions were supported by secondary cables, which passed over masts standing on the ribs at the joints, supported directly by the primary cables, and thence down to the pins in the skew-back tubes.

By such means semi-ribs, stretching two hundred and fifty feet over the Mississippi, were fully supported until they were successfully "closed" at the crown. The minute details of the operation of closing the ribs form an interesting feature in the history of the bridge. The influence of temperature and elasticity was strikingly shown. The magnitude of the main cables may be estimated from the fact that they were made of the best rolled iron, and each had a cross-section of forty-two square inches.

The total weight of one naked rib of the centre span is four hundred and eighty-eight thousand two hundred and two pounds. The total amount of steel in the three arches is four million seven hundred and eighty thousand pounds. Of wrought iron there are six million three hundred and thirteen thousand pounds.

The superstructure of the bridge was constructed by the Keystone Bridge Company, of Pittsburgh, Pa., and its cost was \$2,122,781.65. The approaches were built by the Baltimore Bridge Company. The total cost of the entire bridge, including the approaches, was \$6,536,729.99. If to this we add interest, land damages, commissions for charters and financial agents, hospital expenses, etc., the sum total is swelled to nearly ten million dollars. The bridge was completed and opened to public travel on the 23d of May, 1874.¹

¹ "The long-looked-for opening of the bridge to public travel," said the *Republican* of May 24th, "took place yesterday morning, as previously announced. Six o'clock was the hour fixed for the opening, but long before that time a great multitude of people had gathered around the office, each anxious to get the first ticket. The pressure on the ticket-sellers continued for two or three hours, and during the entire day they were kept reasonably busy. Many more tickets were sold than were used, as many persons, for economy's sake, purchased packages. It is understood that the receipts for the day were about one thousand dollars."

The first person who purchased tickets on May 23d, according to the same authority, was Charles Gallagher, night clerk in the office of the *Republican*. In announcing this fact that paper added, "He was present waiting for the office to open, and has the following certificate to show the facts:

"Charles Gallagher bought first one dollar's worth of tickets and crossed the bridge.

(Signed)

F. W. GEISEKER.

"May 23, 1874."

On the 9th of June the first train of three passenger-coaches, in which was seated a select party of about fifty invited guests, connected with the track of the bridge-approach from the St. Louis and Vandalia Railway and crossed the river, running as far into the tunnel as Seventh Street.

At the suggestion of Sylvester H. Laffin, an imposing celebration in honor of the completion of the bridge was held on the Fourth of July, 1874. Barton Able, George Bain, and other leading citizens of St. Louis promptly seconded Mr. Laffin's proposition, and a meeting to take preliminary action was held at the Merchants' Exchange on the 13th of June. Capt. Barton Able presided, and George H. Morgan acted as secretary. A committee was appointed to make the necessary arrangements, and on the 13th a committee on programme, Chauncey I. Filley, chairman; a finance committee, Sylvester H. Laffin, chairman; and a committee on transportation, Capt. John N. Bofinger, chairman, were selected. On the 16th a committee on printing was appointed, with George H. Morgan as chairman, and Arthur B. Barret, afterwards mayor of the city, was made grand marshal of the day. Mr. Barret subsequently appointed Col. C. Maguire assistant marshal, and G. O. Kalb and Henry Benecke as adjutants. The committees as finally completed were composed of the following persons:

Committee of Arrangements.—Barton Able (chairman), George H. Morgan (secretary), S. H. Laffin, George Bain, John S. Cavender, W. H. Maurice, M. J. Lippman, Web. M. Samuel, D. P. Rowland, John B. Maude, R. M. Seruggs, C. O. Dutcher, John N. Bofinger, John W. Carroll, Chauncey I. Filley, L. L. Ashbrook, C. Maguire, John O. Farrar, Arthur B. Barret, J. O. Broadhead, S. E. Hoffman, L. S. Metcalf, C. M. Woodward, Charles Osborne, Henry Benecke, George D. Capen, C. L. Thompson, Henry T. Blow, Charles Speck, Isaac M. Mason, John Riggan, Jr., Robert A. Campbell, J. B. C. Lucas, H. Clay Sexton, L. Dorshimer, R. P. Tansey, Daniel G. Taylor, George Knapp, G. W. Fishback, William McKee, Charles A. Mantz, Stilson Hutchins, W. V. Wolcott, Emil Preetorius, A. J. Spaunhorst, Carl Daenzer, Henry Gams, Daniel Able, W. A. Brawner, H. M. Blossom, M. L. Cohn, D. R. Risley, John McDonald, Abram Nave, Thomas Kennard, G. W. Chadbourne, E. A. Carr, George I. Barnett, B. M. Chambers, W. H. Scudder, Daniel Catlin, Joseph Brown, L. A. Moffett, J. T. Hostenstein, C. B. Bray, Miles Sells, Gen. Grierson, Capt. Babbitt, Maj. E. B. Grimes, Gen. John Turner, Col. C. C. Penrose, Capt. William Hawley, James Doyle, John H. Beach, Charles Parsons, R. J. Lackland, J. G. Chapman, R. C. Clowry, John H. McCluney, G. O. Kalb, Wallace Delafield, H. W. Hough, W. A. Hargadine, John Cantwell, R. M. Renick, J. C. Cabot, George Minch, Charles P. Warner, James M. Brawner, W. H. Pulsifer, E. S. Walton, A. W. Slayback, H. H. Wernse, John G. Prather, A. B. Pendle-

"It has been stated, as we understand, that Mr. McMahon, a superintendent of the bridge, was the first man to cross. This is incorrect. Mr. McMahon purchased his ticket the night previous, and was not legitimately a passenger, being an employé of the company. Mr. Gallagher is clearly entitled to the honor."

ton, James B. Clemens, William H. Smith, Nicholas Wall, Fred. Von Phul, W. B. Thompson, Forester Dolhonde, Edmund Froehlich, N. Stevens, M. M. Buck, Herman Rehtien, Robert A. Betts, N. M. Bell, Goodman King, Joseph Franklin, C. N. Hohltzell, J. L. D. Morrison, Joseph A. Wherry, E. S. Miragoli.

Committee on Finance.—S. H. Laffin (chairman), John B. Maude, Chauncey I. Filley, George Bain, C. O. Dutcher, J. T. Howenstein, S. Metcalf, Arthur B. Barret, George I. Barnett, D. P. Rowland, W. A. Hargadine, John H. McCluney, Wallace Delafield, George D. Capen, C. L. Thompson, H. H. Wernse, L. L. Ashbrook, John Cantwell, W. A. Brawner, H. M. Blossom, M. L. Cohn, Thomas Kennard, Charles Speck, S. M. Dodd, H. W. Hough, A. W. Slayhack, John Kennard, C. B. Bray, E. S. Walton, James S. Brawner, W. B. Thompson, Robert A. Betts, Goodman King, Joseph Franklin, C. J. L. Hohltzell.

Committee on Fireworks.—S. H. Laffin (chairman), W. H. Maurice, John B. Maude, R. M. Scruggs, D. P. Rowland.

Committee on Programmes and Invitations.—Chauncey I. Filley (chairman), D. P. Rowland, John B. Maude, Arthur B. Barret, John W. Carroll, Barton Able.

Committee on Transportation.—Arthur B. Barret (chairman), John N. Bofinger, S. H. Laffin, R. P. Tansey.

Committee on Printing.—George H. Morgan (chairman), Leslie A. Moffett, J. T. Howenstein.

Committee on Decorations.—George I. Barnett (chairman), Dr. J. O. Farrar, Maj. E. B. Grimes, E. S. Miragoli, Charles Speck, Daniel Ahle, D. R. Risley, J. H. McCluney, C. B. Bray, G. O. Kalb.

Committee on Ordnance.—Capt. Bahhitt (chairman), S. H. Laffin, F. W. Fuchs, John B. Gray, John S. Cavender.

Committee on Music.—George Bain (chairman), G. H. Morgan, C. O. Dutcher, Rich. J. Compton.

Committee on Harbor and Police.—L. Dorsheimer (chairman), James Doyle, H. Rehtien.

Committee on Fire Department.—H. Clay Sexton.

Press Committee.—George W. Gilson, *Democrat*; George Mills, *Times*; C. Winter, *Westliche Post*; W. B. Stevens, *Dispatch*; J. G. Dill, *Republican*; T. Mitchell, *Globe*; C. D. Kargau, *Anzeiger*; Lewis Willich, *Amerika*; F. Haaron, *Courier*; Thomas J. Meek, *Journal*; Charles J. Oshorn, agent Associated Press.

The programme determined on comprised a procession, addresses, display of fireworks, etc. The east and west approaches to the bridge were elaborately decorated, and at the Third Street entrance a gigantic portrait of Capt. James B. Eads was displayed. Immediately underneath the portrait were exhibited two large symbolical figures, which represented Missouri and Illinois clasping hands. At the east end of the bridge, and just at the point where the two roadways separate and begin the descent to the Illinois shore, a great triumphal arch was erected, extending from side to side of the bridge, and surmounting a pavilion which separated the two passages of the arch was a colossal statue of the Goddess of Liberty. To the left of the Third Street entrance a platform was erected for the accommodation of the invited guests. Farther on, on the same side of the roadway, a series of elevated seats was provided on one of the buildings adjoining the bridge for the

families of the bridge officials. The decorations were of an elaborate and tasteful character, and on the morning of the Fourth of July, beneath a cloudless sky, presented a beautiful and imposing spectacle. Many buildings in the city were also decorated, and at Washington Avenue and Ninth Street a handsome triumphal arch was erected by St. Xavier's College.

On the wings of the east front the heraldic arms of the States of Illinois and Missouri were painted, with the legend above, "A link of steel unites the East and West;" and on the western front of the arch, tastefully decorated with evergreens and fifty feet high, a medallion portrait of Capt. Eads. On the wings were the following: "The Mississippi discovered by Marquette, 1673; spanned by Capt. Eads, 1874." "St. Louis founded by Laclède, 1764; crowned Queen of the West, 1874."

Salutes in honor of the bridge and the day were fired by Simpson Battery, under the direction of Lieut.-Col. F. W. Fuchs, inspecting and mustering officer for St. Louis City and County, who was placed in charge of the ordnance and firing for the occasion.

The battery consisted of four guns, four caissons, and fifty-six men, commanded by First Lieut. Charles Hiltwein and Second Lieut. A. B. Bayer.

At daylight a salute of thirteen guns was fired by the battery near the bridge for the old original States.

At nine o'clock A.M. one hundred guns were fired for the bridge, fifty on each side of the river, by the same battery, the firing being alternate, commencing with Missouri. At twelve o'clock (noon) a salute of thirty-seven guns for the States and Territories of the Union was fired on the Levee by the ordnance department of Jefferson Barracks, under command of Capt. Babbitt. At daylight a Federal salute, and at nine A.M. a national salute was fired by Gen. Grierson at the old arsenal grounds.

The procession moved at a few minutes past nine o'clock from the junction of Washington and Jefferson Avenues, headed by a squad of Metropolitan police under command of Capt. Huebler, and followed immediately by the grand marshal and his aids, twenty-two of whom were boys mounted on ponies and wearing uniforms of black jacket, white pantaloons, and red sash.

Next in order came the following organizations: Company of United States cavalry, Companies A and B National Guards, company of Uhlans, Knights of Pythias, Ancient Order of Hibernians, Knights of Father Mathew, Druids, Sons of Hermann, members of the French National Aid Society, Turners, Bohemian Gymnastic Club, Western Star Commandery (Knights Templar), Same (Encampment), United

Brethren of Friendship, Mutual Aid Society, Laborers' Aid Society, United League, No. 1, Real Estate and Beneficial Society, Old Temperance Society, preceded by the Bavarian Band, Irish American Benevolent Society, No. 1.

In addition to these societies the procession comprised the following organizations:

Merchants' Exchange, represented by a large banner bearing a picture of the Exchange, and the officers and members in carriages.

Fire Department, with engines and apparatus decorated with flags, wreaths of flowers, etc. H. Clay Sexton, chief, on horseback; Richard Beggs, J. W. Bame, and Jacob Trice, assistants, in buggies, and J. W. Tennelle, secretary, on horseback.

German Singing Societies, Professor E. Froelich, leader. The societies, headed by the New Orleans Orchestra, numbered six hundred men, and made a fine display with banners and decorations.

Mechanics' and Manufacturers' Exchange, with an Exchange building in miniature. The building had a large number of windows, each supposed to light the office of one of the many trades represented in the Exchange membership, and over each of these windows was painted the trade represented, such as "bricklayer," "carpenter," etc. Following this, in the order in which they were employed, were representatives on wagons in long procession of all the different processes necessary to the construction of a complete house,—architects, excavators, stone-masons, stone-cutters, brick-makers, bricklayers, architectural iron-workers, carpenters, stair-builders, roofers, tinners, lightning-rod men, plumbers, plasterers, gas-fitters, painters and glaziers, paper-hangers, grate and mantel manufacturers.

The marshal of this department was Henry Milburn, and the following were his aids: T. J. Flanagan, adjutant; Henry Perks, Lewis Luthy, James Gilfoyle, C. K. Ramsey, C. Franz, and C. Kammerer.

The directors of the Exchange preceded this portion of the procession in carriages. They were as follows: James Luthy, president; David Cavanaugh, C. H. Frank, J. H. Maurice, John Norris, William McCully, C. Lynch, T. P. McKelleget, James Garvin, Martin Ittner, John Stoddart, A. S. McBride, W. S. Stamps, secretary.

St. Louis Life Insurance Company, of which Capt. Eads was president, with a *fac-simile* of the company's building at Sixth and Locust Streets.

Independent Order of Odd Fellows, numbering from twelve hundred to fifteen hundred men.

Grand officers of Grand Lodge: L. T. Minturn, M. W. G. M.; Alfred Bennett, R. W. D. G. M.; J. S.

Maitland, R. W. G. W.; E. M. Sloan, R. W. G. Sec.; W. H. Thompson, R. W. G. Treas.; A. M. Alexander, M. C. Libby, R. W. G. Representatives; Rev. E. D. Isbell, W. G. Chap.; J. M. Gilkeson, W. G. Marshal.

Past Grand Masters: Gerard B. Allen, Elihu H. Shepard, Isaac M. Veitch, Henry Holmes, C. C. Archer, Isaiah Forbes, J. F. Sheifer, J. R. Lackland, Ira Stansberry, J. C. Nulsen, John Doniphan, E. M. Sloan, H. H. Bodeman, M. C. Libby, E. Wilkerson, W. H. Thompson.

Grand officers of Grand Encampment: J. J. Meier, M. W. G. P.; J. S. Maitland, M. E. G. H. P.; E. S. Pike, R. W. G. S. W.; R. E. McNuly, R. W. G. Scribe; William Berry, R. W. G. Treas.; Daniel Kerwin, E. R. Shipley, R. W. G. Representatives.

Past Grand Patriarchs: A. G. Braun, Alexander Peterson, Thomas Gerrard, A. G. Trevor, W. H. Woodward.

Uniformed Patriarchs: E. Wilkerson, chief marshal; A. G. Hequembourg, first assistant marshal (in command); F. A. Cavendish, second assistant marshal.

First Division, Daniel Kerwin, marshal; Second Division, Thomas Bennet, marshal; Third Division, Henry Diers, marshal.

United States officials. The custom-house employés exhibited a full-rigged brig, twenty-six feet long, emblematic of commerce, mounted on wheels, and drawn by eight horses. The vessel was named the "James B. Eads," and was "commanded" by Henry P. Wyman, special deputy collector. The post-office was represented by a six-horse wagon bearing the post-office seal, post-rider, railway train, and telegraph wire, with coat of arms of the United States, the whole decorated with flags, evergreens, etc., three messenger-wagons,—one each for North, South, and West St. Louis,—and one hundred letter-carriers, mounted and on foot.

Brewers' Association, with a representation of King Gambrinus on his throne, the king being personated by Jacob Schorr.

The various other trades and industries of St. Louis were also fully represented by delegations, with banners, appropriate devices, etc.

The St. Louis Rowing Club had a boat suspended to a wagon, with oars, flags, and other decorations. A number of the members of the club were in the boat, imitating nautical acts.

The Western Rowing Club had two boats and two teams, likewise accompanied by members of the club, and finely decorated.

The members of the City Council in carriages, and all the engines and hose-carriages in the city in holi-

day attire, led by Chief Sexton, were the closing features of the procession. The engines had hardly gotten into line, however, after waiting all the forenoon, when an alarm of fire was sounded from Seventeenth and Franklin Avenue. By a previous understanding, those engines which were already under head of steam responded to the alarm, and as they darted through the crowded streets with the horses at a gallop there was great confusion and excitement. No accidents happened, however, and order was soon restored, the procession ending as was laid down in the programme, after having passed through the principal streets in the city to the bridge.

One of the features of the celebration was the passage of a train of cars across the bridge from East St. Louis to the exit of the tunnel on the St. Louis side. The train was composed of fifteen palace sleeping-cars and three powerful locomotives, contributed by the Vandalia and Illinois Central Companies. The entire train was in charge of W. H. Finkbine, conductor on the Vandalia road for twenty-three years. His assistants were, on the first engine, No. 62, William Consen; second engine, No. 70, William Vansen. The brakemen were Job Graves, William Colburn, H. Schumaker, A. C. Thornton, H. W. Orvell, Thomas Mirton, John Brown, John Mallory, James Binkley, M. B. Mason, and Michael Brazill.

The officials of the Vandalia Railway on board the train in crossing were John E. Simpson, general superintendent; N. Stevens, general agent; and N. K. Elliott, master of transportation.

Among the passengers on the train were Senator L. V. Bogy, Hon. Silas Woodson, Governor of Missouri; Governor Beveridge, of Illinois; Governor Hendricks, of Indiana; Judge Napton, St. Louis; Judge H. M. Jones, St. Louis; Judge Hamilton, St. Louis; Judge John M. Krum, St. Louis; Hon. Hugh Moffat, mayor of Detroit; Hon. D. R. Wright, mayor of Oswego, Kan.; Hon. E. O. Stanard, Hon. James S. Rollins, Columbia, Mo.; Hon. George Bain, Capt. Bart Able, Web M. Samuel, president Merchants' Exchange, and many other leading citizens of St. Louis and elsewhere.

On the grand stand on the open area at the corner of Washington Avenue and Third Street, were seated the following persons, named in the order of their arrival: Gen. W. S. Harney, Hon. T. C. Harris, member of the Legislature from Phelps County; Hon. George B. Clark, State Auditor; J. H. Waugh, of Columbia; Hon. H. Clay Ewing, attorney-general of Missouri; ex-Governor B. Gratz Brown, Judge Samuel Treat, Hon. E. O. Stanard, Dr. Samuel Read, president of Missouri State University; Hon. John F. Cooke, British vice-consul; Gerard B. Allen, Capt.

James B. Eads, Barton Able, Maj. Grimes, United States army; Hon. James S. Rollins, Hon. L. V. Bogy, Col. R. B. Preece, of Columbia; Judge John M. Krum, Chauncey I. Filley, S. D. Barlow, George I. Barnett, Hon. N. M. Bell, Capt. Samuel Pepper, ex-Governor Thomas C. Fletcher, Judge Speck, Col. J. L. D. Morrison, William A. Lyneh, Governor Beveridge, of Illinois; Hon. John D. Perry, Rev. Dr. Brookes, Maj.-Gen. W. S. Hancock, Richard Dowling, J. Wilson McDonald, the sculptor; Hon. Web M. Samuel, president of the Merchants' Exchange; John Baptiste Hortey, the oldest native citizen of St. Louis; Unit Pasin, David A. Harvey, L. Harrigan, chief of police; William A. Cozens, Sullivan Blood, Samuel Hawken, Robert D. Sutton, H. B. Belt, David A. Harris, Arrible and Antone Cayore, J. H. Britton, James H. Heath, Hon. Charles H. Hardin and Hon. David Moore, of the State Senate; Col. Joseph L. Stevens, of Boonville; Capt. John Sibille, a veteran of the war of 1812; Gen. Nathan Ranney, Hon. Wells Blodgett, Hon. John F. Darby, Col. John L. Phillips, of Sedalia; John F. Tolle, United States Senator Ferry, of Michigan; Hon. Erastus Wells, W. Milnor Roberts, consulting engineer of the bridge, and C. Shaler Smith, engineer; Hon. H. C. Broekmeyer, United States collector; E. W. Fox, Col. D. M. Renick, Dr. Barret, S. H. Lafin, Col. R. A. Campbell, L. H. Murray, of Springfield, Mo.; D. Robert Barclay, Col. Ferdinand Myers, Dr. William Taussig, Carlos S. Greeley, Governor Woodson, Miles Sells, State Senator Allen, George Bain, Mayor Brown, Gen. Wilson, J. R. Lionberger, John Jackson, J. S. Welsh, N. S. Chouteau, Capt. Fitch, United States navy; J. F. How.

Among the ladies who graced the occasion with their presence were Mrs. Governor Woodson, Mrs. Governor Brown, Mrs. H. Clay Ewing, Mrs. J. H. Britton, Miss Hutt, of Troy, Mo.; Miss Fanny Britton, Mrs. C. K. Dickson, Miss Dickson, Miss Chouteau, Mrs. J. Jackson, Mrs. J. B. Eads, Miss Addie Eads, Mrs. J. H. Britton, Miss F. Britton, Mrs. J. R. Lionberger, Miss Lionberger, Mrs. William Taussig, Miss Taussig, Mrs. H. Flad, Miss Flad, Mrs. G. B. Allen, Miss Hodgman.

The exercises opened with prayer by Rev. Dr. Brookes, after which addresses were delivered by Capt. Barton Able, Hon. Joseph Brown, mayor of St. Louis, Governor Beveridge, of Illinois, Governor Woodson, of Missouri, Hon. B. Gratz Brown,¹ Capt.

¹ In the course of his address Governor Brown gave an interesting sketch of the legislation of Congress in relation to the bridge, as follows: "Ever since the earliest act incorporating St. Louis the necessity of establishing some permanent way

James B. Eads,¹ Governor Hendricks, of Indiana, and Hon. Thomas W. Ferry, of Michigan. The speeches were varied with singing by the various singing societies present, led by Professor E. Froelich.

across the great river has impressed itself upon the minds of our people. On two or three occasions this has taken shape in charters proposed or passed by the Legislatures of the adjoining States, but as they were necessarily inoperative in the absence of any congressional sanction, they failed to attract investment. At length, however, the demand for greater facilities of transit forced itself into national importance, and in commemoration of the enterprise it may be stated that it was on the 4th day of December, 1865, that notice was given in the Senate of the United States of intent to bring in a bill to authorize the construction of a bridge across the Mississippi River at the city of St. Louis. On the 18th day of December the bill was presented and appropriately referred. It was reported back from the committee March 22, 1866, and laid over until a subsequent day for action. The discussion which followed was animated, elicited much hostile criticism, and the bill was only passed after an elucidation which seemed to render it innocuous in the eyes of its most violent opponents. Subsequently a bill relating exclusively to bridges and post-routes on the upper Mississippi came back to the Senate from the House of Representatives, and was referred to the Committee on Post-offices. The bill, which had passed the Senate, it was found had been suppressed in the committee of the House. The situation was critical, the calendar was loaded down, the session was closing. It was then that the appeal was made to the committee in the Senate to engraft by way of amendment the Senate bill upon the House bill, and after much controversy this was finally assented to, so reported back and passed, the House concurring therein in the expiring hours of the Congress.

"It was in virtue of riparian rights conceded by Illinois and Missouri, under the sanction of an act of the National Congress, and sustained by the indorsement of our own Chamber of Commerce, that this bridge was undertaken. Historically, therefore, it seemed to grow out of the necessities of the age. But the point to which I wish to invite your attention is this, that, so great was the antagonism from rival commercial routes, it was only when the provisions of the congressional act had been made to declare that the central span should not be less than five hundred feet nor the elevation less than fifty feet above the city directrix that hostility could be so allayed as to permit the passage of the bill. It was upon the tacit assumption by its opponents of its utter impracticability that antagonism gave way. In fact, the utterance was then and there boldly made that the genius did not exist in the country capable of erecting such a structure. Others, however, had more faith, and to-day you behold the accomplishment of what was thus derided as impossible; you see the requirement of the law fulfilled in all its strictness; you see those spans of five hundred feet leaping agile from base to base; you see those tapering piers hedged on the immovable rock, deep down below the homeless sands, and rising to gather the threads of railways and roadways high in the upper air; and you see, caught as if by inspiration, beauty there in all its flowing proportion, and science there in its rare analysis of the strength of materials, and an endurance there for all time in its bond of iron and steel and granite to resist force and fire and flood."

¹ With regard to the permanence of the structure, Capt. Eads said, "I am justified in declaring that the bridge will exist just as long as it continues to be useful to the people who come after us, even if its years should number those of the pyramids. That

In addition to the ceremonies at the bridge, there was a display of steamboats in the harbor, which were arranged near the bridge according to "the rainbow plan," the boats taking position in three tiers, the smallest vessels being in front.

At night there was a grand display of fireworks from the bridge, among the pieces being a representation of the bridge itself, a colossal statue of Washington, a grand "Temple of Honor," with a statue of Capt. Eads in the centre, and a representation of the new Chamber of Commerce building.

The bridge as it now stands is one of the marvels of modern engineering. It is a two-story structure, the great arches which we have described carrying double-track railways, and above, a broad highway seventy-five feet in width. On this are promenades on either side and four tracks or iron tramways for street-cars and ordinary road-wagons. Thus four vehicles may be hauled abreast along this spacious elevated roadway and then not blockade it so as to prevent persons passing on foot and on horseback.

This roadway is formed by transverse iron beams twelve inches in depth, supported by iron struts of cruciform sections resting on the arches at the points where the vertical bracings of the latter are secured. The railways beneath are carried on transverse arch-like beams of steel secured to the struts, which, based upon the arches, support the right of the carriageway, as well. Between the iron beams forming the roadways four parallel systems of longitudinal wooden members are introduced, extending from pier to pier, which serve the purpose of maintaining the iron in position. The ends of these wooden beams rest upon the flanges of the beams, and are thus secured from moving. On these the sills of the roadway and the cross-ties of the railways are laid. From the opposite ends of the iron beams, a double system of diag-

its piers will thus endure but few will doubt, while the peculiar construction of its superstructure is such that any piece in it can be easily taken out and examined, and replaced or renewed, without interrupting the traffic on the bridge. The effect of temperature upon the arches is such that in cold weather the lower central tubes and the upper abutment tubes composing the spans are so relieved of strain that any one of them may be uncoupled from the others and easily removed. In hot weather the upper ones of the centre and the lower ones near the piers may be similarly removed. In completing the western span, two of the lower tubes of the inside ribs near the middle of the span were injured during erection, and were actually uncoupled and taken out without any difficulty whatever after the span was completed, and two new ones put in their place within a few hours.

"This is a feature in its construction possessed by no other similar work in the world, and it justifies me in saying that this bridge will endure as long as it is useful to man."

onal horizontal iron bracing serves to bind the whole firmly together, and gives additional support against wind-pressure.

The calculation made for the strength of the bridge was that it should carry the weight of the greatest number of people who could stand on the roadway above, and at the same time have each railway track below covered from end to end with locomotives, and this enormous load to tax the strength of the bridge to the extent of less than one-sixth of the ultimate strength of the steel of which the arches have been constructed. It is computed that the ultimate strength of the material of which this structure is composed will sustain on the three arches twenty-eight thousand nine hundred and seventy-two tons before it would give way under it. The maximum load, however, which can be allowed on the bridge at any one time is much less than the enormous burden which we have mentioned. The weight of the bridge and the load which it should sustain at the maximum of the allowance for perfect safety is $7\frac{2}{10}$ tons per lineal foot, or about 10,865 tons. The thrust of each end of the arch is received on a surface of granite equal to 24 square feet, and as each span has four arches, it follows, therefore, that the thrust of the arches is received on a surface of 576 square feet of granite. At 10,000 pounds to the square inch—a low rate of strength for granite—to crush it 414,770 tons would be required. A weight so enormous could never be placed on the piers or arches. No danger then exists of the piers being crushed by the tremendous thrust of the immense five hundred feet arches.

There is no other bridge of the arch or truss pattern which can be compared to this. The Kuilnburg bridge across the Leek, an arm of the Rhine, or rather the Zuyder Zee, in Holland, which is one of the most famous structures of the kind in Europe, is a truss bridge of 515 feet span. The Menai bridge is an arch of 500 feet.

The eastern approach is a great work apart from the bridge to which it leads. This portion of the work was executed by the Baltimore Bridge Company, under the supervision of Col. C. Shaler Smith. The grand highway, leaving the stone arch supports on the East St. Louis side, is carried across a space of some sixty feet on immense steel columns, which support great iron girders. About eighty feet from the stone arch the road divides, and begins to descend at the rate of about three feet to the hundred. This division was rendered essential in order to conduct the railway tracks along at a rate of descent of about one foot to the hundred. About four hundred feet to the eastward of the bridge proper the highways and rail-

road tracks are on a level. But the railways from that point eastward, because of its easier grade, are elevated above the roadways on either side. At Third Street, East St. Louis, the highways are terminated on the level of the street. Where the grade of the railways rises about ten feet above the grade of the carriageways there is a broad level platform, and a double roadway turns westward under the railway and reaches the grade of the street on Second Street. The roadways from this turning platform are continued on to the level of Dike Avenue beyond, about two hundred feet. The railways are conducted over Dike Avenue, East St. Louis, on an iron viaduct, at a grade of one foot to the hundred, about three thousand feet, to the east bank of Cahokia Creek, where it attains the level of the concentrating railways. The railways and the roadways as well turn an easy curve to the northeast when about two hundred and fifty feet east of the stone piers. This approach of itself is a great work splendidly accomplished.

The situation of the bridge and the peculiar topography of the city made it impossible that the work could be accomplished without rendering the construction of a subterranean approach necessary. If the bridge had been built on a more elevated plan it would have necessitated the passage of steam-propelled trains across and through the thronged thoroughfares of a populous city. Had the bridge been located at Bidde or Bates Street it would have been necessary to carry the railways over the streets and on out Cass Avenue, a much-traveled thoroughfare. The height of the bridge above the water is the minimum which a due regard for the great navigation interests of the river would have permitted. The western landing of the bridge is on one of the highest points of Third Street. The grade brings the highway from the bridge arches down to the level of this street, leaving at that place a depth of fourteen feet in which to commence the underground passageway from the bridge to the Mill Creek valley. It seems as though nature intended that in St. Louis a mighty railway interest should concentrate and be provided with facilities for the transaction of business without interfering with intercommunication in the city. In the future, even more than now, will the selection of a location for the bridge, which necessitated a tunnel, be esteemed the wisest that could have been made. The great traffic of the railways can go on and the thronging myriads of the city's population will rush along undisturbed by the trains that carry the products of a vast continent underneath the ground.

It was early seen that an approach tunnel would have to be built to get trains to the western terminus.

of the bridge. Indeed, that followed inevitably the Eads location of the bridge itself. For the construction of the tunnel a company was organized with Dr. William Taussig as president.

After mature consideration a plan was drawn up which involved the building of a double tunnel, and was adopted. A route along Washington Avenue to Seventh Street, with a curve from that point to Eighth and Locust Streets, thence down Eighth Street to Poplar, was selected, and arrangements perfected to put the work under contract.

The necessary financial arrangements, surveys, and estimates having been made, the tunnel company, in the autumn of 1872, awarded a contract to Messrs. Skrainka & Co., who, after working several months, threw up the contract, which was then awarded to James Andrews, of Allegheny, Pa. The new contractor set about the execution of the task April 16, 1873, with great energy. A large number of laborers were employed, and the work of excavating the great tunnel and building the huge stone walls to support the heavy arches was pushed forward with great rapidity.

It was no small task the contractor had assumed. Before it was completed there had been removed two hundred and fifteen thousand cubic yards of earth from the tunnel canal, and the stone masonry required on the work was fifty thousand cubic yards. Thirteen millions of bricks have been used in the arches of this great underground passageway. The whole length of the tunnel is four thousand eight hundred and eighty feet, or sixteen hundred and twenty-three yards and one foot, almost one mile. There are two tunnels really, divided by a heavy wall which supports the arches that spring from it in either direction. The width of these tunnels is fourteen feet each, except at the curve, where they are fifteen feet wide. From the top of the rail to the interior crown of the arches the height is sixteen feet six inches.

The arrangement of a double tunnel covered under the street by two longitudinal arches not only renders collisions in the tunnel absolutely impossible, but also greatly increases the strength of the arches, which not only support their own weight, but must carry the weight of the streets and the immense traffic of the most traveled thoroughfare in the city. On Eighth Street between Locust and Olive, the location of the new post-office, the roof of the tunnel is composed of immense longitudinal iron girders, supported on heavy cast-iron pillars. On these longitudinal sills of iron rest lateral girders scarcely less ponderous. The spaces between these are filled by transverse brick arches. At this point the roadways open wider so as

to admit of the exchange of mails. By means of hopper-like receptacles the mail on the cars may be completely discharged in thirty seconds, and a similar place of deposit for the outgoing mails enables the train agent to get the bags on board in about the same time.

The distance from the entrance of the tunnel at its southern terminus to the northern terminus of the railway approach east of Cahokia Creek, East St. Louis, is eleven thousand feet, which is three thousand six hundred and sixty-six yards and two feet, or two miles, one hundred and forty-six yards, and two feet. This is really the length of the bridge railway.

The last stone for the arches of the tunnel was placed in position Thursday, June 24, 1874. During the progress of the work two serious mishaps to the tunnel delayed operations for a time. In 1873 about two hundred feet of the massive stone wall of the open cut was overthrown during a great rain-storm by the tremendous pressure of twenty-eight feet of water collected behind. In the winter of 1874 a serious break in the completed tunnel took place on Washington Avenue above Sixth Street. These were repaired. In the first case the wall had to be rebuilt, in the last the arch was taken out, the wall strengthened, and the arch replaced. Notwithstanding so many men were employed, and there was so large an amount of work, there were comparatively few fatal casualties. The railway tracks were completed through the tunnel in July, 1874.

On the 20th of December, 1878, the bridge was sold under foreclosure of mortgage, at the east front of the court-house, a little after twelve o'clock. The sale was in virtue of a decree of the United States Circuit Court, rendered on the 17th of October, in the suit of John Pierpont Morgan and Solon Humphreys against the bridge company and others. Ezekiel W. Woodward was the commissioner appointed to make the sale, and the property to be sold included the bridge proper, its approaches in St. Louis and East St. Louis, and all its appurtenances, franchises, and other property. The terms of the sale were fifty thousand dollars to be paid in bidding off the property, and the balance in the manner described in the decree of the court. The purchaser was also to pay in cash, on the confirmation of the sale by the court, the costs of the suit, including the expenses of sale, commissions to the trustees, and fees to the solicitors and counsel as determined by the court, and in addition to and over his bid, in cash, the amount of the certificates of the indebtedness of the receivers in the suit that were outstanding and amounting to three hundred and fifty thousand dollars, more or less.

Bidding was invited, and Charles B. Tracy bid two million dollars. There the matter hung, and all the eloquence of the auctioneer was futile to procure another bid. When it became quite certain that no advance would be made on Mr. Tracy's bid, the auctioneer, with the usual warning of "once, twice, three times," knocked down the bridge at two million dollars. The name being called for, Mr. Tracy announced Anthony J. Thomas, of New York, as the purchaser. On inquiry Mr. Thomas was ascertained to be a merchant in New York, who had bought the bridge for the first mortgage bondholders, who were also the principal, if not the sole, holders of the second mortgage bonds.

E. W. Woodward stated subsequently that the bridge had failed to yield enough money to pay the interest on its indebtedness. There were three mortgages. The fourth one was canceled and wiped out of existence. The suit for foreclosure was brought by the first and second bondholders jointly. The bridge company organized soon after the sale by the election of J. Pierpont Morgan and Solon Humphreys, of New York; and Gerard B. Allen, Julius Walsh, and Ezekiel W. Woodward, of St. Louis, as directors. The new company thereupon elected the following officers: Solon Humphreys, president; Ezekiel W. Woodward, vice-president; Edward Walsh, secretary; and Anthony J. Thomas, treasurer.

On the 1st of July, 1881, the bridge was leased to the Missouri Pacific and Wabash, St. Louis and Pacific Railway companies at an annual rental equaling interest on bonds, semi-annual dividends on first preferred stock at the rate of five per cent. per annum for three years to and ending in July, 1885, and thereafter at the rate of six per cent.; and semi-annual dividends of three per cent. on second preferred stock, the first payment to be made July 1, 1884. Dividends payable in gold free of all charges. The companies further agreed to pay all taxes, assessments, and other charges; to pay two thousand five hundred dollars a year for maintaining organization, and to provide and maintain offices for the company in St. Louis and New York. In addition it is provided that the bonds of the company as they mature shall be paid by the lessee companies. The funded debt consists of \$5,000,000 seven per cent. gold bonds, dated April 1, 1879, due 1928; interest payable April and October; first preferred stock \$2,490,000; second preferred stock \$3,000,000; common stock \$2,500,000. The directors of the St. Louis Bridge Company in 1882 were Solon Humphreys, J. Pierpont Morgan, New York; E. W. Woodward,

Gerard B. Allen, Edward Walsh, Jr., St. Louis, Mo.; President, Julius S. Walsh, St. Louis.

One of the most active and energetic promoters of the great bridge enterprise was John R. Lionberger, who was a director of the company from its incipiency, and a member of the executive and construction committee. Mr. Lionberger was a stanch, unwavering supporter of the project through its darkest hours, and contributed his share and something more towards providing means to resume work on the bridge and push its construction to completion.

John Robert Lionberger was born in Virginia, Aug. 22, 1829. As the name indicates, his father was of German, his mother of English-Scotch descent;—a mixture of blood calculated to produce an enterprising and aggressive race. His father was engaged in mercantile business in Virginia, which he resumed upon the removal of the family, in 1837, to Boonville, Cooper Co., Md.

Up to the age of sixteen young Lionberger attended the noted Kemper's Academy in Boonville, and subsequently entered the University of the State of Missouri at Columbia, and took a classical course. Although thus equipped with an education which fitted him for a professional career, his tastes led him to engage in mercantile pursuits, and he spent some years thus occupied at Boonville. The small and quiet town, however, offered at best only a limited prospect to a young man of energy and enterprise, and in 1855 he removed to St. Louis, and established the wholesale boot- and shoe-house of Lionberger & Shields, on Main Street. This partnership lasted some two years, when Mr. Lionberger purchased Mr. Shields' interest, and for some time managed the business as sole proprietor under his own name. Subsequently junior partners were admitted, and the firm became known as J. R. Lionberger & Co., under which title it flourished until 1867, when he retired, leaving to his associates a well-established and prosperous trade, and having made for himself a fortune and reputation for rectitude and business sagacity second to none of the merchants of that period.

But in retiring from trade he did not retire from business. On the contrary, he immediately entered upon a field of much greater activity, and thenceforth his energies were exerted in connection with many enterprises of great public importance, and promising much to the city of his adoption. All the great projects of the past twenty-five years have had his earnest and energetic support. He has been foremost in developing the transportation system of St. Louis, and was specially prominent in the affairs of the North Missouri Railroad. When the fortunes of that road were

UNIVERSITY OF ILLINOIS.

at a low ebb, the company with which he was identified took the road and completed it to Kansas City and the Iowa State line. As has been seen, he was very active and efficient in promoting the construction of the bridge across the Mississippi. He was also a director of the Chamber of Commerce Association, and a member of the building committee which supervised the erection of the Merchants' Exchange, perhaps the most stately and ornamental structure of which the city can boast. He is a member of the Board of Trade, and has served it in many honorable and useful capacities; was a delegate to the Boston Convention of the National Board, and was also its representative in the New Orleans Convention, where his fellow-delegates showed their estimation of his character as a representative business man of St. Louis by electing him their chairman. It may therefore be said without exaggeration that in all matters relating to the public welfare, and in all enterprises undertaken for the benefit of the city, Mr. Lionberger has manifested the keenest interest, and has contributed generously of his own means towards any object that seemed likely to build up St. Louis.

One of the later enterprises which he has assisted, and one of the most important, is the Union Depot and Shipping Company, which in 1881 erected a warehouse with an elevator five hundred by seventy feet, and four stories high, with an elevator capacity of seven hundred and fifty thousand bushels of grain. Other corporations with which Mr. Lionberger has been connected have done much to improve the city in the erection of tasteful and ornamental buildings.

When the street railway system was introduced, Mr. Lionberger at once appreciated its importance as an agency in developing the city, and promptly gave it his attention and support. He is a large owner of street railway stock, and his efforts have always been directed towards the management of the street car companies with reference to the convenience of the community.

Mr. Lionberger was one of the organizers of the Safe Deposit Company, one of the most substantial corporations of its kind in the country, and has been its president for several years. He was also one of the organizers of the old Southern Bank in 1857, served actively as a director, and was for many years its vice-president. When in 1864 it organized under the National banking law and became the Third National Bank, Mr. Lionberger retained his interest in the corporation, and in 1867 was elected president, a position which he held until 1876, when he resigned and made a long European journey. On his return from abroad he was elected vice-president, in

which position his judgment and foresight have contributed largely towards making the bank one of the strongest and most highly respected financial institutions in the Mississippi valley. In December, 1882, after twenty-five years of continuous service in different capacities, he resigned the vice-presidency and directorship in this institution.

In 1852, Mr. Lionberger married Miss Margaret M. Clarkson, of Columbia, Mo., a lady of engaging and estimable qualities, and their union has yielded four children.

The many public positions which Mr. Lionberger has held have exposed him to the severest scrutiny of the community, which has only served to demonstrate his sterling integrity, and to set forth conspicuously his pure and unblemished character. As a public-spirited man, he occupies a prominent place among the citizens of St. Louis, while in private life he is esteemed for his engaging qualities of head and heart. His work is not yet finished, and if the past is any augury of the future, it may be assumed that he will for many years to come be heard of in connection with schemes to advance the public good and further still more the "manifest destiny" of St. Louis.

CHAPTER XXVII.

NAVIGATION ON THE MISSISSIPPI RIVER.

AFTER the bark canoe, in the progress of navigation on the Mississippi, came the Mackinaw boat, carrying from fifteen hundredweight to three tons, and then the keel-boat, or barge, capable of carrying from thirty to forty tons. The first appearance of the keel-boat on the Mississippi above the mouth of the Ohio of which there is any account was in 1751, when a fleet of boats, commanded by Bossu, a captain of French marines, ascended as far as Fort Chartres. This enterprise, also, was the first to ascertain by actual experience the perils of navigating the Mississippi. One of the boats, the "Saint Louis," struck a sand-bar above the mouth of the Ohio, and was unladen and detained two days. Three days later, says the traveler, "my boat ran against a tree, of which the Mississippi is full; . . . the shock burst the boat, and such a quantity of water got in that it sunk in less than an hour."¹ This was probably the first commercial boat "snagged" on the Mississippi. From three to four months were required to make a voyage from New

¹ Bossu, vol. i. p. 114.

Orleans to the settlement in the vicinity of St. Louis. For years afterwards, and until the era of steam navigation, a journey on the river was a matter of no small moment, serious consideration, and prudent domestic and personal preparation. It had to be made on craft of a peculiarly constructed and constricted form, having but limited living arrangements, and of slow, uncertain progress, where, besides being deprived of the usual comforts of even an ordinarily-supplied home, the traveler was thrown into immediate association with a wild, reckless, rollicking set of *voyageurs*, whose manual labors alone aided or urged the craft, either with or against wind and current, by the use of oars, poles, and other contrivances. The shippers on these boats, after forwarding their goods and products thereon, were satisfied to have returns therefrom in five or six months after the shipment, and not very much surprised or disappointed when they heard that boat and cargo were resting quietly on the bottom of the river, near the foot of some snag, or upset in a storm, or reposing high and dry on a sand-bar, where they must remain till the next high water floated them off. True, such disasters and delays were not always attendant upon this mode of navigation,—if they had been, the whole system would have fallen into disuse very soon and altogether,—but they were of frequent occurrence, and were viewed as being, more or less, a natural result of the primitive powers and material they were compelled to bring into service.

Flat-boats (of about the same model we have now) and barges were the kind of craft mostly in use on the Ohio and Mississippi and their navigable tributaries at the beginning of the immigration and settlements along those rivers, in the early part of this century, and for several of the closing decades of the previous century, the former for transporting their few marketable products, and for the conveyance of families and stock to new settlements that could be reached, or mainly so, by water. As the country became more populous and developed, the interchange of products and manufactures became a desirable necessity, especially along and with the southern coasts and towns. For this purpose barges were introduced and made common carriers, up and down, and from point to point. Like flat-boats, they were broad and square at the ends, but were raked fore and aft, and instead of being entirely covered in, not more than half their hull was decked over, and on the part thus decked a cabin was placed for the use of the crew and such few passengers as might venture with them. The remainder was left open, or only oar-decked, where was stored the cargo, which was covered with some suitable material to protect it from the weather. The

space under the cabin was devoted to stowage also. Being designed for continued and active service, they were stronger, better built, and more properly fitted out for navigation than flat-boats, and instead of being sold at the end of the trip for whatever they would bring, or otherwise disposed of (as the flat-boat was), were brought back to their home-ports by the crew, against winds and current, by a constant and arduous heaving on oars, poles, and cordelles, with an occasional use of the sail when the breeze was sufficiently strong and favorable. Many of these crafts were owned and run by individuals who made barging their avocation, and in person commanded and controlled their operations, but established lines of barges (not regular) owned by companies or firms were not uncommon from the principal towns of the upper rivers to New Orleans, the boats of which were placed in charge of competent men experienced in river navigation, who acted as *patroon* (captain) and pilot, aided by a crew of their own selection. These boats carried from one hundred to two hundred tons, and some as much as four hundred, but not many, the latter being too unwieldy and unmanageable, and difficult to land except in high water. The trip down, say from Cincinnati or St. Louis to New Orleans, was made in about five weeks, unless they were favored with bright nights, when it would be made more quickly. The return occupied eighty or ninety days, and frequently much longer. The crew was eight to fifteen men on the downward and twenty to thirty-six on the upward trip. Fast time was frequently attempted, and often successfully performed according to the prevailing ideas. A quick trip was made in February, 1811, by the keel-boat "Susan Amelia," which descended from the Falls of the Ohio to Natchez in fourteen days and five hours. This trip was a famous one in its day, and the boat's time from and to different points was made the standard of swiftness for many years, as was that of the steamer "J. M. White" in a later day. But it was deemed a very risky and imprudent exhibition by the cautious men of the time. An old river chronicler in speaking of it said, "Nothing ought to induce such running but a case of life and death."

"Before the panting of the steam-engine was heard on these (Western) waters," says *Lloyd's Steamboat Directory*, "the only river contrivance for conveyance of freight and passengers was a species of boat called a barge, or *bargee*, according to French nomenclature. The length of this boat was from seventy-five to one hundred feet; breadth of beam from fifteen to twenty feet; capacity from sixty to one hundred tons. The receptacle for the freight was a large covered coffer,

called the cargo-box, which occupied a considerable portion of the hulk. Near the stern was an apology for a cabin, a straitened apartment six or eight feet in length, in which the aristocracy of the boat, viz., the captain and *patroon*, or steersman, were generally quartered at night. The roof of the 'cabin' was slightly elevated above the level of the deck, and on this eminence the helmsman was stationed to direct the movements of the boat. The barge was commonly provided with two masts, though some carried but one. The chief reliance of the boatmen was on a square sail forward, which when the wind was in the right direction accelerated the progressive motion of the boat and relieved the hands, who at other times were obliged to propel the barge by such laborious methods as rowing, warping, and the cordelle."

Keel-boating proper was an institution of a later day. The keeled craft were not in general use on the rivers until 1808-9, though all the early river navigation is now referred to under the generic term of keel-boating. Naturally the bargemen became the keel-boatmen; the commercial interests, designs, and working of the two modes were, in fact, about the same, and, for all the purposes of the present sketch, essentially alike. But keel-boats were much of an advance over barges in celerity and diminution of time and labor. They were longer and narrower, had a keel-shaped, instead of a broad flat bottom, carried as much freight on a less amount of current expenses, furnished less resisting surface, and therefore were more easily handled in cross currents, bends, and other places requiring speedy movement, made quicker trips, and for several other good reasons became in a short time after their introduction the universal freight-carriers, holding their position as such for nearly twenty years, or until the running of steam-craft came with a sufficient frequency and tonnage to supply the demands of commerce, when of course they were abandoned for the superior advantages offered by steam-boats. They were also generally quite artistically built, presenting a neat appearance on the water, in many respects resembling the canal-boats of this day. As a rule, however, the river-craft was unshapely and cumbrous. The lines of least resistance were not then understood, and different kinds of boats were used according to the needs of the locality and the nature of the freight, including canoes, pirogues, barges, keel- and flat-boats. "The Indian birch canoe was ordinarily thirty feet long, four feet wide in the broadest part, two and a half feet deep in the centre, and two feet deep at each end. The pirogue was larger than the canoe, but smaller than the other boats. The barge was wider, but not so long

as the keel-boats, and was chiefly used between St. Louis and New Orleans. The barges sometimes had a capacity of forty tons. The boats designed for the Indian trade were of peculiar construction, from forty to sixty feet in length, with low sides and a bottom almost flat. Their narrowness and light draught fitted them for swift or shallow water. In ascending the river, the boatmen, in order to prevent a useless expenditure of strength, avoided the rapid current of the channel of the river and sought the slower water near the shore; and in order that they might approach close to the bank, the boats were constructed with a flat bottom and provided with short oars. The low side of the boat, by bringing the oarlock nearer to the water, lessened the resistance, and consequently lightened the labors of the rowers. The capacity of these boats varied from fifteen thousand to twenty-five thousand pounds, and the size of the crew was determined by the allowance of one boatman for every three thousand pounds of freight. The oarsmen were generally Creoles and French mulattoes.

"The crookedness of the Mississippi between St. Louis and New Orleans necessitated long détours. In one place a circuit of fifty-four miles represented an actual gain of only five miles; at another point the neck of a bend thirty miles long was but a mile and a half across. In ascending these bends the boats always avoided the concave side of the stream, for the double purpose of escaping the force of the current and the peril of caving banks. Large masses of earth undermined by the action of the water sometimes fell suddenly into the river, and a boat overtaken by such an accident was in imminent danger of submersion. In order to shun this risk, as well as to avoid the main current of the stream, the boats kept close to the convex bank of the bends. The extreme crookedness of the river necessitated frequent crossings, and it has been stated that the number of times a boat was compelled to cross the Mississippi in the ascent from New Orleans to St. Louis was three hundred and ninety. These crossings, and the distance that a heavily freighted boat would be borne down stream in going from one side to the other, added nearly five hundred miles to the length of the voyage. In descending the river the boatmen reversed their course of action, and followed the concave side of the bends in order to avail themselves of the effective aid of the current. In violent storms or high winds, when it was not safe to move, the boats were fastened to trees on the opposite bank.

"A voyage from St. Louis to New Orleans and return occupied from four to six months; consequently

only two round trips could be made in a year. Even with the assistance of sails, a row-boat could not make the ascent in less than seventy or eighty days. A keel-boat could be brought by cordelle from Louisville to St. Louis in twenty-five days."¹ In addition to the use of sails and oars, "warping," "cordelling," and "poling" were employed as means of propulsion. "In 'warping' a long rope was fastened to some immovable object on the bank, and then the crew, standing in the bow and pulling hand over hand, drew the boat forward; the hands of the crew serving the purposes of a capstan. The progress was slow but steady. In 'cordelling' the crew walked along the bank and drew the boat after them by means of a rope. It was, in fact, identical with canal-boat navigation, except that the motive-power was men instead of mules or horses. 'Poling' consisted in pushing the boat up stream by the aid of long poles. The men successively took their places at the bow, and firmly resting their poles on the bed of the river, walked towards the stern pushing the boat forward. Whenever a man reached the stern, he pulled up his pole and ran rapidly back to resume his place in the line. Hence the spaces on each side of the boat where this constant circuit was going on were called the 'running boards.'"²

The boatmen were a class by themselves, a hardy, adventurous, muscular set of men, inured to constant peril and privation, and accustomed to severe and unremitting toil. For weeks, and even months at a time, they saw no faces but those of their companions among the crew or in some passing craft, and their days from dawn until dark were spent in constant work at the oars or poles, or tugging at the rope either in the boat or on the shore, as they were employed either in warping or cordelling. At night, after "tying up," their time was generally spent in gaming, carousing, story-telling, etc., the amusements of the evening being varied not infrequently with a fisticuff encounter.

The labor involved in their occupation was of the severest character, and the constant and arduous exercise produced in most of them an extraordinary physical development. So intense was the exertion usually required to propel and guide the boat that a rest was necessary every hour, and from fourteen to twenty miles a day was all the progress that could be made against the stream. The sense of physical power which naturally accompanied the steady exercise of the muscles inspired the average boatman not merely with insensibility to danger, but a bellicosity

of disposition which seems to have been characteristic of his class. The champion pugilist of a boat was entitled to wear a red feather in his cap, and this badge of pre-eminence was universally regarded as a challenge to all rivals.³

In summer the boatmen were usually stripped to the waist, and their bodies, exposed to the sun, were tanned to the swarthy hues of the Indian; in winter they were clothed in buckskin breeches and blankets, (capots), a grotesque combination of French and Indian styles which gave their attire a wild and peculiar aspect. Their food was of the simplest character. "After a hard day's toil," says Monette,⁴ "at night they took their 'fillee' or ration of whiskey, swallowed their homely supper of meat half burned and bread half baked, and retiring to sleep they stretched themselves upon the deck without covering, under the open canopy of heaven, or probably enveloped in a blanket, until the steersman's horn called them to their morning 'fillee' and their toil.

"Hard and fatiguing was the life of a boatman, yet it was rare that any of them ever changed his vocation. There was a charm in the excesses, in the frolics, and in the fightings which they anticipated at the end of the voyage which cheered them on. Of weariness none would complain, but rising from his bed at the first dawn of day, and reanimated by his morning draught, he was prepared to hear and obey the wonted order, 'Stand to your poles and set off!' The boatmen were masters of the winding horn and the fiddle, and as the boat moved off from her moorings, some, to cheer their labors or to 'scare off the devil and secure good luck,' would wind the animating blast of the horn, which, mingling with the sweet music of the fiddle and reverberating along the sounding shores, greeted the solitary dwellers on the banks with news from New Orleans."

Levity and volatility were conspicuous traits of the boatman's character, and while he was willing to perform excessive and long-continued labor, he would render such service only to a "patroon" whom he respected. In fine, the average keel-boatman was cool, reckless, courageous to the verge of rashness,

³ "Their athletic labors gave strength incredible to their muscles, which they were vain to exhibit, and fist-fighting was their pastime. He who could boast that he had never been whipped was bound to fight whoever disputed his manhood. Keel-boatmen and bargemen looked upon flat-boatmen as their natural enemies, and a meeting was the prelude to a 'battle-royal.' They were great sticklers for 'fair play,' and whosoever was worsted in battle must bide the issue without assistance."—*Monette's History of the Valley of the Mississippi*, p. 20.

¹ Professor S. Waterhouse.

² *Ibid.*

and pugnacious, but, notwithstanding certain grave shortcomings, an unmitigated hater of all the darker shades of sin and wrong-doing, such as stealing, robbing, and murdering for plunder, crimes that in his day were frequently and boldly perpetrated along the sparsely-settled banks and at lonely islands of the Ohio and Mississippi Rivers.

"The departure of a boat was an important incident in the uneventful village life of St. Louis. On such occasions it was customary for their friends to assemble on the banks to bid adieu to the *voyageurs*. Sometimes half the population of the village was present to tender their wishes for a prosperous trip.

"For years it was believed that no keel-boat could ascend the Missouri. The rapidity of the current was supposed to be an insuperable obstacle to navigation by such craft. The doubt was settled by the enterprise of George Sarpy, who sent a keel-boat under Capt. Labrosse to try the difficult experiment of ascending the Missouri. The success of the undertaking marked a signal advance in Western navigation, and supplied the merchants of St. Louis with new facilities for the transportation of their goods,"¹ while it also greatly extended the operations of the boatmen and increased their numbers.

Of the keel-boatmen, when classed by nativity, the Kentuckians bore the most unenviable reputation, on account of the fact that they were generally characterized by excessive recklessness and bellicoseness, and we are told so gloomy was the reputation of the Kentuckians that travelers were liable at every place (except the miserable wayside taverns) to have the door shut in their face on applying for refreshments or a night's lodgings. Nor would any plea or circumstance alter the decided refusal of the master or mistress, unless it might be the uncommonly genteel appearance and the equipage of the traveler.

For a similar reason, possibly, badly-built boats, with poor or injured plank in their bottoms, which had been sold to unsuspecting or inexperienced persons, were known as "Kentucky boats."

"In 1807," says a writer on "Early Navigators" in a St. Louis newspaper, "a Mr. Winchester's boat struck a rock in the Ohio, below Pittsburgh a short distance, and one of her bottom planks being badly stove in, she sunk immediately, having on board a valuable cargo of dry-goods. The proprietor, not being with the boat at the time, conceived, when informed of the disaster, that it had been caused by carelessness of the person to whom he had intrusted the boat and cargo, and brought suit against him for

damages; and indeed it was somewhat evident, from all that could be ascertained, that the *patroon* had no business in the neighborhood of the rock, and could and should have avoided it. The defendant's position was rather gloomy, but his resources proved equal to the emergency. The suit was before (Dr.) Justice Richardson, of Pittsburgh, who himself had had some sad experiences with Kentucky boats. The defendant knowing or being informed of this, hired two men, went down to the wreck, and with some difficulty procured several pieces of the plank that had given way. On the day of trial, after the plaintiff had, as every one present thought, fully established his charges and demands, the justice asked the defendant if he had any rebutting evidence to offer. 'Yes, your Honor,' he replied, 'I have;' and reaching down under his seat, he drew out the pieces of plank aforementioned and said, 'I have no evidence to offer, your Honor, except these pieces, which I can prove to your Honor are part of the same plank, the breaking of which caused the boat to sink, which, I say, would not have occurred if the plank had been reasonably sound. Look at them! Your Honor will see that it was my misfortune to have been placed in charge of one of these d—d Kentucky boats.' Without in any way noticing the blasphemous expression, the justice examined the pieces, which proved to be thoroughly rotten and defective, unfit to be put anywhere, much less in the bottom of a boat. After hearing from the defendant's helpers that these pieces were taken from the boat in question, at the identical place where she had broken, the court delivered its mind as follows: 'This court had the misfortune once to place a valuable cargo on a Kentucky boat, not knowing it to be such, which sunk and went down in seventeen feet of water, this court verily believed, by coming in contact with the head of a yellow-bellied catfish, there being no snag, rock, or other obstruction near her at the time; and this court, being satisfied of the premises in this cause, doth order that the same be dismissed at plaintiff's costs, to have included therein the expenses of the defendant in going to and returning from the wreck, for the purpose of obtaining such damnable and irrefutable evidence as this bottom plank has furnished.' And the bottom plank was deemed proof so conclusive, and the prejudice against Kentucky boats in the public mind was so extended and settled, that it was thought inadvisable to urge the suit any further."

Besides the ordinary dangers of the treacherous currents, "cave-ins," shoals and snags of the Mississippi, and occasional assaults from prowling savages, the early boatmen were often called upon to face the more

¹ Professor Waterhouse.

serious peril of an attack by river pirates. "Many a boatload of costly merchandise intended for the warehouses of St. Louis never reached its destination. The misdeeds of the robbers were not always limited to the seizure of goods. The proof of rapine was often extinguished by the murder of the witnesses. The caves of the pirates were rich with the spoils of a plundered commerce, and the depredations became more frequent in proportion to the impunity with which they were committed. At last the interruption of trade became so grave and the danger to life so imminent that the Governor-General of Louisiana was constrained to take more effective steps for the suppression of the bandits. An official order excluding single boats from the Mississippi granted the privilege of navigation only to flotillas that were strong enough to repel their assailants. The plan succeeded and the pirates were ultimately driven from their haunts. The arrival at St. Louis in 1788 of the flotilla of ten boats was a memorable occasion in the annals of the village."¹

The arrival of this flotilla gave the name of "*l'année des dix bateaux*" to the year 1788, which was the last year of Don Francisco Cruzat's second administration. In the year before, M. Beausoliel, a New Orleans merchant, had been captured by pirates near the island that still bears his name, and subsequently escaping, recaptured his boat and killed the pirates. He then returned to New Orleans and reported his experience to the Governor, who thereupon issued the order already referred to that all boats bound for St. Louis the following spring should sail together for mutual protection. This was carried out, and the flotilla "*des dix bateaux*" made the voyage, capturing at Cottonwood Creek the camp and supplies of the pirates, with a valuable assortment of miscellaneous plunder which had been taken from many boats on previous occasions.

"In an advertisement published in 1794 the patrons of a special line of boats were assured of their safety. The statements which were made to allay apprehensions showed that the fear of pirates was not then groundless. A large crew skillful in the use of arms, a plentiful supply of muskets and ammunition, an equipment on each boat of six one-pound cannon and a loop-holed rifle-proof cabin for the passengers were the means of defense provided, on which were based the hopes of security. So formidable an array of weapons was not well calculated to inspire timid natures with confidence in the safety of the voyage."²

The boatmen were very active and energetic in rooting out the nests of pirates, and not infrequently

administered lynch-law in summary fashion. One of the most sanguinary incidents of this character was that which occurred in 1809.

Island 94 (called Stack Island, or Crows' Nest), one hundred and seventy miles above Natchez, was notorious for many years for being a den for the rendezvous of a gang of horse-thieves, counterfeiters, robbers, and murderers. It was a small island located in the middle of Nine-Mile Reach. From hence they would sally forth, stop passing boats, and murder the crew, or if this appeared impracticable, would buy their horses, flour, whiskey, etc., and pay for them. Their villainies became notorious, and several years' pursuit by the civil law officers failed to produce any results in the way of punishment or eradication. But they were at length made to disappear by an application of lynch-law from several keel-boat crews. The full history of this affair has never been fully unfolded, and perhaps never will be, but for terrible retribution and complete annihilation, outside of any authorized decrees, it never had its equal in any administration of lynch-law, the recitals of which cast so many shadows on the annals of the West and South. The autumn and winter immediately preceding the month of April, 1809, had been marked by numerous atrocities on the part of the bandits of the Crows' Nest. Several boats and their entire crews had disappeared at that point, and no traces could be found of them afterward. The country around and up and down the river had been victimized and robbed in almost every conceivable form by depredators whose movements could be satisfactorily traced as tending towards the Crows' Nest. In that month it occurred that seven keel-boats were concentrated at the head of Nine-Mile Reach, within speaking distance of each other, being detained by heavy contrary winds. The crews of these were well informed as to the villainies of those who harbored on the little island a few miles below them. Many of them had friends and old comrades who were known to have been on the missing boats. By what means it was brought about, at whose suggestion or influence was never made known, but one dark night, a few hours before daylight, eighty or ninety men from these wind-bound craft, well armed, descended silently in their small boats to the Crows' Nest and surprised its occupants, whom they secured after a short encounter, in which two of the boatmen were wounded and several of the robbers killed. Nineteen men, a boy of fifteen, and two women were thus captured. Shortly after sunrise the boy (on account of his extreme youth) and the two women were allowed to depart. What was the manner of punishment meted out to the men, whether shot or hanged,

¹ Professor Waterhouse.

² *Ibid.*

was never ascertained with any degree of certainty. None but the boatmen, the boy, and the two women, however, ever left the island alive, and by twelve o'clock noon the crews were back to their boats, and the wind having calmed the night previous they shoved out, and by sunset were far down the river and away from the scene of the indisputably just though unlawful retribution. Two years afterward came the terrible earthquake, which, with the floods of 1811-13, destroyed every vestige of the Crows' Nest, leaving nothing of it to be seen but a low sandbar, and with it passed away from public sight and mind all signs of its bandits, their crimes, and the awful doom that befell them.

Some years later a new type of river desperadoes appeared, who, if tradition and history do not greatly belie them, were not much more exemplary in their conduct than the pirates and buccaneers who preceded them. "Mike" Fink in particular, the model hero of the Mississippi boatmen, who has figured on the pages of popular romance, was a ruffian of surpassing strength and courage. His rifle was unerring, and his conscience was as easy and accommodating as a man in his line of business could wish. His earliest vocation was that of a boatman, but he had belonged to a company of government spies or scouts whose duty it was to watch the movements of the Indians on the frontier. At that time Pittsburgh was on the extreme verge of the white population, and the spies, who were constantly employed, generally extended their reconnoissances forty or fifty miles west of that place. Going out singly and living in Indian style, they assimilated themselves to the habits, tastes, and feelings of the Indians. In their border warfare the scalp of a Shawnee was esteemed about as valuable as the skin of a panther. "Mike" Fink, tiring of this after a while, returned to the water life; and engraving several other occupations on that of the boatman, put all mankind, except his friends and employer, to whom he was honest and faithful, under contribution, and became nothing more nor less than a freebooter. "Mike," having murdered "Joe" Stevens, was killed by one of Joe's brothers. James Girty, another of the famous Mississippi boatmen, was represented as a "natural prodigy," not "constructed like ordinary men, for, instead of ribs, bountiful nature had provided him with a solid bony casing on both sides, without any interstices through which a knife, dirk, or bullet could penetrate." He possessed amazing muscular power, and courage in proportion, and his great boast was that he had "never been whipped."¹

The trade conducted by these boats was of considerable proportions. As early as 1802 the annual exports of the Mississippi valley amounted to \$2,160,000, and the imports to \$2,500,000. Up to 1804 the annual value of the fur trade of Upper Louisiana amounted to \$203,750. The province then exported lead, salt, beef, and pork, and received Indian goods from Canada, domestics from Philadelphia and Baltimore, groceries from New Orleans, and hardware from the Ohio River.

Short notices in the newspapers of that day, announcing, "Wanted to freight, from this place to Louisville, about sixteen hundredweight, apply at the printing-office,"² or "thirteen boatmen are wanted to navigate a few boats to New Orleans, to start about the 15th of next month; the customary wages will be given,"³ or that "the barge 'Scott' will start from St. Louis on the 1st of March, and will take freight for Louisville or Frankfort, in Kentucky, on reasonable terms, apply to John Steele,"⁴ are too laconic to more than indicate the existence of a commerce, without affording any reliable data of its dimensions or the appliances by which it was carried on.⁵

⁴ *Ibid.*, Dec. 22, 1809.

⁵ "FREIGHT FROM NEW ORLEANS TO KASKASKIA IN 1741.—We doubt whether so unique or so old a bill of lading can be found in the valley of the Mississippi as that which follows. It is a translation from a bill of sale executed the 18th of May, 1741, by Barois, notary in Kaskaskia. What would our steamboatmen say now at receiving such a price for an old salt-kettle, when they are in the practice of transporting one thousand to twelve hundred tons of goods between the ports of New Orleans and St. Louis, and are in a very bad humor if by chance they fail to make the trip in six days? 'And has been further agreed that said Mettager promises to deliver to said Bienvena, at the landing-place of this town of Kaskaskia, at his own risks, the fortunes of war excepted, an iron kettle, weighing about two hundred and ninety pounds, used for the manufacture of salt, and which said Bienvena owns in New Orleans, and said Bienvena promises to pay to said Mettager, for his salary and freight, after the delivery of said kettle, a steer in good order, three bushels of salt, two hundred pounds of bacon, and twenty bushels of Indian corn, under the penalty of all costs, etc.'"—*Republican*, Nov. 30, 1850.

PETER PROVENCHERE'S BILL OF LADING.

Shipped by Peter Provenchere, of the town of St. Louis, merchant, on board the boat "J. Maddison," whereof Charles Quirey is master, now lying at the landing before the town of St. Louis and ready immediately to depart for Louisville, Ky.

F. T. Six packs of deer-skins, marked and numbered as per margin, and a barrel of bear-oil, containing about thirty-

96 two gallons, all in good order and well conditioned, which I promise to deliver in like good order and condition

99 (unavoidable accident excepted) unto Mr. Francis Tarascon, merchant, Louisville, or to his assigns.

109 And, moreover, I acknowledge to have of the said Peter Provenchere a note of Peter Menard on Louis

¹ Lloyd's Steamboat Directory, p. 38.

At the period of the introduction of steam upon the Mississippi, 1817, the whole commerce from New Orleans to the upper country was transported in about twenty barges of an average of one hundred tons each, and making but one trip in a year. The number of keel-boats on the Ohio was estimated at one hundred and sixty, carrying thirty tons each. The whole tonnage was estimated at between six thousand and seven thousand.

The advent of steam, of course, superseded the use of the keel-boat, and the picturesque features of the earlier navigation passed away. In the presence of the mighty energy which has revolutionized the commerce of the world, the warp and cordelle, the pole and running-board forever disappeared from the bosom of the Mississippi.

"The commerce of St. Louis had humble beginnings. The facilities for transportation were limited to the rudest row-boats, but in course of time there has grown from the birch canoe a vast inland fleet, which in 1880 bore to the port of St. Louis about two million tons of merchandise."¹

Steamboating.—In "The First Steamboat Voyage on the Western Waters," John H. B. Latrobe says, "Whether steam could be employed on the Western rivers was a question that its success between New York and Albany was not regarded as having entirely solved, and after the idea had been suggested of building a boat at Pittsburgh, to ply between Natchez and New Orleans, it was considered necessary that investigations should be made as to the currents of the rivers to be navigated in regard to the new system." These investigations were undertaken by Nicholas J. Roosevelt, who repairing in May, 1809, to Pittsburgh, there constructed a flat-boat in which he proceeded to New Orleans for the purpose of studying and investigating the new conditions of navigation to which the steam system was about to be subjected. These investigations proved entirely satisfactory, not

only to Mr. Roosevelt but also to Messrs. Fulton and Livingston, who were to furnish the capital, and Mr. Roosevelt in 1811 took up his residence in Pittsburgh, to superintend the construction of the boat and engine that were to open the Western waters to the new system of steam navigation.

The "New Orleans" was the first steamboat constructed on Western waters. She was one hundred and sixteen feet in length, with twenty feet beam, and her engine had a thirty-four-inch cylinder, with boiler and other parts in proportion. She was about four hundred tons burden, and cost in the neighborhood of thirty-eight thousand dollars. There were two cabins, one aft for ladies, and a larger one forward for gentlemen. The ladies' cabin, which was comfortably furnished, contained four berths. The "New Orleans" was launched in March, 1811; left Pittsburgh in October of the same year; passed Cincinnati October 27th, and reached Louisville the next day, in sixty-four hours' running time from Pittsburgh. The water was too low for her to cross the falls, and while at Louisville waiting for sufficient water she made several short excursions. She also made one trip to Cincinnati, arriving there in forty-five hours' running time from Louisville, Nov. 27, 1811. While here she made an excursion trip to Columbia, charging one dollar per head. Shortly afterward, the river rising, she left this place for New Orleans, December, 1811. Her voyage down the river was perilous in the extreme, as shortly after leaving Louisville the great earthquakes began. She ran between Natchez and New Orleans, her trips averaging about three weeks. July 13, 1814, she landed on her upward voyage two miles above Baton Rouge, on the opposite side, and spent the night taking in wood, the night being thought too dark to run with safety. At daylight the next morning she got up steam, and on starting the engine it was found she would not move ahead, but kept swinging around. The water had fallen during the night, and the captain found she was resting on a stump. An anchor was put out on her starboard quarter, and by the aid of her capstan she was soon hove off; but on clearing her it was discovered she had sprung a leak and was sinking rapidly. She was immediately run into the bank and tied fast, but sunk so rapidly her passengers had barely time to get off with their baggage.²

- 111 Lorimier, inhabitant of Cape Girardeau, for one thousand pounds of receiptable deer-skins, the said note transferred to my order, and I bind and engage myself to ask of the said Louis Lorimier the payment of the said note, and if I reclaim it to deliver to the said Francis Tarascon or assign the thousand pounds of deer-skins, together with the six packs and the barrel now received, and in case of no payment to return the note to Mr. Tarascon, he or they paying freight.

In witness whereof I have set my hand to three bills of lading, all of the same tenor and date, one being accomplished, the others null and void.

CHARLES QUIREY.

Test, WILLIAM C. CARR.
St. Louis, the 8th, A.D. 1809.

¹ Professor Waterhouse.

² The "Navigator," an old and rare book printed at Pittsburgh, Pa., in the early part of this century, records many interesting facts concerning the "early navigators." From this source we learn something of the expenses and profits of the "New Orleans" when a packet between Natchez and New Orleans. This old chronicle says, "Her accommodations are good and

The history of the early steamboats following the "New Orleans" will be found interesting, as showing

her passengers generally numerous, seldom less from Natchez than from ten to twenty, at eighteen dollars per head, and when she starts from New Orleans generally from thirty to fifty, and sometimes as many as eighty passengers, at twenty-five dollars each to Natchez. According to the observations of Capt. Morris, of New Orleans, who attended her as pilot several trips, the boat's receipts for freight, upwards, have averaged the last year seven hundred dollars, passenger money nine hundred dollars; downward, three hundred dollars for freight, five hundred for passengers. She performs thirteen trips in the year, which, at two thousand four hundred dollars per trip, amount to thirty-one thousand two hundred dollars. Her expenses are, twelve hands at twenty dollars per month, four thousand three hundred and twenty dollars; captain, one thousand dollars; seventy cords of wood each trip, at one dollar and seventy-five cents, which amounts to one thousand five hundred and eighty-six dollars; in all six thousand nine hundred and six dollars. It is presumed that the boat's extra trips for pleasure or otherwise, out of her usual route trade, have paid for all the expenses of repairs, and with the profits of the bar-room, for the boat's provisions, in which case there will remain a net gain of twenty-four thousand two hundred and ninety-four dollars for the first year. The owners estimate the boat's value at forty thousand dollars, which gives an interest of two thousand four hundred dollars; and by giving one thousand eight hundred and ninety-four dollars more for furniture, etc., we have the clear gain of twenty thousand dollars for the first year's labor of the steamboat 'New Orleans.'

"The steamboat goes up in about seven or eight days, and descends in two or three, stopping several times for freight, passengers, etc. She stays at the extremes of her journey, Natchez and New Orleans, about four or five days to discharge and take in loading."

The first sea-vessel on the Western waters was a brig called the "St. Clair," one hundred and twenty tons burden, built at Marietta, Ohio, by Commodore Preble, in 1798 or '99, who went down the rivers in her to New Orleans, from thence to Havana and Philadelphia, and at the latter port he sold her. From 1799 to 1805 there were built at Pittsburgh four ships, three brigs, and several schooners, but misfortunes and accidents happening to most of them in going down the rivers to the gulf, ship-building at Pittsburgh and the upper Ohio went into a decline, until revived some years after in the shape of steamboat architecture. One of these ships took out her clearance papers at Pittsburgh for Leghorn, Italy, and in illustrating the commercial habits and enterprise of the American people, Henry Clay, in a speech in Congress, related the following anecdote about her: When the vessel arrived at Leghorn, the captain presented his papers to the custom officer there, but he would not credit them, and said to the master, "Sir, your papers are forged, there is no such place as Pittsburgh in the world, your vessel must be confiscated." The trembling captain asked if he had a map of the United States, which he fortunately had, and produced, and the captain, taking the officer's finger, put it down at the mouth of the Mississippi, then led it a thousand miles up that river, and thence another thousand up to Pittsburgh, and said, "There, sir, is the port whence my vessel cleared from." The astonished officer, who, before he saw the map, would as soon have believed the vessel had been navigated from the moon, exclaimed, "I knew that America could show many wonderful things, but a fresh-water seaport is something I never dreamed of."

how quickly the innovation made itself felt, and how speedily the new system obliterated the old.

The second boat was the "Comet," of twenty-five tons, owned by Samuel Smith, built at Pittsburgh by Daniel French; stern-wheel and vibrating cylinder, French's patent granted in 1809. The "Comet" made a voyage to Louisville in 1813, and to New Orleans in the spring of 1814; made two trips to Natchez, and was sold, the engine being put up on a plantation to drive a cotton-gin. Third boat, the "Vesúvius," three hundred and forty tons, built at Pittsburgh by Robert Fulton, and owned by a company belonging to New York and New Orleans; left Pittsburgh for New Orleans in the spring of 1814, commanded by Capt. Frank Ogden. She started from New Orleans, bound for Louisville, the 1st of June, 1814, and grounded on a bar seven hundred miles up the Mississippi, where she lay until the 3d of December, when the river rose and she floated off. She returned to New Orleans, where she ran aground the second time on the batture, where she lay until the 1st of March, when the river rose and floated her off. She was then employed some months between New Orleans and Natchez, under the command of Capt. Clemment, who was succeeded by Capt. John DeHart. Shortly after she took fire near New Orleans and burned to the water's edge, having a valuable cargo aboard. The fire was supposed to have been communicated from the boiler, which was in the hold. The bottom was raised and built upon at New Orleans, and she went into the Louisville trade, but was soon after sold to a company at Natchez. On examination subsequent to the sale she was pronounced unfit for use, was libeled by her commander, and sold at public auction. Fourth boat, the "Enterprise," forty-five tons, built at Brownsville, Pa., by Daniel French, under his patent, and owned by a company at that place, made two trips to Louisville in the summer of 1814, under the command of Capt. J. Gregg. On the 1st of December she took in a cargo of ordnance stores at Pittsburgh, and left for New Orleans, commanded by Capt. Henry M. Shreve, and arrived at New Orleans on the 14th of the same month. She was then dispatched up the river in search of two keel-boats laden with small-arms which had been delayed on the river. She got twelve miles above Natchez, where she met the keels, took their masters and cargoes on board, and returned to New Orleans, having been but six and a half days absent, in which time she ran six hundred and twenty-four miles. She was then for some time actively employed in transporting troops. She made one trip to the Gulf of Mexico as a cartel, and one trip to the rapids of the

Red River with troops, and nine voyages to Natchez. She left New Orleans for Pittsburgh on the 6th of May, and arrived at Shippingport on the 30th, twenty-five days out, being the first boat that ever arrived at that port from New Orleans. She then proceeded on to Pittsburgh, and the command was given to D. Worley, who lost her in Rock Harbor, at Shippingport. Fifth boat, the "Ætna," three hundred and forty tons, built at Pittsburgh, and owned by the same company as the "Vesuvius," left Pittsburgh for New Orleans in March, 1815, under the command of Capt. A. Gale, and arrived at that port in April following; was placed in the Natchez trade; was then placed under the command of Capt. Robinson De Hart, who made six trips on her to Louisville.

The sixth boat was the "Zebulon M. Pike,"¹ built by Mr. Prentiss at Henderson, Ky., on the Ohio River, in 1815. The "Pike" deserves special mention, as she was the first steamboat to ascend the Mississippi above the mouth of the Ohio, and the first to touch at St. Louis. Her first trip was made in the spring of 1815 to Louisville, Ky., two hundred and fifty miles in sixty-seven hours, making three and three-quarter miles per hour against the current. On her voyage to St. Louis she was commanded by Capt.

¹ Named after Zebulon Montgomery Pike, formerly a brigadier-general in the United States army, who was born at Lambertton, N. J., Jan. 5, 1779, and killed at York, near Toronto, Upper Canada, on the 27th of April, 1813. Zebulon, his father, was born in New Jersey in 1751, and died at Lawrenceburg, Ind., July 27, 1834. He was a captain in the Revolutionary army, was present at St. Clair's defeat in 1791, and was brevet lieutenant-colonel in the United States army July 10, 1812. His son was appointed a cadet in the regiment of his father March 3, 1799, and was made first lieutenant in November and captain in August, 1806. Skilled in mathematics and in the languages, he was appointed after the purchase of Louisiana to conduct an expedition to trace the Mississippi to its source. Leaving St. Louis, Aug. 9, 1805, he performed this service satisfactorily, returning after eight months and twenty days of exploration and exposure to constant hardship. In 1806-7 he was engaged in geographical explorations of Louisiana, during which, being found on Spanish territory, he with his party was taken to Santa Fé, and after a long examination and the seizure of his papers was escorted home, arriving at Natchitoches July 1, 1807. In 1810 he published a narrative of his expeditions, with valuable maps and charts. Receiving the thanks of the government, he was made major of the Sixth Infantry, May 3, 1808; lieutenant-colonel of the Fourth Infantry, Dec. 31, 1809; deputy quartermaster-general, April 3, 1812; colonel Fifteenth Infantry, July 3, 1812; and brigadier-general, March 12, 1813. Early in 1813 he was assigned to the principal army as adjutant and inspector-general, and was selected to command an expedition against York, the capital of Upper Canada. Landing under a heavy fire, he charged the enemy in person, and put them to flight, carried one battery by assault, and was moving to the attack of the main works, when the explosion of the British magazine mortally wounded him, speedily causing his death on April 27, 1813.

Jacob Read. "The hull," says Professor Waterhouse, "was built on the model of a barge. The cabin was situated on the lower deck, inside of the 'running-boards.'

"The boat was driven by a low-pressure engine, with a walking-beam. The wheels had no wheel-houses. The boat had but one smoke-stack. In the encounter with a rapid current the crew reinforced steam with the impulse of their own strength. They used the poles and running-boards just as in the push-boat navigation of barges. The boat ran only by day, and was six weeks in making this first trip from Louisville to St. Louis. It landed at the foot of Market Street Aug. 2, 1817. The inhabitants of the village gathered on the bank to welcome the novel visitor. Among them was a group of Indians. As the boat approached, the glare of its furnace fires and the volumes of murky smoke filled the Indians with dismay. They fled to the high ground in the rear of the village, and no assurances of safety could induce them to go one step nearer to the object of their fears. They ascribed supernatural powers to a boat that could ascend a rapid stream without the aid of sail or oar. Their superstitious imaginations beheld a monster breathing flame and threatening the extinction of the red man. In a symbolic sense, their fancy was prophetic: the progress of civilization, of which the steamboat may be taken as a type, is fast sweeping the Indian race into the grave of buried nations."

The first notice we have of the expected arrival of the "Pike" at St. Louis is the following announcement in the *Missouri Gazette* of the 14th of July, 1817:

"A steamboat is expected here from Louisville to-morrow. There is no doubt but what we shall have a regular communication with Louisville, or at least the mouth of the Ohio, by a steam packet."

On the 2d of August the *Gazette* published this notice:

"The steamboat 'Pike' will be ready to take in freight to-morrow for Louisville or any of the towns on the Ohio. She will sail for Louisville on Monday morning, the 4th August, from ten to twelve o'clock. For freight or passage apply to the master on board.

"JACOB READ, *Master.*"

The return trip of the "Pike" is also mentioned in the *Gazette* of September 2d as follows:

"The steamboat 'Pike' will arrive in a day or two from Louisville. This vessel will ply regularly between that place and this, and will take in her return cargo shortly after her arrival. Persons who may have freight, or want passage for Louisville or any of the towns on the Ohio, will do well to make early application to the master on board. On her passage from this to Louisville she will make a stop at Herculanum, where Mr. M. Austin will

act as agent; also at Ste. Genevieve and Cape Girardeau. At the former place Mr. Le Meilleur and at the latter Mr. Steinbeck will act as agents, with whom freight for the 'Pike' may be deposited and shipped.

"Persons wanting passage in this vessel will apply as above. She will perform her present voyage to and from Louisville in about four weeks, and will always afford an expeditious and safe passage for the transportation of freight or passengers.

"JACOB READ, *Master.*"

Again on the 22d of November the *Gazette* announced that "the steamboat 'Pike' with passengers and freight arrived here yesterday from Louisville."

The "Pike" had a capacity of thirty-seven tons, old government tonnage. She made a trip to New Orleans, and several between Louisville and Pittsburgh, after which she was engaged in the Red River trade. She was snagged in March, 1818.¹

¹ The seventh boat on the Mississippi was the "Dispatch," twenty-five tons, built at Brownsville, Pa., by the same company that owned the "Enterprise," and under French's patent. She made several trips from Pittsburgh to Louisville, and one to New Orleans and back to Shippingport, where she was wrecked and her engine taken out. She was commanded by Capt. J. Gregg.

The eighth boat was the "Buffalo," three hundred tons, built at Pittsburgh by Benjamin H. Latrobe, Sr., the distinguished architect of the capitol at Washington. She was afterwards sold at sheriff's sale in Louisville for eight hundred dollars.

We find in the *American Weekly Messenger*, published in Philadelphia, July 2, 1814, the following letter, which relates the circumstances of the launch of the steamboat "Buffalo":

"PITTSBURGH, June 3, 1814.

"We omitted to mention that the steamboat 'Buffalo' was safely launched on the 13th ult. from the yard of Mr. Latrobe. This boat, which was intended to complete the line of steamboats from New Orleans to Pittsburgh, is a fine and uncommonly well built vessel of two hundred and eighty-five tons burden, carpenters' measurement, and is intended to trade regularly between Louisville and Pittsburgh once a month as long as the water will admit. She has two cabins and four staterooms for private families, and will conveniently accommodate one hundred persons with beds. Should it be found that her draught of water, which will be about two feet six inches when her machinery is on board, is too great for the summer months, it is intended immediately to put on the stocks another boat or boats of smaller draught and less bulky construction. It is expected that the 'Buffalo' will be finished in time to bring up the cargo of the steamboat 'Vesuvius' from New Orleans."

A succeeding number of the same paper, the *Weekly American Messenger*, contains the following items from St. Louis:

"St. Louis (I. T.), July 2, 1814.

"On Sunday last an armed boat arrived here from Prairie du Chien, under the command of Capt. John Sullivan, with his company of militia and thirty-two men from the gunboat 'Governor Clark,' their terms of service (sixty days) having expired. Capt. Yeizer, who commands on board the 'Governor Clark,' off Prairie du Chien, reports that his vessel is completely manned, that the fort is finished, christened Fort Shelby, and occupied by the regulars, and that all are anxious for a visit from Dickson and his red troops. The Indians are hovering around the

The next vessel after the "Pike" to arrive at St. Louis was the "Constitution," Capt. R. T. Guyard, which arrived Oct. 2, 1817. The steamboat ceased in 1818 to be a novelty on the Mississippi, and be-

village, stealing horses, and have been successful in obtaining a prisoner, a Frenehman, who had gone out to look for his horses."

Ninth boat, the "James Monroe," one hundred and twenty tons, built at Pittsburgh, by Mr. Latrobe, owned by a company at Bayou Sara, and run in the Natchez trade.

Tenth boat, the "Washington," four hundred tons, a two-decker, built at Wheeling, Va., constructed and partly owned by Capt. Henry M. Shreve.* The engine of the "Washington" was built at Brownsville, Pa., under the immediate direction of Capt. Shreve; her boilers were on the upper deck, being the first boat on that plan, a valuable improvement by Capt. Shreve, which is now generally in use. The "Washington" crossed the falls in September, 1816, under the command of Capt. Shreve, bound for New Orleans, and returned to Louisville during the following winter. In the month of March, 1817, she left Shippingport a second time, and proceeded to New Orleans, and returned to Shippingport, being absent only forty-five days. This was the trip that convinced the despairing public that steamboat navigation would succeed on the Western waters.

Eleventh boat, the "Franklin," one hundred and twenty-five tons, built at Pittsburgh, by Messrs. Shiras & Cromwell, engine built by George Evans, left Pittsburgh in December, 1816, was sold at New Orleans, and was subsequently employed in the Louisville and St. Louis trade. She was sunk in the Mississippi, near Ste. Genevieve, in 1819, on her way to St. Louis, commanded by Capt. Revels.

Twelfth boat, the "Oliver Evans" (afterwards the "Constitution"), seventy tons, built at Pittsburgh, by George Evans, engines his patent. She left Pittsburgh in December, 1816, for New Orleans; she burst one of her boilers in April, 1817, off Point Coupée, by which eleven men lost their lives, principally passengers. Owned by George Sulton and others of Pittsburgh.

Thirteenth boat, the "Harriet," forty tons, built at Pittsburgh, constructed and owned by Mr. Armstrong, of Williamsport, Pa. She left Pittsburgh, October, 1816, for New Orleans, crossed the falls in March, 1817, made one trip to New Orleans, and subsequently ran between that place and Muscle Shoals, on the Tennessee River.

Fourteenth boat, the "Kentucky," eighty tons, built at Frankfort, Ky., in 1817, and owned by Hanson & Beswell, engaged in the Louisville trade.

* The *St. Louis Republican* of March 7, 1851, thus notes the death of this eminent steamboat-man: "This worthy citizen died at the residence of his son-in-law in this city yesterday. He was for nearly forty years closely identified with the commerce of the West, either in flat-boats or steam navigation. During the administrations of Adams, Jackson, and Van Buren he filled the post of United States superintendent of Western river improvements, and by the steam snag-boat, of which he was the inventor, contributed largely to the safety of Western commerce. To him belongs the honor of demonstrating the practicability of navigating the Mississippi River with steamboats. He commanded the first steamer that ever ascended that river, and made several and valuable improvements, both of the steam-engine and of the hull and cabins of the Western steamboats. While the British were threatening New Orleans in 1814-15, he was employed by Gen. Jackson in several hazardous enterprises, and during the battle of the 8th of January served one of the field-pieces which destroyed the advancing column led by Gen. Keane. His name has become historically associated with Western river navigation, and will long be cherished by his numerous friends throughout this valley."

came a recognized agent of the commerce of the valley.

The arrivals and departures of vessels about this time were occasionally noticed by the *Gazette* as follows:

Fifteenth boat, the "Governor Shelby," ninety tons, built at Louisville, engine by Bolton & Ebolt, of England. In 1819 she was running very successfully in the Louisville trade.

Sixteenth boat, the "New Orleans," three hundred tons, built at Pittsburgh by Messrs. Fulton & Livingston in 1817, for the Natchez trade, sunk near Baton Rouge, but was raised, and sunk again near New Orleans in February, 1819, about two months after her first sinking.

Seventeenth boat, the "Vesta," one hundred tons, built at Cincinnati in 1817, and owned by Messrs. Bosson, Cowdin & Co. She plied regularly as a packet between Cincinnati and Louisville.

Eighteenth boat, the "George Madison," two hundred tons, built at Pittsburgh in 1818, by Messrs. Voorhees, Mitchell, Rodgers & Todd, of Frankfort, Ky., was engaged in the Louisville trade in 1819.

Nineteenth boat, the "Ohio," four hundred and forty-three tons, built at New Albany, Ind., in 1818, by Messrs. Shreve & Blair, in the Louisville trade.

Twentieth boat, the "Napoleon," three hundred and thirty-two tons, built at Shippingport in 1818, by Messrs. Shreve, Miller & Breckinridge, of Louisville, engaged in the Louisville trade.

Twenty-first boat, the "Voleano," two hundred and fifty tons, built at New Albany, Ind., by Messrs. John & Robinson De Hart in 1818. She was purchased in 1819 by a company at Natchez, and ran between that port and New Orleans.

Twenty-second boat, the "General Jackson," one hundred and fifty tons, built at Pittsburgh in 1818, and owned by R. Whiting, of Pittsburgh, and Gen. Carroll, of Tennessee, in the Nashville trade.

Twenty-third boat, the "Eagle," seventy tons, built at Cincinnati in 1818, owned by James Berthoud & Son, of Shippingport, Ky., in the Natchez trade.

Twenty-fourth boat, the "Hecla," seventy tons, built at Cincinnati in 1818, and owned by Messrs. Honoris & Barbaror, of Louisville, in the Louisville trade.

Twenty-fifth boat, the "Henderson," eighty-five tons, built at Cincinnati in 1818, and owned by Messrs. Bowers, of Henderson, Ky., in the Henderson and Louisville trade.

Twenty-sixth boat, the "Johnson," eighty tons, built at Wheeling, Va., in 1818, and in 1819 engaged in the Yellowstone expedition.

Twenty-seventh boat, the "Cincinnati," one hundred and twenty tons, built at Cincinnati in 1818, and owned by Messrs. Paxon & Co., of New Albany, Ind., in the Louisville trade.

Twenty-eighth boat, the "Exchange," two hundred tons, built at Louisville, Ky., in 1818, and owned by David L. Ward, of Jefferson County, Ky., in the Louisville trade.

Twenty-ninth boat, the "Louisiana," forty-five tons, built at New Orleans in 1818, and owned by Mr. Duplisa, of New Orleans, in the Natchez trade.

Thirtieth boat, the "James Ross," three hundred and thirty tons, built at Pittsburgh in 1818, and owned by Messrs. Whiting & Stackpole, of Pittsburgh, in the Louisville trade.

Thirty-first boat, the "Frankfort," three hundred and twenty tons, built at Pittsburgh in 1818, and owned by Messrs. Voorhees & Mitchell, of Frankfort, Ky., in the Louisville trade.

Thirty-second boat, the "Tamerlane," three hundred and

"On Saturday last the steamboat 'Franklin,' of about one hundred and forty tons burden, arrived here in thirty-two days from New Orleans with passengers and an assorted cargo. The 'Franklin' is admirably calculated for a regular packet-boat to ply between St. Louis and New Orleans. Her stowage is capa-

twenty tons, built at Pittsburgh in 1818, and owned by Messrs. Bogart & Co., of New York, in the Louisville trade.

Thirty-third boat, the "Perseverance," forty tons, built at Cincinnati in 1818, and owned at that place.

Thirty-fourth boat, the "St. Louis," two hundred and twenty tons, built at Shippingport, Ky., in 1818, and owned by Messrs. Hewes, Douglass, Johnson, and others, in the St. Louis trade.

Thirty-fifth boat, the "General Pike," built at Cincinnati in 1818, intended to ply between Louisville, Cincinnati, and Maysville as a passenger packet, and owned by a company at Cincinnati. She was the first steamboat built on the Western waters for the exclusive convenience of passengers. Her accommodations were ample, her apartments spacious and convenient. She measured one hundred feet keel, twenty-five feet beam, and drew only three feet three inches water. The length of her cabin was forty feet, and the breadth twenty-five feet. At one end were six state-rooms, and at the other end eight. Between the two sets of state-rooms was a saloon forty by eighteen feet, sufficiently large for the accommodation of one hundred passengers. The "Pike" was built as an opposition boat to the "Vesta," built in 1817. The rivalry of these boats gave rise to a slang phrase which held its place with the boys at that period, and outlived the career of both boats. There are old citizens of Cincinnati now living who, if they will carry their memories back to the '20's, will remember the boys in the streets and through the commons yelling, "Go ahead, 'Vesta,' the 'Pike' is coming!"

Thirty-sixth boat, the "Alabama," twenty-five tons, built on Lake Ponchartrain, La., in 1818, in the Red River trade.

Thirty-seventh boat, the "Calhoun," eighty tons, built in 1818 at Frankfort, Ky., and afterwards employed in the Yellowstone expedition.

Thirty-eighth and thirty-ninth boats, the "Expedition," one hundred and twenty tons, and "Independence," fifty tons, built near Pittsburgh, Pa., both of which were destined for the Yellowstone expedition, the "Independence" being the first boat that undertook to stem the powerful current of the Missouri. They both arrived at Franklin (Boon's Lick), Howard Co., two hundred miles up the Missouri River from its mouth, in the month of June, 1819.

Fortieth boat, the "Maid of Orleans," one hundred tons, built at Philadelphia in 1818, and owned by a company in New Orleans, and afterwards (in 1819) engaged in the St. Louis trade. She was constructed both for river and sea navigation, —the latter by sails, the former by steam-power. She arrived at New Orleans, schooner-rigged, ascended the Mississippi by steam, and was the first vessel which ever reached St. Louis from an Atlantic port.

Forty-first boat, the "Ramapo," sixty tons, built in New York in 1818, and in 1819 employed in the Natchez trade.

Forty-second boat, the "Mobile," one hundred and fifty tons, built at Providence, R. I., in 1818, owned at Mobile, and in 1819 employed in the Louisville trade.

Forty-third boat, the "Mississippi," four hundred tons, built in New Orleans in 1818, arrived at Havana in February, 1819. She was intended to ply between Havana and Matanzas.

Forty-fourth boat, the steamboat "Western Engineer," built on the Monongahela in 1818-19, descended the Ohio River from Pittsburgh about the 1st of May, 1819, and afterwards ascended

cious, and her cabin commodious and elegant."—*Gazette*, June 12, 1818.

"The steamboat 'Franklin' left this place yesterday with freight and passengers for New Orleans. The master expects to arrive there in eight days. Our common barges take from twenty-five to thirty days to perform the voyage."—*Gazette*, June 19, 1818.

the Missouri River in connection with the government exploring expedition. The object of the expedition was principally to make a correct military survey of the river and to fix upon a site for a military establishment at or near the junction of the Yellowstone with the Missouri, to ascertain the point where the Rocky Mountains are intersected by the forty-ninth degree of latitude, which formed the western boundary between the possessions of Great Britain and the United States, and to inquire into the "trading capacity and genius of the various tribes through which they may pass." The officers employed on this duty were Maj. S. H. Long, of the United States Engineers, Maj. Thomas Biddle, United States Corps of Artillery, and Messrs. Graham and Swift. The boat was completely equipped for defense and was manned by a few troops. The "Western Engineer" drew only two feet six inches of water. She was well built, was bottomed with iron or copper, and had a serpent's head on her bow through which the steam passed, presenting a novel appearance.

The launch of the "Western Engineer" at Pittsburgh, March 26th, was noticed in the *Gazette* of May 26, 1819, as follows:

"As the launching of the United States steamboat at Pittsburgh has been announced, and as it may not be generally known what are the objects in view, I send you some extracts of a letter from a young officer going upon the expedition. She is called the 'Western Engineer,' and will start from Pittsburgh about the first of May. It is intended that she shall navigate the Western waters as far as the Yellowstone River, which will require upwards of two years. It is not expected that they will do more than explore the waters of the Missouri the first season, as the movements will be gradual, in order to obtain a thorough knowledge of that section of the country, with a history of the inhabitants, soil, minerals, and curiosities. The expedition is under the direction of Maj. Stephen H. Long, of New Hampshire, of the topographical engineers, attended by Mr. James Graham, of Virginia, Mr. William H. Swift, from the United States Military Academy, Maj. Thomas Biddle, of Philadelphia, of the artillery, and the following gentlemen: Dr. Jessup, of Philadelphia, mineralogist; Dr. Say, of Philadelphia, botanist and geologist; Dr. Baldwin, of Wilmington, Del., zoologist and physician; Dr. Peale, of Philadelphia, landscape painter and ornithologist; Mr. Seymour, of Philadelphia, landscape painter and ornithologist; Maj. O'Fallon, Indian agent.

"She is well armed, and carries an elegant flag, painted by Mr. Peale, representing a white man and an Indian shaking hands, the calumet of peace, and a sword. The boat is seventy-five feet long, thirteen feet beam, draws nineteen inches water with her engine, which, together with all the machinery, is placed below deck entirely out of sight. The steam passes off through the mouth of the figure-head (a large serpent). The wheels are placed in the stern, to avoid the snags and sawyers which are so common in these waters. She has a mast to ship or not as may be necessary. The expedition will depart with the best wishes of the scientific part of our country."

Forty-fifth boat, the "Rifeman," two hundred and fifty tons, built in Louisville in 1819, and owned by Messrs. Butler & Barmers, in the Louisville trade.

Forty-sixth boat, the "Car of Commerce," one hundred and fifty tons, built at Pittsburgh, Pa., in 1819, owned by William F.

"List of Steamboats Trading to New Orleans.—'Franklin,' one hundred and thirty-one tons; 'Eagle,' 'Pike' (sunk); 'James Monroe' (sunk, now repairing)."—*Gazette*, Sept. 5, 1818.

"The new steamboat 'Johnson,' built by Col. Johnson, of Kentucky, passed Shawneetown the first of this month bound to New Orleans. She is intended as a regular trader from Kentucky on the Mississippi and the Missouri as far up as the Yellowstone River."—*Gazette*, Nov. 6, 1818.

Patterson & Co., of Louisville, and engaged in the trade of that place.

Forty-seventh boat, the "Paragon," three hundred and seventy-six tons, built in 1819 at Cincinnati by William Parsons, and owned by William Noble and Robert Neilson, in the Louisville trade.

Forty-eighth boat, the "Maysville," one hundred and fifty tons, built in 1819, and owned by Messrs. Murphy, Moreton, and J. Birkley, of Washington, Ky., and Messrs. Armstrong and Campbell, of Maysville.

Forty-ninth boat, the "Columbus," four hundred and sixty tons, built at New Orleans in 1819, and owned by a company there. She was afterwards engaged in the Louisville trade.

Fiftieth boat, the "General Clark," one hundred and fifty tons, built at Louisville in 1819, and owned by a company there.

Fifty-first boat, the "Vulcan," three hundred tons, built at Cincinnati, 1819, for the New Orleans trade, and owned by James & Douglass and Hugh & James, all of Cincinnati.

Fifty-second boat, the "Missouri," one hundred and seventy-five tons, built at Newport, Ky., 1819, owned by John and Walker Yeastman, and destined for the St. Louis trade.

Fifty-third boat, the "New Comet," one hundred tons, altered from a barge called the "Eliza" in 1819, owned by Isaac Hough and James W. Byrne, of Cincinnati, and intended for the New Orleans trade.

Fifty-fourth boat, the "Newport," fifty tons, built at Newport, Ky., in 1819, owned by a company at New Orleans, and in 1819 engaged in the Red River trade.

Fifty-fifth boat, the "Tennessee," four hundred tons, built at Cincinnati in 1819, owned by Messrs. Breedlove & Bardford, of New Orleans, and a company of Nashville, afterwards employed in the Louisville trade. The "Tennessee" was sunk in the Mississippi by striking a snag on a very dark night in 1823. The loss of life was large, some sixty-odd persons being drowned, among them several persons of distinction. This disaster caused great excitement throughout the country, and deterred numbers from traveling on steamboats.

Fifty-sixth boat, the "General Robinson," two hundred and fifty tons, built at Newport, Ky., in 1819, owned by a company at Nashville, and run in that trade.

Fifty-seventh boat, the "United States," seven hundred tons, built at Jeffersonville, Ind., for the Natchez trade in 1819, and owned by Hart and others. She was the largest steamboat which had been built in the Western country.

Fifty-eighth boat, the "Post-Boy," two hundred tons, built at New Albany, Ind., in 1819, owned by H. M. Shreve and others, and run from Louisville to New Orleans. This was one of the packets employed by the Postmaster-General for carrying the mail between those places, according to an act of Congress passed March, 1819. By this act the whole expense was not to exceed that of transporting the mail by land.

Fifty-ninth boat, the "Elizabeth," one hundred and fifty tons, built at Salt River, Ky., in 1819, owned by a company at Elizabeth, Ky., and engaged in the New Orleans trade.

Sixtieth boat, the "Fayette," one hundred and fifty tons, built in 1819, owned by John Gray and others, in the Louisville trade.

The arrival about March 1, 1819, of "the large and elegant steamboat 'Washington'" from New Orleans, which city she left on the 1st of February, was announced in the *Gazette* of March 3d. The steamboat "Harriet" arrived from the same port early in April. The "Sea-Horse," which arrived at New Orleans from New York, and the "Maid of Orleans," which reached the same port from Philadelphia early in 1819, were probably the first steamboats that ever performed a voyage of any length on the ocean.

The "Maid of Orleans" continued her voyage to St. Louis, where she arrived about the 1st of May. On the same day the steamboat "Independence," Capt. Nelson, arrived from Louisville. The *Missouri Gazette* of the 19th of May, 1819, has the following steamboat memoranda:

"The 'Expedition,' Capt. Craig, arrived here on Wednesday last, destined for the Yellowstone. The 'Maid of Orleans,' Capt. Turner, sailed for New Orleans, and the 'Independence,' Capt. Nelson, for Franklin, on the Missouri, on Sunday last. The 'Exchange,' Capt. Whips, arrived here on Monday, and will return to Louisville in a few days for a new set of boilers, she having burst her boiler in ascending the Mississippi.

"The 'St. Louis,' Capt. Hewes, the 'James Monroe,' and 'Hamlet' were advertised to sail from New Orleans to St. Louis about the middle of last month.

"In 1817, less than two years ago, the first steamboat arrived at St. Louis. We hailed it as the day of small things, but the glorious consummation of all our wishes is daily arriving. Already during the present season we have seen on our shores five steamboats and several more daily expected. Who would or could have dared to conjecture that in 1819 we would have witnessed the arrival of a steamboat from Philadelphia or New York? yet such is the fact. The Mississippi has become familiar to this great American invention, and another new arena is open. A steamboat, owned by individuals, has started from St. Louis for Franklin, two hundred miles up the Missouri, and two others are now here destined for the Yellowstone. The time is fast approaching when a journey to the Pacific will become as familiar, and indeed more so, than it was fifteen or twenty years ago to Kentucky or Ohio. 'Illustrious nation,' said a distinguished foreigner, speaking of the New York canal, 'illustrious nation, whose conceptions are only equalled by her achievements.'"

The "Independence," Capt. Nelson, was the first steamboat that entered the Missouri River. Sailing from St. Louis in May, 1819, she reached Franklin, on the Missouri, after a voyage of thirteen days,¹

Sixty-first boat, the "Elkhorn," three hundred tons, built at Portland, Ky., in 1819, owned by Messrs. Gray & Anderson, in the New Orleans trade.

Sixty-second boat, the "Providence," two hundred tons, built near Frankfort, Ky., in 1819, and owned by L. Castleman & Co.

Sixty-third boat, the "General Putnam," two hundred tons, built at Newport, Ky., in 1819, owned by James M. Byrne & Co., of Cincinnati, and engaged in the New Orleans trade.

¹ "FRANKLIN (BOON'S LICK), May 19, 1819.

"ARRIVAL OF THE STEAMBOAT.—With no ordinary sensation of pride and pleasure we announce the arrival this morning at

of which four days were spent at different landings. Her voyage extended up the Missouri to Old Chariton, from whence she returned to St. Louis.² The United States government the year previous had determined to explore the Missouri River up to the Yellowstone, and for that purpose, as elsewhere stated, Major S. H. Long had built at Pittsburgh the "Western Engineer."

To Col. Henry Atkinson had been intrusted the command of this expedition, and starting from Plattsburgh, N. Y., in the latter part of 1818, he arrived in Pittsburgh in the spring of 1819. The "Western Engineer" was completed soon after, and arrived at St. Louis June 8, 1819. On the 21st the expedition started for the Missouri.³ "It was ac-

this place of the elegant steamboat 'Independence,' Capt. Nelson, in seven sailing days (but thirteen from the time of her departure) from St. Louis, with passengers and cargo of flour, whiskey, sugar, iron castings, etc., being the first steamboat that ever attempted ascending the Missouri. She was joyfully met by the inhabitants of Franklin, and saluted by the firing of cannon, which was returned by the 'Independence.'

"The grand desideratum, the important fact, is now ascertained that steamboats can safely navigate the Missouri."

² "On Wednesday last arrived steamboat 'Harriet,' Capt. Armitage, twenty-six days from New Orleans.

"On Sunday arrived the 'Johnson,' from Cape Girardeau, with United States stores, one of the fleet destined for the Missouri expedition.

"On Saturday the steamboat 'Independence,' Capt. Nelson, arrived from Franklin and Chariton, on the Missouri. The 'Independence' has met with no accident on her route, although much troubled with bars and the impediments in the channel of the river. Both the inhabitants of Franklin and Chariton gave a dinner to the captain and passengers on board. The 'Independence' was three days coming from Franklin, but only running nineteen hours. She has been absent from St. Louis in all twenty-one days. This trip forms a proud event in the history of Missouri. The Missouri has hitherto resisted almost effectually all attempts at navigation; she has opposed every obstacle she could to the tide of emigration which was rolling up her banks and dispossessing her dear red children, but her white children, although children by adoption, have become so numerous, and are increasing so rapidly, that she is at last obliged to yield them her favor. The first attempt to ascend her by steam has succeeded, and we anticipate the day as speedy when the Missouri will be as familiar to steamboats as the Mississippi or Ohio. Capt. Nelson merits and will receive deserved credit for his enterprise and public spirit in this undertaking."—*Gazette*, June 9, 1819.

³ "The steamboat 'Johnson' passed here on Wednesday last with troops, etc., for the Yellowstone."—*Gazette*, May 25, 1819.

"The steamboat 'Jefferson' arrived on Saturday last from Louisville. She is another of Col. Johnson's boats destined for the Western expedition, and has been delayed by the breaking of her machinery."—*Gazette*, June 23, 1819.

"The 'Western Engineer' left St. Louis on Monday, the 21st inst., and proceeded on her journey up the Missouri. This undertaking is worthy of an enlightened and patriotic government, and its success will confer deserved renown both on its projectors and its executors."—*Gazette*, June 23, 1819.

accompanied by three other United States steamers and nine keel-boats, bearing a detachment of government troops. The names of the steamboats and of their commanders were 'Thomas Jefferson,' Capt. Orfort; 'R. M. Johnson,' Capt. Colfax; and the 'Expedition,' Capt. Craig.

"The little fleet entered the Missouri with martial music, display of flags, and salute of cannon. In honor of the statesman who acquired the territory of Louisiana for the United States, the precedence was accorded to the 'Thomas Jefferson,' but some disarrangement of its machinery prevented this boat from taking the lead, and the 'Expedition' secured the distinction of being the first steamer of this flotilla to enter the Missouri. The 'Thomas Jefferson' was doomed to a still worse mishap, for not long after it ran on a snag and sank.

"The steam-escape of the 'Western Engineer' was shaped like a great serpent coiled on the bow of the boat in the attitude of springing, and the steam hissing from the fiery mouth of the python filled the Indians with terror. They thought that the wrath of the Great Spirit had sent this monster for their chastisement."¹

The *Gazette* of the 2d of June contained the following "steamboat news:"

"Arrived at this place on the 1st instant the fast-sailing and elegant steamboat *St. Louis*, Capt. Hewes, in twenty-eight days from New Orleans; passengers, Col. Atkinson and Maj. McIntosh, of the United States army, and others. The captain has politely favored us with the following from his log-book: 'On the 5th May left New Orleans. At 3 P.M. passed steamboat *Volcano*, bound down. 10th, at 6 A.M., passed steamboat *James Ross*; at 11 P.M. passed steamboat *Rifleman*, at anchor, with shaft broke. 15th, at 3 P.M., passed steamboat *Madison*, six days from the Falls of the Ohio. 20th, passed steamboat *Governor Shelby*, bound for New Orleans. 22d, run on a sand-bar and was detained till next day. 26th, at 7 P.M., at the grand turn below Island No. 60, passed nine keel-boats, with Sixth Regiment United States Infantry, commanded by Col. Atkinson, destined for the Missouri; at 11 P.M. took on board Col. Atkinson and Maj. McIntosh; at quarter past eleven run aground, and lost anchor and part of cable. 27th, the steamboat *Harriet* passed while at anchor. 28th, at 3 P.M., passed steamboat *Jefferson*, with United States troops, having broke her piston; at 4 P.M. repassed the steamboat *Harriet*.'

On the 9th the same paper announced that Capt. Hewes, of the "St. Louis," had gratified the citizens of St. Louis with a sail to the mouth of the Missouri,

¹ Last week Col. Henry Atkinson, on seeing the ferry-boats worked by wheels, immediately conceived the idea of applying them to the barges bound up the Missouri with United States troops, stores, etc. In about three days he had one of the barges rigged with wheels and a trial made, in which she was run up the Missouri about two miles and back in thirty minutes.—*Gazette*, June 30, 1819.

¹ Professor Waterhouse.

and that "the company on board was large and genteel, and the entertainment very elegant."

The return of the "Maid of Orleans," Capt. Turner, on the 28th of July, and the departure of the "Yankee," Capt. Hairston, early in December for New Orleans, complete the record of steamboating for 1819.

About this time began the long and active career on the river of Capt. John C. Swon, one of the best-known names in the steamboat trade of St. Louis. Capt. Swon was born in Scott County, Ky., May 16, 1803. His father was an early pioneer from Maryland, and a large land-owner in Kentucky. He died in 1814 while locating lands in St. Francis County, Mo., and young Swon passed under the guardianship of Col. R. M. Johnson, who had then lately been Vice-President of the United States. In 1819 the boy sailed up the Missouri to Council Bluffs, and was so infatuated with the river that he resolved to follow it for a livelihood. The wild and romantic scenery of the Missouri, the high bluffs, dense forests, and broad prairies offered special attractions to the eye and fired his youthful imagination. In the following year he returned home and obtained permission from his guardian to engage in the river trade.

Consequently, in 1821, Capt. Swon obtained a position as clerk on the "Calhoun," under Capt. Silas Craig, and for two years was engaged in the St. Louis and Louisville trade, the boat occasionally making a trip to New Orleans, when Swon usually had charge of the vessel himself.

From 1823 to 1830, Capt. Swon was connected with several of the most famous boats of that period, among which may be mentioned the "Steubenville," "Governor Brown," and "America," under Capt. Crawford and Capt. Alexander Scott.

In 1825, Capt. Swon, having formed an extremely favorable idea of the place from his frequent visits, made St. Louis his permanent home. In 1830 he temporarily left St. Louis and went to Pittsburgh, Pa., where, in company with Capt. James Wood, of that city, he built the "Carrollton." He subsequently took charge of that vessel, and ran her in the St. Louis and New Orleans trade. In 1833 he built the "Missouri," and commanded her for one season; in the next year he built the "Majestic," in 1835 the "Selma," and in 1837 the "St. Louis," the largest steamer up to that time ever employed on the Mississippi.

In 1839 he sold the "St. Louis," and engaged in the wholesale grocery business in St. Louis with R. A. Barnes, the firm being Barnes & Swon, but in 1840 he retired from the partnership and resumed his old

calling. He then returned to Pittsburgh, and brought out the "Missouri" in 1841. In August of that year the boat was destroyed by fire while lying at the wharf at St. Louis. Undaunted, however, Capt. Swon went to Louisville, and purchased the "Alexander Scott" in 1842, and managed her until 1845, when he sold her, and purchased an interest in the "J. M. White," which vessel he commanded until 1847, when he sold her, and proceeded to comply with a resolution, formed on account of family reasons, to build just one more boat and then leave the river. He contracted for the "Aleck Scott," and launched her in March, 1848, for the Missouri trade. Both the "Alexander Scott" (previously mentioned) and the "Aleck Scott" were named in honor of one of young Swon's earliest captains, Alexander Scott, one of the best known river-men of that period. Capt. Swon commanded the "Aleck Scott" until July, 1854, when he sold her and retired from the river, thus ending a long, active, and useful career, devoted to the development of the river interests of Missouri.

In 1857 he purchased a beautiful place at Webster Station, on the Missouri Pacific, and lived there several years in rural quiet. In 1867-68 he disposed of it and visited Europe. Upon his return he settled in St. Louis, where he has continued to reside, enjoying in well-earned ease the fruits of a more than usually industrious manhood.

Capt. Swon has been twice married. His first wife, whom he married in 1830, was Anna Kennett, sister of L. M. Kennett, ex-mayor of St. Louis. Of this union two children were born, who are now dead. After three years of singularly happy married life Mrs. Swon died, and Capt. Swon married Miss Kennett, a cousin of his first wife. This lady died in the spring of 1882, leaving no living children.

Capt. Swon was chosen superintendent of the Ohio and Mississippi Railroad in the early stages of that enterprise, but did not accept the position. He is a director in the Hope Mining Company, his only business connection, although he has been solicited to assist numerous enterprises. He has taken a lively interest in the problems of transportation which St. Louis has had to grapple with, and cherishes an honest pride in his own labors in that direction, having done probably as much as any one man to develop the river and steamboat interests of the city and State. Well preserved and wonderfully fresh for a man over eighty years of age, he remains one of the few survivors of the adventurous class of steamboatmen who aided so largely in building up the river commerce of the Mississippi valley.

The first steamboat that ascended the upper Mis-

issippi was the "Virginia," which arrived at Fort Snelling in May, 1823. The Missouri and upper Mississippi had now been opened to regular navigation, and the steamboat traffic of the great river and its tributaries developed rapidly. On the 27th of August, 1825, the *Republican* announced that there were two steamboats, the "Brown" and "Magnet," now lying here for the purpose of repairing, and added, "We believe this is the first instance of a steamboat's remaining here through the season of low water." The expansion of the steamboat business continued without interruption, and in its issue of April 19, 1827, the *Republican* commented upon it as follows:

"During the past week our wharf has exhibited a greater show of business than we recollect to have ever before seen, and the number of steam and other boats arriving and departing has been unprecedented. The immense trade which has opened between this place and Fevre River at the present employ, besides a number of keels, six steamboats, to wit: the 'Indiana,' 'Shamrock,' 'Hamilton,' 'Muskingum,' 'Mexico' and 'Mechanic.' The 'Indiana' and 'Shamrock' on their return trips have been deeply freighted with lead, and several keel-boats likewise have arrived with the same article. Judging from the thousands of people who have gone this spring to make their fortunes at the lead-mines, we should suppose that the quantity of lead produced this year will be tenfold greater than heretofore."

Again, on the 12th of July, the same paper remarked that it must be gratifying to every citizen of St. Louis to witness the steady advancement of the town, "the number of steamboats that have arrived and departed during the spring" being cited as "the best evidence of the increase of business." During 1832 there were eighty arrivals of steamboats at St. Louis, whose aggregate tonnage amounted to 9520 tons. In 1834 the number of steamboats on the Mississippi and its tributaries was 230, their tonnage aggregating 39,000 tons. There were also 1,426,000 feet of plank, joists and scantling, 1,628,000 shingles, 15,000 rails, 1700 cedar logs, 8946 cords of wood, and 95,250 bushels of coal landed from the boats, together with 12,195 barrels and sixty half-barrels of flour, 463 barrels and twenty half-barrels of pork, and 233 barrels and fifty half-barrels of beef.

In 1836 the "Champion," Capt. Mix, performed the trip from Vicksburg to Pittsburgh, and thence to St. Louis, in seven days' running time; and between St. Louis and Louisville in fifty hours, "passing the 'Paul Jones' and several other boats with ease." She was beaten, however, in June of that year by the "Paul Jones." In announcing this fact the *Republican* stated that the captain of the "Champion" (which was an Eastern-built boat) "acknowledges

Wm. H. Wood

UNIVERSITY OF ILLINOIS.

his inability to go ahead of our Western boats," and that he would shortly start with his boat for the Atlantic cities *via* New Orleans.

During the same month seventy-six different steamboats arrived at St. Louis, the aggregate tonnage of which was 10,774, the number of entries being 146, and the wharfage \$930. The same activity continued in 1837, and the *Republican* notes the presence of thirty-three steamboats receiving and discharging cargo on one day in April, 1837.

The steamboat "North St. Louis" was launched on the 29th of March, 1837, from the yard of Messrs. Thomas & Green. This boat was said to have been a "splendid specimen of the enterprise, the genius, and the art of our Western citizens," and was regarded as "the finest boat which has ever floated upon the Mississippi."¹

On the 10th of October, 1838, the subject of establishing a steamship line from St. Louis to Eastern cities was considered at a meeting of merchants at the Merchants' Exchange. John Smith was appointed chairman, and A. G. Farwell secretary.

The object of the meeting having been stated by the chair, it was on motion ordered that a committee of five persons be appointed to prepare resolutions for the action of the meeting. The chair appointed Messrs. D. L. Holbrook, N. E. Janney, A. B. Chambers, A. G. Farwell, and R. M. Strother as this committee.

After a short absence the committee returned and reported the following:

"Resolved, That the establishment of a line of steamships from some Eastern port or ports to this city is a subject of deep interest to the citizens of St. Louis, and that in the opinion of this meeting it is expedient.

"Resolved, That a committee of persons be appointed to correspond with such individuals in the Eastern cities, and with such other persons as they may deem proper upon the subject, and that they be requested to put themselves in possession of as many facts connected with the proposed enterprise as possible, and that they report at as early an adjourned meeting as practicable.

"Resolved, That a committee of persons be appointed to collect facts and statistics relating to the import and export trade of St. Louis, and the necessity of opening a direct trade with the Eastern ports, its profits and utility, and report at an adjourned meeting."

The question being upon the adoption of the first resolution, Messrs. N. Ranney, A. B. Chambers, R. M. Strother, N. E. Janney, John F. Hunt, and the chairman severally addressed the meeting, after which the resolutions were unanimously adopted.

On motion it was ordered that the blank in the

second resolution be filled with "five," and that in third resolution be filled with "fifteen," whereupon the chair appointed Messrs. A. G. Farwell, A. B. Chambers, Hezekiah King, J. B. Camden, and E. Bredell the committee under the second resolution, and Messrs. Adam B. Chambers, N. E. Janney, D. L. Holbrook, Reuben M. Strother, William Glasgow, H. Von Phul, E. H. Beebe, John F. Hunt, N. Ranney, Edward Walsh, G. K. McGunnegle, J. O. Agnew, B. Clapp, E. Tracy, and O. Rhodes the committee under the third resolution.

On motion of Capt. N. Ranney, John Smith was added to the first committee as chairman.

The steamboat and lumber register for 1838 shows the number of steamers which entered the port of St. Louis during the year to have been 154, and the aggregate tonnage 22,752; the number of entries, 1014; and the wharfage collected, \$7279.84.

The steamboat "Ottawa" was the first boat built on the Illinois. She was constructed in part at Ottawa, added to at Peru, and finished at St. Louis. She was of the very lightest draught, seventeen inches light, and had a powerful engine, the design being to take two keels in tow in low water, the steamer herself being light; so that whenever there were seventeen inches of water on the bars, she would be able to reach St. Louis with one hundred tons of freight weekly. Her length was one hundred feet, breadth twenty, and the cabin was laid off entirely in state-rooms. The owners resided in Ottawa.

In 1840 the number of steamboats on the Mississippi and its tributaries was two hundred and eighty-five, with an aggregate tonnage of forty-nine thousand eight hundred tons.

The steamboat "Missouri," then the longest boat on Western waters, visited St. Louis about the 1st of April, 1841. Her length was two hundred and thirty-three feet, the width of her hull was thirty feet, and her entire breadth, guards included, fifty-nine feet. The depth of her hold was eight and a half feet, and this was the quantity of water she drew when fully loaded. Her light draught was five feet four inches. The diameter of her wheels was thirty-two feet, and the length of buckets twelve feet. Her cylinders were twenty-six inches in diameter, with a twelve-foot stroke. She had two engines and seven forty-two-inch boilers. She was steered by chains, and was well furnished with hose and other apparatus for the extinguishment of fires.

The "Missouri" carried six hundred tons, and was built at Pittsburgh for and under the direction of Capt. J. C. Swon, of St. Louis, at a cost of forty-five thousand dollars.

¹ The death of Joseph Bates, captain of the steamboat "Boonville," occurred on the 5th of April, 1837.

She was intended as a regular trader between St. Louis and New Orleans, but, as heretofore stated, was burned at St. Louis in August, 1841.

In 1842 two boat-yards for the construction of steamboats and other river-craft were in existence in St. Louis, and during this year the number of steamboats on the Mississippi and its tributaries was four hundred and fifty, with an aggregate tonnage of about ninety thousand tons.¹

In 1843 the number was six hundred and seventy-two, with an aggregate tonnage of one hundred and thirty-four thousand four hundred, and in addition to the steamers there were about four thousand flats and keels. For the year 1844 the enrolled and licensed tonnage of Western rivers amounted to one hundred and forty-four thousand one hundred and fifty tons. Messrs. Harvey, Premeau & Co., under the style of the St. Louis Fur Company, chartered the steamer "Clermont, No. 2," D. G. Taylor commander, in June, 1846, and the boat sailed for the head-waters of the Missouri on the 7th to trade with Sioux and Blackfeet Indians. The improvements in the construction of steamboats had been such that the time consumed in the voyage from New Orleans to St. Louis, which in early days had occupied weeks, had in 1844 been reduced to a few days. On the 9th of May, 1844, the *Republican* made the following announcement:

"What has heretofore been merely the speculation of enthusiasts has been realized. New Orleans has been brought within less than four days' travel of St. Louis,—in immediate neighborhood propinquity. The steamboat 'J. M. White' has been the first to accomplish this extraordinary trip.

"The 'J. M. White' left this port on Monday, April 29th, at three o'clock p.m., with six hundred tons of freight, and arrived at New Orleans on Friday evening, the 3d inst., being three days and sixteen hours on her downward trip. She departed for St. Louis on Saturday, May 4, 1844, at forty minutes after five o'clock p.m., and arrived on the 8th, having made the trip up in three days and twenty-three hours, and having been but nine days on the voyage out and home, including all detention.

"The following are the runs up from wharf to wharf, the best time ever made by any steamboat on the Western waters:

"	"	"	Vicksburg, 410 miles, 29 h. 55 m.
"	"	"	Montgomery's, 625 miles, 1 day 13 h. 8 m.
"	"	"	Memphis, 775 miles, 2 days 12 h. 8 m.
"	"	"	Cairo, 1000 miles, 3 days 6 h. 44 m.
"	"	"	St. Louis, 1200 miles, 3 days 23 h. 9 m."

One of the leading steamboat men of St. Louis about this time was Capt. W. W. Greene. William Wallace Greene was born in Marietta, Ohio, in 1798. His father, Charles Greene, was of the Rhode Island

family of Greeses which furnished the country one of its most successful Revolutionary generals. He was a merchant in Marietta from 1796 to 1812, and also engaged in the building of ships on a large scale for those days, constructing three ships, two or three brigs, and several schooners, which he owned in connection with R. J. Meigs, Col. Lord, and Benjamin Ives Gilman, prominent men of that period. Charles Greene's wife was Elizabeth Wallace, of Philadelphia. From these parents William Wallace Greene inherited sterling qualities of heart and mind and elevated religious principles. Reverses in the large shipping interests of his father threw him early in life upon his own resources, and with no capital save energy, a good character, sound common sense, and a fair education, he left home for busier and more promising fields. He first went to Dayton, Ohio, where for seven years he was employed in the general merchandise establishment of his cousins, Steele & Pierce. He then removed to Louisville, Ky., and New Albany, Ind., continuing in the mercantile business until 1820, when he engaged as clerk on the steamboat "Ohio," running in the New Orleans trade, and for two years was employed on the river. In 1822 he again embarked in mercantile pursuits at Hamilton, Ohio.

In the following year he removed to Cincinnati and commenced business as a commission and forwarding merchant. Soon after, in connection with his brother Robert, he built the low-pressure steamer "De Witt Clinton," the fastest boat of her day on the Western waters. When finished he took command of her, but soon resigned her to his uncle, Maj. Robert Wallace, of Louisville, Ky. The Greene brothers then built the low-pressure steamers "Native" and "Fairy," and followed in quick succession with others, until they owned a large flotilla of very fine and fast boats, some engaged in the Cincinnati and Louisville trade, others in the Cincinnati trade, and still others in the Arkansas, Missouri, and Illinois Rivers. Capt. W. W. Greene commanded several of these vessels, and was as well and favorably known as any officer who navigated the great rivers of the West. In 1832-33 he commanded the high-pressure steamer "Superior," employed in the Cincinnati and New Orleans trade.

In 1834, Capt. Greene, in connection with his brother-in-law, Capt. Joseph Conn, built the "Cygnets," with vibrating cylinders; and while running this boat they removed to St. Louis and made that city their residence and base of operations. Greene was captain, and Conn was clerk; and so officered, the "Cygnets" for several years did a prosperous business on the Mississippi, Arkansas, and Illinois Rivers.

In 1837, Capts. Greene and Conn sold the "Cygnets,"

¹ Elliot R. Hopkins, collector of the port, died on the 18th of September, 1842.

W. W. W. ALLEN G. SWEBB

LIBRARY
OF THE
UNIVERSITY OF ILLINOIS

and, in connection with James R. Sprigg, engaged in the auction and commission business under the firm-name of Conn, Sprigg & Greene (a partnership easily recalled by many of the older citizens and one of the leading houses of that period). The firm was also at times interested as part owner in the steamers "Caspian," "Vandalia," "Oregon," and "Osage," all employed in the St. Louis and New Orleans trade.

Capt. Greene enjoyed in a marked degree the confidence of the community. In 1842 (Bernard Pratte being mayor) he was appointed harbor-master; in 1845, local agent of the Post-Office Department; and in 1849 surveyor and collector of the port of St. Louis, which office he resigned in 1853 to accept the presidency of the Globe Mutual Insurance Company, to which he was annually elected for many years. All who knew him will remember with what unflinching urbanity and fidelity he discharged these important public trusts.

In 1827, Capt. Greene was married to Sarah A. Conn, daughter of an old and well-known citizen of Cincinnati. He died April 16, 1873, leaving two daughters.

Capt. Greene was an honored, consistent, and useful member of the Presbyterian Church. For many years he was a ruling elder, and brought to the duties of that office the zeal and fidelity which he always exhibited in his secular employments. In all the relations of life, in fact, Capt. Greene was a man of the strictest rectitude, untiring energy, and ready generosity. His death was that of the resigned and hopeful Christian, weary, however, under the accumulated burdens of years.

The following *résumé* of steamboating at St. Louis is from the *Republican* of Jan. 5, 1847:

"During the year 1845 there were 213 steamboats engaged in the trade of St. Louis, with an aggregate tonnage of 42,922 tons, and 2050 steamboat arrivals, with an aggregate tonnage of 358,045 tons, to which may be added 346 keel- and flat-boats. During the year 1846 there were 251 steamboats, having an aggregate tonnage of 53,867 tons, engaged in the St. Louis commerce. These boats made 2411 trips to our port, making an aggregate tonnage of 407,824 tons. In the same year there were 881 keel- and flat-boat arrivals.

"To exhibit the time of their arrival, and their tonnage, and to show at what period the heaviest portion of our commerce is carried on, we subjoin a statement of the arrivals for each month:

Arrived.	Steamers.	Tonnage.	Flats and Keels.
January.....	53	8,917	6
February.....	152	26,111	35
March.....	158	31,580	22
April.....	195	49,334	44
May.....	372	78,124	68
June.....	295	60,043	38
July.....	193	46,554	68
August.....	211	37,553	75
September.....	171	28,331	72
October.....	237	37,538	162
November.....	185	31,346	171
December.....	190	32,393	120

"The trade in St. Louis in 1846 employed, as we have stated, 251 boats, of an aggregate tonnage of 53,867 tons. If we estimate the cost of these boats at \$50 per ton, which is below the true average, we have an investment in the shipping of this city of \$2,693,350; and if we allow an average of 25 persons, including all those employed directly upon the boat, to each vessel, we have a total of 6275 persons engaged in their navigation. Add to these the owners, workmen, builders, agents, shippers, and all those connected or interested in this commerce, from the time the timber is taken from the forest or the ore from the mine, and the list will be swelled to many thousands."

The number of enrolled and licensed steamboats on Western rivers in 1845 was 789, with an aggregate tonnage of 159,713 tons.

The steamers running on the upper Mississippi from 1823 to 1844 were used mainly to transport supplies for the Indian traders and the troops stationed at Fort Snelling. Previous to the arrival of the "Virginia" at Fort Snelling in May, 1823, keel-boats were used for this trade, and sixty days from St. Louis to Fort Snelling was considered a good trip.

The report of the Secretary of the Treasury for 1846 makes the following exhibit of enrolled and licensed tonnage of the West: New Orleans, 180,504.81; St. Louis, 22,425.92; Pittsburgh, 17,162.94; Cincinnati, 15,312.86; Louisville, 8172.26; Nashville, 2809.23; Wheeling, 2666.76; total, 249,054.77 tons. Applying to this volume of tonnage the average of 210 tons to a steamboat, there were 1190 employed on Western rivers, which at \$65 per ton cost \$16,188,561. Supposing these boats to run 220 days in a year at a cost of \$125 per day, their annual expense amounted to \$32,725,000, and they employed 41,650 persons. The cost of the river transportation in 1846 was estimated at \$41,154,194.¹

The rapid increase of the steamboating interest of St. Louis is thus set forth in the *Republican* of the 27th of January, 1848:

"In no department of business has the rapid growth of St. Louis as a commercial port been made so undeniably manifest as in her shipping by means of steamboats. The first steamboat arrival at St. Louis was in 1817. At that time the whole commerce of New Orleans was carried on by about twenty barges of one hundred tons each, and one hundred and sixty keel- and flat-boats of about thirty tons each, making a total tonnage of from six thousand to seven thousand tons. In 1834 the whole number of steamboats on the Mississippi and its tributaries was two hundred and thirty, with a total tonnage of thirty-nine thousand tons. In 1840 the number was two hundred and eighty-five, with a tonnage of forty-nine thousand eight hundred. In 1842 the number was four hundred and fifty, with a tonnage of about ninety thousand tons. In 1843 the number rose to six hundred and seventy-two, with a tonnage of one hundred and thirty-four thousand four hundred. In 1846, by reference to the report of the Secretary of the Treasury of the

¹ The Commerce and Navigation of the Valley of the Mississippi, p. 7.

licensed and enrolled steamboat tonnage, the number is stated at eleven hundred and ninety, with a tonnage of two hundred and forty-nine thousand and fifty-four tons.

"In 1839 there were one thousand four hundred and seventy-six steamboat arrivals at this port, with a total tonnage of two hundred and thirteen thousand one hundred and ninety-three tons. In 1840 there were seventeen hundred and twenty-one arrivals; tonnage, two hundred and forty-four thousand one hundred and eighty-six. In 1844 there were two thousand one hundred and five arrivals; tonnage, four hundred and sixty-seven thousand eight hundred and twenty-four. In eight years, from 1839 to the end of 1847, the number of steamboat arrivals and the aggregate tonnage have more than doubled. The arrivals in 1847 exceed those of 1839 by four hundred and eighty-nine, and the tonnage by three hundred and seventy-one thousand four hundred and forty-six tons."¹

In 1851 three steamboats went up the Minnesota River, and in 1852 one boat ran regularly up that river during the season. In 1853 the business required an average of one boat per day. In 1854 the trade had largely increased, and in 1855 the arrivals of steamers from the Minnesota numbered 119.

In 1852 the novel application of the steamboat to the purposes of a circus was made by Capt. Jack, well known to thousands of the "old-timers" in the Mississippi valley from his long connection with the show business. In that year he was engaged in building at Cincinnati the great "Floating Palace" for Spalding & Rogers' circus, among the oldest and most successful managers in that line in the United States. Capt. Jack purchased an interest in the floating palace, and began his career as a showman at Pittsburgh. The boat carried an amphitheatre, in which the equestrian performances took place, which was capable of seating one thousand persons. From Pittsburgh they descended the Ohio and Mississippi to New Orleans, giving exhibitions at all places along the banks. From New Orleans they steamed across the gulf to Mobile, and from Mobile the palace ascended the Alabama River to the head of navigation at Wetunka, and, returning, went up the Black Warrior to Columbia. Returning to Mobile and New Orleans, they started on the spring campaign up the Mississippi, and, arriving at St. Louis, exhibited at the foot of Poplar Street to an audience of twenty-five hundred people for three days. The crowd was so immense that they charged one dollar "permission," instead of admission tickets, to those who were unable to get in, for the privilege of looking in at the windows. G. R. Spalding was the manager of the concern, and Mr. Van Norton the general agent. The palace continued

¹ Capt. Alfred Rodgers, formerly a commander of one of the finest steamboats on the river, and for the last year or eighteen months of his life engaged in the commission and produce business in St. Louis, died on the 13th of June, 1849.

to exhibit successfully along the Mississippi, Missouri, and Ohio Rivers until 1860, when the boat was beached in New Orleans. Capt. Jack then engaged on the "Banjo" with a French Zouave troupe, which exhibited on all the principal tributaries of the lower Mississippi, up the Red River, the Cache, La Fourche and Atehafalaya, and on the Mississippi at Fort Adams. On the 19th of July, 1862, they entered the boundaries of the Southern Confederacy, and at New Iberia and Franklin, La., gave shows for the benefit of the soldiers of the Confederate States. In 1862, Spalding & Rogers organized their outfit for South America. Mr. Spalding offered Capt. Jack an interest in the venture, advising him at the same time that it was hazardous. "You," said Mr. Spalding, "are now well fixed, and may lose all, but if we lose all we can stand it." Capt. Jack went into business for himself, and lost largely in Confederate currency, but came out finally very successful. He was from Ohio, and arrived in St. Louis in 1849 with but one dollar in his pocket. Spalding & Rogers returned from their South American venture in 1866, having made money. They returned with all their company except one lady, who died on the trip. Capt. Jack owed his success in life to his former employé, G. R. Spalding, who died in New Orleans in February, 1880. Mrs. Spalding died six months afterwards, leaving Charles Spalding, of St. Louis, who was their only living son, as their heir.

During the season of 1856 trade upon the Mississippi was very prosperous, and the arrivals at St. Paul exhibited an increase over any previous year, notwithstanding the season of navigation was much shorter than that of the year before.²

In the year 1870³ the most remarkable event which

² In July, 1857, the steamer "Louisiana," commanded by Capt. J. Harry Johnson, with S. D. Bradley, clerk, and Capt. D. R. Asbury, pilot; Joseph Brennan, engineer; and Hugh Maney, mate, fired her gun from a point between the shot-tower and water-works at eight minutes after four o'clock A.M., and arrived at Keokuk, a distance of two hundred and forty miles, making the run all the way against a swift current, by eight o'clock and sixteen minutes P.M., in sixteen hours and eight minutes. On her memorable run the "Louisiana" landed at Hannibal, and lost some twenty-four minutes. She beat the fastest time ever before made, that of the "Hannibal City," forty-one minutes.

³ The "Jennie Bonnie," a little yacht commanded by Capt. Carpenter, arrived at St. Louis June 14, 1870, from New Orleans, in tow of the "Mary Aliee." Capt. Carpenter had started over a year previously from the coast of Maine, and had made a voyage of over twenty-six thousand miles, including the survey of harbors and inlets, terminated by his arrival at St. Louis. The crew consisted only of the captain and a companion. The vessel took a most circuitous route, up and down all the bays and inlets of the Atlantic coast, until her arrival

had as yet occurred illustrating the degree of excellence attained in the art of boat-building, was the celebrated trial of speed between the steamers "Robert E. Lee" and "Natchez," in a race from New Orleans to St. Louis. Perhaps no event in the whole history of steamboating on the Mississippi attracted so much attention. For many days the press in the West was filled with references to it, and many newspapers in the far East esteemed it of sufficient importance to notice the progress of the two leviathans, not only by publishing long telegrams, but also editorially. The boats arrived at St. Louis on the 4th of July, having made an unparalleled run of more than twelve hundred miles. It is believed that not less than two hundred thousand persons witnessed the arrival of the "R. E. Lee," which was the first to reach the goal.¹

at New Orleans. After remaining at St. Louis a couple of days the "Jennie Bonnie" went to St. Paul, and thence across the grand portage to Lake Superior, through Lakes Huron, Erie, and Ontario into the St. Lawrence, and around to the coast of Maine to the point where she started from.

"Quite an excitement," says a St. Louis journal, "was created in steamboat circles by the trials of speed between the steamers 'R. E. Lee' and 'Natchez.' For years the time of the 'J. M. White' from New Orleans to St. Louis had stood unequalled, and among river-men there was a desire to know if any improvement in the building of fast, and at the same time good, business boats had been made. While we cannot see that anything was gained by the trial, we place the time of each boat on record for the benefit of those interested.

Steamboat Casualties.—Neither the exact number of steamboats lost nor a reasonably accurate approximation of the number of deaths resulting from steamboat accidents on Western waters will ever be ascertained, for until within a few years past but little effort was made to preserve the records and statistics of such disasters. The most reliable record of ex-

¹ The Fifth Annual Report of the St. Louis Chamber of Commerce, for 1860, has no reference to or mention of steamboat casualties.

² The "Dubuque," Capt. Smoker, was destroyed on the Mississippi River while on her voyage from St. Louis to Galena, Aug. 15, 1837, near Muscatine Bar, eight miles below Bloomington. The accident was caused by the explosion of the boiler on the larboard side, probably on account of some defect in material or workmanship. The steamboat "Adventure," arriving in a few hours after the explosion, took the "Dubuque" in tow to Bloomington. The killed were John Littleton, Isaac Deal, Felix Pope, Charles Kelly, Noah Owen, Jesse Johnson, James C. Carr, George McMurtry, Francis Pleasants, Henry A. Carr, John C. Hamilton, Joseph Brady, John Boland, Joseph L. Sanes, L. B. Sanes, Martin Shoughnohy, George Clix, David Francour, and Mrs. M. Shaughnessy and child.

³ When the "George Collier," while on her way, May 6,

The curious revelation is made by these figures that there have been more explosions of steam-boilers on Western steamboats, in proportion to the number of boats engaged in business on the rivers, since Congress enacted laws for the regulation and guidance of engineers on steam-vessels; and the list of casualties also shows that explosions were attended by more fatal results after that legislation than previously when engineers had to trust entirely to their skill and judgment in the management of the engine and regulating the pressure in the boilers. By contrasting the number of casualties for a period of eighteen years preceding the passage of the law of 1852 by Congress with the number of casualties for a period of eighteen years subsequent to the adoption of the law, the difference can be more readily perceived. During the first-named period twenty-seven boats exploded their boilers, and one thousand and two persons were killed. During a period of eighteen years subsequent to the passage of the law fifty-four boats met with disaster by explosion, and three thousand one hundred persons were killed.

From Jan. 1 to Nov. 19, 1841, the following boats engaged in the St. Louis trade were lost:

The Vermont sank between St. Louis and the mouth of the Ohio, valued at.....	\$5,000
Rienzi sank between St. Louis and the mouth of the Ohio.....	8,000
Peoria sank between St. Louis and the mouth of the Ohio.....	5,000
Chester sank between St. Louis and the mouth of the Ohio.....	20,000
Homer sank between St. Louis and the mouth of the Ohio.....	6,000
Maid of Orleans sank between St. Louis and the mouth of the Ohio.....	25,000
Oregon sank between St. Louis and the mouth of the Ohio.....	20,000
Keokuk sank between St. Louis and the mouth of the Ohio.....	6,000
Wm. Paris sank between St. Louis and the mouth of the Ohio.....	12,000
A. M. Phillips sank between St. Louis and the mouth of the Ohio.....	6,000
Tohula sank between St. Louis and the mouth of the Ohio.....	15,000
U. S. Mail sank between St. Louis and the mouth of the Ohio.....	15,000
Brazil sank on the upper Mississippi....	8,000
Caroline sank below mouth of Ohio.....	35,000
Chief Magistrate sank below mouth of Ohio.....	15,000
Baltic sank below mouth of Ohio.....	12,000
Malta sank on the Missouri.....	15,000
Missouri burnt at the wharf.....	50,000

\$290,000

1839, from New Orleans to St. Louis, was about eighty miles below Natchez, her piston-rod gave way. The cylinder-head was broken, and the boiler-stand carried away. The steam escaping scalded forty-five persons, of whom twenty-six died that day, as follows: T. J. Spalding, Ch. Brooks, William Blake, C. Herring, Mrs. E. Welch and two children, S. O'Brien and wife, S. J. Brogna, John Idida, D. J. Rose, D. Groe, F. Gross, J. B. Bossuet, P. Smith, Joseph Lawrence, Charlotte Fletcher and brother, — Bilch, and six others unknown.

In *De Bow's Review* a list of disasters to steam-boats is given which, though made from "very defective returns," has not overdrawn the picture of death, ruin, and suffering which explosions, collisions, and carelessness have inflicted on the people of this country who traveled on Western waters. This list in the *Review* for 1849 extended back many years. It is as follows:

Whole number of boats on which explosions have occurred.....	233
Passengers killed (enumerated in 6 cases).....	140
Officers " " " 31 ".....	57
Crew " " " 25 ".....	103
Whole number killed " 164 ".....	1,805
" " wounded " 111 ".....	1,015
Total amount of damages " 75 ".....	\$997,650
Average number of passengers killed in the enumerated cases.....	23
Average number of officers killed in the enumerated cases.....	2
Average number of crew killed in the enumerated cases.....	4
Average number killed in the enumerated cases.....	11
Average number wounded in the enumerated cases.....	9
Average amount of damages.....	\$13,302
The cause is stated in 98 cases; not stated in 125; unknown in 10; together.....	233
1. Excessive pressure, gradually increased, was the cause of.....	16
2. The presence of unduly heated metals was the cause of.....	16
3. Defective construction was the cause of.....	33
4. Carelessness or ignorance was the cause of.....	32
5. Accidental (rolling of boat) was the cause of.....	1

Nature of the Accidents.

Bursting boiler.....	101
Collapsing flue.....	71
Bursting steam-pipe.....	9
Bursting steam-chests.....	1
Bolt and boiler forced out.....	1
Struck by lightning.....	1
Blew out boiler-head.....	4
Breaking cylinder-head.....	1

Date given in 177 cases; not stated in 56; total.....	233		
Pecuniary loss, 233 cases, at \$13,202 each.....	\$3,090,366		
Loss of life, 233 cases, at 11 each.....	2,563		
Wounded, 233 cases, at 9 each.....	2,097		
Total killed and wounded.....	4,660		

The fate of boats employed in the Mississippi trade is traced in the *Western Boatman* for 1848, as follows:

344 worn out or abandoned.....	50½ per cent.
238 snagged or otherwise sunk.....	34½ "
68 burnt.....	10 "
17 lost by collision.....	2½ "
17 explosions.....	2½ "

The seventeen boats which had their boilers burst were the "Washington," "Union," "Atlas," "Caledonia," "Porpoise," "Cotton Plant," "Tallyho," "Tricolor," "Car of Commerce," "Alabama," "Hornet," "Kanawha," "Helen McGregor," "Huntress," "Gen. Robinson," "Arkansas," and "Tech."

Average age of boats worn out or abandoned, five years nearly.

Average age of boats sunk, burnt, or otherwise lost, four years nearly.

Boats of which we have no dates of loss are calculated by the accounts obtained.

Building.

Built in Pittsburgh district.....	304
" Cincinnati.....	221
" Louisville.....	103
" Nashville.....	19

The following is a compilation of the number of boats lost up to 1850:

From 1810 to 1820.....	3
“ 1820 to 1830.....	37
“ 1830 to 1840.....	184
“ 1840 to 1850.....	270
Boats whose date of loss is unknown.....	80
Total.....	576
The tonnage of 480 of the above boats, as ascertained by record.....	68,048
Tonnage, supposed.....	17,210
Total.....	85,258
Original cost of boats lost by sinking, as ascertained.....	\$6,348,940
Supposed original cost of 102 not accounted for.....	765,000
Total original cost.....	7,113,940
Total depreciation while in service.....	3,665,890
Final loss.....	3,681,297

The list of boats destroyed by fire comprises 166. The original cost of these 166 steamers was \$1,010,854.

The following are some of the more noteworthy disasters to St. Louis vessels:

In March, 1823, the “Tennessee,” Capt. Campbell, was lost and thirty persons drowned. In December of the same year the “Cincinnati,” on her way from St. Louis to New Orleans, ran on a snag below Ste. Genevieve and sank. No lives were lost.

In the latter part of April, 1832, the “Talisman,” lying in port at St. Louis, was burned to the water’s edge. On the 24th of October, 1834, the “Missouri Belle” collided with the “Boone’s Lick” and sank almost immediately, thirty persons being drowned.

The “Shepherdess,” from Cincinnati for St. Louis, struck a snag on the 4th of January, 1844, in Cahokia Bend, within three miles of Market Street wharf, St. Louis, and sank. The disaster occurred about eleven o’clock at night, and as most of the passengers had retired to their cabins and the boat sank rapidly, the loss of life was very great.

On the 10th of March, 1848, the steamers “Avalanche,” “Hibernian,” “John J. Hardin,” and “Laclede,” with two barges, were burned at the Levee near the foot of Washington Street, St. Louis; and on the 9th of May the steamers “Mail,” “Missouri Mail,” “Lightfoot,” and “Mary” were burned at their wharf in St. Louis.

The following boats were burned at St. Louis during the year 1849, excepting at the time of the great fire in May:

Algona, July 29th.....	\$18,000
Dubuque, July 29th.....	8,000
Highlander, May 1st.....	14,000
Mary, July 29th.....	30,000
Phoenix, July 29th.....	16,000
San Francisco, July 29th.....	28,000

Accidents to Steamboats which were afterwards raised and repaired.

“Buena Vista,” took fire at Kaskaskia landing; cargo greatly damaged by water; boat saved from burning by the exertions of her officers and crew.

“Governor Briggs,” struck a wreck and sunk in backing out from the wharf at St. Louis July 12th; afterwards raised and repaired.

“Magnet,” collapsed connection pipe and flue at St. Louis August 8th; afterwards repaired.

“San Francisco,” exploded a boiler at St. Louis May 30th, killing and scalding several persons; afterwards burned at the same place on July 29th.

Twenty-three vessels were burned at the wharf in St. Louis at the time of the great fire on May 17, 1849, as follows:

“American Eagle,” Cossen, master, Keokuk and Upper Mississippi packet, valued at \$14,000, total loss; insured for \$3500 in Pittsburgh; no cargo.

“Alice,” Kennett, master, Missouri River packet, valued at \$18,000, total loss; insured for \$12,000,—\$9000 in city offices, balance East; cargo valued at \$1000.

“Alexander Hamilton,” Hooper, master, Missouri River packet, valued at \$15,000, total loss; insured for \$10,500 in Eastern offices; no cargo.

“Acadia,” John Russell, master, Illinois River packet, valued at \$4000, total loss; fully insured in Eastern offices; cargo fifty barrels molasses and sundry small lots of merchandise, valued at \$1000.

“Boreas, No. 3,” Bernard, master, Missouri River packet, valued at \$14,500, total loss; insured for \$11,500 in city offices; no cargo.

“Belle Isle,” Smith, master, New Orleans trade, valued at \$10,000, total loss; insured for \$8000 in the Columbus agency at New Orleans and another office; no cargo.

“Eliza Stewart,” H. McKee, master, Missouri River trade, valued at \$9000, total loss; insured for nearly the full value,—\$4500 in the Nashville agency, balance in the city; no cargo.

“Eudora,” Ealer, master, New Orleans and St. Louis trade, valued at \$16,000, total loss; insured for \$10,500, all in city offices; no cargo.

“Edward Bates,” Randolph, master, Keokuk packet, valued at \$22,500, total loss; insured for \$15,000, all in city offices; no cargo.

“Frolic” (tow-boat), Ringling, master, valued at \$1500, total loss; no insurance; no cargo.

“General Brook” (tow-boat), Ringling, master, valued at \$1500, total loss; no insurance; no cargo.

“Kit Carson,” Goddin, master, Missouri river packet, valued at \$16,000, total loss; insured for \$8000, if not more, in city offices; cargo valued at \$3000.

“Mameluke,” Smithers, master, New Orleans and St. Louis trade, valued at \$30,000, total loss; insured for \$20,000,—\$8000 in Louisville, \$5000 in Columbus agency, \$7000 in St. Louis; no cargo.

“Mandan,” Beers, master, Missouri river trader, valued at \$14,000, total loss; insured for \$10,500, all in city offices; no cargo.

“Montauk,” Legrand Morehouse, master, Upper Mississippi trader, valued at \$16,000, total loss; insured for \$10,000,—\$5000 here, balance in agencies; cargo valued at \$8000.

“Martha,” D. Finch, master, Missouri river trader, valued at \$10,000, total loss; fully insured; cargo valued at \$30,000, also insured.

“Prairie State,” Baldwin, master, Illinois river packet, valued at \$26,000, total loss; insured in Eastern offices for \$18,000; cargo valued at \$3000.

“Red Wing,” Barger, master, Upper Mississippi trade, valued at \$6000, total loss; no insurance; cargo valued at \$3000.

"St. Peters," Ward, master, Upper Mississippi trade, valued at \$12,000, total loss; insured for \$9000 in the Nashville and Louisville agencies; no cargo.

"Sarah," Young, master, New Orleans and St. Louis trade, valued at \$35,000, total loss; insured for \$20,000 at Cincinnati; cargo valued at \$30,000.

"Taglioni," Marshall, master, Pittsburgh and St. Louis trade, valued at \$20,000, total loss; insured for nearly the full value in Pittsburgh; cargo fifty tons of iron, five hundred kegs of nails, and sundry lots of merchandise, valued at from \$12,000 to \$15,000.

"Timour," Miller, master, Missouri river trade, valued at \$25,000, total loss; insured for \$18,000,—\$4000 in the city offices, the balance East; cargo valued at \$6000.

"White Cloud," Adams, master, New Orleans and St. Louis trade, valued at \$3000, total loss; fully insured; no cargo.

The steamboat "Andrew Jackson" was destroyed by fire while lying at Illinoistown on Aug. 7, 1850. She was an old boat and insured for six thousand dollars. Five other boats narrowly escaped being consumed. The steamboat "Governor Briggs" was damaged by collision with the "Allegheny Mail," near St. Louis, on January 13th. The "Mustang" was burned to the water's edge at St. Louis on May 8th. She was rebuilt, but afterwards lost by snagging in the Missouri, near Brunswick, early in October. The "Ohio" blew out a mud-valve at St. Louis on September 26th, scalding two persons.

The bursting of the larboard boiler of the ferry-boat "St. Louis," on the 23d of February, 1851, caused one of those terrible disasters which have so often shocked the public in this country. "Timbers, large masses of machinery, brick-work, and ashes were hurled aloft in every direction with many human beings." There were from twenty-five to thirty persons on the boat at the time of the explosion. Of that number there were but three or four survivors. There were thirteen bodies identified. The coroner's list of dead mentions "John Walter James, an unknown boy, Sebastian Smith, a boy called Bill, living in Illinoistown near Pap's house, Dr. Truett, Merriwether Smith, Robert Hardin, Alexander McKean, William W. Benson, Isaac Cooper, Alfred Wells, Ernest August Smidt."

The steamer "Sultana" was destroyed by fire, with a loss of seventy-five thousand dollars on boat and cargo, on the 12th of June, 1851, while lying at the foot of Mullanphy Street, St. Louis.

By the explosion of the boilers of the steamer "Glencoe," upon her arrival at St. Louis from New Orleans, on April 4, 1852, another great destruction of life and property was brought about. During the same fire the steamer "Cataract" was greatly injured, together with wood- and wharf-boats. On the 18th of January, 1853, the steamers "New England," "Brunette," and "New Luey" were burned at the

wharf in St. Louis. The steamer "Bluff City" was burned, and the "Dr. Franklin, No. 2," and "Highland Mary" were greatly damaged by the fire from the first, on the 27th of July, 1853, while lying at the St. Louis Levee. The "Montauk," "Robert Campbell," and "Lunette" were burned on the 13th of October, 1853. On Feb. 16, 1854, the Alton packet, "Kate Kearney, No. 1," exploded her starboard boiler just as she was starting from St. Louis. Twenty-five persons were severely scalded. The Rev. S. G. Gassaway, rector of St. George's Church, St. Louis, was killed, and Maj. Buell was severely injured. The steamers "Twin City," "Prairie City," and "Parthenia" were burned at the wharf in St. Louis on the 7th of December, 1855. A loss of nearly one hundred thousand dollars was caused by the burning of the steamers "St. Clair," "Paul Anderson," "James Stockwell," "Southerner," and "Saranac," and the damaging of the "Monongahela," "Pennsylvania," and "Mattie Wayne."

The steamer "Australia" was burned on the 1st of April, 1859, and the steamers "New Monongahela" and "Edinburgh" at Bloody Island on the 15th of May of the same year. A loss of two hundred thousand dollars and the destruction of five steamers were caused by the burning of the "H. D. Bacon, the "L. L. McGill," the "Estella," the "A. McDowell," and the "W. H. Russell," on the 27th of October, 1862.¹ The steamers "Imperial," valued at sixty thousand dollars, "Hiawatha," valued at sixty thousand dollars, "Jesse K. Bell," valued at twenty thousand dollars, and the "Post-Boy," valued at thirty-five thousand dollars, were burned on the 13th of September, 1863. The "Chancellor," "Forest Queen," and the "Catahoula" were burned on the 4th of October, 1863. The steamer "Maria," having on board a portion of the Third Iowa and Fourth Missouri Cavalry, was blown up at Carondelet in December, 1864.² The "Jennie

² From the *Republican* of Dec. 12, 1864:

"At seven o'clock Sunday morning the steamboat 'Maria,' loaded with government troops, horses, mules, wagons, etc., was blown up while lying at the landing at Carondelet, and afterwards burned to the water's edge. About six o'clock Saturday evening the 'Maria,' 'Lillie Martin,' and 'Ella Faber,'

Lewis," and the ferry-boat "Illinois, No. 2," were sunk in the ice at St. Louis, Nov. 19, 1864.

The Carondelet and Marine Railway Docks, together with the steamer "Jeanie Deans," were totally destroyed by fire on the 12th of May, 1866. The steamers "Ida Handy" (valued at seventy-five thousand dollars), "Bostona," and "James Raymond" were burned on the 2d of June, 1866. The steamer "Magnolia," valued at one hundred and fifty thousand dollars, was burned on the 13th of June. By the fire of the 7th of April, 1866, the steamers "Fanny Ogden" with cargo, the "Frank Bates" and cargo, the "Nevada" and cargo, the "Alex. Majors" with cargo, and the "Effe Deans" with cargo, all together involving a loss of over five hundred thousand dollars, were destroyed. On the 26th of February, 1866, a disastrous fire occurred, destroying the steamers "Leviathan," "Luna," "Peytona," and "Dictator," with a loss estimated at three-quarters of a million of dollars.

On December 19th the steamer "Gray Eagle" was sunk at St. Louis. The ice-gorge of 1865-66 occasioned a loss of nearly a million of dollars to the owners of steamboats. The following was the esti-

having on board a considerable number of cavalry, principally belonging to the Third Iowa and Fourth Missouri Cavalry, left the Levee at St. Louis and dropped down to Carondelet, about seven miles below, where they were lying when the disaster took place, the 'Maria' between the other two. She had on board Col. Benteen, commanding brigade, with his staff and escort, Col. B. S. Jones, Third Iowa Cavalry, a portion of his command and detached troops, amounting in all to about one hundred men, besides the crew of the boat, *en route* for Cairo. The explosion, by whatever means caused, threw the forward end of the boilers apart, landing them on the deck, without disturbing the after ends, and dashed the front of the furnaces and a quantity of coal forward, setting fire to bales of hay, twelve of which only were on deck, the remainder with the oats being in the hold. At the moment the explosion took place the floor of the cabin was burst up, and falling back precipitated a number of soldiers down upon the boilers and burning wreck.

"When the 'Maria' left St. Louis she was in advance of the 'Ella Faber,' who had on board men recently belonging to the Fourth Missouri Cavalry. Eight of the men of this regiment left behind got on board the 'Maria.' Two only of those are known to have got off unhurt. What has become of the others is not known. Immediately after the accident occurred the 'Lillie Martin,' which had steamed up, fell down and took off the men on board and on the after-part of the boat, and also three ladies. In half an hour after the explosion the boat was a mass of flame, allowing time to save nothing but the load of human life aboard. The 'Maria' is a new boat, built at Cincinnati, the trip to St. Louis being her third since built. Her cost was thirty-five thousand dollars. She is insured at Cincinnati, but for what amount we did not learn. The officers of the 'Maria' are Capt. Alexander Montgomery; Wesley B. Dravo and William Dravo, clerks; Washington Couch and Frank Canger, engineers; Thomas Botts and Andrew Acker, mates; Sol. Catterlin and David Blashfield, pilots."

mate of the total loss of steamboat-owners and underwriters from the formation of the ice-gorge at St. Louis in 1865 to its breaking on the 16th of December of that year, together with the names of the vessels sunk :

In the above table no amount whatever is set down for damage done the boats that escaped being sunk. The computations made on this subject by steamboatmen and steamboat-builders aggregated one hundred and forty thousand dollars, while some went as high as one hundred and sixty thousand and one hundred and seventy thousand dollars.

The following is a list of steamboat disasters at or near St. Louis from 1867 to 1881, inclusive :

- 1867. Jan. 20, "Mexico," burned at St. Louis; total loss.
- Jan. 26, "R. C. Wood," sunk opposite Carondelet.
- Jan. 26, "E. H. Fairchild," sunk opposite Carondelet.
- Feb. 6, "Tom Stevens," sunk near St. Louis.
- Feb. 13, "White Cloud," sunk at St. Louis; total loss.
- June 13, "Governor Sharkey," sunk at St. Louis; total loss.
- Sept. 10, "G. W. Graham," burned at St. Louis; total loss.
- Sept. 10, "Yellowstone," burned at St. Louis; total loss.
- Sept. 27, "Illinois," exploded at St. Louis; repaired.
- 1868. Feb. 4, "Anna White," sunk by ice in St. Louis harbor; total loss. Value \$12,000; partly insured.
- Feb. 4, "Clara Dolsen," New Orleans packet, burned in St. Louis; total loss. Insured for \$25,000.
- Feb. 22, "Kate Putnam," sunk near St. Louis; raised and repaired. Insured for \$20,000.
- Feb. 29, "Paragon," sunk in Mississippi River near Cape Girardeau; total loss. Insured for \$35,000.
- March 2, "M. S. Mepham," burned at St. Louis Levee. Value \$35,000; insured for \$40,000. Total loss.
- March 2, "Fannie Scott," burned at St. Louis Levee. Damage \$5000.

March 2, "Kate Kinney," partially burned at St. Louis Levee. Damage \$5000; insured.

April 18, "George D. Palmer" (stern-wheeler), partially burned at St. Louis Levee. Damage \$5000; insured at Cincinnati.

Dec. 18, "George McPorter," sunk in St. Louis harbor; total loss.

1869. March 29, "Carrie V. Kountz," "Gerard B. Allen," "Ben Johnson," "Henry Adkins," "Jennie Lewis," and "Fannie Scott" burned at St. Louis; loss nearly \$500,000.

Oct. 28, steamer "Stonewall" burned, and a large number of lives lost.

1870. Jan. 19, steamer "Lady Gay," one day out from St. Louis, struck a snag near Grand Tower and was sunk. She was built in 1865, and was valued at \$50,000. She was one of the boats of the St. Louis and New Orleans Packet Company, and belonged to Capt. I. H. Jones, Theodore Laveille, and others. She was insured for \$24,000 on boat and \$30,800 on cargo and stock.

Jan. 28, collision between the tow-boat "Fisher" and ferry-boat "East St. Louis," opposite Olive Street; damage slight.

1871. Jan. 13, tow-boat "Tiber" thrown out of the river at the foot of Biddle Street, St. Louis, by floating ice, and totally destroyed.

The canal propeller "Sligo" beached and destroyed by the floating ice at the foot of Cherry Street, St. Louis.

Jan. 28, the steamer "W. R. Arthur," bound from New Orleans to St. Louis, exploded her boilers on the Mississippi River when about twenty miles above Memphis. The boat was totally destroyed. By this accident about sixty lives were lost.

Feb. 28, the St. Louis and Keokuk packet "Rob Roy" met with a serious accident when leaving St. Louis. The starboard head of the steam-drum blew out with great force. Two staterooms and the mess-room were demolished. West Robinson, a deck-hand, was killed.

March 8, great storm at St. Louis. The St. Louis and New Orleans packet "Mollie Able," a fine side-wheel steamer, lying at the East St. Louis wharf, was caught by the tornado and almost totally destroyed. Several other boats were injured.

1876. Feb. 12, the steamer "Rescue" caught fire at the wharf in St. Louis and burned to the water's edge; afterwards rebuilt.

Feb. 16, steamer "John M. Chambers" partly burned at wharf; rebuilt.

April 8, steamer "Rob Roy" struck St. Louis bridge; slightly damaged. On the 25th, the propeller "Whale" struck the bridge, and was damaged to the extent of about \$2000.

Dec. 13, the ice-gorge at St. Louis gave way, carrying with it, destroying and partially destroying, the following boats and barges:

Steamers.	Value.	Loss.
Centennial.....	\$65,000	\$5000
Jennie Baldwin	2,000	2000
Bayard.....	3,500	3500
Rock Island.....	4,000	4000
Davenport.....	4,000	4000
Alexander Mitchell.....	30,000	5000
War Eagle.....	75,000	5000
Andy Johnson.....	30,000	3000

There was no insurance on any of the above steamers.

Steamer "Fannie Keener" was also sunk; was valued at \$5000, fully insured.

Steamer "South Shore," valued at \$2500.

Steamer "Southern Belle," valued at \$1500, and four barges, valued at \$4500.

1877. Sept. 19, while the steamer "Grand Republic" was lying in port at St. Louis she caught fire and burned to the water's edge. She cost \$300,000, and was insured for \$50,200. Six weeks previous to this disaster her owners spent \$25,000 in

repairing her. The iron-hulled steamer "Carondelet," which was lying alongside of the "Grand Republic," met the same fate. She was valued at \$20,000 and insured for \$17,500. The sparks from a passing steamer were the supposed cause of the fire.

1878. March 8, steamer "Colossal" burned to the water's edge while lying at the bank at St. Louis; loss \$12,000.

March 9, the tug-boat "Baton Rouge" damaged by fire at St. Louis.

June 8, steamer "Exchange" burned to the water's edge at St. Louis; loss \$9000.

1879. June 11, the tug "Charles F. Nagle" struck a snag opposite South St. Louis and sank. She was raised.

1880. March 27, steamer "Daisy" sunk at South St. Louis; valued at \$3000.

Sept. 26, steamer "Fannie Tatum" sunk below St. Louis; valued at \$15,000; cargo, \$35,000. She was raised.

1881. March 13, steamer "James Howard" destroyed by fire at St. Louis wharf, together with a cargo of sugar, etc., valued at \$65,000; boat valued at \$75,000.

April 9, steamer "Victory" collided with St. Louis bridge and sunk; afterwards raised.

April 11, the tug "Daisy" exploded her boilers and sunk. Two lives lost.

Steamboat-Building.—The building and repairing of steamboats at St. Louis is an industry which originated at a comparatively early period. In December, 1830, mention was made of the fact that the Legislature had passed an act to incorporate the St. Louis Marine Railway Company, which was organized in March, 1831, with Peter Lindell, president; John Mullanphy, D. D. Page, Thomas Biddle, and J. Clemens, Jr., directors; John O'Fallon, treasurer; and James Clemens, Jr., secretary. In 1833 there was in existence at the upper end of the city a marine railway under the superintendence of Thomas J. Payne, which it had been announced in July would be ready for work in the same year.¹

In 1841 public sentiment began to be directed towards the importance of securing the construction at St. Louis of the steamboats that carried on her commerce, and the newspapers of that year repeatedly called attention to efforts being made in that direction.²

¹ *Marine Railway at St. Louis.*—The proprietors have the pleasure of informing the public that their ways have been fairly tested, and are now ready to receive for repair steamboats and other craft at the very low price of one hundred dollars for all boats not exceeding one hundred tons, to lie on the ways two days for repair without any additional charge, except the cost of repair. Boats exceeding one hundred tons will be charged one dollar per ton, with the privilege of lying on the ways for repair from two to four days, according to tonnage. Boats that shall remain on the ways longer than is herein privileged to pay for every day exceeding the privileged number twenty per cent. on the sum charged for drawing out.

THOMAS J. PAYNE,

Superintendent Marine Railway Company.

—*Republican*, July 22, 1833.

² "A great deal has been said by the newspapers of this city in favor of building boats at this place. The spirit has been

In 1842 two boat-yards for the construction of vessels were in existence, and in January, 1843, the marine railway of Messrs. Murray & Sons, below Thomas' mill, erected for the purpose of drawing out and repairing boats, was ready for work. The structure consisted of eight ways reaching into the bed of the river below low-water mark. There was a cradle upon each two ways which let down into the river, and upon which the boat was placed, and from these, two chains led to a beam which was propelled by a wheel and screws, and each screw was turned by a horse, thus combining the power of the lever and the screw.

The *Reporter* of Jan. 29, 1846, contained the following statement of steamboats built at St. Louis, of boats built elsewhere for St. Louis, and of boats purchased and brought into the St. Louis trade in 1845, furnished by L. A. Hedges, surveyor of that port:

BOATS BUILT AT ST. LOUIS.

Names.	Tonnage.	Cost.
Governor Briggs.....	91	\$9,000
Laclede.....	239	20,000
Missouri.....	887	45,000
Iowa.....	249	22,000
Dial.....	140	7,000
Helen.....	61	8,000
Prairie Bird.....	213	17,000
Little Dove.....	77	5,500

	2912	\$189,500

moved, the ground has been broken, and we trust that hereafter we shall have no cause to complain, and that our boat-owners will consult not only their own individual interests, but the interests of the community also, and give to their neighbors and customers employment in return for their custom. It is not more gratifying to us than it will doubtless be to many others of our citizens to learn that Capt. Case has opened a boat-yard in the upper part of the city, near the site of the old brewery. The situation is pronounced by experienced boat-builders to be one of the best in the West. The water in front of it is deep, and no difficulty will be experienced at any season of the year in launching boats. Upon examination it is ascertained that the timber is superior to any used in the West in building boats.

"A contract has been made by Messrs. Hoffman, Alleyne & Klein for the hull of a new boat, and for the machinery of the 'Little Red,' of three hundred and fifty tons, for the New Orleans trade. The keel has been laid, and the frame is nearly ready to be put up. The foundry-work will be by Messrs. Kingsland & Lightner, and the cabin and upper works by Mr. Lumm. The whole is under the supervision of Capt. J. C. Shepard.

"A contract has been made for the rebuilding of a boat to be called the 'Phoenix,' and for the machinery of the 'Missouri.' The contract for the hull has been made with the Dry-Dock Company, the cabin and superstructure by Messrs. Whitehill & Weston, the foundry-work by Messrs. Kingsland & Lightner and her clothing and other articles of outfit by Mr. John J. Anderson, the whole under the superintendence of Capt. John F. Hunt."—*Republican*, Nov. 11, 1841.

This statement is interesting, as showing the increase of boat-building in St. Louis, as well as enabling us to compare the cost between boats built in St. Louis and those built elsewhere at this time.¹

The Marine Railway and Floating Dock Company in 1850 had at Carondelet a dock three hundred and fifty feet in length and ninety-four feet in breadth, with seven feet depth of hold. The hold was divided into four water-tight compartments from bow to stern, which were sub-divided by bulkhead thwartships, cutting the whole into twenty-six air- and water-tight chambers. The Mound City Marine Ways Company was established in 1858 by Capt. William L. Hambleton, and its affairs were subsequently conducted under the name of Hambleton Brothers. The business proved very successful, a hundred new boats having been built by the firm and more than a thousand repaired.

The building of iron hulls for steamboats has of late years become an important industry at St. Louis. Though several iron-plated war-vessels were con-

¹ It was noted in the *Republican* of Nov. 1, 1848, that "contracts have been entered into with Messrs. Brotherton & Gordon for the lumber to be used in the building of a ship in this city. It is to be commenced immediately by Capt. Evans and Mr. French, who design to make it a permanent business. The vessel is to be of three hundred tons burden, and will be completely fitted and rigged here. It is to be completed by the 1st of April, will then be loaded and proceed seaward. It is believed that sea-vessels can be built here on better terms than at New York or on the Ohio. The timber used in their construction is of a better quality than that obtained on the Ohio, and greatly cheaper than that which is used in New York."

strued at St. Louis during the civil war, it was not until about the year 1874 that the building of iron hulls took definite and positive form as a leading industry. To Theodore Allen, more than to any other individual, is due the credit of establishing this great business. In 1874, Mr. Allen issued a prospectus pointing out the advantages of iron hulls over wooden, and proposed the erection of the "St. Louis Iron Ship Works," which were afterwards inaugurated under the name of the "Western Iron Boat Building Company," composed of Messrs. Chouteau, Harrison, and Vallée, well-known iron manufacturers. Of this company Mr. Allen became superintendent. The yards of the company at Carondelet extend for two thousand one hundred feet along the river-front, and back to the railroad, employing about two hundred men. A pamphlet published by Charles P. Chouteau in 1878 gives a map and very complete statistics of the products of the West, covering the statistics of tonnage and business on Western waters, the towing and barge business, the defects of wooden and the advantages of iron hulls.

St. Louis and St. Paul Packet Company.—This corporation had its origin in the Keokuk Northern Line Packet Company, which was formed by the consolidation of the St. Louis and Keokuk Packet Company and the Northern Line Packet Company. The St. Louis and Keokuk Line was formed Jan. 1, 1842, the principal members of the company being Capt. John S. McCune and J. E. Yeatman. In October, 1842, the keel of the first boat, the "Di Vernon," was laid at St. Louis, and the vessel was completed at a cost of sixteen thousand dollars and started on her first trip to Keokuk before the close of navigation. On the opening of the spring trade in 1843 she commenced running regularly, and with two other (transient) steamers formed a daily line, which continued throughout the season. During the following winter the company built the "Laclede," one of the best steamboats of her day, and at the same time purchased the "Boreas." With these vessels the daily line was resumed in the spring of 1844, the company in the mean time having secured the contract for carrying the mails. During this season an opposition line with three steamers—the "Swallow," "Anthony Wayne," and "Edwin Bates"—was organized, and in the following spring both lines commenced running and continued until about midsummer, when the new line succumbed, and the "Bates," a fast and handsome boat, was purchased by the old company. In the spring of 1846 the "Lucy Bertram," and in the fall of 1847 the "Kate Kearney," both new and handsome vessels, were added to the line. Another

"Di Vernon" was built at St. Louis in 1850 at a cost of forty-nine thousand dollars, a sum which was thought at the time to be very large for the construction of a steamboat. In the spring of the same year another opposition line, with the steamers "Monongahela," "New England," and "Mary Stephens," was established. The two lines were kept up during nearly the entire spring and summer. One boat of each line left port daily, side by side, at the top of its speed, burning the most expensive fuel, paying the highest wages, and carrying freight and passengers at a price so low that the entire receipts of both would not defray one boat's wood bill. The contest was long and severe, and lasted until late in the summer. When the two lines had sunk about fifty thousand dollars, the opposition boats were withdrawn and sold at auction, and the "New England" was purchased by the old company.

The "Jeanie Deans" was built in the summer of 1852,¹ and the "New Lucy" in the fall of the same year. The "New Lucy" was burned at her wharf at St. Louis about six weeks after being finished. During the summer of 1853 the "Westerner" was built, and subsequently another "Kate Kearney." There were also added to the line from time to time the "Sam Gaty," "Keokuk," and "Quincy," built at St. Louis, and the "Ben Campbell," "Prairie State," "J. McKee," "Glaucus," "Regulator," "Jenny Lind," "Conewago," "York State," "Winchester," "Thomas Swann," and others obtained by purchase.

¹ The commander of the "Jeanie Deans" was Capt. J. W. Malin. Capt. Malin was born in October, 1818, at Vevay, Switzerland Co., Ind. In 1832 he commenced his career as a river pilot in the flat-boat business, between Madison and Cincinnati, and a few years later began running a packet between Cincinnati and St. Louis, commanding at different times in that trade the "John Drennan," the "Mary Stevens," the "Royal Arch," the "Hamburg," and the "Statesman." He next engaged in the Minnesota trade, and was afterwards connected for ten years with the Keokuk Packet Line, commanding at first the "Jeanie Deans," with which he remained until the building of the "Warsaw," which he commanded until that vessel became unfit for further use. In 1863 he engaged with Capt. Scudder in the commission business in St. Louis, the firm being Malin & Scudder, but subsequently returned to his old occupation and commanded vessels in the Star and Anchor Lines. Capt. Malin had purchased in 1868 an interest, with Capt. Brolaski, in the Laclede Hotel, and in 1870, having bought his partner's share, he associated his son, Walter A. Malin, with him and assumed the management of the hotel. In 1871 the erection of an extensive addition to the hotel was commenced by Dr. Bircher, and completed in August, 1873, at which time Malin & Son took possession and united the two under the name of the Laclede-Bircher Hotel. The latter portion of the title, however, was seldom used, and the hotel was popularly known simply as the Laclede. Capt. Malin died at the Hot Springs, Ark., in September, 1874.

In 1857 the company established the Quincy line, making one freight and passenger line between St. Louis and Quincy, and one mail and passenger line between St. Louis and Keokuk. They were arranged as follows:

Quincy Packets.—“Keokuk,” Bradley, master; “Sam Gaty,” Richardson, master; “Quincy,” Ford, master.

Keokuk Mail Packets.—“Jeanie Deans,” Malin, master; “Di Vernon,” Sheble, master; “Thos. Swann,” Johnson, master.

About 1871 the line was consolidated with the Northern Line Packet Company. In the winter of 1857–58 a number of the captains of steamboats plying between St. Louis and St. Paul determined to form a new line and make regular trips, leaving on stated days in the week. On the opening of navigation in the following spring this line consisted of the steamers “Canada,” Capt. James Ward; “W. L. Ewing,” Capt. W. Green; “Denmark,” Capt. R. C. Gray; “Metropolitan,” Capt. Thomas B. Rhodes; “Minnesota Belle,” Capt. Thomas B. Hill; and “Pembina,” Capt. Thomas H. Griffith. Messrs. Warden & Shaler were appointed agents, and the line was known as the Northern Line. In 1859 the “Chippewa,” Capt. W. H. Crapeta; “Dew Drop,” Capt. N. W. Parker; “Lucie May,” Capt. J. B. Rhodes; “Aunt Letty,” Capt. C. G. Morrison; “Northerner,” Capt. P. A. Alford, and the “Laclede” were added.

In the winter of 1859–60 the owners of the different vessels decided to form a joint-stock company, and organized under the name of the Northern Line Packet Company. The incorporators and directors were D. Hawkins, Thomas Gordon, and J. W. Parker, of Galena, Ill.; John B. Rhodes, of Savannah, Ill.; R. C. Gray, of Pittsburgh, Pa.; and James Ward and Thomas H. Griffith, of St. Louis, Mo. Capt. James Ward was elected president, and Thomas H. Griffith secretary and treasurer. The vessels owned by the company were the “Sucker State,” “Hawk-Eye State,” “Canada,” “Pembina,” “Metropolitan,” “Northerner,” “W. L. Ewing,” “Denmark,” “Henry Clay,” “Minnesota Belle,” and “Fred. Lorenz.”

In 1864, Capt. William F. Davidson, who had been managing a line of steamboats on the upper Mississippi, established a service between Dubuque and St. Paul, and subsequently, having purchased the property of the Galena Packet Company, established the Northwestern Union Packet Company. In 1868 the Northern Line Packet Company admitted the boats of the Northwestern Company into their line, and in the following year the vessels were running under the direction of the Northern Company. In 1871 the

steamers of the two companies plying between St. Louis and northern points were: Northern Line, “Lake Superior,” “Red Wing,” “Dubuque,” “Minnesota,” “Davenport,” “Muscatine,” “Pembina,” “Savannah,” “Sucker State,” and “Minnesota;” Northwestern Line, “Northwestern,” “S. S. Merrill,” “Belle of La Crosse,” “Alexander Mitchell,” “Victory,” “City of Quincy,” “Molly McPike,” and “Phil Sheridan.” Up to 1871 the Northern Line had lost but three boats,—the “Denmark,” sunk at Atlas Island by striking a log; the “Northerner,” burned at the St. Louis Levee; and the “Burlington,” sunk at Wabasha. The officers in 1870 were Thomas B. Rhodes, president; Thomas H. Griffith, secretary; Thomas J. Buford, superintendent; and I. M. Mason, general freight agent. The total number of tons of freight deposited by the steamers of the company during the year at St. Louis was seven hundred and sixty-four thousand three hundred and seven.

The Keokuk Packet and the Northern Line Packet Companies were competitors for the same trade, and the rivalry between them became so close and energetic that each suffered heavily, and it was finally decided to form a new company which should embrace them both. Accordingly a new corporation was organized, with the name of the Keokuk Northern Line Packet Company, the capital stock of which was seven hundred and fifty thousand dollars, and the property of the competing lines was purchased. The first president was Capt. John S. McCune, who managed its affairs with marked ability until his death. He was succeeded by Darius Hawkins, who was the nominal head of the company during a period of legal difficulties until 1875, when Capt. William F. Davidson was elected president. In 1879–80 the company owned the following steamboats:

	Tons.		Tons.
Alexander Mitchell.....	512.09	Northwestern.....	802.06
Belle of La Crosse.....	476.69	Rob Roy.....	967.00
Clinton.....	909.22	Red Wing.....	670.43
Daniel Hine.....	100.61	War Eagle.....	953.74

Golden Eagle.....	941.50	Barges, forty-eight	
G. H. Wilson.....	159.06	in number.....	13,242.49
Minneapolis.....	649.62		
Minnesota.....	482.27	Total tonnage...	21,391.16

The officers in 1879 were William F. Davidson, president; Francis Johnston, secretary; John Baker, agent; James A. Lyon, general passenger agent.

The St. Louis and St. Paul Packet Company, the successor of the Keokuk Northern, was organized in June, 1881, with a capital stock of one hundred thousand dollars, the incorporators being W. F. Davidson, R. M. Hutchinson, and F. L. Johnston. The company transacts a general passenger and freight business between St. Paul and St. Louis, and owns the following

boats: "Gem City," "War Eagle," "Alexander Mitchell," "Minneapolis," "Northwestern," "Belle of La Crosse," and "Centennial." The officers in 1882 were W. F. Davidson, president; R. M. Hutchinson, superintendent; and F. S. Johnston, secretary. The general offices are located at Dubuque, Iowa.

William F. Davidson, successively president of the Keokuk Northern and St. Louis and St. Paul companies, is one of the leading steamboat proprietors of the West. He was born in Lawrence County, Ohio, on the 4th of February, 1825. His father being a boatman, Capt. Davidson was educated from his earliest boyhood in the navigation of Western waters. When only twenty years of age he was captain of the steamer "Gondola" on the Ohio River, and in 1856 established a line of three steamers on the upper Mississippi. He also engaged in the same business in 1857-58 on the Minnesota River, and subsequently established a line between La Crosse and St. Paul, and in 1864 a line from Dubuque to St. Paul. He then purchased the Galena Packet Company's property and franchises and organized the Northwestern Union Packet Company, which was afterwards consolidated with the Northern Line, which in turn was absorbed by the Keokuk Northern. After the death of Capt. J. S. McCune, president of the latter corporation, Capt. Davidson was elected his successor, and is now president of the St. Louis and St. Paul Packet Company. Capt. Davidson has thus had a varied but uniformly successful career as a steamboat manager, and his company, under his energetic but wise and prudent administration, is now in a flourishing condition. Capt. Davidson was married in 1859 to Miss Sarah A. Johnson, daughter of Judge Johnson, of Lawrence County, Ohio.

The St. Louis and St. Paul Passenger Freight Line was incorporated in December, 1880, under the laws of Wisconsin, with the following board of directors: P. L. Davidson, S. F. Clinton, and Lafayette Holmes. The company transacts a general passenger and freight transportation business on the Mississippi River, between St. Louis and St. Paul, and owns the following steamboats: "Grand Pacific," "Arkansas," "Flying Eagle," "Alexander Kendall," "White Eagle," and "Alfred Todd." The officers for 1882 were P. L. Davidson, president; S. F. Clinton, vice-president; and Lafayette Holmes, secretary. The general offices are located in La Crosse, Wis.

The Diamond Jo Line was established in 1867 by Joseph Reynolds. It started in a small way, with only one boat, which was employed by Mr. Reynolds in the produce trade on the upper Mississippi, with headquarters at Dubuque, Iowa. The business in-

creased with every succeeding year until, in 1882, there were five elegant steamers running on the line between St. Louis and St. Paul. The boats are the "Mary Morton," "Libbie Conger," "Diamond Jo," "Josephine," and "Josie," all of which are equipped with the latest and most improved machinery and life-saving apparatus. The officers in 1882 were Joseph Reynolds, general manager, and E. M. Dickey, general freight agent. The general office is at Dubuque, Iowa.

The St. Louis and Vicksburg Packet Company was organized and chartered in 1859, as the Memphis and St. Louis Packet Company, by John A. Scudder, Daniel Able, Wm. J. Lewis, Wm. C. Postal, and R. L. McGee. The Memphis Line commenced with the steamers "Ben Lewis," "J. H. Dickey," and "Platte Valley," which were followed in turn by the "John D. Perry," "Rowena," "C. E. Hillman," "Colorado," "St. Joseph," "Mary E. Forsyth," "Southerner," "Courier," "Robb," "Adam Jacobs," "City of Alton," "Luminary," "Julia," "G. W. Graham," "Belle of Memphis, No. 1," "Belle of St. Louis," "City of Cairo," "City of Vicksburg," "Grand Tower," "Belle of Memphis, No. 2," and the "City of Chester."

During the first eleven years but one serious accident occurred, the explosion of the "Ben Lewis," at Cairo. The "Belle of Memphis, No. 1," was lost in the ice at St. Louis, and the "G. W. Graham" was burned at the Levee, but in neither instance were any lives lost. The first president of the company was Capt. Daniel Able, whose life had been identified with river interests from boyhood, and who managed the line with marked ability. He was succeeded by W. G. Lewis, who in turn was followed by John J. Roe, under whose administration the business of the company was greatly increased and extended. A regular line of packets between St. Louis and Vicksburg was established, and the construction of a number of new steamboats was contracted for. On the death of Mr. Roe, Capt. Henry W. Smith, who had long been identified with the company as general superintendent, was elected president.¹

¹ Henry W. Smith was born in Connecticut, and about 1845 removed to Missouri, settling at Glasgow, where he engaged in mercantile pursuits. While thus occupied he was chosen a member of the State Legislature, and served with ability and zeal. In 1850 he abandoned his business at Glasgow to engage in steamboat enterprises, and commenced his career on the river as clerk on the "General Lane." He afterwards commanded and owned steamers of the same line. In 1855 he was made inspector of hulls for the board of underwriters, but upon the formation of the Memphis Packet Line he was called into active service again, and, as general superintendent, and subse-

Capt. Smith died in March, 1870, and was succeeded in the presidency of the company by John A. Scudder.

In 1879 the steamboats belonging to the company were the

	Tons.		Tons.
Belle of Memphis.....	919.67	John B. Maude.....	922.04
Colorado.....	632.87	Ste. Genevieve.....	790.20
City of Vicksburg.....	1058.28	City of Greenville.....	1438.06
City of Helena.....	1058.28		
Emma C. Elliott.....	660.16	Total.....	8537.84
Grand Tower.....	1058.28		

The officers in 1879 were John A. Scudder, president; Theodore Zeigler, secretary; John P. Keiser, superintendent; and William B. Russell, agent. In that year a reorganization of the company was effected, and its name was changed to the St. Louis and Vicksburg Packet Company, and the line is now known as the St. Louis and Vicksburg Anchor Line.

The company owns the following steamers, which ply between St. Louis and Memphis and Vicksburg: "City of Providence," "Gold Dust," "City of Greenville," "Belle of Memphis," "City of Cairo," "City of Vicksburg," "Arkansas City," "James B. Maude," "City of Helena," "Ste. Genevieve," "E. C. Elliott," and "Colorado." The general office is located on the company's wharf-boat at the foot of Locust Street, and the officers in 1882 were John A. Scudder, president and general manager; Directors, John A. Scudder, G. B. Allen, J. P. Keiser, and T. C. Zeigler. The capital stock is five hundred thousand dollars.

The New Orleans Anchor Line was organized in June, 1878, and incorporated during the same month with a capital stock of three hundred thousand dollars, the incorporators being John A. Scudder, James P. Keiser, G. B. Allen, William J. Lewis, and T. C. Zeigler. John A. Scudder was elected president, and has retained that position ever since. The company transacts a general passenger and freight transportation business on the Mississippi River between St. Louis and New Orleans, the steamers employed being the "City of New Orleans," "City of Alton," "City of Baton Rouge," "John A. Scudder," "W. P. Holliday," and "Commonwealth." This company does its own insurance, and during its existence has lost five boats by fire.

John A. Scudder, president of the St. Louis and Vicksburg Anchor Line and New Orleans Anchor Line, has long been identified with steamboat interests on the Mississippi. He was born at Maysville,

Mason Co., Ky., on the 12th of June, 1830. His father, Dr. Charles Scudder, was a native of New Jersey, and his mother, Mary H. Scudder, was a native of Virginia. Capt. Scudder removed to St. Louis at an early age, and soon became actively identified with steamboat interests on the Mississippi River. Before he was thirty years old he had already become quite prominent in the business, and assisted, as one of the incorporators, in the organization of the Memphis and St. Louis Packet Company, of which, as already stated, he became the president in 1870. Capt. Scudder at once addressed himself to the task of consolidating and harmonizing the steamboat interests on the lower Mississippi, and succeeded in greatly expanding the operations of the wealthy and powerful corporation of which he had become the head. Associated with him were Gerard B. Allen, John J. Roe, Edgar and Henry Ames, and other wealthy citizens of St. Louis, who ably seconded his shrewd and energetic administration of the company's affairs. To Capt. Scudder's tact and good management it was mainly due that the corporation passed unscathed through the turmoils and dangers of the civil war, for although he had not then been chosen its chief executive officer, his wise and prudent counsels were always heeded, and served to guide the company safely over many a shoal and rock.

In 1869 the Memphis Packet Company purchased the line running to Vicksburg, and extended its service to that point, running three boats a week to both Vicksburg and Memphis. In 1874, at his suggestion, the company adopted the trade-mark or emblem of an anchor, and from this the appellation "Anchor Line" was adopted. Capt. Scudder was the first to introduce on the Western rivers the restaurant plan, now so much favored, and every improvement calculated to promote the convenience and comfort of patrons he has always been the first to adopt. In 1877 he was elected president of the St. Louis Merchants' Exchange, and in 1878 he organized the New Orleans Anchor Line, with semi-weekly trips. In 1879 the charter of the Memphis and St. Louis Packet Company expired, and, as heretofore stated, the company was reorganized under the title of the St. Louis and Vicksburg Anchor Line. As the chief executive of both these companies, Capt. Scudder continues to lead a life of unceasing activity. His thorough familiarity with the whole subject of river navigation renders him an accepted authority among steamboat men, and there is probably no other individual engaged in the business of Western transportation who has been more uniformly successful, or who has contributed more largely to the development of the trade of the

quently president, of that company he became widely known upon the Western waters. At the time of his death Capt. Smith was also president of the Wrecking Company, and of a building association, besides being engaged in a large lumber business in East St. Louis and other mercantile enterprises.

UNIVERSITY OF WISCONSIN

Mississippi and its tributaries. Although he has succeeded in amassing a large fortune, Capt. Seudder is as regular and punctual in the discharge of his official duties now as he was at the outset of his career. Nothing that concerns the interests of his companies escapes his vigilant eyes, and no detail is too insignificant to demand his attention. His policy is characterized by a happy combination of liberality, boldness, and prudence, and the corporations under his charge are models of enterprising and, at the same time, conservative and judicious management. He possesses in a rare degree not only the capacity to plan, but the ability to execute, and, as we have indicated, is always in the van, not merely in adopting, but in devising improvements in methods of transportation. Personally he is as modest and unassuming as he is public-spirited and generous in his dealings with his fellow-men. For many years he has been thoroughly identified with the interests of the city which early in life he made his home, and to-day he is one of the most highly honored and influential citizens of St. Louis. He was married in June, 1852, to Miss Mary A. White, and a few years since Mrs. Seudder was made the recipient from unknown donors of a handsome portrait of her husband executed by Major Conant. The portrait was presented "as a testimonial in recognition of his services and enterprise in building up the commerce of the city and the Mississippi valley" by leading citizens of St. Louis, whose names were withheld, who "admired him as a man of spirit, thrift, sagacity, and large views," and who "appreciated the work he had accomplished in perfecting and extending river transportation facilities."

The **St. Louis and Mississippi Valley Transportation Company** was originally the Mississippi Valley Transportation Company. The latter corporation was organized in the early part of 1866, and the first president was Capt. Barton Able. The first tow of barges left St. Louis for New Orleans on the 1st of April, 1866. In the following year, Capt. George H. Rea was elected president. Capt. Rea was born in Massachusetts April 26, 1816. He served an apprenticeship at the trade of tanning, and subsequently removed to Waynesboro', Tenn., where he built up a remunerative trade in hides and leather. Shortly before the breaking out of the civil war he removed to St. Louis, where he established a hide and leather store. He soon became prominent among the business men of St. Louis, and assisted in the establishment of the Second National Bank. In 1866 he was elected a member of the State Legislature from the Thirty-fourth Senatorial District of Missouri, and as chairman of the Ways and Means

Committee and in other capacities proved an active and useful member. Capt. Rea became largely interested in Western transportation enterprises. He was at one time a director of the Missouri Pacific Railroad Company, and built the branch of that road from Pleasant Hill to Lawrence, Kan. He was a stockholder in various railway and water transportation companies, and in 1867, as stated, was elected president of the Mississippi Valley Transportation Company, whose affairs he managed with great energy and success. During Capt. Rea's administration the other officers of the company were Henry C. Haarstick, vice-president and superintendent; A. R. Moore, secretary; William F. Haines, general freight agent; John A. Stevenson, agent at New Orleans; R. L. Williams, agent at New York.

The following steamboats were owned by the company in 1879:

	Tons.
Tow-boat "Future City".....	589.30
" " "Grand Lake, No. 2".....	377.49
" " "John Gilmore".....	503.09
" " "John Dippold".....	554.97
" " "My Choice".....	462.23
" " "Port Bads".....	334.38
Barges, forty-three.....	47,524.23
Total tonnage.....	50,345.69

In 1880 the St. Louis and New Orleans Transportation Company was chartered, but on the 10th of September, 1881, it was consolidated with the Mississippi Valley corporation under the name of the St. Louis and Mississippi Valley Transportation Company, which was incorporated with a capital stock of two million dollars, the incorporators being George H. Rea, Henry C. Haarstick, George D. Capen, Austin R. Moore, R. S. Hays, H. M. Hoxie, Henry Lowrey, A. A. Talmage, and John C. Gault. The company owns twelve steam tow-boats and one hundred barges, which are bonded for all export and import business. Its trade is largely in wheat, corn, and oats, and in the transportation of these cereals it probably transacts a larger business than any similar corporation in the world. The officers in 1882 were Henry C. Haarstick, president; H. Lowrey, vice-president; H. P. Wyman, secretary; and A. R. Moore, treasurer; Directors, George H. Rea, Henry C. Haarstick, George D. Capen, Austin R. Moore, R. S. Hays, H. M. Hoxie, Henry Lowrey, A. A. Talmage, and John C. Gault. The office is located on the company's wharf-boat at the foot of Elm Street.

The **St. Louis and New Orleans Packet Company** was organized in May, 1869, and was the successor of the Atlantic and Mississippi Steamship Company. The first president was Capt. John N. Bofinger, the first secretary Walker R. Carter, and

the first general superintendent John W. Carroll. In 1870 the executive officers remained the same, and the directors were John N. Bofinger, D. R. Powell, Walker R. Carter, John W. Carroll, and Theodore Laveille. At that time the steamers belonging to the company, which were then among the largest and finest in Western waters, were the "Olive Branch," "Pauline Carroll," "Richmond," "Dexter," "Mollie Able," "Thompson Dean," "Commonwealth," "W. R. Arthur," "Bismarck," "Great Republic," and "Continental." In 1871 the following steamers were added: "City of Alton," "Belle Lee," "Natchez," "Belfast," "Carrie V. Kountz," "Rubicon," "Capital City," "Henry Ames," "C. B. Church," "Glencoe," "Andy Johnson," "John Kyle," "Mollie Ebert," "Lady Lee," "Oceanus," "Shannon," "Virginia," "Susie Silver," "Tom Jasper," "James Howard," "City of Quiney," "S. S. Merrill." The total amount of freight carried in 1871 was one hundred and seventy-three thousand nine hundred tons.

Capt. John N. Bofinger, first president of the St. Louis and New Orleans Packet Company, was born in Lancaster County, Pa., Oct. 30, 1825, and in 1835 removed with his parents to Cincinnati, where his father established the first German paper west of Pittsburgh, the *Cincinnati Volksblatt*, which became a flourishing journal and existed many years. The boy was educated at the public schools of Cincinnati, and in 1846 obtained a position as clerk on the mail line steamers plying between Cincinnati and Louisville. In April, 1848, he arrived in St. Louis as clerk of the steamer "Atlantic," on which he remained as clerk and captain for six years. In 1854, in connection with John J. Roe and Rhodes, Pegram & Co., he purchased the steamer "L. M. Kennett," and in 1857 built the steamer "William M. Morrison," which, when the war broke out, was the last boat to leave St. Louis for New Orleans. The "Morrison" was detained by the Confederate authorities at Memphis, May 28, 1861, and was burned at New Orleans by the Confederates on the arrival of Farragut's fleet.

For thirteen years preceding the war, Capt. Bofinger commanded steamers running between St. Louis and New Orleans, and enjoyed the reputation of being an unusually successful captain. During that period he made one hundred and ninety-two trips between the two cities, and never met with an accident that occasioned the loss of a life.

The war provided a new theatre for the display of Capt. Bofinger's abilities as an organizer and commander. He became interested in nearly all the contracts let by the United States government for the

transportation of troops and supplies on the Mississippi and its tributaries during 1861, '62, '63, '64, '65, '66, and '67, and during that time owned thirty steamers. He was no doubt the largest vessel-owner in the world. An instance of the magnitude of his operations and the extent of the trust reposed in his capacity to conduct them successfully is afforded by the fact that he was chosen by Gen. L. B. Parsons, A. Q. M. G., in 1862 to proceed to Memphis and Helena for the purpose of embarking the troops and animals of Gen. Sherman's army destined for Vicksburg. The number of steamers engaged in this service was ninety-five,—three boats were laden with munitions of war, four with commissary and quartermaster's stores, and the remainder with the army of nearly thirty-five thousand men and their animals, etc. This vast fleet was escorted by eleven gunboats under the command of Admiral Porter.

After the war Capt. Bofinger with others formed the Atlantic and Mississippi Steamship Company, with a capital of over two million dollars, and owning twenty-five of the largest steamboats then on the river, and was elected superintendent of the company. In 1867 he severed his connection with this company and established the Vicksburg Mail Line, and after two years of successful operations, sold his interest to the Memphis and St. Louis Packet Company, now the Vicksburg Anchor Line.

In 1869 the Atlantic and Mississippi Steamship Company sold its steamers, and Capt. Bofinger and others formed the St. Louis and New Orleans Packet Company, of which he was elected president, serving in that capacity until 1873, when he retired from the company.

In 1869-70, Capt. Bofinger held a contract with the government to transport troops and supplies between St. Louis and Fort Benton, over three thousand miles; between St. Louis and New Orleans, twelve hundred miles; and between St. Louis and Fort Gibson, on the Arkansas River, fifteen hundred miles; an aggregate of five thousand seven hundred miles. This was the longest river transportation contract ever held by any one person.

During the past few years Capt. Bofinger has engaged somewhat extensively in steamboat-building, one vessel of iron, the "Gouldsboro'," being a transfer steamer at New Orleans; and he is now constructing a large steamer for the Memphis and Kansas City Railroad. In connection with his brother he has established the Telephone Company in Louisiana and Mississippi, which they own and operate.

Capt. Bofinger's wife was Miss Mary E. Shewell, of St. Louis.

John N. Pofingen

LIBRARY
OF THE
UNIVERSITY OF ILLINOIS.

Capt. Bofinger is regarded as authority on all matters connected with river transportation, especially on the Mississippi and its tributaries, and congressional committees and other bodies desiring information have availed themselves freely of his knowledge, attained through nearly forty years of varied and arduous experience. He may be classed with the foremost of the second generation of Mississippi steamboat captains, and is a worthy successor of such men as the gallant Shreve and others who were pioneers in this calling. While Capt. Bofinger has contributed his full share towards making river transportation an important factor in the commerce of the country, his work is not yet ended, and those who know his indomitable energy do not hesitate to predict that he will again be heard from in connection with works of great magnitude and of equally conspicuous public utility.

The Merchants' Southern Line Packet Company was established in 1870, and its steamers plied between St. Louis and New Orleans, connecting at Columbus with the Mobile and Ohio Railroad, at Memphis with the Mississippi and Tennessee Railroad and Memphis and Charleston Railroad, at New Orleans with the Morgan Line steamships for Mobile, Galveston, and Indianola, also at the same port with steamships for Havana, at the mouth of Red River with Red and Ouachita River packets, and at Hickman, Ky., with the Northwestern Railroad for Nashville and points in Middle and East Tennessee and Northern Georgia.

The officers of the company in 1870 were J. F. Baker, president; B. R. Pegram, vice-president; Thomas Morrison, secretary; Charles Scudder, superintendent; David H. Silver, general agent, and the principal steamers were the "James Howard," B. R. Pegram, captain; "Henry C. Yeager," I. C. Van Hook, captain; "Susie Silver," Samuel S. Enriken, captain; "T. L. McGill," Thomas W. Shields, captain; "Carrie V. Kountz," "Henry Ames," J. West Jacobs, captain; "John Kyle," John B. Weaver, captain; "Mollie Moore," George D. Moore, captain.

The Kansas City Packet Company (Star Line) is the successor of the Missouri Packet Company, which originated with the Star Line Packet and Miami Packet Companies. The Star Line was absorbed by the Miami, which then became known as the Miami "Star Line" Packet Company. In 1869 this corporation had five steamers plying between St. Louis and Kansas City. The officers at that time were Capt. E. W. Gould, president; Capt. W. W. Ater, secretary; and Capt. M. Hillard, general freight agent, and the steamers were the "Mountaineer," M. H. Crapster,

captain; "W. J. Lewis," R. J. Whitledge, captain; "W. B. Dance," N. F. Constance, captain; "Clara," John Abrams, captain; "Post-Boy," S. Ball, captain. The "E. La Barge," "M. McDonald," "Nile," and "Viola Belle" were also run under direction of the company. Early in 1871 the stockholders of the Star and Miami Lines formed a new line, and organized under the name of the Missouri River Packet Company, with W. J. Lewis as president; Joseph Kinney, vice-president; E. W. Gould, superintendent; William W. Ater, secretary; and M. Hillard, general freight agent. During 1871 the company built three new boats, the "Capitol City," "Fannie Lewis," and "Joseph Kinney." Besides the regular trips to Kansas City, the steamers of the company during 1871 made twenty-one trips to Memphis and Helena.

The Kansas City Packet Company was organized July 15, 1878, with a capital stock of fifty thousand dollars, the incorporators being W. J. Lewis, C. S. Rogers, E. W. Gould, N. Springer, and R. J. Whitledge. The company transacts a general passenger and freight business on the Missouri and Mississippi Rivers between St. Louis and Fort Benton, and owns the steamers "Joe Kinney," "Fannie Lewis," "Mattie Bell," and "D. R. Powell," together with four barges. The officers of the company in 1882 were E. W. Gould, president; C. S. Rogers, vice-president; and R. J. Whitledge, secretary; Directors, C. S. Rogers, W. J. Lewis, E. W. Gould, N. Springer, and R. J. Whitledge. The office is located on the wharf-boat at the foot of Olive Street.

E. W. Gould, president of the Kansas City Packet Company, was born in Massachusetts on the 15th of December, 1811. He served an apprenticeship at the trade of carriage-making, and in 1835 went West and worked for two years at his trade in St. Louis. He then purchased an interest in the steamer "Friendship," which was engaged in the Illinois River trade, and subsequently became clerk of a steamer on the upper Mississippi. In 1837 he was made captain of the steamer "Knickerbocker," which was lost at the mouth of the Ohio two years later. Subsequently Capt. Gould became engaged in the Missouri River trade, and was successively president of the Miami Star Line and superintendent of the Missouri River Packet Company. Upon the organization of the Kansas City Packet Company he became its president. Capt. Gould is an experienced and able steamboat manager, and the affairs of the corporation over which he presides are conducted with conspicuous skill and success. In 1846 he was married to Miss Chipley, daughter of Dr. William B. Chipley, at Warsaw, Ill.

The "K" Line of Packets, designed to ply between St. Louis and Miami and intermediate points on the Missouri River, began business early in 1870 with the "St. Luke," Judd Cartwright, captain. The line was managed by Capt. Joseph Kinney, assisted by J. S. Nanson as superintendent, and H. F. Driller, general agent. Subsequently the "Alice" was added, and a flourishing business was transacted by the two steamers.

The St. Louis and Omaha Packet Company was organized in 1867, the first president being Joseph S. Nanson, and the first secretary Joseph McEntire, both of whom were experienced steamboat-men. During the second year of the company's existence Capt. John B. Weaver¹ was elected president, and served in that capacity for two years.

The steamers of the line were the "T. L. McGill," T. W. Shields, captain; "Silver Bow," T. W. Rea, captain; "Mary McDonald," J. Greenough, captain; "Cornelia," L. T. Belt, captain; "Columbian," William Barnes, captain; "Glasgow," W. P. Lamothe, captain; "Kate Kinney," J. P. McKinney, captain; "H. S. Turner," J. A. Yore, captain.

The Coulson Line of Steamers, plying between St. Louis and Fort Benton, was organized in 1878. The officers in 1882 were S. P. Coulson, president; W. S. Evans, vice-president; and D. W. Marratta, secretary and general superintendent. The company owns and controls the following steamers: "Rosebud," "Big Horn," "Josephine," and "Dacotah." Jenkins & Sass are the agents at St. Louis.

The Naples Packet Company was organized in 1848, and was chartered Aug. 12, 1872, with the following incorporators: C. S. Rogers, E. W. Gould, J. W. Mortimer, and Samuel Rider. The capital stock is sixty-four thousand dollars, and the company transacts a passenger and freight transportation business between St. Louis and Peoria, Ill. It owns the handsome steamer "Calhoun," which makes all way landings on the Mississippi and Illinois Rivers between the terminal points. C. S. Rogers was elected president first in 1872, and has retained the position ever since. John W. Mortimer is the secretary, and the directors are C. S. Rogers, E. W. Gould, John W.

¹ Capt. Weaver died in St. Louis on the 6th of August, 1871, in the fifty-seventh year of his age. Capt. Weaver arrived in St. Louis when a young man, and until his death was identified with the city's steamboat interests. As clerk and then commander, he was connected with steamers plying on the Missouri River for more than twenty-five years. As previously stated, he was elected president of the St. Louis and Omaha Packet Company, and in connection with Capt. Davidson and others became one of the owners of the steamer "John Kyle," and in the fall of 1870 commander of that vessel.

Mortimer, and Samuel Rider. The office is located on the wharf-boat, foot of Olive Street.

The St. Louis and Peoria Packet Company was organized on the 3d of February, 1868, its officers at that time being J. S. McCune, president; A. C. Dunlevy, secretary; and F. A. Sheble, general superintendent. In 1870 the vessels belonging to the company were the "Beardstown," Samuel E. Gray, captain; "City of Pekin," Thomas Hunter, captain; "Illinois," S. E. Gray, captain; "Schuyler," H. G. Rice, captain; "Columbia," Joseph Throckmorton,² captain.

In 1871 the vessels employed by the company were the "Illinois," "City of Pekin," "Huntsville" and barges, "P. W. Strader" and barges, and "Beardstown."

The St. Louis, Cincinnati, Huntington and Pittsburgh Packet Company, whose headquarters

² Capt. Joseph Throckmorton was born on the 16th of June, 1800, in Monmouth County, N. J. As a lad he entered a mercantile house in New York, but, in company with others, subsequently purchased the steamer "Red Rover," and made several trips with her from Pittsburgh to Zanesville, Ohio. The "Red Rover" was finally sunk in a collision, but was raised and taken to St. Louis and employed in the Galena trade. While engaged in the upper Mississippi trade, Capt. Throckmorton won the friendship of the Indian chief Keokuk, who offered him nearly all the Flint Hills, afterwards the site of the city of Burlington, if he would settle there. About 1830 Capt. Throckmorton, in company with Capt. George W. Acheson, built the steamer "Winnebago" at Paducah, and employed her in the Galena trade until 1832, when he built at Pittsburgh the steamer "Warrior," and a tow-barge for the accommodation of passengers. While Capt. Throckmorton was in command of the "Warrior" the Black Hawk war broke out, and the vessel was chartered for the transportation of the United States troops under Gen. Atkinson. At the battle of Bad Axe, which was the decisive engagement of the war, the captain and crew of the "Warrior" were hotly engaged. The "Warrior" continued in the upper Mississippi trade until 1835, when Capt. Throckmorton built the steamer "St. Peter," and in 1836 the "Ariel." During the following year he built the "Burlington," and in 1842 the "General Brooke." In 1845 he sold the "Brooke" to the American Fur Company, and assumed command of that company's steamer "Nimrod," but having purchased the "Ceilia," relinquished his position. In 1848 he built the "Cora," which he commanded for a year or two, after which he acted for four years as the agent of the Tennessee Insurance Company at St. Louis. He then returned to his former occupation of steamboat captain, and having built the "Genoa," commanded that vessel from 1854 to 1856. In 1857 he built the "Florence," and in 1864 the "Montana." In the spring of 1868, Capt. Throckmorton purchased the "Columbia," and employed her in the trade between St. Louis and Fort Benton. He subsequently made several trips with his boat in the service of the Illinois Packet Company, and finally sold her to the Arkansas River Packet Company. During the last two years of his life Capt. Throckmorton was employed by the United States government, under the command of Col. Macomb, United States engineer, in the improvement of the upper Mississippi. He died in December, 1872.

are at Pittsburgh, Pa., established an agency in St. Louis in 1881. It owns and controls the following boats, which run between Pittsburgh, Cincinnati, and St. Louis: the "Buckeye State," "Pittsburgh," "Carrie," and "John L. Rhodes." The company transacts a general transportation business, carrying both passengers and freight. The officers are J. M. Williamson, superintendent, Cincinnati; and Capt. W. S. Evans, superintendent, Pittsburgh. Jenkins & Sass are the agents at St. Louis.

The Gartside Coal and Towing Company was organized in 1856, and chartered in May, 1873, with a capital stock of fifty thousand dollars. The incorporators were James, Charles E., and Joseph Gartside. The company owns two steam-tugs and ten barges, and transacts a general coal and transportation business. The officers in 1882 were Charles E. Gartside, president, and James Gartside, secretary and treasurer. The office is located on the New Orleans Anchor Line wharf-boat, foot of Pine Street.

The Carter Line (Red River Packet Company) was established in 1869 by Capt. W. R. Carter and Capt. Joseph Conn, who employed the "R. J. Lockwood," "Silver Bow," "H. M. Shreve," "Oceanus," "M. E. Forsyth," "Lady Lee," "Belle Rowland," and "Mary E. Poe." The annual receipts of the company amounted to about six hundred and fifty thousand dollars. The ports visited by the line were landings on the Missouri River, St. Louis, Jefferson, Shreveport, and New Orleans.

The Merchants' St. Louis and Arkansas River Packet Company began business in the spring of 1870. The territory embraced within the range of the company's operations extended from the mouth of the Arkansas River to Fort Smith, and comprised all that section south of the river and between it and the Ouachita, and north of it to the extreme western and northwestern sections of the State, also from the mouth of White River to the upper part of it and the country bordering on Black and Currant Rivers, reaching almost to the northern line of the State. The company was incorporated in 1870 with a capital stock of one hundred thousand dollars, and the following officers were elected:

President, James A. Jackson; Vice-President, D. P. Rowland; Treasurer, George D. Appleton; Secretary and Superintendent, James D. Sylvester; Directors, James A. Jackson, D. P. Rowland, Matthew Moody, W. S. Stover, C. L. Thompson, Louis Fusz, George D. Appleton, C. N. McDowell, and George Wolf.

A low-water boat was at once contracted for for the upper Arkansas River, three steamers purchased, and

the line put in working order. The steamers employed by the company in 1871 were the "Sallie," "Columbia," "Muncie," "Sioux City," and "Little Rock." At Little Rock the vessels from St. Louis connected with the light-draught steamer "Little Rock," which ran to Fort Smith, thus forming a continuous line of communication with the extreme western border of the State.

Ouachita River Packets.—Prior to 1870 St. Louis had not enjoyed an extensive trade with the region of country bordering on the Ouachita River. Hitherto her merchants and shippers had permitted New Orleans and other Southern cities to monopolize the business of the Ouachita ports, but in that year it was determined to send several steamers, loaded at St. Louis, to that river. The experiment was made, and the results were such as to establish the entire practicability of building up a regular and lucrative trade. The steamers of the line were the "C. H. Durfee," Frank Dozier, captain; "Mary McDonald," John Greenough, captain; "Ida Stockdale," J. W. Jacobs, captain; "Hesper," J. Ferguson, captain; "C. V. Kountz," J. C. Vanhook, captain; "Tempest," D. H. Silver, captain. The "Tempest" was destroyed on her first trip up the river. H. F. Driller was the general freight agent of the line. Mr. Driller afterwards secured two boats for the White River trade, the "Osage," Capt. William A. Cade, and the "Natrona," Capt. George Graham.

CHAPTER XXVIII.

RIVER COMMERCE OF ST. LOUIS.

By the terms of the treaty for the cession of Louisiana to the United States, the full and complete navigation of the Mississippi River was secured to

the United States. The trade and commerce of the river at this time (1803-4) were unimportant. New Orleans and St. Louis were the only towns of any size upon the Mississippi, the latter having but fourteen hundred inhabitants in 1811, and the value of its merchandise and imports amounting to about two hundred and fifty thousand dollars annually. As small a sum as this appears to be, it was principally owing to the fact that St. Louis was the fitting-out point for the military and trading establishments on the Mississippi and Missouri that even this amount was reached. Peltries, lead, and whiskey made a large portion of the currency, and the branches of business were not at all fixed or definite.¹

The establishment of the Bank of St. Louis in 1816, and of the Missouri Bank in 1817, indicates a great increase of the business of St. Louis, and may be regarded as fixing an initial point in its trade and commerce with other sections. In 1821 there were only four hundred and twenty-nine tax-payers in St. Louis, and the total taxes levied for the year amounted to \$3823.80.

The prices current of a retail market give but a partial idea of the business of the community, and those of St. Louis for Nov. 23, 1816, afford only a general notion of the market of the town at that period.

ST. LOUIS RETAIL PRICES CURRENT.

Beef, on foot, per cwt...	\$4.00	Flour, horse-mill, superfine, per cwt.....	\$6.00
Bread, ship, none.....		Grain, wheat, per bushel.....	1.00

The annual imports of St. Louis were computed for 1820 "at upwards of \$2,000,000,"² and the Indian

¹ John Arthur advertises among "cheap goods" bleached country cottons, cotton cloth, cotton and wool cards, German steel, smoothing-irons, ladies' silk bonnets, artificial flowers, linen duck, muslins, white thread, wool and cotton, a handsome new gig and harness, cable and cordelle ropes, and that he will take pay in furs, hides, whiskey, country-made sugar, and beeswax, with "a negro girl eighteen years of age also for sale." And even the editor and proprietor of the only journal west of the Mississippi advertises in his sheet that he will keep a house of entertainment for strangers, where they will find every accommodation except whiskey. He would also take care of eight or ten horses.—*Edwards' Great West*, p. 295.

² Dr. Lewis C. Beck's Gazetteer of Missouri, 1823.

trade of the Missouri and Mississippi Rivers was valued at \$600,000. The establishment of a Branch Bank of the United States in 1829 would indicate a great increase in the trade and commerce of St. Louis for the decade from 1820 to 1830. In the absence of statistical records, the only sources of information on this point are the public journals of that period, which are filled with the evidence of the great rapidity with which St. Louis was growing in business and manufactures.

A comparison of the prices current for 1816 with those for 1835 affords some idea of the progress indicated, as well as of the articles which made up the trade of St. Louis by the river at that time :

The steamboat register for 1835 shows the			
number of different steamboats to have			
been.....			121
Aggregate tonnage.....			15,470
Number of entries.....			803
Wharfage collected.....			\$4,573.60
Wood and lumber liable to wharfage:			
Plank, joists, and scantlings.....			1,414,330 feet.
Shingles.....			148,000
Cedar posts (8's).....			7,706
Cords of firewood.....			8,066

A comparison of these figures with the same items for 1831 shows an increase of more than one hundred per cent.

The panic of 1837 was attended with the ruin of thousands of people all over the country, and with the prostration of the business, trade, and commerce of St. Louis. The arrivals and departures of steamboats for 1839, however, were: arrivals, two thousand and ninety-five; departures, sixteen hundred and forty-five.¹

¹ The *Republican* of June 4, 1836, describes the commercial condition of St. Louis at that time as follows:

"At no prior time has this city exhibited so many signs of improvement as are now daily seen. Capital is finding its way to us, and large investments are made in real estate, not, we feel assured, with a view to speculation, which benefits no one but those who are parties in it, but with the design of improving it. The sale of lots in Christy's addition to the town amounted on the first two days to one hundred and one thousand dollars. It was continued yesterday, and will probably reach one hundred and forty thousand dollars. Other sales of property bordering on the town have recently been made amounting to many thousands of dollars. Block No. 13, with three or four houses upon it, fronting upon Main and Water Streets, sold ten or twelve days ago for two hundred and forty thousand dollars, and other property in the business part of the city went for equally fair prices. We say fair prices, for they

It is impossible to give any concise statement of the amount of the river trade of St. Louis, but some of the leading and principal items for the year 1840 will afford an approximate idea of the volume of business then transacted. From 1831, when the first insurance office was established, to 1840 the marine risks amounted to \$58,021,986. This sum does not include the whole amount of property at risk, because some of the boats and cargoes were insured at the East and South, and some were not insured at all. The estimate of property uninsured was put at thirty-three and one-third per cent., which would raise the value to \$77,362,648. The receipts of lead at St. Louis for 1839 were 375,000 pigs; for 1840, 390,000 pigs; and for 1841, 395,000 pigs. A pig of lead averaged sixty-nine pounds, and was estimated at three and one-half cents per pound, making the value of this trade for 1841, \$13,825, and for the three years nearly \$50,000. "At least 8500 hogsheads of tobacco" passed St. Louis, with a value of \$912,500. There were shipped from St. Louis 80,000 bushels of wheat and 110,000 barrels of flour, valued at \$610,000.

When to these figures are added those for the trade in beef, pork, bacon, lard, butter, corn, live-stock, buffalo robes, furs, skins, and peltries, hemp, bagging, bale-rope, and the many other articles that comprise the industry of a growing community but of which there exist no statistics, it will be seen that

are by no means so extravagant as have been obtained in other Western towns, and are such as will justify the purchasers in making permanent improvements upon the property. In many cases it is their intention to do so.

"We have made some inquiry, and have found that upwards of two hundred houses are now building in the city. They are started in every direction, and it is probable that another hundred will be put up during the season if contracts can be made for them. One or two churches are to be erected, a splendid theatre is under way, and a female seminary is to be commenced. Many of the buildings will be handsomely finished for stores and extensive warehouses, and it is to be hoped that before another year passes away we shall be able to furnish houses for the numerous business men who are desirous of making establishments here. Our country friends who are engaged in mercantile pursuits have in many instances determined to make their purchases hereafter at St. Louis, as the competition and increase of business has satisfied them that they can do so to better advantage than in the Atlantic cities. Useful and extensive manufactories are starting up at every point, and in a short time we shall be independent of other places for our steam-engines and other materials of daily use. The corporate societies are not behind our citizens in making improvements. The whole line of the wharf is rapidly being macadamized, and before the winter sets in it will present a better appearance than any port in the Western country. Many contracts are made for paving the streets, and two or three years of industry will bring about the completion of this work throughout the city."

St. Louis had in 1840 made considerable progress on the road to that commercial prosperity which she now enjoys. The imports were valued at from ten to fifteen millions of dollars.

A slight idea may be gathered of the trade of St. Louis in 1843 from the following table, which exhibits the imports and exports of the city from the 13th of January up to the 12th of August, 1843:

	Imports.	Exports.
Beeswax, bbls.....	470	777
" lbs.....	36,007	26,655
Buffalo robes, bales.....	8,983	4,186
Corn, sacks.....	28,091	27,688
Flour, bbls.....	59,965	88,393
Hemp, bales.....	26,947	17,629
Lead, pigs.....	398,225	397,213
Lard, bbls.....	10,751	19,243
" kegs.....	15,581	18,337
Oil lard, bbls.....	559	3,060
Pork, bbls.....	16,633	30,097
Tobacco, hhds.....	14,599	13,498
Wheat, bbls.....	58,777	22,241
" sacks.....	78,299	27,945

The receipts of tobacco for the year 1842 were 1754 hogsheads, of which 1645 hogsheads were sold, leaving on hand on the 1st of January, 1843, 109 hogsheads.

In the *Prices Current* for 1844 the population is estimated at 40,000, and the registered tonnage at 20,420 tons, against 14,729 tons in the year 1842, thus showing an increase in less than three years of nearly 40 per cent. This tonnage was the property of citizens of St. Louis, and it may be safely said that at least as much more was employed in its trade and commerce the property of other cities. The arrivals during the year amounted to 2613, against 2105 the previous year, showing an increase of 508 arrivals. The annual trade of St. Louis was then estimated at \$50,000,000. Nearly 47,000 bags of coffee, 11,000 hogsheads of sugar, 758,000 pigs of lead, 31,000 bales of hemp, 13,000 hogsheads of tobacco, 132,000 barrels of flour, and nearly a million bushels of wheat were imported into St. Louis in 1843, being an average increase of nearly 20 per cent. on that of the previous year.

The harbor-master's report for 1845 shows that during the year there were 2050 steamboat arrivals in the harbor of St. Louis, with an aggregate tonnage of 358,045 tons, and 346 arrivals of keel- and flat-boats, and that the trade of the city was carried on by 213 steamboats, with an aggregate tonnage of 42,922 tons.

From the same report there has been compiled the following table of the places from whence these vessels came, showing the arrivals from each quarter for each month, as follows:

	New Orleans.	Ohio River.	Illinois River.	Upper Mississippi River.	Missouri River.	Other Points.
In January.....	17	5	15	15	5	8
February.....	13	13	20	12	2	7
March.....	27	42	57	67	11	8
April.....	24	39	36	75	23	10
May.....	35	49	52	102	49	13
June.....	27	33	29	66	42	21
July.....	16	46	26	58	29	18
August.....	20	44	26	63	25	22
September....	25	38	7	60	22	19
October.....	22	45	13	48	20	16
November.....	21	47	17	74	20	24
December.....	3	5	...	3	1	1
	250	406	298	647	249	167

From the foregoing it appears that during 1845 there were 250 steamboat arrivals from New Orleans; 406 from different ports on the Ohio River, including arrivals from the Cumberland and Tennessee; 278 from ports on the Illinois River; 647 from ports on the Mississippi above the mouth of the Missouri, not including the daily trip of the Alton packet; 249 from ports on the Missouri River; and 168 from other points, chiefly from Cairo and intermediate ports between that point and St. Louis.

During the year 1848-49, St. Louis began to receive heavy shipments of the products of the Southern States, and orders for articles hitherto sent to other cities were sent to the merchants, manufacturers, and mechanics of St. Louis. Direct communication with the lakes and the Canadas also presented great advantages to the shipping and commercial interests of the city. The total receipts of tobacco by the river for the period of five years, from 1844 to 1849, was 49,918 hogsheads, an exhibit which shows "a steady decrease in the production of that staple in the State of Missouri since 1844." The decrease in the production of tobacco was compensated by an increase in that of hemp, the entire crop of which in 1846 was 80,000 bales, of which 47,152 bales were received by the river. The receipts of lead by the river were, for 1847, 749,128 pigs, and for 1848, 705,718 pigs. The receipts of flour by the river for 1847 were 328,568 barrels and 686 half-barrels, and for 1848 they were 387,314 barrels and 541 half-barrels. In addition the city mills produced 400,000 barrels. The total production was over 700,000 barrels, which, at \$4.25 per barrel, made an aggregate value of \$2,975,000. The wheat crop of 1847-48 was an unusually fine one throughout the river States, and the receipts by way of the river for 1847 were 2,432,377 bushels, and for 1848, 2,194,798 bushels. The receipts of corn by the river were, for 1847, 1,016,318 bushels, and for 1848, 699,693 bushels. The Illinois and Michigan Canal opened in 1847-48, drawing off 316,625 bushels. The receipts of oats

for 1847 were 202,365 bushels, and for 1848, 243,700 bushels. "Of the entire shipments from this city," it was stated about this time, "it is computed that fully three-fourths reach the city of New Orleans." The beef receipts for 1848 were 9381 tierces, 7876 barrels, and 47 half-barrels; and of pork, 97,662 barrels and 1923 half-barrels, together with 25,820 casks, 3603 hogsheds, 2847 barrels, 3775 boxes of bacon. Of lard there were received 6579 tierces, 67,329 barrels, and 14,180 kegs, showing an immense improvement in the provision trade. The lumber trade for 1847 amounted to 16,917,850 feet, and for 1848 to 22,137,915 feet; shingles for 1847, 13,098,800, and for 1848, 15,851,500. There were also 42,282 cords of wood received by the river in 1847, and 38,857 cords in 1848. Of coal the receipts by river in 1847 were 1,454,048 bushels, and in 1848, 1,623,687 bushels.

As elsewhere stated more in detail, two calamities visited St. Louis in the year 1849, the cholera and

the great conflagration of steamboats and other property on the 17th of May, which exerted a disastrous influence on every branch of her trade, commerce, and business. A mortality of seven thousand eight hundred and twenty-one persons and the destruction of three million three hundred and thirty-five thousand four hundred and fifty dollars of property could not but have administered a check to enterprise and retarded progress. It is surprising, however, to note the alacrity, energy, and perseverance which were exhibited by the people of St. Louis in repairing the losses and obliterating the evidences of these visitations. Before the expiration of six months commerce, if not fully recovered, at least exhibited no signs of impairment, but was in full motion, and all the routine of mercantile affairs was in active operation.

The estimated value of thirty-one of the leading articles of produce received at the port of St. Louis during the year 1849, with total valuation, is as follows:

ARTICLES.	Aggregate Amount.	Average Rate.	Estimated Value.
Tobacco, leaf.....	9,879 hhds.....	\$50.00 per hhd.....	\$493,950.00

Total estimated value.....			\$10,087,327.99

During 1849 the arrivals of steamboats at St. Louis were: From New Orleans, 313; Ohio River, 401; Illinois River, 686; upper Mississippi, 806;

Missouri River, 355; Cairo, 122; other points, 217. The total number of arrivals of steamboats and barges in 1848 was 3468; in 1849, 2975; of keel-

and flat-boats in 1848, 332, and in 1849, 166. The total tonnage of steamboats and barges in 1848 was 688,213, and in 1849, 633,892.

The prevalence of yellow fever at New Orleans in 1853 proved a serious check to the river trade of St. Louis, and the difficulty of shipping crews, except at enhanced wages, threw a large amount of tonnage out of the trade and advanced freights to a high figure. All descriptions of agricultural products ruled unusually high in prices, and the farmers reaped a rich reward for their enterprise and industry, the profits realized enabling them to enlarge the area of cultivation, to improve their residences, and to invest to a large extent in the railroad enterprises that were then being projected in every direction through the West. In this year (1853) the statistics and transactions of a railroad were reported for the first time in connection with the river trade. The Missouri Pacific Railroad was that year completed a distance of forty miles, through a section of country which, though contiguous to St. Louis, had not been brought under cultivation. Without a farm along its line, and with its western terminus in a dense forest, this great railroad began to connect the Mississippi with the "back country," and overpaid the expenses of transportation more than ten thousand dollars, foreshadowing the immense profits from the investment. The "receipts per Pacific Railroad" were: Tobacco, 48 hogshheads and 3 boxes; lead, 1556 pigs; iron, 88,350 pounds pig, 530 blooms; wheat, 3418 bushels; hides, 5200 pounds; whiskey, 214 barrels; wood, 370 cords; wine, 9 casks, 7 barrels, and 8 boxes, native; hubstuff, 25 cords; and hoop-poles, 570,000.

A comparison of the tonnage of Western cities at the end of the year 1853 will show the rapid strides that St. Louis had made in the river trade.

The official returns of tonnage, June 30, 1853, were:

	Tons.		Tons.
Cincinnati.....	10,191	Decrease from 1851...	3,996
Louisville.....	14,166	Increase " " ...	1,229
Nashville.....	3,414	Decrease " " ...	163
St. Louis	45,441	Increase " " ...	11,136

These returns also show that St. Louis had then more steam tonnage than Wheeling, Cincinnati, Louisville, New Albany, Nashville, and Memphis combined. The arrivals of vessels at St. Louis for 1853 numbered 3307, or 529 more than at New Orleans.¹

The official returns of tonnage for the year ending June 30, 1854, give the following table of steam tonnage, showing the amount enrolled at several ports, viz.:

	Tons.
New York.....	101,487.41
New Orleans.....	57,174.54
St. Louis.....	48,557.51
Philadelphia	24,523.93
Cincinnati	23,842.73
Louisville.....	20,122.89
Mobile.....	18,110.40
Baltimore.....	14,451.14
Nashville	5,726.73
Wheeling.....	4,127.89
New Albany.....	2,952.31
Memphis.....	1,894.80

St. Louis was then the third city in the Union in the amount of enrolled steam tonnage, nearly doubling Philadelphia, with more than Philadelphia and Baltimore combined, with more than Cincinnati, Louisville, and Wheeling together, and paying duties on foreign imports amounting to more than seven hundred thousand dollars.²

The navigation of the rivers in the West was impeded to a greater extent and for a longer period in 1860 than ever before within the recollection of the oldest boatmen. This condition of the rivers led to action on the part of St. Louis merchants, which for a while induced the hope that new and entirely different methods were about to be adopted. The necessity of changing the mode of handling grain consigned to the merchants of St. Louis had long been felt, and the commission houses and millers of the city had become convinced that sacks should be dispensed with, and that grain should be transported in bulk. The Chamber of Commerce aided in the movement by presenting a memorial to the City Council requesting it to grant an elevator privilege to Messrs. Henry and Edgar Ames and Albert Pearce, who had offered to construct upon their own responsibility two elevators upon the Levee,—one near the foot of Carr Street, in the northern part of the city, and the other near the foot of Myrtle Street, in the southern part. The elevators were to have been of the most approved construction and material, with a capacity of half a million bushels each, and to have been exclusively used for the storage of grain in bulk. The City Council, after an able report from a special committee of that body had been submitted, promptly passed the ordinance, but it was vetoed by the mayor, and the inauguration of the elevator system of handling grain in St. Louis was postponed until 1863.

The subject of bridging the Mississippi at Rock Island, which had been under discussion for several years, was brought before the Hon. I. M. Love, judge of the District Court of the United States, who decided at the April term of the court in 1860 "that that portion of the railroad bridge across the Mississippi River at or near Davenport, within the

¹ "Thoughts about St. Louis," by John Hogan, pp. 6 and 7.

² *Ibid.*

State of Iowa, being part of the bridge commonly called the Rock Island bridge, and which is part of the Mississippi and Missouri Railroad, is a common and public nuisance, and a material impediment and obstruction to the navigation of said river by steamboats and other craft," and ordered it to be removed. This action of the court was approved by the St. Louis Chamber of Commerce, and the connecting of the railroad systems east with those west of the Mississippi was postponed until a period of more enlightened ideas with regard to transportation had arrived.

In consequence of low water during 1860, freights on the upper Mississippi, Missouri, and Illinois ruled very high, and there was an increase in marine disasters, reaching as high as two hundred and ninety-nine boats, with a loss of life amounting to two hundred and fifty-four.

The arrivals and departures of vessels at St. Louis during 1859 and 1860 were:

	1859.	1860.
Upper Mississippi.....	1,501	1,524
Lower Mississippi.....	616	767
Missouri.....	396	269
Illinois.....	679	544
Ohio.....	367	277
Tennessee.....	58	31
Cumberland.....	31	35
Arkansas.....	7
Barges, canal- and flat-boats.....	1,397	1,724
Total.....	5,045	5,178
Departures.....	5,104	5,218
Tonnage.....	768,905	844,039

During the period of the civil war (1861-65) there was almost complete stagnation in the river trade and a general paralysis of the industries and commerce of St. Louis. The condition of affairs, industrial as well as political, during the great crisis of the nation's history, is fully set forth in the chapter on the civil war. The following, however, is a copy of circular instructions issued by C. G. Memminger, Secretary of the Treasury of the Southern Confederacy, in March, 1861, relating to the commerce of the Mississippi. These instructions related to importations from places north of the then so-called Confederate States. Vessels descending the river were required to come to at Norfolk, or Nelson's Landing, on the Mississippi, and the master was to report the arrival to the collector, exhibiting duplicate manifests of the whole cargo and declaring the name of the vessel, name of master, where from, the port of destination, and a full and particular description of the cargo. A custom-house officer was required to board vessels and demand the manifests mentioned. These manifests were to be certified by the collector or boarding-officer, and one of them returned to the master. The manifest returned by the custom-house officer was to be sent to the collector of

the port of final destination. If there were on board and intended for delivery at points other than ports of entry or delivery goods not subject to duty they could be landed, provided the master gave to the first revenue officer a schedule in duplicate of the articles, describing them, quantity and value, name of consignee, and place where to be landed. On one of these schedules, directed to be returned to the master, the officer was to indorse a landing permit. The instructions were in part as follows:

"Masters of flat-boats, with coal bulk intended for points as above, must give under oath to the collector at Norfolk a schedule in duplicate, setting forth name of boat, owner, master, where from, quality, quantity, and value, and the fact of its being intended to be landed at places other than ports of entry or delivery. On these schedules the collector will estimate the duties payable; and on payment of the duties at Norfolk, will indorse on the original schedule (to be returned to the master) a certificate of payment and permit to land the goods.

"Should any portion of the cargo of vessels arriving as aforesaid, composed of dutiable or free articles, be destined to ports of entry or delivery other than the port of final destination, permission may be obtained to land the same under the following regulations:

"The master shall present to the revenue officer at Norfolk a schedule in triplicate of the goods, describing them by marks and numbers, numbers of packages and contents, corresponding with the description in the general manifest of the vessel, also stating the consignee and name of the port of destination of the merchandise.

"Should the merchandise be intended to be landed at more than one intermediate port, then separate schedules of the goods destined for each port to be made out in triplicate, with all the particulars before required, shall be presented; and the revenue officers to certify on each of the schedules the fact of presentation, and also on the original to indorse his permission for the vessel to land at the port or ports designated the goods described in said schedule. The original shall be then returned to the master or commander.

"On the arrival of the vessel at an intermediate port, the master or commander is to present to revenue officer the original schedule, and will receive a general permit to land the goods upon their being duly entered and special landing permits issued, as now provided by law for the landing of imported merchandise. Should the vessel arrive out of business hours, or should circumstances compel it, the master is permitted to deposit the goods either in a bonded warehouse or the custody of a revenue officer, and shall receive a receipt containing all the particulars of the schedule, and the original schedule shall be delivered to the person with whom the merchandise is deposited, and by him delivered over to the collector or chief revenue officer as soon as the opening of the custom-house will admit.

"On the arrival of the vessel at the port of final destination, the master or commander shall make due entry at the custom-house by delivering his original manifest, together with all schedules indorsed with the permits to land at intermediate ports, and the receipts of officers to whom any goods may have been delivered, or any other documents showing the disposition of any portion of the cargo; and the residue of the cargo shall be landed on permits similar to those provided by law for the landing of imported merchandise; and the total cargo, as shown by the original manifest, shall be delivered at this port, with the

exception of such as is shown by the documents presented at the time of entry to have been landed elsewhere, under the penalties now provided by law for discrepancies existing in the cargoes of vessels arriving from foreign ports.

"In order to relieve vessels in this branch of importing trade from embarrassments, all goods imported therein remaining unclaimed, or for which no entry shall be made or permit granted within twenty-four hours after arrival, may be taken possession of by the collector and deposited in a bonded warehouse, on a general permit to be issued by him for that purpose.

"To afford further facilities in the event of vessels in this trade arriving at the port of final destination before the opening or after the closing of the custom-house for the day, and a necessity exists for discharging the cargo, it shall be lawful to deposit the same or any part thereof, at the risk and expense of said vessel, on the levee, in the charge of the inspection service of the customs, or in any bonded warehouse at the port, such portion of said cargo as may be practicable, the master or commander of the vessel obtaining for the goods so deposited a receipt from the inspection officer on the levee, or the custom officer in charge of the warehouse, which receipt shall be delivered to the collector of customs as soon thereafter as the business hours of the custom-house at said port will permit.

"Any goods, wares, or merchandise imported as aforesaid may be entered at the port of destination on the presentation to the collector of the bill or bills of lading, together with the other documents now required by law on the entry of imported merchandise, before and in anticipation of the arrival of the importing vessel, and the necessary permits for the landing shall issue on the completion of these entries.

"And on the presentation of these permits to the surveyor, it shall be his duty, and is hereby required of him (if the vessel by which the goods are imported shall have arrived at the port), to detail an inspector of the customs to superintend the landing of the merchandise described therein, and such landing is authorized before entry has been made by the importing vessel at the custom-house when the interest of commerce or circumstances attending such arrival shall render it necessary. It must, however, be distinctly understood that it is unlawful to discharge any portion of the cargoes of these vessels except under the supervision and inspection of the customs officer.

"Clearances.—Before the departure of any vessel navigating the Mississippi or other rivers, destined to a foreign port or place beyond the northern limits of the Confederate States of America, the master or person having charge thereof shall deliver to the collector or chief officer of the customs at the port from which such vessel is about to depart a manifest of the cargo on board the same, in the form and verified in the manner now provided by law for vessels to a foreign port, and obtain from said collector a clearance as follows:

Confederate States of America.

District of _____
Port of _____ 18

These are to certify to all whom it doth concern, that
master or commander of the
of _____
bound for _____
hath entered and cleared his said vessel according to law.

Given under my hand and seal at
the custom-house of _____ this day of _____ 18
Collector.

"It shall be permitted to vessels engaged in the navigation and commerce provided for by these regulations, after clearance, to take on board at the port of original departure, or any other place within the limits of the Confederacy, any goods, wares, or merchandise, and to proceed therewith to a destination beyond

the Confederate limits, on delivering to the collector or chief revenue officer at the port of Norfolk, on the Mississippi, or at the port nearest the frontier of the Confederacy on any other river, a schedule describing all the goods on board, the quantity, value, and destination, not declared in the manifest delivered at the time of clearance at the custom-house of the original port of departure. The schedule thus received is to be forwarded to the port from which the vessel may have originally cleared.

"Lastly, it is made the duty of the collector at the port of Norfolk, or at the other frontier ports at which masters of outward-bound vessels are required to deliver schedules, to board all vessels bound for places beyond the Confederate limits in the same manner and at the hours as hereinbefore provided for inward-bound vessels."

As long as there were no railroads to compete with the trade and commerce of the river, the subject of improving the navigation of Western waters was discussed. Commercial opinion seemed to have settled down to the conviction that impediments to navigation, such as snags, sand-bars, sunken boats, and the rapids of the upper river, were inevitable and had to be submitted to. But when railroads began to divert the trade, and threatened loss and injury to the vast amount of capital already invested in steamboats and barges, as well as to the multitude of laborers who found employment in river navigation, the political power of the Mississippi valley was invoked to protect the great river from the loss that was threatened, as well as to employ its natural advantages to better effect in aid of the consumer and producer. The initiatory steps looking to the improvement of the navigation of Western rivers by the general government were taken at a convention held in St. Louis in February, 1867, which resulted in annual appropriations for the removal of snags, sand-bars, and the improvements at the rapids at Rock Island.

The practical operation of the St. Louis grain elevator, the charter for which was granted in 1863, demonstrated the fact that grain could be handled in bulk advantageously, and that with proper facilities for shipping to New Orleans and transferring at that point in bulk, grain could be delivered at the Eastern cities and foreign ports cheaper *via* the Mississippi River than by any other route. The cost of transporting a bushel of wheat from St. Paul to New York *via* St. Louis and New Orleans, with the proper facilities for transferring at those cities, was ascertained to be at least twenty cents per bushel less than by any northern route, and it was also discovered that the cost of transportation could be further reduced ten cents with a proper canal around the rapids at Rock Island. The Mississippi Valley Transportation Company was this year (1863) handling grain in bulk, and a transfer elevator was built by St. Louis parties

for use in New Orleans at the opening of navigation. Further elevator facilities, chiefly at East St. Louis, were undertaken in 1866, and the energy and enterprise of St. Louis were fully awakened to the practicability of making the Mississippi the great highway for the products of the Northwest to foreign markets. At the same time the trade with Montana and the gold regions of the upper Missouri was increasing, and had extended beyond the most sanguine estimates. Fifty-one boats left St. Louis during the year for the upper Missouri, carrying twenty-two million seven hundred and seventy thousand pounds of freight and many passengers.

The opening of the year 1866 found the Mississippi at St. Louis firmly closed by ice, which broke up on the night of January 12th, destroying an immense quantity of shipping.

The following statement shows the quantity of grain received and disbursed by the St. Louis Elevator Company from Oct. 24, 1865, to Jan. 1, 1867:¹

	Receipts from October, 1865, to January, 1867.	Disbursed from October, 1865, to January, 1867.	Balance in Elevator January, 1867.

Missouri.....	71	...	71	38,525	2,545,000
Total.....	265	122	387	186,015	\$10,376,000

The effect of railroads upon the trade of the Mississippi and other rivers becomes very apparent

by an examination of the commercial statistics for 1866. For example, of the total receipts of flour, amounting to 2,107,026 barrels, only 424,627 were received by river; of 4,550,305 bushels of wheat, 3,245,995 bushels; of 7,233,671 bushels of corn, 4,815,860 bushels; of 3,667,253 bushels of oats, 2,648,612 bushels; of 375,417 bushels of rye, 356,078 bushels; and of 548,796 bushels of barley, 425,969 bushels. In the export of grain the same influence is visible. Of 2,107,026 barrels of flour, the rivers carried 1,149,868 bushels; of 4,550,304 bushels of wheat, 408,742 bushels; of 7,233,671 bushels of corn, 6,713,027 bushels; of 3,667,253 bushels of oats, 2,581,492 bushels; of 375,417 bushels of rye, 184,963 bushels; of 548,796 bushels of barley, 53,655 bushels. The total receipts of grain amounted to 22,079,072 bushels, and the total exports to 18,835,969 bushels.

The year 1866 was an unprofitable one in many respects. The cost of the necessities of life was greatly increased, political dissensions were bitter and violent, and the financial policy of Congress and indifferent crops produced doubt and uncertainty as to the future, and greatly depressed trade and business. The receipts of flour and grain at St. Louis fell off in 1867 4,210,317 bushels from 1866, and the exports diminished proportionately. With the exception of the hog product, there was a corresponding decrease in every article of commerce. Previous to the civil war the great market of St. Louis had been in the Southern States, where the energies of the planting interest were wholly devoted to the growing of cotton and sugar, necessitating the importation of breadstuffs. The abolition of slavery produced an entire change in the labor system, and the destitution that followed the war interfered even as late as 1867 with the production of the great staples of the South, and for this reason, and because it compelled the raising of food-supplies at home, made the Southern people small buyers in the market of St. Louis. The prospect of so great a change in the agricultural productions of the Southern States obliged St. Louis to seek other markets for the produce which came to her from the North and West, and to open up other avenues of trade. With this in view the attention of her merchants were directed to South America and Europe. The city of New Orleans, with interests identical with those of St. Louis, set on foot a movement to establish a regular line of steamers with Liverpool, and to construct a large elevator to receive and disburse grain in the most economical manner. The contest between the river and the railroad for the great prize

¹ "Up to 1871 the elevator had no source of supply save the river, connections with the various railroads not having been made in 1866."—*St. Louis, the Commercial Metropolis of the Mississippi Valley*, by L. U. Reavis, p. 189.

of transporting the produce of the West was fairly under way at this time. The cheapness of transportation was to determine the supremacy, and in order that the grain of the West might reach an exporting point at less cost *via* the Mississippi River than *via* the lakes required improved and increased facilities. The Des Moines and Rock Island rapids were in a fair way of removal, the work having been undertaken and regularly appropriated for by the general government. That obstruction removed, the elevators of St. Louis were ready to receive or transfer the

grain, and the barge company provided barges for transportation to New Orleans, where the Higby elevator transferred the grain to ocean vessels. Under the impetus thus given several cargoes of grain were shipped to New York and Europe, establishing fully the practicability of the route. St. Louis added other facilities for handling grain by extending the North Missouri and Iron Mountain Railroads to the elevators.

The arrivals and departures of vessels at St. Louis during 1867 and 1868 were :

During the year 1870 the general government established gauges at different points on the Western rivers, where the daily rise and fall of the water are taken and furnished by telegraph each day to the different cities, also the height of water as compared with a well-known high- or low-water mark, which gives a more perfect indication of the depth of the channel.

The system of railroads which in 1870 had spread out from St. Louis in every direction had the effect of contracting the limits of freighting by water. When not only freight but passengers were carried by water, the steamboats of the Mississippi found a remunerative trade. But the time had arrived when the steamboat had become too slow a means of transportation for an enterprising and progressive people. The passenger travel having deserted the steamboats, they were compelled to look to their freight-list almost entirely for their profits. The question of how to preserve to the river marine the traffic with the South that was, and would be for several years, dependent upon the river was discussed

with a view to the use of iron in the construction of hulls both for steamers and barges.

During the year 1870 the agitation of the question of materially reducing the taxes and dues paid by steamboatmen for the purpose of maintaining wharves and improving the levees and harbors of river towns and cities was kept up almost uninterruptedly through the entire season.

The following is a condensed statement of all the wharfage collected at St. Louis from April, 1846, to December, 1870, a period of twenty-four years :

From April, 1846, to April, 1847.....	\$23,371.02

Total.....	\$1,629,499.24

As the railroads grew in importance and developed their power to successfully compete with the steam-boats in the transportation of merchandise and heavy freights, the steamboat interest, finding the trade gradually leaving it, began the employment of barges. In 1848 the total number employed at St. Louis was sixty-eight, with a tonnage of four thousand six hundred and forty-one tons. There were also in that year engaged in the trade a large number of keel-, flat-, and canal-boats, the arrivals of which for the year 1848 aggregated three hundred and forty-nine in number, and thirteen thousand nine hundred and sixty in tons. In 1849 the barges numbered seventy, with a combined tonnage of four thousand four hundred and ninety-seven tons. This branch of transportation continued to develop, as will appear from the following table:²

¹ Paid for removing wrecks, included in the above amounts, viz.:

In 1862-63.....	\$300.00
1866-67.....	64,952.77
1867-68.....	50,575.00
1868-69.....	30,775.00
Total.....	\$146,602.77

² In the report of the Union Merchants' Exchange for 1866 it is stated that "the barge system is fast finding favor with our merchants, and will, at no distant day, be the prevailing mode of transporting heavy freights, while the fine packets which now grace our western waters will be run on time for passengers and light freight. The Mississippi Valley Transportation Company has, during the past summer, demonstrated the fact that this is the cheapest mode of moving produce and heavy freights, having since May 1st carried from this port over one hundred and ten thousand tons. And when the plan of moving grain in bulk is established the tow-boats and barges will add to the commerce of our city by giving cheap freights and saving an immense amount of expense in the shape of handling, tarpaulins, and dunnage."

Total.....	\$3,769,400

"Gray's Iron Line," organized in 1863, had, in 1872, barges aggregating 29,900 tonnage plying between Cincinnati and St. Louis.

The number of steamboats and barges owned by the packet companies in 1870 was 117 steamers and 176 barges, with a tonnage capacity of 176,615, and valued then at \$5,219,700.

The year 1871 was not a successful year in river navigation, business showing a considerable falling off, both in the number of trips and to the extent of ten thousand tons in tonnage, the season being unusually short and the stage of the water unsatisfactory. The average depth of water in the Western rivers was less "in 1871 than during any season in the past twenty-five years."³ Notwithstanding these drawbacks, substantial progress was made towards replacing

³ Republican, Jan. 1, 1872.

the river commerce on a firmer basis. Gradually but surely the methods of operating on the Mississippi and its tributaries were changing. The demand for cheap freight was causing shippers to turn their attention to water routes, and to meet the general demand in this direction, steamboatmen were making every effort to discover the method by which river navigation might be cheapened and improved. A spirit of enterprise, of genuine and healthy progress, was alive among the river men. The steamers of the Western rivers up to 1871 had generally been built to accommodate both freight and passengers. On all of them were erected costly and weighty cabins, and of course the carrying capacity of the boat was reduced by as much as the weight of the cabin. In addition to this drawback, the owner was compelled to maintain a large and expensive cabin crew, and when passenger travel was dull freights had to be taxed to make up the deficit in a losing passenger trip. Experiments had been made with boats built with large carrying capacity, but furnished with no cabins for the accommodation of passengers. This class of boats proved successful. In 1871, on the Ohio, lower Mississippi, Illinois, and upper Mississippi large quantities of freight were transported in barges, and the number of tow-boats and barges was being increased every year.

During the same year a successful trip was made from St. Louis to Galveston, Texas, by a light stern-wheel steamboat, the "Beardstown," demonstrating the practicability of establishing direct communication between St. Louis, through the bayous and coast channel, and the coast cities of Texas. The enlargement of the Illinois and Michigan Canal opened to St. Louis, through the Illinois River and that canal, direct water communication with Chicago, Milwaukee, Duluth, Detroit, Toledo, Cleveland, and Buffalo. An iron propeller called the "Two Brothers," built and equipped at Buffalo, N. Y., completed a voyage from that port *via* the Miami Canal, Muskingum, Ohio, and Mississippi Rivers to the mouth of the Red River, and thence through that stream into the Atchafalaya, the Sabine, and thence to Galveston. The Michigan and Illinois Canal having been opened, three lake schooners at the beginning of winter sailed from Chicago, passed through the canal, and entered Peoria Lake. It was the intention of the owners of these vessels to pass down the Illinois and Mississippi Rivers to the gulf, where they could operate during the winter. Their design was frustrated by the closing of the river and lake by ice. These incidents seemed to promise that at no very distant period loaded barges would be towed from ports on the lakes to New Orleans direct.

The legislation by Congress in February, 1871, repealed the then existing steamboat laws, and enacted a law of more stringent and restrictive character. Under its provisions a board of officers was created with almost autocratic control over the whole steamboat interests. No sooner did the obnoxious provisions of this law receive the attention of the steamboatmen than a storm of opposition to its enforcement swept over the entire country. Associations of steamboatmen and vessel-owners' associations were formed at all the river-, lake-, and sea-ports in the United States. For the first time in the history of the country the owners of steamboats and ships were united. A call for a convention of vessel-owners to meet in Louisville, Ky., on the 15th of November, was responded to from about twenty States, who sent delegates. The convention, composed of men representing about one billion six hundred million dollars invested in steam-vessels, met at the appointed time, and after a harmonious but earnest discussion of the grievances under which they labored, extending through a three days' session, the convention adjourned after appointing certain general committees. The executive committee labored earnestly to prepare a bill to be introduced into Congress which would be just to their interests and still fair toward the general government. The passage of the law in question awakened an interest in the subject of steam navigation, and provoked a unanimity of feeling among those most deeply interested. A national convention of vessel-owners was called to meet in Washington City on the 22d of December, 1872, to consider what further could be done to reawaken an interest in water transportation lines.¹

The steamboat tonnage of Western rivers in 1871 was :

Pittsburgh.....	162,523.91
Brownsville.....	18,250.00
Wheeling.....	6,254.00
Parkersburg.....	4,180.00
Kanawha River trade.....	2,185.00
Gallipolis.....	1,652.00
Cincinnati.....	41,318.08
Pomeroy.....	2,310.08
Madison.....	1,740.26
Zanesville.....	620.00
Louisville.....	18,820.97
Paducah.....	3,021.00
Evansville.....	10,652.05
Nashville.....	4,500.00
Cairo.....	4,207.00
Memphis.....	20,402.12
New Orleans.....	285,825.18
Galena (Dis.).....	10,307.18
St. Louis (carrying capacity).....	96,926.26
St. Louis (barges' carrying capacity).....	45,741.00
Cincinnati (barges).....	26,638.17
Barges at other ports.....	35,782.19

Total tonnage (capacity)..... 803,844.45

¹ The law of the 28th of February, 1871, has not been materially changed, and will be found in the Revised Statutes of the United States, Title LII, Regulation of Steam Vessels.

The aggregate value of steamboat property on Western rivers in 1871 was as follows :

Pittsburgh, Pa.....	\$3,690,000
Wheeling, W. Va. (estimated).....	385,000
Gallipolis, Ohio.....	40,000
Cincinnati, Ohio.....	3,065,500
Louisville, Ky.....	1,097,500
Evansville, Ind.....	463,100
Nashville, Tenn.....	148,000
Memphis, Tenn.....	685,000
Galena (Dis.).....	820,000
New Orleans (river steamers).....	6,842,600
Total.....	\$17,214,700
To which add steamboats at St. Louis	5,428,800
Grand total.....	\$22,643,500
Value of barges on Western rivers ...	3,769,400
Total value of boats and barges.....	\$26,412,900

The above statement does not include the coal-boats of Pittsburgh, nor the stone-boats employed at various quarries on the Ohio, Green, Cumberland, and Tennessee Rivers, the boats of the upper Tennessee River, the canal-boats employed in the navigation of the Miami, Wabash, and Illinois Canals, nor does it include the barges employed at New Orleans and other ports on the Southern waters, which would add considerably to the aggregate value.

In July, 1872, an invitation signed by many of the best citizens of St. Louis was sent to the commissioner of emigration for Missouri in London, inviting representative Englishmen to visit the great fair at St. Louis in the following October; and the *London Times* of August 30th, in a leading editorial, urged upon its readers the importance of a more direct trade with the Mississippi valley, and particularly with St. Louis. The invitation was favorably received in England, and although only a few Englishmen were able, in consequence of the lateness of the season when it reached them, to attend the fair, it resulted in the formation of the "Mississippi Valley Society of London and St. Louis," having for its "general objects," first, the removal of "all obstructions to the direct interchange of products between Europe and the great Western and Southern States of North America;" and, secondly, "to facilitate the introduction of foreign capital into those States, for the purpose of developing their resources and increasing their commerce."

The failure to estimate at its proper value the operations of the Western river system in determining the course of commerce and establishing an equilibrium in the carrying trade was made apparent by the rates charged in 1873 on the northern and southern routes to Liverpool. Freight charges by these routes were as follows: From St. Paul to

New Orleans, eighteen cents per bushel on corn; thence to Liverpool, twenty cents; elevator charges at New Orleans, two cents, making a total of all charges between St. Paul and Liverpool of forty cents per bushel. The ruling freight rates on corn during that season by the New York route had been, from St. Paul to Chicago, eighteen cents; Chicago to Buffalo, by lake, eight cents; Buffalo to New York, by canal, fourteen cents; charges at Chicago, two cents; at Buffalo, two cents; at New York, four cents; freight to Liverpool, sixteen cents, making the total charges on a bushel of corn between St. Paul and Liverpool *via* New York amount to sixty-four cents, or a difference of *twenty-four cents* on the bushel in favor of the Mississippi and gulf route.

This comparison of freight charges was not without an important influence upon the problem of cheap transportation, which was then coming into prominence. The question was carried into the halls of Congress, and its agitation led to the appointment by the United States Senate of the "Select Committee on Transportation Routes to the Seaboard," which was "authorized . . . to investigate and report upon the subject of transportation between the interior and the seaboard." The message of the President of the United States had invited the attention of Congress to the fact that the time had arrived for that body "to consider various enterprises for the more certain and cheaper transportation of the constantly-increasing Western and Southern products to the Atlantic seaboard," and it added that "the subject is one that will force itself upon the legislative branch of the government sooner or later." In this connection the President suggested "that immediate steps be taken to gain all available information, to insure equitable and just legislation," and recommended the appointment of a commission to consider the whole question and to report to Congress at some future day. Senator Windom, of Minnesota, was made chairman of the Senate committee which, as previously indicated, was appointed in accordance with these recommendations. In addition to this governmental recognition of the necessity and importance of full consideration of the subject of transportation, the Farmers' Convention of Illinois incorporated into their platform an emphatic demand for immediate action looking toward the improvement of the navigation on Western rivers. The Transportation Committee at the outset of the investigation were confronted with "the absence of systematized statistics with regard to the course and magnitude of the internal commerce of the country," and with "the apparent indifference and neglect with which it

had been treated" in our governmental policy.¹ The huge sum of ten billion dollars was fixed by the committee as the "value of commodities moved by the railroads in 1872;" and it was added that "their gross receipts reached the enormous sum of four hundred and seventy-three million two hundred and forty-one thousand and fifty-five dollars;" and that "the commerce of the cities on the Ohio River alone has been carefully estimated at over one billion six hundred million dollars per annum."

Public attention was now directed most forcibly to the water lines of transportation, and everywhere throughout the West the people were awakening to the importance of availing themselves to the fullest extent of the unrivaled facilities for transportation which would be afforded by their magnificent rivers when properly improved, and when the difficulties and embarrassments which then beset their navigation had been entirely removed.

The commerce of the Missouri River had "dwindled to insignificance" in 1874.² A difference of opinion existed as to whether this was due to the fact that two well-equipped railways were running up the valley, parallel to and not far distant from the river, or to the character of the stream, the number of snags and wrecks in its bed, the rapidity of its current, and the consequent necessity for costly vessels to navigate it. An effort to establish the barge system upon the Missouri River had been made in 1873, but without sufficient trial to demonstrate whether it was or was not practicable.

The Illinois River had in 1872 become "the freight regulator between the Mississippi and Lake Michigan," and the enlargement of the Illinois and Michigan Canal had already been productive of most beneficial results. The commerce of St. Louis with the Arkansas, White, and Ouachita Rivers declined very perceptibly during the year, while the trade with the Red River still maintained a position of importance. The "packet system" on the Mississippi continued to embrace almost the entire traffic of the river. The Memphis and St. Louis Packet Company transported 341,400 tons of merchandise during the year 1873; the Keokuk and Northern Line 227,600 tons; the Missouri River Star Line Packet Company 98,950 tons; the Merchants' Southern Packet Company 140,500 tons; the St. Louis and New Orleans Packet Company 141,600 tons, and the Mississippi Valley Transportation Company 161,200 tons.

The amount of freight, in tons, received at St. Louis by rail and river from 1872 to 1876 was as follows:

1872.....	By rail, 2,838,364; by river, 863,919
1873.....	" 3,245,178 " 801,055
1874.....	" 3,165,093 " 732,765
1875.....	" 3,232,770 " 663,525
1876.....	" 3,431,200 " 688,755

The decline in river business appears from these figures to have become permanent. The shipments of freight, in tons, for the same years show a similar falling off in river business:

1872.....	By rail, 1,204,664; by river, 805,282
1873.....	" 1,155,416 " 783,256
1874.....	" 1,230,676 " 707,325
1875.....	" 1,301,450 " 639,095
1876.....	" 1,659,950 " 600,225

The excitement and business depression resulting from the Presidential election in 1876, together with the agitation of the war question in Europe, unsettled values, and interfered seriously with the course of trade throughout the country, but possibly less seriously in St. Louis than at other commercial centres. It is especially noticeable that the receipts of many articles of trade increased in a very marked degree on those of the previous years, as shown by the following table:

	1876.	1875.	1874.
Tons of freight received.....	4,119,975	3,896,295	3,897,858
" " shipped.....	2,260,175	1,940,545	1,938,001
Total tons handled.....	6,380,150	5,836,840	5,835,959

The river at St. Louis was open to trade during the entire winter of 1875-76, and continued open in the fall of 1876 until December 3d, but the winter of 1876-77 was one of the coldest on record, the river being closed at Cairo and Memphis, and as far south as Helena.

In October of 1877 a River Improvement Convention met at St. Paul, which appointed a committee to lay the wants of the Mississippi valley before Congress, and to urge an increased appropriation for the improvement of the river by the general government.

For several years prior to 1877 experimental shipments of grain in bulk to foreign ports *via* New Orleans had been made. The "humidity" of the gulf,³

¹ Report of the Select Committee on Transportation Routes to the Seaboard, p. 8.

² *Missouri Republican*, Jan. 1, 1874.

³ Among the arguments against the value of the Mississippi as a route for the transportation of cereals to foreign markets was the assertion that climatic influences at New Orleans and on the gulf would injure the products of the Northwestern States. The testimony of a large number of gentlemen well informed on the subject before the Senate Committee on Transportation Routes to the Seaboard most effectually disposed of that alleged difficulty. For instance, Capt. A. R. Miller, agent of the State Line Steamship Company, stated that during his experience in business "we have shipped here on our ships about

the condition of the grain upon arrival at destination, which was said to be impaired, and the "dangers by the way" were all alleged as causes why foreign trade down the Mississippi would be commercially impracticable. A record of the shipments, however, with official reports of the condition of grain on arrival on the other side, showed that the cargoes, without exception, were received in good condition, even when shipped in sailing-vessels, and the result of the experiment was to demonstrate the practicability of the route, and to gradually build up an increasing trade.

The value of waterways for commerce continued in 1877 to attract general attention, and the success which at this time began to attend the efforts of Capt. Eads at the "jetties" served to concentrate Western and Southern political influence in favor of such further improvements of the great rivers of the West as would render them fully equal to the demands of the already immense and still growing trade of the great valley.

A careful examination of actual freight rates during the year 1877 on shipments of grain from St. Paul *via* St. Louis and New Orleans to Liverpool, and *via* Chicago and New York, showed that the through rate to Liverpool was eleven cents per bushel lower *via* the St. Louis route *the whole year round*. This advantage in freight immediately changed the complexion of affairs, and the great trunk lines, which had discriminated against St. Louis, began making extraordinarily favorable concessions to its merchants. The public rail rates on grain were immediately reduced from twelve and one-half cents a hundred as low as ten cents, so that grain was carried at about six cents per bushel. In another case a shipment of nineteen hundred barrels of flour was contracted for at one dollar per barrel from St. Louis to Liverpool *via* Philadelphia, which was just five cents less than the steamship rate from New York to Liverpool. Until the jetties were completed, St. Louis was at the mercy of the railroads, and they made what rates they pleased. Chicago and Milwaukee, on the contrary, had the lake route at their command, and the railroads could not dictate to them during the summer months. Six months in the year, however, the lake route is closed with ice, and then

two hundred and twenty thousand bushels of corn, and have never, in any instance, heard complaint of any damage whatever; but, on the contrary, it has landed in as fine condition as when it was shipped." These statements were confirmed by a committee of the Union Merchants' Exchange of St. Louis, which also presented to the Senate committee a list of eighteen cargoes of corn shipped from New Orleans to Europe from Feb. 11 to Aug. 26, 1873, all of which arrived in good condition.

the railroads reign supreme even in the lake cities. Not so with St. Louis: the river from Cairo to the sea is always open, and from St. Louis to Cairo it is rarely closed more than a month or a month and a half, while frequently it is not closed at all. There is, therefore, a certainty of competition and low freights for ten or eleven months in the year, whereas it exists during only six out of the twelve for Chicago and Milwaukee.

The export trade *via* New Orleans, which revived in 1877 under such favorable auspices, continued with augmented volume in 1878. During each month of the year there was a steady flow of shipments, and the total movement reached 5,451,603 tons. In 1879 the shipment of grain in bulk from St. Louis amounted to 6,164,838 tons, and but for the low stage of water during the summer and early fall the shipments would have been largely increased, as on the opening of the river in January, 1880, engagements were made for all the tonnage that could be had, and over 1,500,000 bushels of corn were forwarded during the month, one tow alone taking 270,000 bushels of corn and another 225,376 bushels of corn and other freight.

On the 20th of October, 1880, there assembled in St. Louis a convention of delegates from twenty-one States and Territories, the object being to promote "cheap transportation and free commerce." A convention composed of delegates from Missouri, Kansas, and Nebraska was also held at Kansas City, in September, 1880, which created the Missouri River Improvement Association. Under the auspices of this association another convention was held in the city of St. Joseph, Mo., on the 29th of November, 1881, which appointed an executive committee to memorialize Congress upon the improvement of the navigation of the Missouri River.

CHAPTER XXIX.

RAILROADS.

THE most cursory glance at the map of the United States will satisfy any one that St. Louis is the point at which the greater part of the vast internal commerce of the country passes, whether going from the Atlantic to the Pacific, or from the frozen regions to the torrid zone. From the founding of the city, the great river system of the Mississippi valley, as we have seen, has been tributary to her wealth and prosperity; and when the era of railroads came with its rapidity of movement, to satisfy that restless spirit which characterizes the American, she was among the first of the cities to recognize the impending change in commercial transportation, and to take the necessary steps to guard her interests and promote her prosperity.

The first movement in this direction was the action of a large number of the enterprising citizens of St. Louis, calling upon the several counties of the State to send delegates to an "Internal Improvement Convention" which was to assemble in that city on the 20th of April, 1835. At the time appointed the convention met at the court-house and organized by the selection of Dr. Samuel Merry as chairman, and G. K. McGunnele as secretary. The roll of the convention being called, the following delegates were found to be present:

St. Louis County.—Edward Tracy, Maj. J. B. Brant, Col. John O'Fallon, Dr. Samuel Merry, Archibald Gamble, M. L. Clark, Col. Joseph C. Laveille, Thornton Grimsley, H. S. Geyer, Col. Henry Walton, Lewellyn Brown, Henry Von Phul, George K. McGunnele, Col. B. W. Ayres, Pierre Chouteau, Jr., and Hamilton R. Gamble.

Lincoln County.—Col. David Bailey, Hans Smith, Emanuel Block, Benjamin W. Dudley, and Dr. Bailey.

Washington County.—Dr. J. H. Relfe, Philip Cole, John S. Brickey, Jesse H. McIlvaine, Myers H. Jones, James Evans, and W. C. Reed.

Cooper County.—Benjamin E. Ferry, N. W. Mack, and William H. Trigg.

Warren County.—Carty Wells, Nathaniel Pendleton, and Irvine S. Pitman.

St. Charles County.—Edward Bates, Moses Bigelow, William M. Campbell, and W. L. Overall.

Calloway County.—William H. McCullough, William H. Russell, D. R. Mullen, Dr. N. Kouns, C. Oxley, Jacob G. Lebo, R. B. Overton, and — Moxley.

Montgomery County.—Dr. M. M. Maughas, S. C. Ruby, and Nathaniel Dryden.

Boone County.—Dr. James W. Moss, John B. Gordon, J. W. Keiser, D. M. Hickman, J. S. Rollins, William Hunter, R. W. Morris, and Granville Branham.

Howard County.—Dr. John Bull, Maj. Alphonso Wetmore, Weston F. Birch, Joseph Davis, Gen. J. B. Clark, T. Y. Stearns, and John Wilson.

Jefferson County.—James S. McCutchen.

After some debate the convention recommended the construction of two railroads, one from St. Louis to Fayette, and the other from St. Louis to the iron and lead-mines in the southern part of the State. After the adjournment of the convention the members attended a banquet given in their honor by the merchants of St. Louis at the National Hotel, then situated at the corner of Third and Market Streets. The mayor, John F. Darby, presided, assisted by Charles Keemle, secretary, and the following vice-presidents: Gen. John Ruland, Hon. H. O'Neil, Thomas Cohen, Maj. William Milburn, Beverly Allen, Col. J. W. Johnson, and William G. Pettus.

To defray the expenses attending the survey of the routes of the two railroads recommended by the Internal Improvement Convention, the judges of the St. Louis County court, in May, 1836, appropriated two thousand dollars.

On the 18th of June, 1836, another internal improvement meeting was held in St. Louis, to devise means for the furtherance of the Boston Railroad design, which contemplated a direct communication between Boston and St. Louis, and connections with the improvements leading to the other cities of the Atlantic seaboard. On motion of T. Grimsley, John F. Darby was called to the chair, and on motion of A. B. Chambers, William Milburn was appointed secretary.

The chairman stated what he understood to be the object of the meeting, and urged its importance to the city of St. Louis, the whole State of Missouri, and the entire valley of the Mississippi.

A. B. Chambers gave his views more at length, and concluded by stating that Mr. Walker, of Boston, who was one of the projectors of the scheme and its warm advocate, was present, and that many were desirous of hearing him on the subject, but, to bring the matter directly before the meeting, he would first ask the reading of a preamble and resolutions which had been prepared for the occasion. They were accordingly read as follows:

"WHEREAS, The citizens of St. Louis have seen with pleasure the proposition in Boston and other portions of the East for the connection of Boston with the Western country by means of an uninterrupted line of railroads;

"AND WHEREAS, The measure is one of advantage to the East and the West, and to no portion of the West more than to St. Louis, which will, if it is ever completed, be the termination of the line;

"AND WHEREAS, the accomplishment of the undertaking appears to be probable and within the means of the States interested, and requiring but a small addition of road to what is already built or in the progress of erection;

"Resolved, That we cordially approve of the proposition to connect Boston with the Western country by means of a rail-

road as a work of easy accomplishment, and which deserves the support of all the States through which it may pass.

"2. Resolved, That the citizens of St. Louis will lend their assistance and hearty co-operation, so far as their ability extends, in furtherance of the proposition.

"3. Resolved, That a committee of _____ be appointed, who shall constitute a committee of correspondence, and shall generally have authority to do whatever may be in their power to aid in carrying out the contemplated work."

The preamble and resolutions having been read, there was a unanimous call for Mr. Walker, who delivered a very interesting discourse, in which he demonstrated the practicability of the plan and its great importance to both the East and the West.

The resolutions were then read separately and unanimously adopted, the blank in the third resolution ordered to be filled with the number "five," and the chair authorized to appoint the committee.

The chair accordingly appointed William Carr Lane, mayor of the city, Thornton Grimsley, Andrew J. Davis, William Milburn, and Gustavus A. Bird, and by resolution of the meeting the chairman, John F. Darby, was added to the committee.

The same meeting further resolved that a committee should be appointed "to draft a memorial to the Legislature asking the aid of the State government to the amount of five hundred thousand dollars for the construction of a railroad to the mining region; also to draft a memorial to the mayor and aldermen of this city asking their aid in the same amount for the same object; also to draft a memorial to Congress asking a donation of every section and fractional section thereof of public lands over which the road should pass; also to draft a memorial to the Legislature asking for a geological survey of the State."

Under this resolution the following committee was appointed: B. W. Ayres, A. Wetmore, G. Morton, Dr. King, J. C. Abbot, A. J. Davis, Charles Collins, John Kingsland, John Simonds, William Smith, and James Russell.

At the same meeting it was resolved that a committee be appointed "to collect facts relating to the general subject of internal improvement, and to the particular object embraced in the first-mentioned resolutions." To this committee were appointed J. C. Dinnies, Dr. Englemann, Dr. Merry, Maj. Anderson, Edward Traey, René Paul, and D. D. Page.

In January following two charters were granted by the State, one incorporating the St. Louis and Bellevue Mineral Railroad Company, and the other the Louisiana and Columbia Railroad Company. The charters were similar in their enactments, and were very liberal in their terms. The legislators of that

day were in doubt whether railroads should be worked by horse- or steam-power, and whether the vehicles and motive-power should be owned by the company or by other parties. They also had very vague conceptions of the profits likely to accrue to the stockholders. The ruling idea, however, seems to have been the construction of improved highways, free to all, and subject only to such restrictions as the public good and the interest of those who had invested capital in them demanded.¹

Both of these projected railroad lines were surveyed, but neither was built. The charter of the Louisiana and Columbia road was incorporated ten years afterwards in that granted to the Hannibal and St. Jo Company, and that of the Bellevue road in the Iron Mountain Railroad charter fourteen years afterwards.²

¹ The two charters contain the following provisions:

"SEC. 13. It shall be lawful for said corporation to place on or prescribe the kind of carriages that may be used on said road, and by whom used, and whether propelled by steam or other power, for the transportation of passengers, goods, wares, and merchandise of all kinds, and also all kinds of produce. For this purpose the company may construct such turnouts and other things or devices as may be considered necessary or to the interest of the company. All cars, carriages, or other vehicles on said road shall be subject to the direction of the company, and no person shall put any carriage or other vehicle on said road without the permission of said company.

"SEC. 14. The company may charge and receive such tolls and freights for the transportation of persons, commodities, or carriages as shall be to the interest of the same. Such tolls shall be established by the directors, and may from time to time be altered. They may charge tolls and freights on any part of the road that may be in a state for traveling on, whether the rails be laid or not.

"SEC. 15. Semi-annual dividends of so much profits as the directors may deem expedient shall be made to the stockholders, but no dividends shall be made to a greater amount than the net profits after deducting all expenses, and no dividend shall be more than twenty per cent. per annum on the capital stock paid in."

² "At the railroad convention," said the *Republican* of July 28, 1836, "the following-named gentlemen constituted the committee to raise by subscription the necessary means to pay the expenses of a complete reconnoissance and survey of the routes of the two proposed roads, to secure the services of skillful and competent engineers, etc., and cause the work to be done with as little delay as possible: Messrs. George Collier, J. B. Brant, John Smith, John W. Reel, J. H. Gay, of St. Louis; D. M. Hickman, of Boone; Uriah Sebree, of Howard; Jacob C. Lebo, of Calloway, Andrew Monroe, of Montgomery; David Bailey, of Lincoln; Myers F. Jones and John C. Bricky, of Washington; Samuel Massey, of Crawford; Thomas M. Dougherty and Jacob R. Stine, of St. Louis County."

On the 17th of December the same paper added,—

"All of us remember that we made such ado at the time the railroad convention was held in this town, but that spirit died with the disappearance of the members of that body. Several committees were appointed to perform certain specified duties; all of them were competent, and had abundant time and a deep interest at stake, and yet not one of them has attended as he

Thus ended the first effort at railroad construction in Missouri.³

Notwithstanding their temporary want of success, however, the citizens of St. Louis continued to manifest a lively interest in railroad development, and looked forward with confidence to the day when their cherished desires should be consummated.⁴

In June, 1839, another town-meeting was held at the court-house for the purpose of devising means to connect St. Louis with Boston by railroad. Nothing resulted from a discussion of the subject, as the people still relied too confidently upon the splendid geographical position of St. Louis to, sooner or later, attract the needed capital and enterprise for the construction of railroads. At this period (1839) a railroad had been completed to Buffalo, and the route from the West to the East by way of the lakes had begun to attract attention.⁵

ought to have done, punctually and assiduously, to the duties of his appointment. These gentlemen are the largest property-holders in the city, are all of them wealthy, and it was right to expect that they would feel some little interest in the important matters intrusted to them."

³ In August, 1830, a miniature railroad was exhibited at the old Baptist Church situated at Third and Market Streets. It consisted of a small circular track, fastened to a stage, on which moved a miniature locomotive attached to a car just large enough to hold one person. The speed attained was at the rate of seven miles an hour. A small admission fee was charged, and persons were required to pay "an extra picayune" for the privilege of riding round the track. In its notice of the exhibition at the time (Aug. 24, 1830) a local journal said, "The public will be much gratified by a visit to the miniature railroad exhibited at the old Baptist Church. This combination of art and science, although in miniature, is complete in all its parts, and exhibits in one view all the apparatus necessary for railway traveling. With a few ounces of coal, and a small measure of water, it winds its way round on a circular track of one hundred feet at the rate of seven miles per hour, carrying a person of the largest size in the car."

⁴ In 1832 the bill incorporating the Cincinnati and St. Louis Railway Company passed the Legislature of Ohio.

The *Republican* of Aug. 13, 1836, published the report of the engineers appointed to survey the route of a railroad from Marion City to the interior of the country. "It will be seen," added that paper, "that the rails on a part of this road have already been laid, and many miles more are under contract."

⁵ "A gentleman and his family left here a few days since in a boat for Peoria. There he took another boat to Peru, and from Peru was carried overland by stages to Chicago, making the whole trip in three days. At Chicago he took a boat the same evening for Buffalo. Judging from the speed of the lake boats, he would reach Buffalo in about four or five days from the time he left this place, and if he traveled from Buffalo to New York at the rate stated by a traveler in a late number of the *Journal of Commerce*, he would reach the latter place in less than three days more, making the whole distance from St. Louis to New York in about eight or nine days. The ordinary trip from New York to St. Louis, by the Ohio River, requires between ten and twelve days."—*Republican*, July 11, 1839.

A board of improvements was created by the State in 1840, but nothing was done further than to make a survey for a railroad from St. Louis to the Iron Mountain by the way of Big River, and some surveys of the Osage River with a view of improving its navigation.

Missouri Pacific Railway.—As already indicated, the commercial sagacity of the people of St. Louis recognized the fact that the capital of the eastern section of the country would ultimately come to their city in order to construct the railroads which her expanding trade demanded; that the self-interest of the East would seek the mart where were collected the vast productions of the West; and that being the most distant city from the East, she was the nearest to the West, the greatest producing as well as the greatest consuming section of the country.

These considerations induced her merchants to pivot, as it were, their great Pacific Railroad on the Mississippi River, with that already great feeder and carrier as the base and eastern terminus, and to “go west” for greater conquests and grander results.¹

The successful termination of the Mexican war had added large areas to the territory of the Union and expanded its boundaries to the Pacific, and it was soon seen that the discovery of gold in California (in 1848) would in a few years open up that country to a trade more valuable even than the gold of her mines, and people the Pacific slope with an energetic and enterprising race.²

¹ “Passing by Smith’s foundry yesterday, corner of Pine Street and Post-Office Alley, we there observed certain components of a species of machinery which will be a new sight to many hereabouts, as it was to us. This was the wheels and axles for a train of railroad freight cars, intended for the conveyance of coal from the mine to some point on the Cumberland River which we could not ascertain. The proprietor has taken a contract for furnishing the running apparatus for thirty-six cars, together with the castings of a crane of stupendous power for swinging the entire car, with its load, from the track to the boat.”—*Republican*, Aug. 7, 1847.

² “Seven young gentlemen, citizens of this city,” said a St. Louis newspaper of Jan. 21, 1849, “left last evening on the steamer ‘Rowena’ for the gold regions, *via* New Orleans, Chagres, and Panama, their final destination being San Francisco. The party consists of Messrs. D. S. Ford, C. H. Francher, William Barlow, T. B. Walker, A. H. Gould, — Holbrook, and John S. Robb.

“In addition to this company, another consisting of Capt. William Craine, J. M. Julies, James Anthony, — Murray, and — Piper leaves this morning on the steamer ‘St. Joseph,’ destined for the same point. These parties, the first regularly organized in this city, go, as we learn, fully prepared to encounter all the hardships and dangers of so long a journey, and, what is better, carry with them means sufficient to enter into any suitable or profitable business after their arrival, should they not find that of gold-digging as lucrative as they expect.”

From time to time, previous to the year 1849, various propositions were suggested by Whitney, Maury, Degrand, and others for the construction of a railroad from St. Louis to some point on the Pacific coast, and in December, 1848, the *Western Journal* commenced the publication of a series of articles on Eastern commerce, by J. Loughborough, which were designed to direct attention to the importance of a railroad from the Mississippi valley to the Pacific; the route favored being that by the mouth of the Kansas and the South Pass. In January of 1849 the editor of the *Western Journal* advocated the same project.

About this time, in February of 1849, Col. Benton brought before the United States Senate his project for a Pacific railroad, advocating it in a powerful speech, that seemed to have the effect of giving life to the movement, which the public mind had already been prepared for.³

On the 20th of February following a large meeting of the citizens of St. Louis was held, upon a call of the mayor, to take action upon the subject. Judge Krum, then mayor of the city, presided, and a committee, of which Thomas Allen was chairman, reported a series of resolutions, strongly in favor of the construction of a “national central highway” to the Pacific. These resolutions were unanimously adopted by the meeting. The Legislature was then in session, and a successful attempt was made to procure a charter for the Pacific Railroad, commencing at St. Louis, and running to the western line of Van Buren (afterwards Cass) County. It was approved on

In its issue of March 8th the same paper added: “Our city is rapidly filling up with persons from all quarters of the Union, wending their way to the gold regions. A gentleman who has means of arriving at something like reliable information informs us that there are now in the city several hundred persons from a distance, preparing to start as soon as the weather and season will permit for California. The fine steamer ‘Germantown’ arrived last evening from the Ohio with a freight and a crowd of passengers, of whom we noticed twenty-two persons and several wagons destined for California. Fourteen of the persons styled themselves as the Buffalo Mining Company, and hail from Buffalo, N. Y. They are completely fitted out with all the utensils, implements, etc., for a long journey and a life in the mountains. The others are from different parts of the Keystone State.”

³ Senator Benton, on the 7th of February, 1849, introduced a bill into the United States Senate to provide for the location and construction of a central national road from the Pacific Ocean to the Mississippi River, to be an iron railway where practicable, and a wagon-road where a railway was not practicable, and proposed to set apart seventy-five per cent. of the proceeds of the sales of the public lands in Oregon and California, and fifty per cent. of the proceeds of all other sales of the public lands, to defray the costs of its location and construction, but nothing practicable ever came of that bill.

the 12th of March, 1849. The line of the proposed road is thus defined in the seventh section of the charter:

"Said company shall have power to survey, make, locate, and construct a railroad from the city of St. Louis to the city of Jefferson, and thence to some point on the western line of Van Buren (now Cass) County, in this State, with a view that the same may be continued hereafter westwardly to the Pacific Ocean." The act vested its powers in twenty-one corporators, of whom nine formed a quorum and might proceed to act.

The corporators were John O'Fallon, Lewis V. Bogy, James H. Lucas, Edward Walsh, George Collier, Thomas B. Hudson, Daniel D. Page, Henry M. Shreve, James E. Yeatman, John B. Sarpy, Wayman Crow, Joshua B. Brant, Thomas Allen, Robert Campbell, Pierre Chouteau, Jr., Henry Shaw, Bernard Pratte, Ernst Angelrodt, Adolphus Meier, Louis A. Benoist, and Adam L. Mills.

The capital stock of the company as fixed by the charter was ten million dollars.

On the 24th of May, 1849, the City Council of St. Louis passed the following preamble and resolutions:

"WHEREAS, Recent events have directed public attention to the necessity and importance of early railroad and telegraph connection with California and Oregon, and the general desire seems to be to make St. Louis the starting-point for those great national works; and

"WHEREAS, This community is especially interested in the accomplishment of so vast and beneficent an enterprise, and is properly expected to lead in the essential preliminary action for concentrating and enlightening public opinion in reference thereto; and

"WHEREAS, It is peculiarly desirable that measures should be promptly adopted in furtherance of the most feasible plan for making such a connection between St. Louis and the Bay of San Francisco or the Pacific coast; therefore,

"Be it resolved by the Board of Aldermen, the Board of Delegates concurring, That the mayor be requested to call a mass-meeting of the citizens of St. Louis and surrounding country, to be held on the first Monday in June next, at four o'clock P.M., in order to appoint the necessary committees, and to make suitable arrangements for a convention of delegates from all the towns, cities, counties, and States which will join in such a movement, said convention to be held in the city of St. Louis on the third Monday of October next.

"And be it further resolved, That the hospitalities of this city be tendered to all of the delegates to said convention, and that it be recommended to the mass-meeting on the first Monday of June next to take all suitable action to procure attendance at the October convention from as many States as possible, together with such information to be laid before said convention as may show the value and importance of the route indicated, and the respective merits of the various plans which have been submitted to public consideration in reference to this subject."

In accordance with the request contained in the resolutions, the mayor caused to be published in the

several newspapers of the city the following notice, dated May 28, 1849, viz.:

"WHEREAS, The Honorable City Council have passed resolutions authorizing and requesting the mayor to call a meeting of the citizens of the city of St. Louis and the surrounding country, to be held on the first Monday in June next, in order to appoint the necessary committees and to make suitable arrangements for a convention of delegates from all the towns, cities, counties, and States which will join in such a movement, for the purpose of taking into consideration the best and speediest plan of railroad and telegraphic connection with California and Oregon and the Pacific coast, said convention to be held in the city of St. Louis on the third Monday of October next: Now, therefore, in compliance with said resolutions, I do hereby respectfully request the inhabitants of the city of St. Louis and the surrounding country to meet at the rotunda of the court-house on Monday, the 1st day of June next, at four o'clock, to take into consideration the above-mentioned subject, and such other matters in relation thereto as may come before the meeting.

JAMES G. BARRY, Mayor."

A meeting of persons interested was held at the court-house, in accordance with the above notice, at which the Hon. J. G. Barry, mayor, was called to the chair, and Col. John O'Fallon, David Chambers, and A. R. McNair appointed vice-presidents, Capt. Richard Phillips and A. B. Chambers secretaries.

The chairman explained the object of the meeting, and alluded to the vast importance of the subject, its extent and influence upon the political and commercial prosperity of the country, and the necessity and duty of the citizens of St. Louis to take an active part in furtherance of the enterprise.

On motion of Mr. Blennerhassett, it was ordered that a committee of ten be appointed by the chair to report a preamble and resolutions for the action of the meeting.

The chair selected the following to compose the committee: R. S. Blennerhassett, Thomas Cohen, Robert Campbell, Pierce C. Grace, George L. Lackland, Sr., Matthias Steitz, William Ennis, Mann Butler, L. V. Bogy, and William Milburn, who, by their chairman, reported the following preamble and resolutions:

"WHEREAS, The idea of establishing a thoroughfare of travel and of commerce between Europe and Asia, across the continent of America, has ever been cherished by the statesman and philanthropist since the days of Columbus; and whereas, the discovery and application of steam as a motive-power, the rapid extension of the means of electric communication, the recent events in our history which have extended our domain to the Pacific Ocean, the extraordinary discoveries of gold in California, and the peaceable and prosperous condition of our beloved country, all conspire to place the consummation of this long-cherished project in the power of the American people; and whereas, the great number of projects for a railway across the continent which have been presented to Congress and canvassed before the country, as also the debate with regard to the praeversity of opinion in respect to the location and manner of practicability of a telegraphic line, are calculated to produce a di-

viding the necessary means of construction in the case of both projects, and consequently to embarrass the action of the national legislature upon such subjects; and considering it of vital importance in the adoption of measures purely national in all their bearings, and calculated to affect the condition of the whole race of man, whether civilized or savage, that the heart of the nation should be united in the great work, and believing that this favorable condition of the public mind can best be promoted through the agency of a convention that shall be purely national in all respects, be it, therefore,

Resolved, That this meeting cordially approve of the recommendation made by the city authorities of holding a great national convention in St. Louis, on the third Monday of October next, for the purpose of taking into consideration the expediency and practicability of establishing a line of electric telegraph, and of constructing a railway from St. Louis to the Bay of San Francisco.

Resolved, That the project of a great line of railway across the American continent is in all its aspects a national project, that as such it is due to every State and section of the Union that their opinions and views shall be heard, and their interest fairly considered, and that we deprecate any attempt to excite sectional jealousy, party rivalry, or personal feelings in reference to this important subject.

Resolved, That the chairman of this meeting appoint a committee of twenty-five, whose duty it shall be to prepare an address to the people of the United States, urging them to take into their serious consideration these interesting subjects; to open and conduct a correspondence with every portion of the Union, in such manner as to further the objects of this meeting; to collect, prepare, and publish all the facts calculated to recommend these subjects to public consideration, and to suggest when and how they ought to be accomplished; and, finally, to prepare and classify, and have printed for the use of the members of the October convention, every fact within their power calculated to shed light upon these subjects, together with a map and profile sections, made up from the best authorities.

Resolved, That we feel deeply gratified in witnessing that many portions of the Union are awakening to the importance of this great subject, and feel satisfied that our fellow-citizens generally will cordially co-operate in bringing into successful operation the great national measures which are contemplated by the convention of October next.

Resolved, That the mayor and Council of the city of St. Louis and the county court be hereby requested to appropriate out of their treasury such sum or sums as in their judgment, upon consultation with said committee, shall be requisite to carry into effect the foregoing resolutions.

Resolved, That the whole people of the United States be and they are hereby invited to send delegates to the contemplated convention, and that the hospitalities of this city are hereby cordially proffered to all such as may honor us by their attendance."

The preamble and resolutions were unanimously adopted.

On the 11th of June the chairman announced the following as the committee of twenty-five under the resolution:

Messrs. L. M. Kennett, Thomas Allen, Thomas B. Hudson, M. Tarver, Henry Kayser, A. B. Chambers, R. Phillips, John O'Fallon, Edward Walsh, John F. Darby, J. M. Field, L. V. Bogy, G. K. Budd, N. R.

Cormany, John Loughborough, Charles G. Ramsey, Joseph C. Meyer, John Withnell, George L. Lackland, J. B. Brant, Thomas D. Yeats, Samuel Gaty, O. D. Filley, A. Olshausen, and V. Staley.

At a meeting of the committee held on June 14th the following sub-committees were appointed:

Committee on address to the people of the United States, Thomas Allen, Thomas B. Hudson, M. Tarver, Henry Kayser, V. Staley; committee on invitation and correspondence, A. B. Chambers, R. Phillips, John O'Fallon, Edward Walsh, John F. Darby; committee on publication, M. Tarver, J. M. Field, L. V. Bogy, George K. Budd, N. R. Cormany; committee on statistics of convention, John Loughborough, Charles G. Ramsey, J. C. Meyer, John Withnell, George L. Lackland; committee on finance, J. B. Brant, Thomas D. Yates, Samuel Gaty, O. D. Filley, A. Olshausen.

The prevalence of the cholera as an epidemic for a time interrupted the action of the committee, but at an adjourned meeting of the citizens, held in September, 1849, it was reported by the chairman of the committee that two thousand copies of the address from the pen of Thomas Allen had been printed and freely circulated, and all proper steps taken for calling together a convention to be held on the 15th of October, 1849.

The address was an able presentation of the arguments in favor of the enterprise, and one of the striking theories advanced was that which advocated the national character of the work.

"But, on the other hand," wrote Mr. Allen, "if we fail to make this road, and California and Oregon remain without any practicable or convenient connection with the old States of the Union, who can doubt that a new republic will grow up on the shores of the Pacific which would perhaps become independent of the Union, and obtain a supremacy of their own upon an ocean favorable to steam navigation, and the very home of the trade with Asia? The whale fishery, the present American trade with China, the Pacific Islands, and the northwest coast, would be shared, if not monopolized, by the new republic. The central authority would find their power over a people so remote to be feeble and insufficient. With great mineral wealth in their possession, with a trade before them which has been the cynosure of commercial nations during the whole Christian era, and the experience and energy of the race whence they derive their origin, who can doubt their future power and progress in complete independence of all other nations?"

"The true policy of our government and country, therefore, in reference to this subject is apparent. The great importance and absolute necessity of this communication across the continent, by railway and telegraph, must be appreciated. We confidently trust that it will be carried out, by national means and authority, as one of the most powerful auxiliaries to the integrity and perpetuity of the Union, and to the mission of our country in promoting and extending the influence of the noble cause of civil and religious liberty, civilization and humanity.

"What we want is a central highway that shall be most useful and most acceptable to all parts of our country. Nor

can we anticipate any dispute as to power, inasmuch as the route will lie entirely through the territory of the United States, concerning which Congress have power to make all needful rules and regulations; and if it be expedient or necessary to enter the limits of a State, the right of way is already granted. To the eastern frontier of that territory, we have assurance that the electric telegraph will be constructed during the present year, and to the same frontier, railroad lines are already projected, or in operation, within the limits of the States."

The address concluded as follows:

"We therefore respectfully invite delegates from every State and Territory of the nation. Laying aside for the moment party and private engagements, we bespeak from all parties a day in union for the general good. We ask every district to send its representatives, that we may have them from the mountains and from the plains, from the cities and from the country, from the hills of New England and from the savannas of Georgia; that they will come to us from the north and the south, from the east, and even from the west, pouring in upon us by all the numerous avenues of conveyance which converge at this point, so that the hospitality of St. Louis shall rejoice in the fullest exercise and enjoyment of its means, and that a quickening voice may go forth from the assembled mass that shall give to the great measure of American progress assurance of its triumph."

At the adjourned meeting of the citizens, held on the first Monday in September, 1849, Mayor Barry called the meeting to order, and requested the same officers selected at the mass-meeting to serve with him, viz.: vice-presidents, Col. John O'Fallon, David Chambers, and A. R. McNair; Richard Phillips and A. B. Chambers, secretaries.

The mayor then explained the objects for which the adjourned meeting was held.

On the suggestion of Judge Krum, A. A. King, Governor of the State, being present, was invited and took a seat with the chairman and vice-presidents.

The proceedings of the mass-meeting held on the 4th of June were then read.

L. M. Kennett, from the committee of twenty-five, reported an abstract of the meetings and proceedings of the committee, and the following resolutions, which were accepted:

"Resolved, That a committee of arrangements consisting of twenty be selected by the chairman of this meeting, to provide a suitable place for holding the convention of the 15th of October, and to take all necessary measures for its comfort and accommodation whilst in session.

"Resolved, That the chairman appoint a committee of reception, also to consist of twenty, to procure the names of delegates as they arrive, and see that they are suitably provided for.

"Resolved, That a finance committee, consisting of three members from each ward of the city, be appointed to collect subscriptions to defray the expenses of the convention, as the appropriations made by the City Council and county court are insufficient for that purpose.

"Resolved, That fifty delegates to attend the convention, twenty from the county and thirty from the city (five from each ward), be now selected, the names to be proposed by the chairman and passed upon by the meeting."

The resolutions were adopted unanimously.

On motion of Judge Bowlin it was resolved that the committee of twenty-five appointed by the mass-meeting on the 4th of June be added to the delegation from the city and county, and requested to take seats as delegates from the city and county.

The chairman then announced the following names of the committees and delegates, which were adopted:

Committee of Arrangements.—Thornton Grimsley, Charles Keemle, J. B. Sarpy, A. S. Smyth, James Magehan, J. H. Alexander, Wait Barton, John M. Wimer, John Leach, C. Pullis, C. L. Hunt, P. A. Berthold, Louis Beach, George K. McGunnege, Samuel Hawken, Patrick Gorman, John McNeil, Edward Brooks, Hiram Shaw, Oliver D. Filley.

Committee of Reception.—James E. Yeatman, J. B. Crockett, D. D. Page, C. M. Valleau, George Maguire, Matthias Steitz, R. M. Reuick, T. T. Gantt, Luther C. Clark, Thomas O'Flaherty, William G. Clark, James M. Hughes, William Bennett, R. C. McAllister, J. A. Brownlee, L. A. Labcaume, Mann Butler, Sr., Bryan Mullanphy, J. A. Durkan.

Committee of Finance.—First Ward, John Dunn, John C. Dagenhart, Ezra O. English; Second Ward, Michael S. Cerré, J. P. Thomas, Patrick Walsh; Third Ward, William H. Pockocke, Michael Kelley, H. D. Bacon; Fourth Ward, H. L. Patterson, J. B. Carson, Theron Barnum; Fifth Ward, J. T. Swearingen, George Plant, Isaac T. Green; Sixth Ward, Isaac L. Sturgeon, Nathaniel Childs, Jr., Reuben B. Austin.

Delegates.—First Ward, R. S. Blennerhassett, David B. Hill, Edward Haren, William R. Price, D. D. Mitchell; Second Ward, George R. Taylor, Archibald Gamble, Wilson Primm, John G. Shelton, Mann Butler, Jr.; Third Ward, Edward Bates, Henry S. Geyer, A. L. Mills, Bernard Pratte, Samuel Treat; Fourth Ward, James H. Lucas, William Robb, John M. Krum, G. B. Allen, John Howe; Fifth Ward, Alexander Hamilton, Truven Polk, John B. Gibson, Robert Cathcart, Archibald Carr; Sixth Ward, Henry Holmes, T. M. Post, J. T. Swearingen, Isaac H. Sturgeon, Calvin Case; County, John K. Walker, James H. Castello, George M. Moore, Frederick Hyatt, William F. Berry, Henry Walton, James Sutton, James McDonald, Hamilton R. Gamble, Alton Long, Judge Higgins, Henry McCullough, John B. Bogert, Peregrine Tippet, Zeno Mackey, John Sapington, Peter D. Barada, William Milburn, H. M. Shreve, G. W. Gooder.

At the call of the meeting, Governor King briefly responded, expressing his entire approbation of the objects and purposes of the meeting. He regarded them

as feasible, practicable, and within the powers and energies of the nation. The object was one not partial to the State or nation, but interested the civilized world. All the energies and assistance which he could bring to the furtherance of the proposed work he cheerfully promised to give.

At subsequent periods several meetings of the citizens were held, and suitable arrangements made for holding the convention, and for the accommodation of the delegates attending from a distance.

The convention, which consisted of delegates from the several States, assembled in St. Louis on Monday, the 15th of October, 1849.

At twelve o'clock the delegates assembled in the rotunda of the court-house, and on motion of Col. Thornton Grimsley, of St. Louis, Hon. A. T. Ellis, of Indiana, was called to the chair as president of the convention *pro tempore*.

Mr. Ellis thanked the convention for the honor conferred upon him. Before proceeding to business, he requested that the Rev. Bishop Hawks offer a prayer.

Bishop Hawks thereupon rose, and made a brief and eloquent address, in which he adverted to the rapid growth, prosperity, and influence of the nation among the people of the earth, and the grand project contemplated by the assembling of the convention, and prayed that in their consultations harmony of action and unity of purpose might prevail, and that their proceedings might redound in much good to the country, and to the glory of the Most High.

Upon a call of the several States it appeared that delegates were present from the States of Missouri,¹ Pennsylvania, New York, Ohio, Indiana, Kentucky, Illinois, Iowa, Wisconsin, Michigan, Louisiana, and Tennessee.

On Tuesday the committee appointed to select officers for the permanent organization of the convention, and to recommend rules for the government of its deliberations, reported that they had agreed to recommend for president, Hon. Stephen A. Douglas, of

Illinois; for vice-presidents, W. L. Totten, of Pennsylvania; Samuel Forrer, of Ohio; Samuel Emison, of Indiana; Henry J. Eastin, of Kentucky; Hon. Joseph Williams, of Iowa; Charles Bracken, of Wisconsin; Henry S. Geyer, of Missouri; John Biddle, of Michigan; Amherst K. Williams, of New York; Hon. W. B. Scates, of Illinois; for secretaries, A. B. Chambers, of Missouri; W. H. Wallace, of Iowa; A. S. Mitchell, of Kentucky; W. G. Minor, of Missouri; T. A. Stuart, of Illinois.

The report of the committee was approved, and the president, Hon. Stephen A. Douglas, was conducted to the chair.

A committee of three from each State represented was appointed by the chair to report resolutions for the consideration of the convention, as follows:

Iowa.—V. P. Van Antwerp, G. H. Walworth, William Thompson.

Tennessee.—Le Roy Pope, Jr., E. J. Carroll, George W. Smith.

Kentucky.—H. J. Eastin, A. S. Mitchell, James Harper.

Pennsylvania.—George Darsie, Charles Naylor, J. H. Reed.

Wisconsin.—Charles Bracken, J. R. Murray, Edward Vaughers.

Illinois.—Richard Bond, William B. Warren, Thomas Hayne.

Indiana.—Albert S. White, R. W. Thompson, A. T. Ellis.

Michigan.—John Biddle.

Louisiana.—Charles C. Lathrop.

New York.—Amherst R. Williams.

Missouri.—A. A. King, J. Loughborough, T. B. English.

Ohio.—D. W. Deshler, J. H. Sullivan, Henry Stoddard.

On Wednesday the chair announced the following gentlemen as having been appointed, in accordance with the action of the convention, to constitute the committee to memorialize Congress: W. F. Bowden, of Wisconsin; A. K. Williams, of New York; Charles Naylor, of Pennsylvania; J. F. Maury, of Virginia; John G. Low, of Ohio; G. W. Lincoln, of Tennessee; O. H. Smith, of Indiana; W. S. Wait, of Illinois; John Biddle, of Michigan; James Clark, of Iowa; Thomas Allen, of Missouri; Basil Duke, of Kentucky; C. C. Lathrop, of Louisiana; Robert Chambers, of New Jersey.

Henry Stoddard, of Ohio, from the committee appointed to draft resolutions for the consideration of the convention, submitted the following, which were read:

¹ *St. Louis Delegation*.—Same as above stated, with the addition of the following:

Dr. Prout, Hugh Garland, William M. McPherson, Miron Leslie, John Barnes, L. A. Labeaume, R. S. Elliott, Dr. Penn, F. M. Haight, M. Blair, L. M. Kennett, Thomas Allen, Thomas B. Hudson, M. Tarver, Henry Kayser, A. B. Chambers, R. Phillips, John O'Fallon, Edward Walsh, John F. Darby, J. M. Field, G. K. Budd, N. R. Cormany, John Loughborough, Charles G. Ramsey, John B. Meyer, John Withnell, George L. Lackland, T. T. Gantt, Thomas D. Yeats, Samuel Gaty, O. D. Filley, A. Olshausen, V. Staley, James G. Barry.

Ste. Genevieve.—Lewis V. Bogy, August St. Gemme, Felix St. Gemme, F. Vallé, Gustave St. James.

"1. *Resolved*, That this convention is, in its spirit and object, strictly national, having no party, no sectional, no local interests to serve or promote, but having at heart the interests of the whole country.

"2. *Resolved*, That it is the duty of the Congress of the United States to make immediate provision for the construction of a great trunk railroad to the Pacific Ocean, in California, with a branch road to Oregon, from such point in the Mississippi valley or on the frontier of the States as may be found from examination and surveys to be most eligible and convenient, with reference to the existing and prospective state of the country and the population and convenience of the whole Union, and that it should be diligently prosecuted by the Federal government.

"3. *Resolved*, That the various lines of railway now either complete or under process of construction from Savannah, Charleston, Richmond, Baltimore, Philadelphia, New York, and Boston, tending to and connecting with the Mississippi valley, are only parts of the great whole which the general government is asked to consummate by the Mississippi and Pacific Railway, and that these Eastern connections now being prepared for it, by uniting all interests, guarantee the perfect nationality of this work.

"4. *Resolved*, That, as an important means necessary and preliminary to the construction of such railroad, it is the first duty of the American Congress, immediately upon its assembling together, to make provision for the establishment of military posts from the western confines of our Western States to the Pacific Ocean, and these posts should be established numerously in all proper places, not far distant from each other, and that civilized and productive settlements should be encouraged around them by liberal sales or grants of the public lands, by extending ample protection to the settlers and to the transport of their stores and merchandise, etc., so that by these means full opportunities may be afforded to our topographical engineers for the immediate reconnoissance and survey of our vast possessions reaching to the Pacific, and one or more practical roads, with facilities of travel, be immediately formed for our citizens across our own Territories from the Atlantic to the Pacific shores.

"5. *Resolved*, That the Congress of the United States be memorialized to construct, or authorize the construction of, a national line of telegraph along the route which may be determined upon by national authority for the great railway to the Pacific.

"6. *Resolved*, That a committee of five be appointed by the president of this convention to prepare and publish an address to the people of the United States urging their co-operation in procuring such action on the part of Congress as may be necessary to carry out the views of this convention."

Hon. R. W. Thompson, of Indiana, then addressed the convention at length, and concluded by submitting the following resolutions in lieu of those reported by the committee:

"*Resolved*, That in the opinion of this convention it is the duty of the general government to provide at an early period for the construction of a central national railroad from the valley of the Mississippi to the Pacific Ocean.

"*Resolved*, That in the opinion of this convention a grand trunk railroad, with branches to St. Louis, Memphis, and Chicago, would be such a central and national one.

"*Resolved*, That a committee be appointed to communicate to the convention to be held at Memphis the foregoing resolutions, and to request the concurrence of said convention therein."

The resolutions offered by Mr. Thompson were carried by almost an unanimous vote.

Hon. Charles Naylor, of Pennsylvania, then addressed the convention.

A communication was received from the delegates from Memphis, Tenn., tendering to the convention an invitation to be present at and participate in the deliberations of the National Pacific Railroad Convention, which was to meet in Memphis, October 23d.

The invitation was signed by George W. Smith, Edward J. Carroll, L. Pope, Jr., W. T. Avery, E. Hickman, A. S. Caldwell, Samuel Vance, Miles Owen.

It was moved by Hon. J. H. Burch that the committee to communicate the resolutions of the St. Louis convention to the convention to meet on the 23d instant at Memphis be composed of fifty persons, and that Hon. R. W. Thompson, of Indiana, be chairman of that committee, which motion was adopted.

The following is a copy of the memorial prepared by the committee appointed for that purpose and forwarded to Congress:

"To the Senate and House of Representatives of the United States of America in Congress assembled:

"The memorial of the subscribers, members of a committee appointed at a meeting of numerous delegates assembled from fifteen States of the Union, held at St. Louis, in the State of Missouri, on the fifteenth, sixteenth, seventeenth, and eighteenth days of October last, respectfully represents

"That your memorialists were instructed by said assembly 'to draft a memorial to Congress, presenting the objects and desires of the convention.'

"Your memorialists, therefore, respectfully beg leave to invite the attention of your honorable bodies to the published call of said convention, to its proceedings, and to the address to the people of the United States issued under its authority, as furnishing the best evidence in the possession of your memorialists of the 'objects and desires of the convention,' all of which are hereto annexed, marked respectively A, B, and C.

"Your honorable bodies will readily perceive, by reference to these papers, that the objects and desires of the convention embrace the construction of a national railroad, electric telegraph, and a line of military posts across the central parts of the continent, from the Mississippi River to the Pacific Ocean.

"That these objects are held to be of national importance and of high necessity, and that they ought to be accomplished by the means and authority of the government of the United States at an early day.

"Your memorialists, in behalf of said convention, therefore, respectfully pray that immediate measures may be taken by your honorable bodies for the location and construction of this national railroad and telegraph; and in thus praying, your memorialists believe they are but asking your honorable bodies to promote and perpetuate social, commercial, and political intercourse with our regions in the interior and upon the Pacific Ocean, to render them readily and easily accessible to the whole people of the Union, and to the government itself, and to confirm and strengthen the Union of these States.

"And your memorialists beg leave to call the earnest attention of your honorable bodies to the actual present and probable future condition of affairs in the West. By the treaty of peace with Mexico the territorial property and domain of the

nation have been immensely extended, as well in the interior of the continent as upon the shores of the Pacific. The flag of the United States now waves among remote tribes and people who have hitherto been accustomed to feeble masters and to comparative freedom from the restraints of civilized government. These people and tribes are to feel the power of a new government; peace is to be maintained among them; the emigrants from the older States are to be protected; a largely-extended sea-coast is to be fortified against the dangers of foreign enemies, and we would respectfully submit whether a cheaper or more efficient provision for national defense and internal peace and union, in respect to the Territories and embryo States of the West, can be executed or devised than this railroad and telegraph, extending from the Mississippi River to the Pacific Ocean. And in this connection, and as a preliminary step in the process of constructing this great work, and as an important means of repressing Indian depredations, murders, and wars, your memorialists pray that your honorable bodies may, without unnecessary delay, establish the line of military posts recommended by the convention, and more particularly alluded to in this address.

"Nor is the general subject, in the opinion of your memorialists, unworthy of your serious consideration, viewed as a means of increasing the national wealth. Compare the Pacific Railroad as a medium of trade with the Mississippi and the Ohio Rivers, and the branches which will ultimately project from it, with the tributaries of those noble streams, and no true estimate can be made of its value. Experience has demonstrated that in all parts of the United States the enhanced value of land, through districts comparatively sterile or unproductive, far exceeds the cost of the railroads which have rendered them accessible to market. With the unequalled advantages to be afforded by the Pacific Railroad, would not the territory to be traversed by it immediately become nearly as valuable as the most eligible agricultural districts of the United States, whilst as it now lies it must remain comparatively useless? In this, therefore, would be a creation of value far exceeding the cost of the work at the highest estimation. And as a commercial link, bringing Europe and Asia into contact through the heart of our North American continent, and becoming the greatest common carrier of the world,—our own country, the half-way house upon the highway of nations,—your memorialists respectfully ask your honorable bodies to consider the immense consequences which will result from it beneficially to our country.

"And your memorialists, in conclusion, pray that the national bearing and importance of the subject may secure for it the favorable consideration of enlightened statesmanship and patriotism, and that it may be viewed and always held above the prejudices of party and aloof from the machinations of sectional interest.

"And your memorialists will ever pray, etc.

- "THOMAS ALLEN, of Missouri.
- "W. S. WAIT, of Illinois.
- "W. F. BOWDEN, of Wisconsin.
- "A. K. WILLIAMS, of New York.
- "CHARLES NAYLOR, of Pennsylvania.
- "M. F. MAURY, of Virginia.
- "JOHN G. LOW, of Ohio.
- "G. W. LINCOLN, of Tennessee.
- "O. H. SMITH, of Indiana.
- "JOHN BIDDLE, of Michigan.
- "JAMES CLARK, of Iowa.
- "BASIL DUKE, of Kentucky.
- "C. C. LATHROP, of Louisiana.
- "ROBERT CHAMBERS, of New Jersey.
- "J. C. ELDER, of Maryland."

Letters approving and encouraging the scheme of a national railroad to the Pacific were received and read from Levi Woodbury, Roger Huntington, Z. Pratt, Richard M. Johnson, James G. King, John H. McHenry, Lewis Cass, J. C. Calhoun, Henry Clay, Martin Van Buren, William H. Seward, Levi Hubbell, A. D. Crossmore, P. P. F. Degrand, Thomas H. Benton, Jr., Samuel Beardsley, Giles Spring, Robert M. McLane, D. S. Dickinson, J. W. Crisfield, G. W. Peter, W. L. Goggin, J. G. Chapman, John Glenn, O. G. Cates, H. B. Huntershott, James Gadsden, James Grant, Samuel R. Curtis, William Duer, J. Davis, George S. Fisher, Maunsel White, William T. Lawrence, D. Field, John M. Botts, John H. Clarke, Edwin Crosswell, Albert S. White, J. L. Martin, W. Preston, John F. Gray, A. W. Buel, John N. Niles, John G. Palfrey, Preston B. Reed, Washington Hunt, W. L. Foote, J. Van Buren, W. B. Maclay, Henry O'Reilly, Benjamin F. Porter, C. F. Keener, Chauncey P. Holcomb, William Woodbridge, and F. Tiernan.

The construction of the proposed railroad to the Pacific became a question in politics, and was favored in the "platforms" of both parties and the "pledges" of public men, but was postponed to a "more convenient season." The subject, however, continued to hold the earnest attention and interest of the people of St. Louis, and was urged with great force and vigor by Thomas Allen, J. Loughborough, and others.

On Jan. 29, 1850, Thomas Allen, one of the corporators mentioned in the charter of the Pacific Railroad, published a note in the *Missouri Republican* calling for a meeting of the corporators with a view to organization. At this meeting, which was held in the office of the St. Louis Insurance Company, in the city of St. Louis, on Thursday evening, the 31st of January, 1850, there were present John O'Fallon, James H. Lucas, Edward Walsh, George Collier, Daniel D. Page, James E. Yeatman, Joshua B. Brant, Thomas Allen, Adolphus Meier, Adam L. Mills, and Wayman Crow.

On motion of Thomas Allen, the meeting was organized by calling Col. John O'Fallon to the chair, and appointing Wayman Crow secretary.

Mr. Allen then delivered an address, which was published and extensively circulated. It was an able presentation of the Pacific Railroad enterprise, and inspired confidence in the project of building a railroad in Missouri for its local worth, as well as for a link in the great Pacific Railroad. After this address, on motion of Mr. Lucas, it was

"Resolved, That the corporators do now proceed to organize by the election of a president, secretary, and treasurer."

The vote, having been taken, resulted in the election of Col. John O'Fallon, president; Thomas Allen, secretary; and Daniel D. Page, treasurer.

On motion of Mr. Allen, it was

"Resolved, That a committee of three corporators be appointed to open books for subscription to the capital stock of the company; that said books be opened on Monday, the 4th of February, at ten o'clock, and close at three o'clock P.M., and kept open for six days in the rooms of the Merchants' Exchange."

The chairman appointed the following gentlemen that committee, viz.: James H. Lucas, James E. Yeatman, and J. B. Brant.

On motion of Mr. Lucas, it was

"Resolved, That the several papers in the city be requested to publish the proceedings of this meeting and the address of Mr. Allen on this subject."

On motion of Mr. Allen, it was

"Resolved, That a committee of three be appointed to prepare a memorial to Congress, praying a donation of alternate sections of land along the route for the construction of the proposed road."

The chairman appointed the following gentlemen that committee: Thomas Allen, James H. Lucas, Wayman Crow.

Before the adjournment of the meeting the eleven gentlemen present pledged themselves to subscribe \$154,000 in the aggregate to the stock upon the opening of the books, which pledge they redeemed. Mr. Lucas first started the subscription by offering to be one of three to make up \$100,000. In this he was joined by John O'Fallon and D. D. Page. It was understood that there were others ready to subscribe, and that \$1,000,000 could be raised by the 1st of March.

The subscribers, nearly all of whom expressed their willingness and purpose, if necessary to the progress of the work, to double or more than double their subscriptions, were:

James H. Lucas.....	333 shares,	\$33,300
John O'Fallon.....	334 "	33,400
Daniel D. Page.....	333 "	33,300
Thomas Allen.....	100 "	10,000
J. & E. Walsh.....	100 "	10,000
James E. Yeatman.....	50 "	5,000
Joshua B. Brant.....	100 "	10,000
George Collier.....	100 "	10,000
Wayman Crow.....	25 "	2,500
A. L. Mills.....	50 "	5,000
Adolphus Meier.....	15 "	1,500
Total.....	1540	\$154,000

"We are justified in asserting," added the *Republican* in its notice of its meeting, "that the eleven gentlemen present, if they had had time for consultation and examination of the charter, would have promptly made up the two hundred thousand dollars, and they will yet do it. The three first on the list

agreed to take one hundred thousand dollars, each expressing his willingness to double it if necessary, and for the privilege of subscribing the odd thousand they tossed up, Col. O'Fallon winning it. This subscription has been made in good faith by men under their own signature, every one of whom is able not only to fulfill his present pledge, but to go further if it should be necessary. Their judgment, feelings, and interest prompt them to push the measure forward, and we risk nothing in saying that this road will be early commenced and speedily completed."

At a subsequent meeting a book was ordered to be opened in each ward of the city, and the book at the Merchants' Exchange was ordered to be kept open until the Saturday preceding the last Monday in March. A committee, consisting of Thomas Allen, Edward Walsh, and Adolphus Meier, was appointed to make preliminary arrangements for a general topographical and geological survey of the country upon the proposed route of the road. An election of nine directors, as provided by the charter, was ordered to be held on the last Monday in March.

The committee, in accordance with the original action of the incorporators, issued the following notice:

"Books for the subscription of stock to the Pacific Railroad will be opened between the hours of 10 A.M. and 3 P.M. on Monday, the 4th of February, at the Merchants' Exchange, and will be kept open for six days.

"JAMES H. LUCAS,
"JAMES E. YEATMAN,
"J. B. BRANT,
"Committee."

In its issue of February 5th the *Republican*, describing the opening of the books, said,—

"Nearly the whole amount required to put the Pacific Railroad into operation was subscribed yesterday. The books will continue open during the week.

"The Merchants' Exchange, from eleven to twelve o'clock yesterday, was crowded with business men and visitors, called thither to see what progress was making in the subscription.

"The subscription to the stock in the Pacific Railroad reached one hundred and ninety thousand dollars yesterday. Nineteen thousand dollars is wanted to perfect the organization of the company. As soon as this is secured the directors will feel themselves authorized to employ engineers and to go on with the work. It will authorize them also to ask subscriptions, on the part of the city and county of St. Louis, of all incorporated companies, and of the counties through which it may be settled that the road shall pass."

On February 7th the following subscriptions were added to those which had already been made:

	Shares.	Amount.
Auguste Guelberth & Co.....	20	\$2,000
Charles L. Hunt.....	30	3,000
Thomas Grey.....	5	500
John M. Johnson.....	5	500
L. Deaver.....	20	2,000
Thomas B. Chambers.....	5	500
B. M. Chambers.....	5	500
William Turner.....	2	200
H. L. Patterson.....	20	2,000
Ann C. T. Farrar, by J. T. Swear- ingen.....	20	2,000
James Harrison.....	50	5,000
William Beaumont.....	15	1,500
William Renshaw, Jr.....	10	1,000
P. A. Berthold.....	10	1,000
A. Shurlds Dent.....	5	500
Fred Dent, Jr.....	5	500
S. E. Selleck.....	5	500
Total.....	232	\$23,200

"When the books were closed yesterday," said a newspaper of Feb. 9, 1850, "the following gentlemen had subscribed the shares and sum placed opposite to their names :

	Shares.	Amounts.
James H. Lucas.....	333	\$33,300
John O'Fallon.....	334	33,400
Daniel Page.....	333	33,300
Thomas Allen.....	100	10,000
J. and E. Walsh.....	100	10,000
James E. Yeatman.....	50	5,000
George Collier.....	100	10,000
Joshua B. Brant.....	100	10,000
Crow, McCreery & Co.....	25	2,500
A. L. Mills.....	50	5,000
Adolphus Meier.....	15	1,500
Joseph Charless.....	50	5,000
Taylor & Mason.....	25	2,500
K. Mackenzie.....	25	2,500
Switzer, Platte & Co.....	25	2,500
John B. Sarpy.....	25	2,500
Louis A. Labeaume.....	50	5,000
Chambers & Knapp.....	20	2,000
Charles L. Hunt.....	20	2,000
John Simonds.....	50	5,000
A. P. Ladew & Co.....	15	1,500
Sandford J. Smith.....	10	1,000
W. Risley & Son.....	10	1,000
R. Simpson.....	10	1,000
R. W. Ulrici.....	10	1,000
John B. Carson.....	5	500

George I. Barnett.....	10	1,000
Charles Sellman.....	10	1,000
Evans, Nuckles & Co.....	10	1,000
Oliver Quinette.....	5	500
John Hogan.....	5	500
J. D. Osborne.....	5	500
Alexander, Copp & Co.....	10	1,000
Alexander Hallam.....	5	500
B. H. Batte.....	5	500
John W. Harker.....	5	500
Wilson & Bros.....	10	1,000
Total.....	2020	\$202,000 "

"Every day's subscription to the stock of the Pacific Railroad Company," said a St. Louis newspaper of February 10th, "only serves to show the strong hold which this project is acquiring upon the people of St. Louis. Yesterday the stock taken exceeded forty-five thousand dollars, and at the close of the books the whole amount subscribed was three hundred and five thousand five hundred dollars. When it was considered that the project has only been before the people for about a week, that it is only ten days since the charter was first published and a portion of the commissioners met in a quiet way

and resolved that the great work should be commenced, and by way of attestation of their own convictions of what ought to be done subscribed one hundred and fifty-four thousand dollars, it may be claimed, we think, that the people of St. Louis have done nobly.

"After the close of the books yesterday the directors held a meeting to determine upon further proceedings. We understand that they resolved to reopen the books for the subscription of stock at the Merchants' Exchange to-morrow (Monday), and they resolved also to open additional books of subscription in the First, Second, Fourth, Fifth, and Sixth Wards, the Merchants' Exchange being in the Third Ward, under the supervision of the committee who have had charge of the books; and that they were authorized to employ assistants in the several wards. This arrangement will accommodate a great number of persons, and will add, we have no doubt, to the interest felt in the success of the work."

Two days later (February 12th) it was announced that the following gentlemen had been appointed ward committees to collect subscriptions to the Pacific Railroad, and to make personal collections for subscriptions in their respective wards during the remainder of the week :

First Ward, Edward Haren, R. S. Blennerhassett, D. B. Hill, Adolph Abeles, M. Steitz.

Second Ward, George R. Taylor, George Knapp, G. Schoentaler, M. S. Cerré, John Kern.

Third Ward, Louis A. Labeaume, Asa Wilgus, Ferdinand Overstolz, A. L. Mills, Sullivan Blood.

Fourth Ward, O. D. Filley, G. I. Barnett, Rufus Keyser, A. P. Ladew, Patrick Gorman.

Fifth Ward, A. H. Glasby, John Leach, William Branegan, Charles Dean, John B. Carson.

Sixth Ward, J. H. Sturgeon, Charles Hammond, Smith Robinson, D. W. Dixon, Theodore Labeaume.

At the closing of the books on the 12th of February, 1850, the whole number of shares taken amounted to three hundred and nineteen thousand eight hundred dollars. This, however, did not include any portion of what had been subscribed on the books in possession of the committees of the several wards. On the 1st of May, 1850, it was announced that the city corporation was about to subscribe the five hundred thousand dollars authorized by a vote of the people. "The subscriptions of individuals," it was added, "do not yet amount to that sum."

The amount required by the charter (two hundred thousand dollars) having been secured, the corporation proceeded to organize by the election of a board of directors. The committee appointed to superintend the election consisted of Luther M. Kennett, O. D. Filley, A. Wilgus, Louis A. Labeaume, and George Knapp. At the election which was held on the 25th of March, 1850, at the Merchants' Exchange the following were chosen directors: Thomas Allen, John O'Fallon, James H. Lucas, Louis A. Labeaume,

Edward Walsh, James E. Yeatman, George Collier, Daniel D. Page, and L. M. Kennett.

On the following day the directors met and elected Thomas Allen president, and Louis A. Labcaume secretary *pro tem*. There were then twenty-nine million two hundred and sixteen thousand acres of land in Missouri open to private entry which, as stated in the memorial of the directors to Congress, remained unsold.¹

Mr. Allen, the president of the company, who, as we have seen, had been one of the most prominent and efficient promoters of the enterprise from the start, addressed himself to the work before him with characteristic energy and vigor, and under his able direction the affairs of the company soon took shape. On the 22d of April it was announced that James P. Kirkwood, of New York, had been appointed chief engineer of the road.²

Mr. Kirkwood was then superintendent of the New York and Erie Railroad. Under his direction three parties of engineers were started on the surveys. Three different routes were surveyed, and a very full and able report made by the engineers, and published with the first annual report of the board of directors. The preliminary surveys were commenced on the 24th of May, and closed on the 29th of November, 1850. Five different lines were surveyed, embracing in the whole over eight hundred miles of survey.

During the progress of the surveys the president, Mr. Allen, personally visited and addressed the people and the county courts of nearly every county from St. Louis to the western boundary, and also laid his plans before the Governor of the State, which the Governor, after due consideration, substantially adopted. The city and county of St. Louis and the county of Jackson subscribed to the stock. Petitions to Congress in behalf of a grant of land, as applied for by the company, were circulated and numerous signed in all the counties along the proposed line, and in due time transmitted to Congress.

At the session of Congress held in 1850-51 a bill passed the Senate of the United States granting for

the railroad alternate sections of land for a space of six miles in width on each side, but was not reached in the House of Representatives. In the same winter of 1850-51, the president of the railroad company having been elected to the State Senate, a plan for a complete system of railroads for the State was laid before the Legislature by him, including a form of State aid by a loan of the public credit. This plan, which was soon adopted, contemplated the issue of State bonds to the railroad company to an amount equal to the amount first to be advanced by the stockholders, the company agreeing to pay the interest and principal of the bond, and the State reserving a first lien on the road as security.

The first act was approved Feb. 22, 1851, and provided for the issue to the extent of two millions of State bonds to the Pacific Railroad Company, in sums of fifty thousand dollars, upon satisfactory evidence being furnished to the Governor at each application that a like sum of fifty thousand dollars had been expended by the company, derived from sources other than State bonds, and *provided* that the bonds should not be sold below par. These bonds having twenty years to run, and bearing six per cent. interest, were sold at a premium for more than a year and a half, and some were sold as high as 110. Some important amendments to the charter were granted at the same session by an act approved March 1, 1851. Congress, on the 10th of June, 1852, passed an act granting to the State of Missouri the alternate sections of land in a strip of six sections in width on each side of the line, for the construction of a railroad from St. Louis to the western boundary of the State. Soon after the passage of this act the company petitioned the Governor to call an extra session of the Legislature, and the then Governor, Hon. Austin A. King, complied with the request.

So largely had individuals entered the public lands the previous year or two in consequence of the railroad surveys, that it was soon discovered that the grant would be of little value for constructing a railroad in a direct line westward from St. Louis to the western boundary. Therefore, in view of the immense district of country lying at the southwest, known to be desirable in soil, climate, and minerals, yet inaccessible, and also in view of the probability that a good route for the national road to California might be found along the thirty-fifth parallel, it was deemed advisable to make a fork in the line of road, and run the main trunk nearly west in the direction of Kansas *via* the State capital, and the fork or branch in the southwestern direction. To the road from St. Louis to the point of divergence from the main line,

¹ At this time not a single railway touched the Mississippi on either side at St. Louis. The Erie Railroad was not completed, and only seven thousand miles of railroad had been constructed in the United States.

² "*Pacific Railroad*.—The commencement of this great and, to our city, important work we presume will take place immediately. Mr. Kirkwood, late engineer of the New York and Erie Railroad, now engineer of the Pacific Railroad, arrived in our city yesterday morning accompanied by two assistants. In a very short time the corps of engineers will be organized and the reconnoissance and the location commenced."—*Republican*, May 21, 1850.

and thence to the southwest boundary of the State, the State granted the lands by the act of Dec. 20, 1852, without bonus and with an exemption from taxation until the road could pay a dividend, and with also a further loan of \$1,000,000 to the main line, and \$1,000,000 to the Southwest Branch. The right of pre-emption to actual settlers already on the lands at \$2.50 per acre was, however, reserved.

Mr. Allen, president of the company, was appointed the agent of the State to select the lands, and for that purpose went to Washington City. The lands selected amounted to about 1,200,000 acres.

The Pacific Railroad Company, having surveyed a route for a branch railroad to the Iron Mountain, to cross the Maramec near the mouth of Calvey Creek, in Franklin County, and run on an interior ridge west of Big River, *via* Potosi, and having reported that the Iron Mountain could thus be reached by building about sixty miles additional of railroad, at a cost of two or two and a half million dollars, the Legislature granted a loan to the company for that branch of seven hundred and fifty thousand dollars. The demand having arisen for a "direct line" to the Iron Mountain from St. Louis, this loan was subsequently yielded and transferred to the St. Louis and Iron Mountain Railroad.

On the 12th of March, 1851, the board of directors resolved to commence the construction of the Pacific road, and were called upon for the first time to consider the question of route. The road had originally been defined as to Jefferson and Cass County, but, now free to seek the best route through the State, it became evident that more extended surveys must be made before they could act intelligently. A division of forty miles only was located, as being common to all the routes that they could take.

At the time it was in contemplation to make other surveys, not only connecting in detail those already made, but to try other routes, passing farther inland or towards the southwest. But it had been found that speculators followed the track of the engineers and entered all the best land, and it was thought advisable not to make any more surveys until a land grant had passed Congress, and the land was put out of market.

In the mean time vigorous efforts were made to increase the subscriptions to the stock of the company to one million five hundred thousand dollars, in order that the latter might avail itself of the State's subscription.

"There was a good deal of encouragement," said the *Republican* of May 12, 1851, "in the meeting in relation to the Pacific Railroad which took place on Saturday evening. Mr. Allen stated a variety of facts in relation to the road. Speaking of

the financial condition of the company, he said that the individual subscriptions amounted to about four hundred and fifty thousand dollars, the city had subscribed five hundred thousand dollars, the county of St. Louis one hundred thousand dollars, the county of Jackson one hundred thousand dollars, and other subscriptions would make the sum up to nearly twelve hundred thousand dollars. The directors desired to swell this sum to fifteen hundred thousand dollars, and hence the present effort. Whenever the last-named sum is subscribed, the company can then avail itself of the credit of the State to the amount of two millions of dollars, and then there would be a capital of three and a half millions of dollars to go to work with. The engineer estimates the entire cost of the road, assuming that it is three hundred miles in length, at six millions of dollars. This includes everything, payments for depots, cars, locomotives, etc. We have a right to expect that Congress will do justice to this State at the next session by making adequate grants of lands for the use of this road and that of the Hannibal and St. Joseph Company, and this will go very far towards the completion of the work."

At this meeting a resolution was adopted providing for committees "to canvass the several wards for subscriptions of stock to the railroad. Subsequently the following committees were appointed:

"First Ward, Adolph Abeles, Henry A. Lynch, Frederick W. Beckwith, Brannock Jones, Lewis Clark, L. C. Degenhardt, William Friend, H. Niemeyer, Thomas T. Gantt, John C. Rust.

"Second Ward, George R. Taylor, Solomon Smith, Matthew Steitz, William Palm, Francis P. Blair, J. B. Sickles, Hiram Shaw, John Kern, Alexander Keyser, Robert Simpson.

"Third Ward, R. S. Elliott, Asa Wilgus, A. Mittelberger, George R. Reed, John C. Meier, John C. Ivory, William H. Carroll, Adolphus Meier, Nathan Ranney, John Shade.

"Fourth Ward, William T. Christy, John Finney, S. H. Robins, O. D. Filley, F. B. Chiles, A. J. P. Garesche, T. W. Hoyt, John S. Watson, P. R. McCreery, J. D. Houseman.

"Fifth Ward, A. P. Ladew, John Leach, Willis R. Prichard, F. Laubmann, G. B. Allen, L. Holthaus, Leroy Kingsland, H. H. Cohen, Louis Bach, James Fortune."

At a meeting of the directors held on the 18th of June, 1851, at which A. S. Mitchell acted as secretary, the board proceeded to locate the First Division of the road. The various surveyed routes and their estimated costs having been presented and explained by James P. Kirkwood, chief engineer, Mr. Lucas offered the following resolution:

"*Resolved*, That the route through Chouteau Pond valley and the valley of the Des Peres to the Maramec valley, and up the Maramec valley for a distance of about thirty-nine miles from St. Louis, commencing in St. Louis at Fourteenth Street, be adopted as the First Division of the Pacific Railroad."

The yeas and nays were demanded on this resolution, and the result was as follows:

Yeas, Messrs. Allen, Bridge, Haren, Harrison, Kennett, Labeaume, Lucas, Walsh, and Yeatman,—9. Nays, none; the entire board present and voting.

In deciding upon this location the board took into consideration not only the estimated cost of the dif-

ferent lines, but the need of a branch to the Iron Mountain and the southwest part of the State.

On motion of Mr. Kennett, the following resolution in relation to calls on stock in the Pacific Railroad was adopted:

“Resolved, That not exceeding thirty per cent. upon the capital stock of the company shall be called in any one year during the construction of the road.”¹

An election for directors of the road was held on

¹ “The report of J. P. Kirkwood, chief engineer of the road, to the board of directors, in June, 1851, contained the following information as to the lines he had surveyed, their lengths and estimated cost:

	Miles.	
Missouri River route (by Crevecoeur Lake to Jefferson).....	121.87	\$2,989,157
Maramee route, inland to Jefferson City.....	149.03	3,752,854
Maramee combination route by Maramee and Gray's Gap.....	130.58	3,145,303

“The board of directors were divided in opinion as to which route, under all the circumstances, should be adopted. At the eastern end of the line, and more practically in St. Louis, there was very decided opposition to the selection of the route shown above as the Missouri River route, for this principal reason, that, as was urged, the river itself afforded sufficient facilities to the whole country through which it ran, and that the road should be so located as to open and develop a country not penetrated by any natural highway. Under these circumstances of opposition to the route shown by the engineer's report to be the shortest, as well as the least expensive, it was determined to locate the road as far as Franklin, thirty-seven miles. This point was selected for the reason that it was the extreme western point from which, after further deliberation and examination, it would be possible, without seriously increased cost, to continue the location either on the inland or the Missouri River route. To accomplish this object they were compelled to abandon the route described above by Crevecoeur Lake, which strikes the Missouri River eighteen miles and three-quarters from St. Louis, though that was the shortest and the most economical.

“Prior to the decision of this question, and while it was pending, considerable feeling arose in St. Louis, which was manifested in denunciations of the board of directors, coupled with charges that they were purposely delaying the location of the line, especially that portion of it nearest to St. Louis, for unworthy reasons, arising out of a desire to enrich themselves by speculations in lands, having, as was alleged, in their capacity of directors information respecting the route to be selected which the community generally could not procure. When, therefore, the report of the engineer was made, the road was immediately located (on the succeeding day, as appears by the records of the company), and an order made for the publication of the route selected.

“It should, perhaps, also be added that though, as has been explained above, the board of directors were influenced by popular prejudice in favor of the inland route (in which they probably to some extent participated) to locate the road upon that route so far as Franklin, there is no evidence whatever that in the actual location of the road upon the particular route adopted to that point any considerations had weight except the engineer's report and the questions of economical construction and use.”—*Report of Joint Railroad Committee of Missouri Legislature*, published Nov. 28, 1855.

the 19th of June, 1851, which, we are told, “excited very considerable interest, and called forth a large vote.” It resulted as follows:

For James H. Lucas, 3015 votes; Hudson E. Bridge, 2943; James E. Yeatman, 2915; Edward Walsh, 2914; Louis A. Labeaume, 2892; James Harrison, 2883; Luther M. Kennett, 2777; John C. Rust, 2728; Thomas Allen, 2294; Daniel D. Page, 2036; Joseph Charless, 1598; Joshua B. Brant, 1584; George Collier, 1470. This list completed the board. The next highest was Isaac L. Garrison, who received 1452 votes.

The first division of the road (thirty-nine miles) having been put under contract, the first spadeful of earth was removed, in the absence of the Governor, by the then mayor of the city, Hon. Luther M. Kennett, on the 4th of July, in the presence of a large and enthusiastic audience. This memorable event took place at a point on the south bank of Chouteau Pond, on Mr. Minckes' ground, west of Fifteenth Street.

The event was the occasion of a great popular demonstration, in which the entire city participated. The day was introduced with a national salute by the Missouri Artillery, under the command of Capt. Henry Almstedt. At an early hour the city in every portion was filled with the members of the civil and military societies who designed to join in the procession. Chief Marshal Grimsley had announced that the march to the ground would commence punctually at eight o'clock A.M., and accordingly as early as half-past seven the various associations, orders, companies, clubs, etc., began to pour into Fourth Street from all quarters. The city had seldom witnessed such an enlivening spectacle as that displayed previous to the forming of the procession. Flays were flying from the tops of engine buildings and public-houses, and streamed from the windows of newspaper offices, or floated over the street at many points; numerous detachments of military corps were dashing to their various places of rendezvous; squads of civil societies were coming to view from every corner, and the whole was enlivened by the inspiring sounds of music. Soon after seven o'clock an immense multitude thronged Fourth Street from Washington Avenue, where the head of the line rested, a distance of several blocks. The line formed on Fourth Street, and shortly before eight o'clock the chief marshal assembled his aids and assistants and instructed them in regard to the duties assigned them. The band of the St. Louis Grays was then ordered to its post, and the following officers also took the places previously agreed upon:

Thornton Grimsley, chief marshal; John S. Watson, II. W. Williams, aids; assistant marshals, Joseph P. Wilkinson, William J. Romyn, William Waddingham, Jr., Benjamin Bogy, Alfred Dryden, William Light, Charles Mehl, William H. Cozens, — McDowell, Thomas Horrell, John Kern, D. Preston, William T. Knapp, John C. Vogel, George L. Nuckolls, George Shuly, William S. Chapman, Frederick King.

The chief marshal then arranged the procession in the following order :

- Chief Marshal and his Aids.
- St. Louis Grays' Brass Band.
- Governor, his Aids, Heads of the Departments.
- President, Directors, and Company of the Pacific Railroad.
- Corps of Engineers.
- Orator of the Day and Invited Guests.
- Judiciary of the Eighth Circuit and Officers of the several Courts.
- Mayor and Board of Aldermen, Delegates, and Executive Officers of the City. Editorial Corps.
- St. Louis Grays, Capt. George Knapp.
- Missouri Dragoons, Capt. Brinkman.
- Missouri Artillery, Capt. Almstedt.
- St. Louis Yagers, Capt. Schaeffer.
- Union Swiss Guards, Capt. Frye.
- St. Louis Fire Department.
- Ancient Order of Free and Accepted Masons.
- Hibernian Benevolent Society.
- Catholic Total Abstinence and Benevolent Society.
- St. Vincent Orphan Society.
- German Roman Catholic Society.
- St. Louis Musial Club.
- Social Glee Club.
- St. Louis Gymnastic Society.
- German Benevolent Society.
- United Association of Free Men.
- Sons of Temperance.
- German Catholic Total Abstinence Society.
- United Ancient Order of Druids.
- United Patriotic Refugee Association.
- Citizens in Carriages.
- Citizens on Horseback.

Arrived at the grand stand, which had been erected at Chouteau's Pond for the speakers and invited guests, the band performed the "Grand Pacific Railroad March," which had been composed for the occasion by Mr. Balmer, after which Col. Thornton Grimsley, the grand marshal, announced the order of proceedings, and then introduced the president of the railroad company, Thomas Allen. Mr. Allen delivered an interesting address, in which he reviewed the history of the road up to that time, and in the course of it he said,—

"The charter of the Pacific Railroad was granted in 1849, and slept for a year, disregarded and almost unknown. It is about eighteen months since public attention was first called to it, and only about fifteen months since the company now acting was organized under it. During that period we have had a good deal of preliminary work to do, comparatively new country to explore, and the people to awaken to the consideration of a new subject. We have made over eight hundred miles of preliminary survey; we have located about seventy miles; we have obtained the promised support of every county

upon the line; we have secured the co-operation of the State, and a loan of the public credit; we have brought the subject to the notice of the government of the United States, and we have procured subscriptions which, though not yet so large as we desire, give us great encouragement.

"We have found our distance across the State to be about three hundred miles, and our grades easy, the maximum not exceeding forty-five feet to the mile, and that occurring only on a short distance. The cost is estimated below the average cost of railroads, at about twenty thousand dollars per mile, or about six millions for the whole completed.

The particular business of our proposed road has been estimated by the engineer, and the estimate is made in detail, and will be found upon examination to be a very moderate one. The general result, however, is that the passenger business will amount to

Passenger.....	\$457,900
Freight.....	470,200

Total, second year..... \$928,100

"This would be a gross profit of about fifteen per cent. on six millions. The cost of running may be forty to fifty per cent. of the gross earnings. But it should be borne in mind that this business will constantly increase.

"The business on the Missouri River in 1850 seems to afford some corroboration of this estimate, if we may compare the river with the railroad. The results obtained from manifests is probably below the truth, but gives,—

For freight.....	\$450,478
For passengers.....	368,000
	\$818,478"

Upon the conclusion of Mr. Allen's address, a prologue in verse, composed by A. S. Mitchell, secretary of the company, was recited by J. M. Field. Hon. Edward Bates, orator of the day, then delivered an elaborate address, in which he drew a graphic picture of the fertility and resources of the great Mississippi valley.

"Here we are," said Mr. Bates, "in the centre of the great valley, the natural centre of the largest body of rich, habitable land on the face of the earth,—a land large enough to maintain in comfort two hundred millions of people, every one of whom could bring the produce of his labor to this centre by natural navigation,—just below the confluence of three mighty rivers, Missouri, Mississippi, and Illinois, and just above the influx of the beautiful Ohio, whose fertile banks are already teeming with industry, enterprise, and wealth. Look at the map of the valley, its broad surface is divided into quarters by the figure of a cross,—a little irregular, to be sure, but still a cross. The Mississippi is the shaft, and the Ohio and Missouri are the limbs. And the shaft and both the limbs are bristling with tributaries, each one of which is large enough to be considered in Europe a mighty river, fit to be improved and cherished as the artery of a nation's commerce.

"Look again at the map, and note the distance and the commanding points. The driftwood that floats past our city plunges in the turbid waters of the Mississippi for twelve hundred miles before it is washed by the bright waves of the ocean. The water-line of commerce from Pittsburgh to St. Louis is twelve hundred miles. Your steamers go up the Missouri, without a snag pulled out or a sand-bar removed beyond our western border, two thousand five hundred miles. Ascending the Mississippi, they push their bows into the very foam of St. Anthony's Falls; and above those falls, I know not how many hundred miles of placid water invite the adventurous boatmen

to the far north. Go up the Illinois: you can find no stopping-place there, for the Father of Waters is wedded to the lakes. In Illinois and New York the duty imposed by the great gifts bestowed upon us is partly done, and now, by the aid of their canals, you can leave the ocean in a boat, and entering the Mississippi or the Hudson, circumnavigate the nation.

"We occupy the most important point on this great circuit. If there were not a cabin or a white man from the Ohio to the Missouri; if our forests were still in pristine solitude, and our prairies untracked, save by the hoof of the buffalo and the moccasin of the Indian savage, I should still believe—considering the extent and richness of the valley, the number, length, and direction of its rivers, and its capacity to produce, in boundless plenty, all that can minister to the comfort, wealth, and power of man—I should still confidently believe that the greatest city upon the continent must be established within that span's length upon the map.

* * * * *

"Consider the country through which the road is to pass. It abounds in all the means necessary for the support and comfort of a dense population. Its rich soil produces in abundance all the plants that belong to the climate, and its most barren hills serve but to contain its unmeasured stores of mineral treasures.

"But whither does it tend? When you have constructed the road to the frontier of Missouri, what power can stop it there? Beyond lie the extended plains of the Missouri and the Arkansas, New Mexico, Utah, California, Oregon, the Pacific, and the old Eastern World. My mind recoils from the magnitude of the contemplation, and I leave the incalculable results to mingle with the future glories of our country's name."

In the absence of the Governor of the State, Hon. Austin A. King, who was detained at home by illness, Hon. Luther M. Kennett was called upon by the president of the company, Mr. Allen, to perform the ceremony of raising the first sod in the commencement of the work of grading the road. On receiving the spade which Mr. Allen presented for that purpose, Mr. Kennett made a brief address, closing with the statement that he would proceed to use the spade "to make the *first cut* in the line of the Pacific Railway."

At the conclusion of Mr. Kennett's speech, the procession again formed, and while the band played the "Governor's March," the assemblage proceeded to the line of the road, near the shore of Chouteau's Pond. The mayor here shoveled a few spadefuls of earth into the pond, and was followed by the president, Mr. Allen, and several other members of the Pacific Railroad Company. Enthusiastic cheers greeted this proceeding, with which the ceremonies closed.

The first section of the First Division (from St. Louis to Franklin), the construction of which was thus inaugurated, extended from Seventh to Fourteenth Street, St. Louis, and included the filling in of Chouteau's Pond. The work of grading was fully commenced on the 2d of August, 1851. The contracts on the first divisions were let when labor was cheap,

and with little or no experience by contractors in doing work in Missouri, and labor increased in price from seventy-five cents to one dollar and twenty-five cents per day. A great deal of sickness prevailed upon the line most of the time. The cholera made its appearance nearly every year on almost every section. Provisions of all kinds rose to very high prices. Material was found more difficult of excavation than any one could have supposed. All these difficulties combined increased the cost much over original estimates. A large portion of the work when the cars commenced running to Franklin was in an unfinished condition, and required a great deal of labor with gravel trains; in widening embankments and taking down slopes in cuts. Most of the ballasting was done by the company, material being procured from the bluffs upon the Maramec River.

The second division extended from Franklin to Jefferson City.¹

As the work progressed it was soon discovered that more money would be needed, and on the 6th of September, 1851, an election was held to test the sense of the people of St. Louis County on the expediency of subscribing an additional one hundred thousand dollars to the stock of the company, which resulted in favor of the proposition. Strenuous efforts were also made to swell the resources of the company by procuring grants of land from the general government. In June, 1852, as heretofore stated, Congress passed an act approved June 10th, which granted the right of way to the State of Missouri and a portion of the public lands to aid in the construction of railroads. The provision of the act relating to the sale of these lands was as follows:

"That a quantity of land not exceeding one hundred and twenty sections on each road, and included within a continuous length of twenty miles of said road, may be sold; and when the Governor of said State shall certify to the Secretary of the Interior that said twenty miles of said road is completed, then an-

¹ Sections 16 and 17 were the heaviest on the First Division, covering very deep rock excavations and two tunnels, one about six hundred and the other about four hundred and fifty feet long. During the progress of this work the cholera appeared and drove, at several periods, the entire force from the sections. Great numbers died, and for a while it was impossible to induce men to go upon the work. Finally the contractors succeeded in procuring a large force, but there was a good deal of trouble between Sections 17 and 18, which finally resulted, in January, 1853, in a general riot in which two laborers of Section 17, John Flood and James Carroll, were killed and a number of others badly injured. In order to suppress these disturbances and restore order, the St. Louis Grays, Capt. Knapp, and the Missouri Artillery, Capt. Almsted, were dispatched to the scene and accomplished that object. After this outbreak a police force was stationed upon Section 18, which had become known as the "Bloody Eighteenth," to preserve order.

other like quantity of land hereby granted may be sold, and so from time to time until said road is completed; and if said road be not completed within ten years, no further sales shall be made, and the lands unsold shall revert to the United States."

The State of Missouri also extended liberal assistance to the road. The first legislation on the subject, as we have seen, was the act of March 12, 1849, which required the company to complete the road within ten years from the date of its commencement, and reserved to the State the right to purchase the road at the expiration of fifty years, two years' notice of the intention so to do having been given, its value to be ascertained by appraisers mutually chosen. The General Assembly afterwards passed an act, approved Feb. 22, 1851, granting to the Pacific Railroad Company a loan of the credit of the State to the amount of two millions of dollars, in special bonds of the State, bearing interest at the rate of six per centum per annum from the date of the respective issues thereof, payable twenty years thereafter, to be delivered to the company in sums of fifty thousand dollars, after satisfactory evidence that an equal sum, derived from the other moneys of the company, had been expended on the work prior to the original and each successive issue. The act provided further that as a condition precedent to the delivery of the first installment of bonds, a *bona fide* subscription to the capital stock of the company of one million and a half of dollars should be made; required the company to provide for the payment of the accruing interest and the principal of the bonds, and provided that the acceptance of the successive issues of bonds, filed in the office of the Secretary of State, should operate as a mortgage of the entire property of the company to the State, to secure the payment of principal and interest, to be foreclosed for the benefit of the State upon failure to make such payment, with the further condition that none of the bonds should be disposed of at less than their par value.

During the same session an act was passed entitled "An Act to amend the act entitled 'An Act to incorporate the Pacific Railroad,'" approved March 1, 1851, and accepted by the stockholders of the company, as required by the act, on the 2d of December, 1851, enlarging and defining the powers granted by the original act of incorporation, removing the conditions therein contained that the city of Jefferson should be made a point on the line of the road, and that it should intersect the western line of Van Buren County, and authorizing the company to select any route from St. Louis to the western line of the State deemed most advantageous. The act authorized the company to borrow money for the purpose of com-

pleting and operating the road (to any amount not exceeding the unsubscribed capital), and to issue bonds therefor, secured by mortgage on their property, subject, however, to the prior lien of the State.

On the 13th of December, 1852, the president and directors of the Pacific Railroad Company addressed a memorial to the General Assembly, setting forth their willingness—in view of the fact that that part of the grant of land made to the State by the act of Congress, approved June 10, 1852, and applicable to a railroad from St. Louis to the western boundary of the State, would, if the lands were selected with reference to the then proposed line of the road from St. Louis to the western boundary of the State, yield so small a quantity of land in view of the conditions coupled with the grant, as to be of comparatively little value to the railroad—to undertake the construction of a branch road, diverging from the trunk line of the Pacific Railroad, and terminating on the western boundary of the State, south of the Osage River, and seeking, if the views of the memorialists should be adopted, a further loan of the credit of the State in aid of the construction of the proposed branch road, and also, in view of the proposed diversion of the land grant from the main trunk of the Pacific Railroad, praying for an additional loan of the State credit to secure its completion. The memorialists further proposed to construct a branch of the Pacific Railroad southwardly to the Iron Mountain and Pilot Knob, if the aid of the State by a loan of her credit should be given. At the first session of the seventeenth General Assembly an act was passed entitled "An Act to accept a grant of land made to the State of Missouri by the Congress of the United States, approved June 10, A.D. 1852, to aid in the construction of certain railroads in this State, and to apply a portion thereof to the Pacific Railroad," approved Dec. 25, 1852, and accepted by the Pacific Railroad Company, as required in the act, on the 21st of January, 1853. This act vested the lands granted by act of Congress in the Pacific Railroad Company, to be by it selected, and located along the line of a road to be constructed by that company identical with the main line of the Pacific Railroad to the point of divergence, and diverging from the main trunk line of the road at a point east of the Osage River, and striking the western boundary of the State south of the Osage River, at any point selected by the company. This act granted a loan of the credit of the State in aid of the construction of the Southwest Branch Road to the amount of one million of dollars, on the condition that no part of the credit thus granted should be used until a *bona fide* subscription of five hundred thousand dollars to the

capital stock of the company, applicable to the construction of the Southwest Branch, should be made, and on terms and under limitations similar to those which had attended the former grants of the credit of the State. The act further provided that the main trunk of the Pacific Road should be located from St. Louis to Jefferson City; thence by the best inland route through Johnson County, terminating at any point designated by the company in Jackson County, conditioned that the counties west of Jefferson City should subscribe four hundred thousand dollars to the capital stock of the company, in addition to the amount already subscribed; in default of which the company should be at liberty to select for the road any location deemed expedient. An additional grant of the credit of the State to the amount of one million dollars, applicable to the construction of the main trunk of the Pacific Railroad, was made by this act, on the same terms and conditions as prescribed in the act of Feb. 22, 1851, with the requirement that the road should be completed to its terminus in Jackson County and in operation within five years from the date of the passage of the act. Power was granted to the company for the purpose of raising money from time to time, for the completion and construction of the Branch Road, to sell the land in the manner provided in the act of Congress of June 10, 1852, and to issue bonds bearing a rate of interest not greater than seven per cent. per annum, secured by mortgage of the lands, subject to the terms of the act of Congress, for the redemption of which bonds the faith of the State should in nowise be pledged.

In the winter of 1853 an act was passed entitled "An Act to authorize the formation of railroad associations, and to regulate the same, approved Feb. 24, 1853, which provided that the gauge of track or width between the rails of all railroads in this State should be five feet six inches," the gauge adopted and brought into use prior to that time by the Pacific Railroad Company.

An act was also passed at the same session amendatory of the original act of incorporation, approved Feb. 24, 1853, authorizing the Pacific Railroad Company to extend, construct, and operate the road to any point west of the boundary of the State, and to enter into contracts for that purpose.

At the first session of the Eighteenth General Assembly an act was passed entitled "An Act for the benefit of the Pacific and other railroad companies," approved Feb. 10, 1855. This act provided for the loan to the Pacific Railroad Company of the sum of two hundred thousand dollars. The act so amended former laws as to require the Governor to deliver to the several

railroad companies in the State who were entitled to a further issue of State bonds the whole amount within the limits of the grants to them respectively to which they were entitled by virtue of showing an equivalent amount of actual expenditure upon their roads, respectively, of funds derived from other sources, without regard to the limit of such disbursement, before fixed at fifty thousand dollars; and, further, by authorizing the several companies to sell the bonds issued to them at their market value, even though they should fall below par, and by authorizing the hypothecation of the bonds, if desired, to carry on the operations of the roads.

At the same session an act was passed entitled "An Act to aid the construction of the Pacific Railroad," approved March 3, 1855, granting a further loan of the State credit to the amount of three hundred thousand dollars, on the same terms and conditions which governed the loans formerly made, and providing for the appointment of a Board of Public Works to examine into the affairs of the company and its management. This act provided that unless accepted by the Pacific Railroad Company within six months after its passage it should be inoperative, and not having been accepted by the company it expired by its own limitation. A supplemental act passed at the same session was approved March 3, 1855, providing for the protection of innocent settlers on lands included in the land-grant to the Pacific Railroad Company.

On the 1st of June, 1853, a mortgage was executed by the company for ten million dollars, which included the lands granted by the General Assembly to the Pacific Railroad and the entire property of the company on the main and branch line, subject to the prior lien of the State. No bonds were sold under this mortgage, and it was subsequently canceled.

The estimates of cost furnished to the Legislature Dec. 1, 1852, were:

St. Louis to Kansas.....	\$7,853,043
Southwest Branch.....	8,157,000
Total, exclusive of interest.....	\$16,015,043

Estimates submitted Jan. 1, 1855:

Full expenditures required, with interest, etc., from St. Louis to Kansas, with roll- ing stock.....	\$10,300,000
Southwest Branch to State line.....	9,900,000
Total estimate, Jan. 1, 1855.....	\$20,000,000

The total of stock subscriptions and State bonds devoted to the purposes of the company up to November, 1855, amounted to \$6,734,400. Of this sum the individual subscriptions amounted to \$864,400, of which \$140,000 was applicable west of Jefferson

City. The subscriptions made by the city and county of St. Louis, payable in bonds, were:

City of St. Louis.....	\$500,000
County of St. Louis.....	500,000
County of St. Louis subscribed in cash, at one, two, three, and four years, \$1,200,000, but anticipated by the county's bonds to the amount of.....	875,000

The first railroad iron for the Pacific Road was received in St. Louis in April, 1852. There were in all 4267 bars, the aggregate cost of which was \$16,595.30. The government duty amounted to \$4978.50. The iron was imported from England. On Nov. 12, 1852, the first locomotive, the "Pacific," manufactured at Taunton, Mass., was placed upon the track at the machine-shop erected by the company, and run out to the Manchester road.

"Yesterday evening," said the *Republican* of Dec. 2, 1852, "we visited the depot station of the Pacific Railroad Company to see the first car started, and listen to the first whistle of the iron horse on this side of the Mississippi. We were disappointed in seeing the car start, but we had, in company with a number of persons, the pleasure of seeing the first car, the 'Pacific, No. 3,' placed on the track, and this morning at seven o'clock we expect to hear the first whistle. Owing to unavoidable circumstances, the car and tender could not be placed upon the track as early as was expected. It is there now, and the fact may be announced that the first car for the Pacific was placed on the track yesterday evening."

On the following day, as anticipated, the first trial was made. The locomotive, with the tender, had been backed down nearly to Fourteenth Street, and three heavily-laden cars of iron and ties were attached. Thomas Allen, president of the company, T. S. O'Sullivan, engineer, Mr. Copp, the secretary, and a number of other gentlemen were present. William R. Kingsley, the resident engineer, having charge of the construction of the First Division, had the track in complete working order. Everything being ready, and the word given, "All aboard," Charles Williams, the chief machinist of the company, took charge of the engine, and at seven o'clock the whistle sounded, and the train was in motion. To Mr. Williams belongs the credit of having run the first engine west of the Mississippi going towards the Pacific. The train was run successfully to the terminus of the track, a distance of several miles.

A few days later the road was completed to Sulphur Springs, or Cheltenham, five miles from St. Louis, and an experimental trip was made to that point on the 9th of December, 1852.¹

¹ "The president, Thomas Allen, in commemoration of the event, had invited the directors of the company, the members of the Legislature from St. Louis and other counties, then on their way to Jefferson City, and a few early friends of the enterprise to a collation at the Sulphur Springs, or Cheltenham. At one o'clock the train was off. There were two beautiful and

During this year (1852) Mr. Kirkwood, chief engineer, resigned, and was succeeded by Thomas S. O'Sullivan.

On the 6th of May, 1853, the directors decided that the road should be opened for travel to Kirkwood, fourteen miles from the city, and that for the accommodation of way business the train should stop at Rock Spring, two and a half miles from the city; "Cheltenham, about five miles; the River des Peres, a little beyond Sutton's; and Webster's College, which is two and a half miles this side of Kirkwood."

By resolution of the board "the fare for passengers from this time forth is not to exceed three cents per mile, with proper and liberal deduction for in and out passengers."

The First Division, thirty-nine miles, from St. Louis to Franklin, was opened on the 19th of July, 1853, and the event was signalized by an excursion to the then terminus of the road. At eleven o'clock on that day, twelve large passenger-cars, drawn by the locomotive "St. Louis," and carrying between six and seven hundred invited guests, including the St. Louis Grays, with Jackson's Band of the Sixth United States Infantry, started for Franklin Station, in Franklin County, which was then situated in a forest of large timber, with no other improvements than a large and handsome depot, extending several hundred feet. Here the train was greeted by several hundred persons from the surrounding country, including many ladies. In all there were fully fifteen hundred persons present.

commodious passenger-cars attached to the powerful locomotive. A few minutes brought the company to the mansion of Mr. Hawley, at the Sulphur Springs, and they sat down to a most bountiful repast.

"After discussing the viands the meeting was entertained by addresses from Mayor Kennett, the president of the railroad company, Mr. Allen, Dr. Shelby, the then Speaker of the House of Representatives of the State, the Hon. Edward Bates, James H. Lucas, Esq., Mr. Halliburton, member of the House of Representatives from Linn, Mr. Tarver, Mr. O'Sullivan, the then engineer of the road, who commenced the work in connection with Mr. Kirkwood, the first engineer, and who was most flatteringly toasted by the company. The health of Mr. Williams, who ran the first locomotive, was also received with cheers. Mr. Labeaume gave 'the Governor of the State and the aid he has given this and other internal improvement enterprises,' and expressed the hope that his successor would prove as favorable to their consummation. This sentiment was received with much enthusiasm. Mr. Loughborough and many other early friends of this road were toasted.

"The day was remarkably fine, and at the appointed time (railroad time) the company, with several hundred who had come out on the second train, returned to the city. Everything worked well, and for a new road, we say advisedly that there is not a better built road in the Union."—*Republican*, Dec. 10, 1852.

"Much of the latter part of the road," says a contemporary account, "had not been used before,—in fact, some of the rails had not been laid until that morning,—and still we arrived at Franklin before two P.M. The actual running time, as kept by some of the passengers, was one hour and fifty-one minutes, a fair speed for a new, partially unballasted and untried road."

A collation was served, after which Charles D. Drake proposed the health of the president of the company, Thomas Allen. In Mr. Allen's absence, Hon. L. M. Kennett responded in an address highly eulogistic of Mr. Allen's services in behalf of the enterprise. In the course of his address Mr. Kennett congratulated his hearers on the fact that the cars were of St. Louis manufacture, "drawn by a locomotive made in St. Louis, and by St. Louis mechanics, Messrs. Palm & Robertson, to whose enterprise and public spirit the company, and the citizens of St. Louis generally, are indebted for so important a movement towards our city's advancement to wealth and prosperity."

The actual cost of the division was set down by Mr. Kennett as being "a trifle over one million six hundred thousand dollars." At this time the two divisions of the main stem, towards Kansas, had been located, and were under construction as far as Jefferson City, eighty-eight miles from Franklin.

Addresses were also made by Hon. John How, mayor of St. Louis, Hon. Edward Bates, J. D. Stevenson, R. S. Elliott, William Palm (of the firm of Palm & Robertson, who built the first locomotive in St. Louis), A. S. Mitchell, P. B. Gareschè, William L. Williams, James Conran, Henry Cobb, Charles S. Rannals, and others.

The president, Mr. Allen, who had devoted his time and energies to the starting of the enterprise, the first year without pay, and during the last at a salary of fifteen hundred dollars per annum, willing still to make sacrifices for the cause, and desirous of attracting public attention at once to the necessities of the case and to propitiate all opposition, if any, on the score of long continuance in office, tendered his resignation, which was accepted at a meeting of the board of directors on April 30, 1854, which at the same time passed a unanimous indorsement of his entire action in the affairs of the company. After Mr. Allen's resignation had been accepted, Hudson E. Bridge was elected president of the company, and Henry L. Patterson vice-president. At an election held about this time the question of making a subscription on the part of St. Louis County to the amount of one million two hundred thousand dollars to the capital stock of the company was decided affirmatively by a

vote of three thousand four hundred and twenty yeas to one thousand three hundred and thirty-three nays.

The work of construction from Franklin westward was prosecuted with unremitting energy, and on the 1st of November, 1855, the road was opened to Jefferson City.¹ This event was the occasion of a catastrophe which resulted in great loss of life, and caused universal distress and mourning in St. Louis. It has ever since been known as the Gasconade Bridge disaster, and occupies a position of melancholy prominence in the history of the city.

The train, which consisted of fourteen passenger-cars, started from the Seventh Street Depot, St. Louis, on the morning of Thursday, November 1st, with the mayor and City Council of St. Louis, Company A of the St. Louis Grays, and the National Guard, with the band attached to the latter, and a number of invited guests, the whole party numbering between six and seven hundred persons. There had been heavy rains the night before, and the weather was still inclement, but the train proceeded in safety until the Gasconade River was reached, when the bridge across the stream gave way, and ten of the cars were precipitated a distance of twenty-five or thirty feet. The locomotive, from all appearances, had reached the edge of the first pier when the structure gave way, and in falling reversed its position, the front turning to the east and the wheels upward. On the locomotive at the time were the president, H. E. Bridge, T. S. O'Sullivan, the chief engineer of the road, and several employés. Mr. Bridge escaped, but Mr. O'Sullivan was killed. The road entered the bridge with a curve, and this circumstance, perhaps, prevented the disaster from being more fatal, as the cars thereby were diverted, and thus prevented from falling in a general *mêlée*. The baggage-car, next the engine, went down easily, without causing any serious casualty. The first and second passenger-cars followed, and in these several were killed, and a great number more or less mangled. In the third car one or two were killed only. This car, although in a dangerous position and almost entirely demolished, was less fatal to life and limb. In the fourth and fifth cars a great many were fatally injured and several instantly killed. The other cars of the train followed swiftly on their fatal errand, and the loss of life, with contusions more or less severe, was dreadful. Some of the cars plunged on those beneath them with their ponderous wheels, and crushed or maimed the unfor-

¹ On the 10th of February, 1855, the road was opened to Washington, fifty-five miles; and on the 6th of August, 1855, to Hermann, eighty-one miles.

tunate persons below. Others hung upon the cliff in a perpendicular position, and two or three turned bottom upward down the grade. Only one, the extreme rear car, maintained its position on the rail.

"When we take into consideration the fall of thirty feet in front to the bed of the river," says the *Republican*, in its account of the disaster, "and the high embankment on either side of the track, covered with stone,—the ponderous cars themselves capable of grinding each other into fragments,—the wonder is increased that so few were killed outright or fatally wounded. There is hardly a position in which a car could be precipitated from the track at the point named that gives a reasonable hope of escape, and yet although seven out of the ten of which the train was composed plunged headlong down the abutment, and then others rolled over the grade, containing five to six hundred passengers, we have only the report of twenty-five killed and mortally injured.

"As soon as the crash was over a moment of painful silence ensued, and then issued from the wreck the groans of the wounded, the supplications of the imprisoned, the screams of the agonized, while here and there might be observed the upturned face of the dead, mangled and clotted with blood, or the half-buried forms of others whose spirits had passed away forever. To add to the horror of the scene, a storm of lightning, thunder, and rain arose of the severest description."

Drs. McDowell and McPherson happened to be on the train, and rendered efficient aid to the wounded.

Couriers were dispatched forthwith to Hermann for another train, and in an hour or less the wounded were in comfortable cars on their way to the city.

The following is a list of the killed and injured :

Killed.—A. L. Chappell, Rev. A. Bullard, B. B. Dayton, Cyrus Melvin, Mann Butler, Thomas Grey, Rev. Mr. Teasdale, S. Best (fireman), Patrick Barry (wood-passer), T. J. Mott (representative of Dunklin County), Thomas S. O'Sullivan (chief engineer), E. C. Yosti (firm of Shields & Yosti), Capt. C. Case, E. C. Blackburn, J. A. Ross (firm of Ross & Gillum), — Athey (late assessor of St. Louis), Henry Chouteau (of the firm of Chouteau & Vallé), Capt. O'Flaherty, Joseph Harris (of St. Louis County), E. B. Jeffrees (representative of Franklin County), Adolph Abeles, George Eberle, William L. Lynch, R. M. Dubois, H. W. Huhn, Joseph A. Finnegan, Mr. McCulloch (of Dunklin); one body, left at the Gasconade; one body, identified at Hermann, name unknown.

All of the above not otherwise specified were residents of St. Louis.

Wounded.—Hon. Washington King, mayor of St. Louis, badly cut.

F. L. Billon, arm broken.

Carlos S. Greeley, slightly injured.

L. M. Kennett, slightly injured.

Judge Wells, United States District Court, slightly injured.

John M. Wimer, badly hurt.

Henry C. Hart.

George K. Budd.

Francis Lanc, leg broken.

James Mullery, slightly injured.

D. H. Armstrong, right arm broken.

Capt. Connelly, right leg injured.

Wilson Primm, bruised about the head.

John Schuetze, not seriously hurt.

Edward Colston, badly cut on head.

S. J. Levi, bruised about face.

L. A. Benoist, leg hurt.

Judge Thomas, of Bridgeton, face injured.

John J. Hoppe, face cut.

Wayman Crow, leg bruised.

Peter Ochman, badly bruised.

Mr. Dyson, firm of Taylor & Dyson, lower jaw broken, and otherwise badly injured.

John C. Ivory, much cut and bruised.

William Lindsey, shoulder out of joint.

John K. Field, firm of Beardslee & Field. Mr. Field went out the day after the accident, having heard that his brother was seriously injured at the Gasconade Bridge. He failed to get across Bœuff Creek before the bridge there was washed away. Afterwards he crossed the river, took a hand-car, and was at work on it when his coat was caught in the wheel and he was thrown out. The wheel passed over him, doing him very serious injury, principally about the face.

W. H. Tucker, the engineer on the locomotive, had his legs badly bruised.

William D'Ench, right arm broken.

Julius Bush, face cut badly.

John Neidenhofer, face bruised.

James McDermott, leg broken.

A number of others were more or less seriously hurt.

The masonry of this bridge was of the most substantial kind, and had stood every test applied to it without damage in any shape whatever. The wooden superstructure—trestle-work—was put up by Stone, Boomer & Co., men of great experience in bridge-building in the West.¹

¹ In view of the distressing nature of the calamity, the mayor of St. Louis, Hon. Washington King, determined to set apart a

It having become apparent that the cost of the proposed railroads in Missouri had been underestimated, the Legislature on the 10th of December, 1855, enacted that the State bonds might be issued to the railroad companies in the proportion of two dollars of loan advanced for one expended by the stockholders, and thus granted the further sum of two millions to the main trunk line of the Pacific Road. The act also created and established a Board of Public Works, consisting of three persons, not stockholders, to be (after the first appointed by the Governor) elected by the people for four years, the first election in 1856, and further required each railroad company to set aside and pay to the State treasurer every year, on State bonds thereafter to be issued, one and one quarter of one per cent. on each thirty-year bond, and two and one-half per cent. on each twenty-year bond sold or hypothecated. The treasurer of the State and the treasurer of each railroad company for the time being were made commissioners of the sinking fund thus created, and each company was required to pay to the State treasurer the semi-annual interest on the bonds issued to them thirty days before the coupons should fall due. The State treasurer was required to select one place in the city of New York for the payment of the interest on all the bonds issued by the State, and to give public notice thereof thirty days in advance.

James H. Lucas was elected president of the Pacific Railroad Company in March, 1856, but resigned about a month afterwards, when William M. McPherson was elected president in his place, and Edward Miller soon after was made chief engineer. Mr. McPherson continued to serve as president until March, 1858, when Hon. John M. Wimer was elected in his place.

By an act approved March 3, 1857, the State

agreed to guarantee the bonds of the Pacific Railroad Company, issued as authorized by the act of Dec. 10, 1855, upon a mortgage of lands on the Southwest Branch, in sums of \$100,000 each, to an amount not exceeding \$4,500,000, the first \$100,000 to be issued upon evidence of a like amount of expenditure on that branch by the company, derived from sources other than guaranteed bonds, but the subsequent amounts were to be issued as fast as each given sum was expended. The Governor was also authorized to make such guarantees in larger amounts than \$100,000 at a time if expedient, and place them for sale in the hands of an agent to be appointed by him, etc.

The company was required to complete the Southwest Branch in four years, pay the interest, and hold the State harmless from her guarantee, or forfeit the branch road, lands, and franchises. The same act further provided that whenever the Pacific Railroad Company had expended five hundred thousand dollars west of Jefferson City, the Governor of the State should issue to them \$1,000,000, part of the amount granted by the act of Dec. 10, 1855, but not issued; and also granted a further loan of \$300,000 of the same amount, to be based upon a showing of half that sum expended from stock subscriptions west of Jefferson City. The act also granted the same company a further loan of \$1,000,000, to be issued in sums of \$100,000, the applications for them to be based upon proof of additional expenditure of half the amount derived from other sources than State bonds, and not included in any previous statement, and showing also that the proceeds of all the bonds issued under the act of 1855 had been expended in the construction of the road, the statement of expenditure to be exclusive of interest, discount, and commissions.

This law also provided that the work should progress continuously west, so as to leave no part unfinished beyond the reach of the means of the company, and postponed the payments into the sinking fund required by the act of 1855 until Jan. 1, 1859, when said payments were to commence and be made as before required, and within two years from that time the companies were to make full payment of all sums thus postponed. The same act of March 3, 1857, required the State geologist to make a thorough survey along the lines of all railroads aided by the State, and to report in detail to the president and directors "all the mineral, agricultural, and other resources which may affect the value or income of the road under their direction."

In consequence of the panic in the money market, the State bonds of Missouri, like many others, touched

day of fasting and prayer. He accordingly issued the following proclamation:

"TO THE CITIZENS OF ST. LOUIS.—In view of the awful and inscrutable dispensation of Providence, by which so many valuable lives were lost on Thursday last, I have deemed it proper to recommend, and as the mayor of the city I do hereby recommend and set apart Monday next, the 5th inst., and ask that it be observed universally as a day of cessation from all labor, as a tribute of respect to those who are most deeply stricken by this terrible blow, and a day of heartfelt thankfulness and gratitude to God by and on account of all who are saved from death.

"I recommend that all business houses be closed, and that all secular pursuits go unobserved on that day. I also request that the churches of all denominations be opened for religious worship on that day.

"WASHINGTON KING, Mayor.

"MAYOR'S OFFICE, ST. LOUIS, Nov. 3, 1855."

a low point in the fall of 1857, and many of the holders felt much alarmed. The act of Nov. 19, 1857, suspended the further issue and guarantee of bonds until March 1, 1859, with some exceptions, and among them four hundred thousand dollars were permitted to be issued to the Pacific Railroad to finish to Round Hill, and two hundred thousand dollars to carry the Southwest Branch to Moseley's. But it was agreed that whenever State bonds could be sold for ninety cents on the dollar, the Governor might issue five hundred thousand dollars for the Southwest Branch, and receive in exchange the same amount of guaranteed bonds. It was further provided that there should be deposited with the State treasurer a like amount of seven per cent. railroad mortgage bonds as collateral security, and as the latter bore seven per cent. interest and the former six, the company was required to pay the difference (one per cent.) into the State interest fund on the bonds so exchanged.

The Pacific Railroad was also required to deliver up all guaranteed bonds, and a like amount of State bonds, running twenty years and bearing six per cent. interest, were ordered to be issued and delivered to them. It was a singular fact that while State bonds sold readily, mortgage bonds, guaranteed by the State, could not be sold.

The Board of Public Works was required to attend all the meetings of the boards of directors and watch their proceedings. Full and ample provision was also made by the Legislature to meet at all times the accruing interest on the State bonds of Missouri.

The main (or Kansas) line of the Pacific Railroad was completed to Sedalia, and its Southwest Branch, afterwards the St. Louis and San Francisco line, to Rolla in 1861. The four years of the civil war retarded the efforts of the company to push forward the work of construction, and the effect upon the road was disastrous in the extreme. For much of the time in the use of the government, which only allowed the actual cost of transportation, and seriously injured by destruction of its depots and bridges by armed bands, the work was still pushed forward under the greatest difficulties, and in May, 1863, was extended to Dresden, in July, 1864, to Warrensburg, and was being pushed to Kansas City, when the great raid of Gen. Price, in the fall of that year, destroyed everything destructible between Franklin and Kansas City, inflicting a damage which exceeded a million of dollars. Nearly one mile of bridging was destroyed, including the Gasconade, Moreau, and Osage, and depot buildings, machine-shops, water-tanks, and wood-sheds were totally destroyed at Franklin, Gray's Sum-

mit, South Point, Washington, Hermann, California, Syracuse, Otterville, and many lesser points. Large portions of the track were torn up, and the entire road was a wreck.

Under military protection the work of repair and extension was continued, and the road was opened to Holden in May, 1865, and to Kansas City in September of that year.

Since its completion to Kansas City other roads have been completed to that point, but the Pacific Road has held its own in the contest for the commerce of the West. Its present connections with roads west and southwest are of the most intimate character, and cars run to and from St. Louis, without break of bulk, to every railroad point in Kansas and Colorado.

During the year 1878-79 the construction of the Sedalia and Fort Scott Railroad shortened the line between St. Louis and Fort Scott more than one hundred miles, and arrangements were completed for the running of freight and passenger trains, without break, between St. Louis and Fort Scott. The connecting link between Fort Scott and the main line of the Missouri, Kansas and Texas Railroad was completed in 1871, after which time freight and passenger trains ran, without break, to Chetopa and points in the Indian country.

Connections have been made between Pleasant Hill and Lawrence, by which the route to Denver was straightened and shortened. Roads from Sedalia to Lexington, from Holden to Paola and Emporia, Kan., and from Tipton to Versailles and Warsaw, in Missouri, have also been constructed.

Among the most active and liberal of the early promoters of this great enterprise was Edward Walsh. Mr. Walsh was born in County Tipperary, Ireland, Dec. 27, 1798. The family consisted of eleven children, who were trained to habits of industry and economy, and when old enough to work established in some employment. After being kept at school until twelve years old, Edward entered the store of a cousin, and remained there four years. He then went into business with his brother, who kept a mill and brewing establishment, and remained there four years. A letter from his cousin in Louisville about this time induced him to emigrate to America, and on the 7th of June, 1818, he arrived in New York, reaching Louisville in due season. In October, 1818, he removed to St. Louis, and subsequently settled in Ste. Genevieve County, where he built a mill and conducted a profitable business until 1824, when he sold out and started another mill in Madison County. This, too, he soon disposed of, and acting on the idea which he had

Ed Wash

long entertained that St. Louis was the best field for his energies, he finally removed to the city and settled permanently, engaging with his brother in the general merchandising business, under the firm-name and style of J. & E. Walsh.

In 1831 he also engaged in milling again, and ultimately conducted operations on a large scale, having three mills in constant operation. One of the three is still standing, at the corner of Florida Street and the Levee. It was built in 1827, and has made more flour than any mill in St. Louis.

The milling business succeeded as merchandising had done, and Edward Walsh next engaged in steam-boating on a large scale. It is estimated that he had half a million dollars invested in the business, and at one time he was interested in twenty-one vessels that were plying on the Western waters.

During this period his firm enjoyed almost the entire monopoly of the Galena lead business. There was then no Chicago to dispute the supremacy of St. Louis in that region.

When railroads began to be agitated, Mr. Walsh was among their most earnest and energetic promoters, being one of the first subscribers and original directors of the Missouri Pacific Railroad Company. He was also a subscriber to the stock of the North Missouri Railroad and the Ohio and Mississippi Railroad Companies, and was one of the originators of the present street railway system.

Mr. Walsh assisted in numerous other public enterprises, and was one of the first directors of the old Bank of the State of Missouri, and a director in the old Missouri Insurance Company and Union Insurance Company. He was also one of the founders of the present Merchants' National Bank.

The successful management of such large and complex interests, down almost to the very day of his death, indicate a mind of uncommon strength, and Mr. Walsh's sound business judgment was recognized by all his contemporaries. The splendid success which he accomplished is his best monument. The young man who came to a new continent with neither friends nor patronage made his way by sheer force of character and industry to wealth and position, and when he died, on the 23d of March, 1866, he was mourned as one of the leading citizens of the State of his adoption.

Edward Walsh's brother, John Walsh, with whom he was so long associated in business, and who died many years before him, was likewise noted for his business talents and lofty integrity. He was also widely known for his benevolence and charity, which endeared him to a very large circle of friends, and

still keeps his memory green in the minds of the people of St. Louis. Edward Walsh was also of an eminently charitable and benevolent character, but many of his benefactions were private and were never known. He was particularly friendly and generous to immigrants, especially his own countrymen, many of whom, being destitute, he helped to become prosperous business men, and who not infrequently testified their gratitude to Mr. Walsh by the presentation of some elegant and costly token.

Although frequently tendered political honors and preferment, Mr. Walsh uniformly declined, having no aspirations in that direction. He was, however, a warm friend and admirer of the Hon. Thomas H. Benton, and wherever his (Benton's) interests were involved he labored actively and unselfishly for their promotion.

Edward Walsh was twice married,—first in 1822 to Miss Maria Tucker, and secondly, Feb. 11, 1840, to Miss Isabelle De Mun, daughter of Julius De Mun. She died May 26, 1877. Mr. Walsh left six children, viz.:

Ellen, who became the wife of Solon Humphreys, of New York, president of the Wabash, St. Louis and Pacific Railway.

Julius S. Walsh, of whom a sketch appears elsewhere in this work.

Marie C., who became the wife of B. M. Chambers, now a resident of St. Louis County.

J. A. Walsh, president of the Mississippi Glass Company.

Edward Walsh, Jr., president of the Pilot Knob Iron Company.

Daniel E. Walsh, ex-president of the People's, Tower Grove and Lafayette Railway Company.

In 1866 the Southwest Branch of the Missouri Pacific Railway was taken possession of by the State for non-payment of interest on the State subsidy, and sold with the lands in the same year to the Atlantic and Pacific Railroad Company, which company in 1872 leased the line of the old company. The two roads were operated under one management until Sept. 6, 1876, when the Pacific Road was sold, under process of foreclosure of the third mortgages, and conveyed by the purchasers to the present company, incorporated as the Missouri Pacific Railroad Company, Oct. 21, 1876, with a share capital of \$3,000,000. The amount of old indebtedness prior to the third mortgage, and assumed by the new company, was \$13,700,000.

By articles of association filed Aug. 11, 1880, the Missouri Pacific was consolidated (still retaining the same name) with the St. Louis and Lexington, the

Kansas City and Eastern, the Lexington and Southern, the St. Louis, Kansas and Arizona, the Missouri River, and the Leavenworth, Atchison and Northwestern Companies. The authorized share capital of the consolidated company was \$30,000,000; amount issued to carry out consolidation, \$12,419,800; the funded debt of the new company, including three of the present lines, was \$19,259,000. The Missouri, Kansas and Texas Railway was leased to the Missouri Pacific Railway Company on the 1st of December, 1880, the rental being the net earnings of the leased line, which for 1881 amounted to \$1,911,673.93. The Missouri Pacific Railway operates the Central Branch, Union Pacific Railroad, accounting to the Union Pacific, which owns it, for the net earnings.

During 1881 the Missouri Pacific Railway acquired the ownership of the railroad, branches, and property of the St. Louis, Iron Mountain and Southern Railroad Company by the exchange of three shares of its capital stock for four shares of that of the St. Louis, Iron Mountain and Southern Railroad. The International and Great Northern Railroad of Texas was absorbed by the Missouri, Kansas and Texas Railroad of Missouri by the exchange of one share of the stock of the former for two shares of the stock of the latter. According to the report for the year ending Dec. 31, 1881, the condition of the Missouri Pacific Railroad was as follows:

Rolling stock: Locomotive engines, 134; cars, passenger, 78, baggage, mail, and express, 28; cabooses, 81; freight (box, 2318; stock, 551; platform, 132; coal, 1138), 4139; total revenue cars, 4326; service cars, 24.

Operations for the year: Trains run (passenger, 1,109,793; freight, 2,940,078), 4,049,871 miles; total engine service, 4,220,241 miles; passengers carried, 1,017,507; carried one mile, 59,132,107; average fare, 2.48 cents; freight moved, 2,712,634; moved one mile, 368,817,609 tons; average rate, 1.30 cents.

The earnings (774 miles) were: From passengers, \$1,472,150.13; freight, \$4,806,913.67; mail and express, \$29,281.01; miscellaneous, \$2,067,612.99, total (\$11,164.03 per mile), \$8,640,957.80.

Expenditures: For maintenance of way, \$1,043,655.78; rolling stock, \$1,268,204.31; transportation, \$1,047,254.58; miscellaneous and taxes, \$269,040.17; total (\$4,687.54 per mile), \$3,628,154.84.

Net earnings, \$5,012,802.96; dividends (April, July, October, and Dec. 31, 1881, 1½ per cent. each), \$1,524,167.11.

The general balance sheet presented Dec. 31, 1881, showed,—

Construction and equipment.....	\$33,555,939.10
Real estate.....	73,766.99
Stocks and bonds.....	20,300,866.53
Material and fuel.....	1,091,763.44
Current accounts.....	6,463,138.66
Cash on hand.....	585,540.16
Total assets.....	\$62,071,014.88
Capital stock.....	\$29,955,375.00
Funded debt.....	20,664,000.00
Sundry accounts.....	6,941,926.77
Bills payable.....	451,956.64
Profit and loss.....	4,057,756.47
Total liabilities.....	\$62,071,014.88

The increase in share capital during the year (\$17,534,575) was due wholly to the issue made in the purchase of the St. Louis, Iron Mountain and Southern Railroad. The statement of the funded debt, Dec. 31, 1881, showed that there were \$48,195,000 of authorized bonds, and that the outstanding indebtedness amounted to \$20,664,000.

The Missouri Pacific now forms part of the great system of railroads controlled by Jay Gould and his associates. Its directors (elected March 7, 1882) are Jay Gould, Russell Sage, Sidney Dillon, W. F. Buckley, Thomas T. Eckert, George J. Forrest, George Gould, A. L. Hopkins, H. G. Marquand, Samuel Sloan, all of New York; F. L. Ames, South Easton, Mass.; S. H. H. Clark, Omaha, Neb.; R. S. Hayes, St. Louis. Jay Gould, president; R. S. Hayes, first vice-president; A. L. Hopkins, second vice-president; A. H. Cafef, secretary, New York; W. M. Arnold, assistant secretary; A. A. Talmage, general manager; A. W. Dickinson, superintendent; D. Brock, master of transportation; J. C. Brown, general solicitor; T. J. Portis, general attorney; D. S. H. Smith, local treasurer; C. G. Warner, general auditor; F. Chandler, general passenger and ticket agent; C. B. Kinnan, assistant general passenger agent; J. L. G. Charlton, assistant general ticket agent; S. Frink, general freight agent; G. W. Cole, assistant general freight agent; J. J. Rogers, assistant general freight agent; J. Hewitt, superintendent machinery; J. W. King, paymaster; R. B. Lyle, purchasing agent, all of St. Louis. M. Bullard, superintendent telegraph, Sedalia; A. G. Easton, car accountant, Sedalia; W. P. Andrews, general baggage agent, St. Louis; J. Hansen, general agent, St. Joseph; L. H. Nutting, general Eastern agent, New York.

Missouri Division: Warder Cumming, superintendent, Sedalia; A. M. Hager, assistant superintendent transportation, St. Louis; C. L. Dunham, superintendent, Atchison Section, Western Division, Kansas City.

Kansas and Texas Division: T. M. Eddy, superintendent, Sedalia, Mo.; T. G. Golden, assistant su-

perintendent transportation, Denison, Texas; C. V. Lewis, division freight agent, Parsons, Kan.

Central Branch Division.—W. W. Fagan, superintendent, Atchison, Kan.; M. L. Sargent, assistant general freight agent, Atchison, Kan.

The practical operation of this vast railway system, with all its ramifying lines and branches, is confided to the experienced and skillful hands of the general manager, Mr. Talmage. Archibald Alexander Talmage was born in Warren County, N. J., April 25, 1834. His father (an Englishman by descent) was pastor of a Presbyterian congregation, and was assisted in his responsible duties by a noble wife, in whose veins flowed some of the purest blood of Scotland. Born under these favorable auspices, young Talmage enjoyed every opportunity for acquiring a sound rudimentary education, and improved his advantages so well that at the comparatively early age of fifteen he had passed through the curriculum of the High School and the academy with more than usual credit. Desiring to be independent, he then left home and spent three years in a country store at Goshen, N. Y., where he became somewhat familiar with the routine of general business and obtained his first glimpse of active commercial life. The lessons learned in this capacity no doubt proved invaluable in moulding the future character of the man and in giving him habits of method and organization, which qualified him in an eminent degree for performing the duties of freight clerk in the freight department of the New York and Erie Railway, on which he entered when eighteen years of age, and where he remained one year, displaying during that brief period a precocious talent and an adaptability for railroad work which were highly satisfactory to his superiors. He next spent some months in a wholesale hardware establishment in New York City, but the business hardly suited him, and in 1853 he removed to Chicago and obtained employment with the Michigan Southern Railroad as freight clerk. Within sixty days, however, he was transferred to Monroe, Mich., and soon after to Toledo, Ohio, where he remained until August, 1858, during the last two years in the responsible position of train-master, directing all trains on the Toledo Division of the road, and having charge of all employés at that point.

In his twenty-fifth year he removed to St. Louis and engaged as passenger conductor on the Terre Haute and Alton Railroad, displaying the same force of character, the same energy, and the same ready tact which characterize his present management, and his superior abilities in the transportation department being generally conceded by all with whom

he was brought in contact. In April, 1864, he was appointed assistant superintendent of the road between East St. Louis and Terre Haute, and infused into the management new energy and method; but in consequence of a want of harmony between himself and his chief, he resigned in October, 1864, and accepted a position as master of transportation of the military roads controlled by the United States government east and south of Chattanooga. Within thirty days he was appointed superintendent of the same lines, and remained in absolute charge of them until at the close of the war the government turned them over to the civil authorities. He was then appointed general superintendent of the East Tennessee and Georgia Railroad, and remained busily engaged in its reorganization and reconstruction until the fall of 1868, when he was invited by Mr. Herkimer, general superintendent of the Indianapolis and St. Louis Railway Company (which had leased the Terre Haute and Alton Railroad) to resume the assistant superintendency, which he had resigned in October, 1864. Here he displayed such marked ability that in October, 1870, he was appointed Mr. Herkimer's successor, the late Col. Thomas A. Scott asserting that "A. A. Talmage was the best railroad manager in the West." In this position his abilities became more widely known and recognized, and hence it was not surprising that in March, 1871, he was requested to transfer his sphere of operations to the west side of the Mississippi River and to become general superintendent of what was then known as the Atlantic and Pacific Railroad, running from Pacific to Vinita. In December of the same year the general superintendence of the Missouri Pacific was intrusted to him, and for a period of over eleven years, with the exception of a few months in 1876, he has remained in active charge of what may be truly considered the most valuable railroad property west of the Mississippi River. In this position he enjoys the implicit confidence of those who are recognized as being among the shrewdest and most far-seeing railway managers in the United States. His retention in so responsible a position as that of general transportation manager of the Missouri Pacific Railway and its comprehensive system, covering about six thousand miles of railway, for so long a period, is the best possible evidence of his success. He certainly occupies a foremost place among those truly great and public-spirited men who have been instrumental in building up that unrivaled transportation system west of the Mississippi River. There can be no question as to the indomitable energy, versatility, and executive ability of one who,

in the prime of physical and mental strength, has raised himself to a standard of influence incomparably superior to that which is occupied by any operating executive officer in the Western States.

In 1868, Mr. Talmage was married to Miss Mary R. Clark, the accomplished daughter of the Rev. James Clark, D.D., of Philadelphia, Pa. The Rev. T. De Witt Talmage, D.D., the brilliant pulpit orator of Brooklyn, N. Y., is his cousin.

The great Pacific Railroad across the continent was completed May 10, 1869, and railroad communication was opened between the Atlantic and Pacific coasts two days later, May 12, 1869. At a meeting of the Missouri Historical Society, held on the 4th of June, 1869, the following, on motion of Gen. Ranney, was adopted for the purpose of being placed on record:

"One of the great Pacific Railroads over the continent from east to west was finished May 10, 1869.

"One of our merchants, James H. Gibson, made over it the first importation of tea from China to St. Louis, which was only thirty-seven days in transit."

The Missouri Pacific or Southwestern system, as it is called, operated under one management, or rather one interest, consists of the Missouri Pacific, the Iron Mountain, the Texas Division of the Missouri Pacific (formerly the Missouri, Kansas and Texas), the Texas and Pacific, and the International and Great Northern Railroads, covering five thousand nine hundred and forty-four miles of railway directly in the interests of St. Louis. The region drained by this system covers the whole country from the Mexican frontier to the Mississippi, from Omaha to the gulf. New lines are being built in many parts of the Southwest. One of the principal roads in this system now under construction is the Fort Worth and Denver Road, which is now finished to a point called Henrietta, one hundred miles northwest of Fort Worth. It stretches across the country towards Pueblo, in Colorado, whence the trains will run into Denver over the Rio Grande Railroad for the present. This line will be nearly six hundred miles in length, and will be pushed rapidly to completion.

The southern point of this system is Laredo, on the Rio Grande, reached by the International and Great Northern Railroad, where connection is made with the Mexican Railroad (narrow-gauge), now in course of construction towards the city of Mexico. The latter is being built from both ends,—Laredo and the city of Mexico. In time the International Road will itself have a standard gauge connection through to the city of Mexico, though the work as projected is at a standstill on account of certain compli-

cations that have arisen within the past few months in Texas. The Mexican National Road has many branches in the republic of Mexico, and before two years shall have elapsed the system will embrace something like eighteen hundred miles, giving St. Louis direct communication with all the principal cities of that country and the mining regions. St. Louis will not only have opened to her merchants and manufacturers a valuable trade, but, owing to her splendid railway connections, will have advantages which, if properly taken hold of, will secure the bulk of the business to be derived from Mexico.

To the westward the Texas and Pacific meets the Southern Pacific at Sierra Blanca, a point a short distance east of El Paso, and in connection with the Iron Mountain these roads form a through route to San Francisco and points on the Pacific coast. To the southeastward from Marshall the Texas Pacific is completed to New Orleans, the extension being known as the New Orleans Pacific, and thus does the Southwestern system have its own through line to New Orleans. Before many months St. Louis will have direct rail connection with New Orleans on the west bank of the Mississippi River. This line will soon be almost a bee-line between the two cities by the completion of the line of the Iron Mountain Road, now being pushed as rapidly as possible through Eastern Arkansas from a point known as Knoble, on the Iron Mountain Road, in Arkansas, to Alexandria, La., on the Texas Pacific, and now finished to Forest City. This system, while tending to draw trade to St. Louis, of course brings St. Louis into competition with the cities of New Orleans and Galveston, and the course of trade will depend upon the inducements offered by the different cities for it.

This Southwestern system, as previously indicated, is a part of the Gould system, which embraces in addition to the roads named the Wabash, St. Louis and Pacific Railroad system, both east and west of the river. This powerful combination is considered as advantageous to St. Louis, and the policy heretofore pursued has been in the interests of the city. It is understood that the interests of the two are identical in many respects, and that the true interests of this vast system will be to make St. Louis its grand centre. As far as can be known, this has been the policy of the management up to this time, and St. Louis is recognized as the headquarters of this vast interest, all the general offices being located here.

The Missouri Pacific on May 1, 1882, extended its line northward on the west bank of the Missouri River from Atchison, Kan., to Omaha, Neb., making direct connection through Kansas City between Omaha and

St. Louis. Various other extensions of its branches have been and are being made.

The mileage of the Missouri Pacific at this writing (Jan. 1, 1883) is as follows:

	Miles.
Main line, St. Louis <i>via</i> Kansas City, to Omaha.....	496
St. Joseph Extension.....	21
Carondelet Branch.....	11
Lebanon Branch.....	40
Glencoe Branch.....	4
Boonville Branch.....	44
Lexington Branch.....	55
Lexington and Southern Division.....	132
Kansas and Arizona Division.....	135
Kansas City and Eastern Division.....	32
Warsaw Section.....	42
Kansas and Texas Division, main line, Hannibal, Mo., to Denison, Texas.....	575
Neosho Section.....	157
Mineola Section.....	103
Fort Worth and Waco Sections.....	230
Dallas Extension.....	38
Jefferson Branch.....	155
Central Branch Division, main line, Atchinson to Lenora, Kan.....	293
Washington Branch.....	7
Republican Branch.....	31
Jewell Branch.....	43
South Solomon Section.....	24
Total Missouri Pacific proper, with Missouri, Kan- sas and Texas Division.....	2718

The Iron Mountain Road is the next most important factor in this system. The main line runs from St. Louis to Texarkana, on the border, between Arkansas and Texas, while from Bismarck a branch leads to Belmont, on the Mississippi, opposite Columbus, Ky., at which point connection is made with the system of roads east of the Mississippi River.

The Iron Mountain and Helena is forty-three miles in length, and was but recently acquired. It will be a most valuable feeder. It extends from Helena to Forest City.

The Galveston, Henderson and Houston Road, fifty miles in length, and running between the cities of Galveston and Houston, was recently purchased by the Gould system, and henceforth will be operated as a part of the International and Great Northern Railroad.

The Atlantic and Pacific Railroad, originally the Southwest Branch of the Missouri Pacific Railroad, was endowed December, 1852, by the State, with one million two hundred thousand acres of land, and with an appropriation of one million dollars of State bonds. In the spring of 1853 the president of the Missouri Pacific, who was then in New York, entered into a contract with Diven, Stancliff & Co. for the construction of the whole Southwest Branch. In December, 1855, the Legislature passed an act transferring to the main line the one million dollars before authorized for the Southwest Branch. The company was also authorized to mortgage a million acres of their lands and those

of the Southwest Branch, and issue their own bonds thereon to the extent of ten million dollars, to aid them to construct that branch, the State agreeing to guarantee three million dollars of the company's bonds, the proceeds to be expended on the first one hundred and fourteen miles of the Southwest Branch, reaching from Franklin to a point beyond the Gasconade River; but the company was required to expend fifty thousand dollars, to be derived from other sources, for every one hundred thousand dollars of bonds to be guaranteed. This act required the First Division of the branch to be completed within three years from its date, under penalty of forfeiture of the road to the State, with its lands and franchises, by operation of law, subject only to the mortgage above mentioned. The law also extended the privileges of actual settlers on railroad lands, by granting them rights of pre-emption at two dollars and fifty cents per acre to the extent of fifteen miles from the road.

From 1854 to 1861 the State contributed two million dollars more to its construction. As the condition of its several contributions to the funds of the Southwest Branch, amounting to five million dollars, the State of Missouri had stipulated for the forfeiture to it of the road, its lands, franchises, etc., in case of failure on the part of the company to pay the interest on the bonds issued by the State.

Such failure having been made, on Feb. 19, 1866, the Governor took possession of the road as State property, and by act of the Legislature its name was changed to the "Southwest Pacific Railroad," and the property was offered for sale. It was bought by Gen. J. C. Fremont at one million three hundred thousand dollars, payable one-fourth cash, the balance in four annual installments, and under the obligation to expend five hundred thousand dollars in its extension the first year. Fremont and his associates failed to comply with this agreement. He, however, succeeded in completing the road to the Gasconade River, at Arlington, or thirteen miles, but encumbered the property with debts to a large amount. He took possession June 14, 1866, and was dispossessed by the Governor, under the terms of the sale, June 21, 1867.

While Fremont and his associates, one of whom was Levi Parsons, were in possession of the property, they procured from Congress the charter of the Atlantic and Pacific Railroad Company. This charter contemplated one hundred million dollars of capital, granted forty sections, or twenty-five thousand six hundred acres, of land per mile in the Territories, and twenty sections, or twelve thousand eight hundred acres, per mile in the State through which its line

might pass; provided for a railroad from Springfield, Mo. (thus tapping the charter of the Missouri Company), to the Pacific Ocean, with a branch in the Indian Territory from Van Buren, Ark., to an intersection with the main line on the Canadian River; and further provided for the consolidation of the company to be formed under this charter with any other (to wit, the Missouri Company) which might have been chartered over the same route or any part thereof. This charter was passed July 27, 1866.

Before the proprietors of this great enterprise had time to realize from the speculation, their power in the premises was broken to a degree by the loss of their control over the Missouri portion of the road, once more the property of the State. Andrew Peirce, Jr., F. B. Hayes, and their associates, having been losers as holders of bonds issued under the Fremont *régime*, which were apparently rendered worthless by the forfeiture of the property to the State, associated themselves together under a new act of the Missouri Legislature, organizing the South Pacific Railroad Company, and to this new company the State made almost a clean donation of all the road already completed, unsold lands, etc., on certain stringent conditions, to wit:

1st. The company was required to spend \$500,000 the first year to complete the road to Lebanon in two years, to Springfield in three years and six months, and to the State line by the 10th of June, 1872.

2d. They were to deposit \$1,500,000 in cash in the State treasury, which they were to be allowed to withdraw only in sums of \$100,000, as the same might be expended in extending the road.

3d. They were required to give a bond in the sum of \$1,000,000 for the faithful performance of the contract, and for the payment of \$300,000 to the State in three annual installments.

These conditions having been complied with, and an excess of \$200,000 over the sum required having been deposited with the treasurer, the South Pacific Company took possession June 30, 1868, and completed the road to the several points mentioned in from twelve to eighteen months less time than was required by their contract with the State.

The "Atlantic and Pacific," chartered, as above mentioned, July 27, 1866, was duly organized in October, 1866, and Gen. Fremont chosen president on June 11, 1868. The property having meanwhile been encumbered by the indorsement of some \$3,000,000 bonds issued by the Southwest Pacific, the control of the company passed into the hands of the same parties who owned and controlled the South Pacific Railroad Company, and on Oct. 21, 1870, the said South

Pacific Company sold and conveyed its entire property to the Atlantic and Pacific. Thus the entire property and franchises of all these companies became merged in one under the liberal Federal charter granted to the Atlantic and Pacific, who thus owned not only what the stockholders had bought and paid for, but what has cost the State of Missouri and county of St. Louis over \$6,000,000 in securities to its predecessors.

The **St. Louis and San Francisco Railway Company** is the successor of the Southwest Branch of the Missouri Pacific, which, as we have seen, was sold in 1868 to purchasers who were incorporated as the South Pacific Railroad Company. The latter corporation completed the road to Lebanon, seventy-one miles, in 1869; to Springfield, fifty-six miles, in May; and to Peirce City, fifty miles, in October, 1870. At this date the Atlantic and Pacific Railroad Company purchased the road and completed it to Vinita, three hundred and sixty-four miles from St. Louis, where connection was made with the Missouri, Kansas and Texas Railroad. On the 1st of July, 1872, the Atlantic and Pacific Railroad Company leased the Pacific and Missouri, to which its line once belonged, and operated that road until November, 1875, when the Atlantic and Pacific was placed in the hands of a receiver. On the 8th of September, 1876, the road and lands of the company were sold under foreclosure of mortgages to the St. Louis and San Francisco Railway Company, and the corporation was reorganized under the latter name.

Few Western roads have made the rapid progress that the St. Louis and San Francisco has. Up to the time of its extension to Springfield, in the southwestern corner of Missouri, its business was comparatively small. No sooner had the country of the Ozarks been reached than the road began to rise in importance, and to-day it is regarded as one of the most valuable roads of the St. Louis system. Several years ago the branches to Carthage and other parts of Southwest Missouri were built; then the extensions were carried into Kansas. On June 8, 1881, the first passenger train that ever steamed its way through Benton and Washington Counties, Ark., went into Fayetteville, and opened up a most fertile portion of that growing State to St. Louis.

During last year the line was completed to Van Buren and Fort Smith, beyond the Boston Mountains into the Arkansas valley, where the finest of cotton is grown, as well as all kinds of grain and fruit, and coal of the best varieties abounds in inexhaustible quantities. The right of way has been secured through the Choctaw nation, and the survey made for the further extension of the road to Paris,

Texas, where it will some day form connections with the Houston and Texas Central and the Gulf, Colorado and Sante Fé Roads, two of the leading lines of that State, which will reach Paris by the time the St. Louis and San Francisco is finished to that point. The completion of the latter will give three competing lines to Texas, all under separate and distinct managements.

During last year the road was extended to Tulsa, in the Indian Territory, and is being rapidly pushed on to Albuquerque to meet the Atlantic and Pacific, which is jointly owned by the St. Louis and San Francisco and the Atchison, Topeka and Santa Fé Railway Companies. West of Albuquerque the road is in operation to Cañon Diablo, three hundred and twelve miles, and the grading is being rapidly done from the latter point to the Colorado River. The Southern Pacific, working eastward, has a large force grading from Mohave, and expects to have the line completed to the Colorado River by the time the Atlantic and Pacific reaches that point.

The mileage of the St. Louis and San Francisco at this time (Jan. 1, 1883) is in detail as follows :

St. Louis, Mo., to Halstead, Kan.....	533
Pierce City, Mo., to Tulsa, Indian Territory..	138
Plymouth, Mo., to Fort Smith, Ark.....	134
Joplin, Mo., to Girard, Kan.....	39
Springfield, Mo., to Sparta, Mo.....	27
Oronogo, Mo., to Galena, Kan.....	20
Total	891

On the 14th of March, 1882, the following persons were elected directors of the road: Leland Stanford, San Francisco, Cal.; Edward F. Winslow, Jay Gould, A. S. Hatch, C. P. Huntington, W. L. Frost, James D. Fish, and William F. Buckley, New York; Albert W. Nickerson, Boston, Mass.; Charles W. Rogers, R. S. Hayes, St. Louis. The executive officers of the company are Edward F. Winslow, president, New York; C. W. Rogers, first vice-president and general manager, St. Louis; James D. Fish, second vice-president, New York; T. W. Lillie, secretary and treasurer, New York; A. Douglas, auditor, St. Louis; John O'Day, general attorney, St. Louis; W. A. Thomas, Springfield, Mo., and J. R. Wentworth, Neodesha, Kan., division superintendents; D. Wishart, general passenger agent, St. Louis; T. E. Cassidy, general freight agent, St. Louis; W. H. Coffin, land commissioner, St. Louis; D. H. Nichols, master of transportation, Springfield, Mo.; James Dun, chief engineer, Springfield, Mo. The principal office of the company is located in St. Louis.

The St. Louis, Salem and Little Rock Railway, which reaches St. Louis by the St. Louis and San Francisco Railway, extends from Cuba to Salem, Mo.,

a distance of forty-one and five-tenths miles, with a number of small branches. The company was chartered Jan. 17, 1871, and the road was opened Oct. 15, 1873. The president of the company is A. L. Crawford, of New Castle, Pa.; Vice-President and Purchasing Agent, H. A. Crawford, St. Louis; Treasurer and Secretary, William Brewster, Erie, Pa.; Assistant Secretary and Treasurer, E. L. Foote, St. Louis.

Of the enterprising band of St. Louis capitalists who secured the completion of the Missouri Pacific and its Southwest Branch none was more ardent, self-sacrificing, or energetic than Daniel Randall Garrison. Mr. Garrison was born near Garrison's Landing, Orange Co., N. Y., Nov. 23, 1815. His father, Capt. Oliver Garrison, owned and commanded the first line of packets that ran between New York and West Point, early in the present century before steamboats were known. Capt. Garrison was of old New England Puritan stock, and his wife was of a Holland family that settled in New York at an early day. Her connections embraced such historic names as the Schuylers, Buskirks, and Coverts.

Young Garrison's youth passed without special incident until his removal with his father to Buffalo in 1829, where he obtained employment with Bealls, Wilkinson & Co., engine-builders, with whom he remained until 1833, when he went to Pittsburgh and was engaged in one of the largest machine-shops in that city. In 1835 he removed to St. Louis.

While he was in Buffalo, Daniel Webster visited the place, and young Garrison was one of three young men who presented the great "expounder of the Constitution" with an elegant card-table, as a testimonial of their indorsement of his tariff views. The table was a mosaic, composed of nearly every description of American wood, and was accepted by Mr. Webster with flattering acknowledgments. The admiration which Mr. Garrison thus early formed for the great statesman has continued undiminished ever since.

Upon arriving in St. Louis, Mr. Garrison secured employment at the head of the drafting department in the foundry and engine-works of Kingsland, Lightner & Co., and although less than twenty-one years of age, was soon distinguished as one of the ablest and most trustworthy mechanics in the city. This engagement continued until 1840, when, in connection with his brother, Oliver Garrison, he started in business as a manufacturer of steam-engines. Manufacturing establishments in the West were comparatively few at that time, and nearly all manufactured articles were brought from the East; but coal and iron existed in abundance in Missouri, and the Garrisons

reasoned that St. Louis presented many unsurpassed advantages as a manufacturing point. Their start was moderate, but as business prospered the capacity of their works was increased until nearly every kind of steam machinery in use was made by them. Their success had a stimulating effect on other enterprises of the kind, and gave a great impetus generally to the manufacturing interests of the city. During these years Mr. Garrison worked incessantly; all the drafting of the establishment was done by him, and every piece of work turned out passed under his personal inspection at every stage of its manufacture.

In 1848 the discovery of gold in California agitated the whole country, and a tidal wave of immigration swept westward. Believing that as the Pacific slope was settled a large market would be created for steamboat and mill machinery, the Garrisons immediately began to manufacture for that region, and Daniel was sent to California early in 1849, to supervise the introduction of their products. He went *via* the Isthmus; and upon his arrival at Panama found the discoveries of gold fully confirmed, and wrote to his brother Oliver at St. Louis to send on three engines immediately. These reached him in California in the fall of the year (1849), were quickly sold at a handsome profit, and were the forerunners of other extensive and profitable shipments of the kind.

One of the engines were sold to the Hudson's Bay Company, and Mr. Garrison went to Oregon to deliver it. Here was displayed a signal illustration of his fertility of resource in unforeseen emergencies. On the voyage the main couplings of the engine had been lost overboard, and it was necessary that Garrison should supply them; but since to order them from St. Louis would, in those days of slow-going sail-vessels by way of Cape Horn, have involved a protracted delay in the ordinary course of affairs, Garrison undertook to make the couplings himself. The nearest known iron ore was on the upper Willamette, a hundred miles or so distant, and the only way to get it down to him was by means of Indians and mules. This was done, however, and when the ore arrived Garrison had a blast furnace ready and made his iron and poured his casting. This is believed to have been the first iron manufactured on the Pacific coast. He also built the boat for his engine,—one hundred and eighty feet keel, twenty feet beam, and six feet hold,—also no doubt the first steamboat ever constructed on the waters of the Pacific.

Mr. Garrison returned to St. Louis in 1850, and soon after the brothers retired from the foundry, each having made an ample fortune. Daniel R. Garrison

then settled down upon his beautiful farm in West St. Louis, embracing a large tract in what is now the fashionable "Stoddard's Addition." This tract was covered with woods when Mr. Garrison established himself there, and through its shady recesses he and his neighbors had often hunted deer and other game. It is now traversed by handsome avenues, and is dotted with charming residences.

After a brief period spent in the enjoyments of country life, Mr. Garrison, at the earnest solicitation of his friends and many prominent citizens of St. Louis, undertook the task of completing the Ohio and Mississippi Railroad,—an enterprise partly finished, but just then in what seemed a most helpless and hopeless condition. The directory of the company embraced such strong men as George K. McGunagle, Judge Breeze, of Illinois; Col. Christy, Col. John O'Fallon, W. H. Belcher, H. D. Bacon, and Mr. Garrison himself. The others all turned instinctively to Mr. Garrison as the one man to lift the project out of the "slough of despond." First stipulating that he should have absolute power in the premises, he accepted the trust, and ultimately succeeded in finishing the work, but not without almost herculean labors in the face of obstacles that only those intimately acquainted with the circumstances can have any idea of. To Daniel R. Garrison, therefore, unquestionably belongs the honor of having completed the first railroad that connected St. Louis with the East. The completion of the road was a marked event in the history of St. Louis, and the merchants of the city gave Mr. Garrison a magnificent service of solid silver, as a testimonial of their appreciation of his invaluable labors.

Mr. Garrison continued to manage the Ohio and Mississippi until 1858, and then left it in fine condition. Meanwhile he had become interested in the Missouri Pacific Railroad Company. When the war broke out this road was finished from St. Louis to Sedalia, where it stopped, owing to lack of money to carry it forward. The enterprise was involved in the greatest embarrassments, and Mr. Garrison was appealed to to extricate it. He refused the presidency of the road, but was made vice-president and general manager, and, armed with full powers, succeeded in completing the road to Kansas City in the face of obstructions that seemed insurmountable. The war was in active progress at the time, and in Missouri hostile armies were continually fighting for the possession of the splendid domain through which the Missouri Pacific was to run. While the road was being built, therefore, he was placed between two hostile armies, and more than once he periled his life to push forward his great undertaking. As he was an uncompromis-

D. P. Garrison

LIBRARY
OF THE
UNIVERSITY OF ILLINOIS

ing Union man, he repeatedly received warnings that his life was in danger, but these threats did not affect his composure in the slightest degree; he kept on, and before the war was over cars were running into Kansas.

In 1869 it was desired to reduce the gauge of the road from five and a half feet to the standard gauge, and in July of that year Mr. Garrison superintended the execution of the work. So complete were his arrangements that this great feat was accomplished in sixteen hours, without the slightest interruption to travel, over the whole distance from St. Louis to Kansas City.

Mr. Garrison remained as vice-president and general manager of the Missouri Pacific Railroad and its connections until 1870, when he retired. In 1874, however, he was elected vice-president and general manager of both the Missouri Pacific and the Atlantic and Pacific, and so remained until the sale of those great properties.

As a railroad man, Mr. Garrison had cultivated an enlarged view of the future of the Mississippi valley, and naturally regarding iron as the base of its prosperity, he interested himself upon his first retirement from the management of the Missouri Pacific in the organization of the Vulcan Iron-Works in South St. Louis, employing nearly one thousand men, and the first mill of the kind established west of the Mississippi. Very soon thereafter he and his friends built the Jupiter Iron-Works, one of the largest furnaces in the world, and still later he brought about a consolidation of the two interests under the title of the Vulcan Iron and Bessemer Steel-Works, which were owned principally by himself and his brother. For years he was managing director of these giant establishments, and conducted them with signal success. When he finally retired from the position a few months ago his employés presented him with a finely-engrossed testimonial expressive of their appreciation of his kindness as a humane and thoughtful employer, and of regret that the relations between master and men, so signally pleasant in every particular, were about to be sundered.

It would be difficult to name one who has done so much for the real prosperity of St. Louis and the West as has Mr. Garrison, and there are not many who, having accomplished so much, would take so modest a view of their labors as he does of his; for he is one of the plainest and most unassuming gentlemen of which the city can boast, and yet one of the most courteous and approachable. He is tall and of robust frame, is still capable of great physical and mental endurance, and possesses to a pre-eminent degree a

“sound mind in a sound body.” Upon scarcely any other man in St. Louis, and perhaps in the whole West, have rested such great responsibilities as frequently in his later career have devolved upon him. In every demand made upon him he has shown the finest executive ability. It has been justly remarked that Mr. Garrison “has compassed within his own experience an amount of beneficent enterprise and well-directed labor that, if parceled out among a score of common men, would make the life-work of each very large.” All this Mr. Garrison has accomplished by sheer native energy and ability, for he is a self-made man in the most literal sense of the expression. He came to St. Louis a poor young man, and is now one of its wealthiest citizens; but his wealth is not merely in stocks and bonds; it consists also in the valued esteem of his fellow business men and the citizens of St. Louis, who gladly honor him for his unstinted labors in behalf of their city and State.

The biographical edition of Reavis’ “St. Louis, the Future Great City,” was dedicated to Mr. Garrison in these appropriate words:

“To Daniel Randall Garrison, a citizen great in the attributes of manhood, one who has woven out from his individuality, his superior brain and restless activity a large contribution to the city of my theme and to my country, one who in building up his own fortunes has impressed his character upon many material interests, and who gives promise of still greater usefulness in the future, this volume, which illustrates a fadless hope and a profound conviction in the future of St. Louis, is respectfully inscribed by the author.”

The Hannibal and St. Joseph Railroad, one of the earliest railroad enterprises in Missouri, was chartered on the 16th of February, 1847, and ground was broken at Hannibal early in November, 1851. When the Pacific Railroad sought aid from the State the two enterprises worked together, each aiding the other, and the Hannibal and St. Joseph Railroad procured the State credit for \$1,500,000. Again acting together before Congress, they both procured a grant of land. The Hannibal line was completed to St. Joseph in 1859. The Missouri Pacific Railway Company uses the road between St. Joseph and Atchison, together with the terminal facilities at both places. The total length of the line between Hannibal and St. Joseph is 206.41 miles, and the branches are:

Quincy.—Palmyra, Mo., to Quincy, Ill., 13.42 miles.

Kansas City.—Cameron to Kansas City, Mo., 53.05 miles.

Atchison.—St. Joseph to Atchison, Mo., 19.47 miles.

Making the total length of lines owned and operated 292.35 miles.

The Laclède and Crevecoeur Lake Railway Company was chartered Sept. 26, 1880, and opened July 1, 1881. The company owns no rolling stock,

it being operated by the Missouri Pacific Railroad Company, whose road it joins at Laeclde Junction, eight miles from St. Louis. Its line extends from Laeclde Junction to Crevecoeur Lake, Mo., and is twelve miles in length.

The **St. Louis, Iron Mountain and Southern Railway Company** was formed May 6, 1874, by the consolidation of four other organizations, viz.: the St. Louis and Iron Mountain Railway Company, the Arkansas Branch of the St. Louis and Iron Mountain Railway Company, the Cairo, Arkansas and Texas Railroad Company, and the Cairo and Fulton Railroad Company. The through line was opened in 1874.

The valuable mineral deposits of the Iron Mountain and Pilot Knob early attracted the attention of the enterprising men of St. Louis, and in 1837 mention is made in the *Republican* of January 18th of a "railroad to the mineral region," and of the fact that "Mr. Stansbury has completed his reconnoissance of the country between St. Louis and the rich mineral region of Washington County, with a view to the location of a railroad in that direction."

The same paper, under date of Feb. 6, 1837, referred to

"an act to incorporate the St. Louis and Bellevue Mineral Railroad," with Robert Simpson, Samuel Merry, J. B. Brant, Thornton Grimsley, G. W. Call, Joseph C. Laveille, John F. Darby, James Robinson, William R. Ellett, John Perry, Jesse H. McIlvaine, James H. Relfe, Israel McGready, or a majority of them constituting the first board of directors.

The charter of the St. Louis and Iron Mountain Railroad Company was granted by the State Legislature and approved March 3, 1851, reviving for the most part the charter of the "St. Louis and Bellevue Mineral Railroad Company," approved Jan. 25, 1837, and amended Feb. 17, 1853. The first survey for a railroad west of the Mississippi River was made for this road by W. H. Morrell, it having been ordered in 1839 by the State government on "the nearest and best route from St. Louis to the Iron Mountain." In 1849 a survey was made by order of the United States government from St. Louis to the southwest corner of Arkansas, and in 1852 one for a branch of the Pacific Railroad to the Iron Mountain was made by James H. Morley.

By the act of March 3, 1851, the capital stock of the Iron Mountain Company was fixed at six million dollars, divided into shares of one hundred dollars each, and the company was empowered to construct a road from the city of St. Louis, or from some point on the line of the Pacific Railroad, to or near the Iron Mountain, in St. Francois County, or the Pilot Knob, in Madison County, and at any time within ten years from the passage of the act to extend the road to Cape

Girardeau, on the Mississippi River, or to any point south of Cape Girardeau within the limits of the State, or to the southwestern part of the State. At the second session of the Seventeenth General Assembly an act was passed entitled "An Act to expedite the construction of the Iron Mountain Branch of the Pacific Railroad, approved Dec. 25, 1852."

This act empowered the Pacific Railroad Company to construct a branch road to the Iron Mountain and Pilot Knob, with liberty to extend it to the Mississippi River and to the boundary line of the State of Arkansas, and granted a loan of the State credit, to be used solely in constructing the Iron Mountain Branch, to the extent of seven hundred and fifty thousand dollars. The act further provided for the transfer by the Pacific Railroad Company to the Iron Mountain Company of the bonds thus authorized to be issued on a failure by that company to commence the construction of the branch within twelve months from the passage of the act, on condition that five hundred thousand dollars should be subscribed to the capital stock of the company before any part of the bonds were issued, and that the road should be located through Washington County, and not more than five miles east of the county-seat thereof.

At the same session of the General Assembly an act was passed amendatory of the act last referred to, approved Feb. 23, 1853, providing that the adoption by the board of directors of the Pacific Railroad Company within the limit of twelve months from the 25th of December, 1852, of a resolution declining to construct the Iron Mountain Branch Road should operate as an immediate and full transfer of the loan of the State credit—granted for the construction of that branch—to the Iron Mountain Railroad Company.

At the same session an act was passed entitled "An Act to amend an act entitled 'An Act to incorporate the St. Louis and Iron Mountain Railroad Company, approved March 3, 1851,'" which was approved Feb. 17, 1853, granting general powers and supplying the deficiencies of the original charter.

The general provisions of an act passed at the same session, entitled "An Act to authorize the formation of railroad associations, and to regulate the same," approved Feb. 24, 1853, applied to the Iron Mountain Railroad Company, as well as the provisions of Sections 2 and 3 of an act passed at the first session of the Eighteenth General Assembly, entitled "An Act for the benefit of the Pacific and other railroad companies," authorizing the issue of bonds in installments of greater amount than fifty thousand dollars on certain conditions, and permitting

the sale and hypothecation of bonds at their market value, though below par.

At the first session of the Eighteenth General Assembly an act was passed entitled "An Act to aid in the construction of the St. Louis and Iron Mountain Railroad," approved March 3, 1855. This act provided for an additional loan of the State credit to the Iron Mountain Railroad Company to the amount of seven hundred and fifty thousand dollars, upon the same terms and with the same restrictions as prescribed by the several acts providing for and regulating the grant of State credit to the several railroad companies. The act provided also for the appointment of a Board of Public Works, charged with the supervision, and required to examine into the affairs of the company, the act to be operative only if accepted by the company within six months after its passage. This act was accepted as prescribed on the 11th of May, 1855.¹

The preliminary organization of the company was effected on the 4th of November, 1852, and on the 4th of January, 1853, the first board of directors was chosen as follows:

John O'Fallon, James Harrison, William M. McPherson, Jules Vallé, Henry Kayser, Francis Kellerman, Jr., William H. Belcher, Andrew Christy, Solon Humphreys, Lewis V. Bogy, John Simonds, Frederick Schulenburg, and John Cavender. Surveys were ordered by the board and commenced during the same month (January, 1853), and were reported on the 29th of March, 1853. In all the preliminary movements

¹ "Pursuant to a call published in the English and German papers, a meeting was held on the 16th inst. at the Phoenix Engine-House, for the purpose of raising subscriptions to the Iron Mountain Railroad.

"On motion, Mr. H. Kayser was chosen president, Messrs. F. Schulenberg, J. B. Bremel, H. Cobb, and Ch. Gehrke vice-presidents, and Charles Mehl and Ad. Abeles were appointed secretaries.

"After some preliminary remarks by the president as to the object of the meeting, Messrs. McPherson, Reynolds, Alex. Kayser, and Cobb addressed the meeting in an eloquent manner, expressing at the same time their preference for a separate, direct route.

"The following gentlemen have been appointed on the eight sub-committees for collecting subscriptions to the stock of the St. Louis and Iron Mountain Railroad Company:

"1. C. R. Diekson, L. King, J. Brimermann; 2. A. H. Menkins, J. Kern, J. P. Bremel; 3. J. D. Daggett, E. R. Mason, A. Steinkauler; 4. A. Abeles, Thos. Reynolds, I. G. C. Heidricks; 5. C. C. Simmons, J. C. Degenhart, L. M. Kennett; 6. G. Gehrke, Wm. Hohenschild, M. Feldman; 7. H. C. Lyneh C. Jung, B. Riee; 8. C. F. Blattau, E. O. English, C. Mehl.

"The first named on each of the committees will be furnished with a subscription-book.

"H. KAYSER, *Ch'n of Com.*"

—*Republican*, Dec. 18, 1852.

the prominent object seems to have been to reach the mineral region and the Iron Mountain, without any definite idea of going beyond. The work on the line was advertised for contract on the 21st of July, 1853.

After some delay, caused, as appears from the journal of proceedings of the board, by conflicting opinions as to the proper route to be selected, the line was finally located for a portion of the distance to the Pilot Knob, in Madison County, on the 8th of September, 1853.

On the 7th of November, 1853, an election for directors of the company was held, at which the following were chosen: William H. Belcher, John Cavender, John How, Adolph Abeles, Lewis V. Bogy, L. M. Kennett, M. Brotherton, James Harrison, William M. McPherson, F. Schulenburg, E. Haren, M. Miller, and E. R. Mason. The board met on the following day (November 8th), and elected Luther M. Kennett president. Mr. Kennett was re-elected in 1854, and his successors in the presidency up to the sale of the road in 1866 were Madison Miller, 1855-58; Lewis V. Bogy, 1858-59; S. D. Barlow, 1859-66.

In the fall of 1853 the work of construction was commenced, under a partial letting to Messrs. Holmes & Co. on a small portion of the northern end of the line. On the 28th of February, 1854, a contract for the construction of the whole road to the Pilot Knob, except that portion already contracted for, was entered into with Messrs. Watts & Co. This contract did not include the furnishing of iron rails. Messrs. Watts & Co. subsequently bought out the other contracts, with the exception of that for work connected with the bridge over the Maramec, and that for the grading of a small portion of the line between St. Louis and Carondelet, which was contracted for by the board, in the spring and summer of 1854, with the owners of the land through which the line of the road passed.

On the 15th of June, 1855, a contract was entered into with a Pennsylvania firm for nine thousand tons of iron rails of their manufacture, the whole quantity needed for the completion of the road to the Pilot Knob.

The first locomotive (made in St. Louis by William Palm) was placed on the road in 1856, and the road was opened for business a distance of eighty-five miles, from St. Louis to Pilot Knob, in May, 1858. The entire cost of the road, including Potosi Branch, rolling stock, discounts and interest to Oct. 1, 1860, was \$5,519,948.51. The means of construction were derived from the following sources:

From stock subscribed and paid in.....	\$1,970,537.50
“ State of Missouri bonds,	3,501,000.00
“ net earnings transportation to October, 1859.....	87,093.68
“ floating debt.....	43,989.13

The company having received from the State of Missouri from time to time during the progress of construction loans of State bonds amounting in the aggregate to \$3,501,000, for which the State took a statutory first mortgage; and having failed for several years, in common with some of the other railroads, to pay all the interest falling due upon those bonds, the Legislature on the 19th day of February, 1866, passed an act entitled “An Act to provide for the sale of certain railroads and property by the Governor, to foreclose the State’s lien thereon, and to secure an early completion of the Southwest Branch Pacific, the Platte Country, the St. Louis and Iron Mountain, and the Cairo and Fulton Railroads of Missouri.”

Under the provisions of this act the Governor advertised the road for sale, and on the 27th of September, 1866, sold it at public auction, and bid it in for the State for the amount of principal and interest due the State. Three commissioners, appointed under the act, took possession of the road and managed it for the State until Jan. 12, 1867. They were authorized by the law to receive proposals and sell the road “to the highest and best bidders,” one fourth cash, and the balance in five equal annual installments, with six per cent. interest, payable annually, and the purchasers to enter into contract and give bond in the sum of \$500,000 to complete the road to the Mississippi River, opposite to or below Columbus, Ky., in five years after the date of sale, and to expend \$500,000 a year “in the work of graduation, masonry, and superstructure on said extension.” The commissioners awarded the road to McKay, Simmons & Vogel, and the Governor approved the award, and completed the sale contract by a deed, and these parties, without taking any but momentary possession, sold and transferred the property to Thomas Allen, who entered into possession Jan. 12, 1867. He assumed the bond and the obligation to pay the purchase-money, and the contract to complete the road as required. He at once appointed James H. Morley chief engineer, and the surveys for the extension commenced in February, and owing to the rough character of the country were continued on many different lines, which were fully reported on until July, when the route from Bismarck to Belmont was selected, finally located, and put under contract.

On the 20th of March, 1866, the Legislature passed an act to enable the purchasers of the railroad to incorporate themselves, directing how it might be

done, and declaring that the corporation thus provided for should have the same rights as to property and franchises that the corporation to which they succeeded through the sale made by the State formerly had.

Accordingly Mr. Allen and his associates incorporated themselves on the 29th of July, 1867, in the manner directed by the law, into the St. Louis and Iron Mountain Railroad Company, adopting the same name as the original corporation, and acquiring the same right of property and franchises as had belonged to that corporation.

On the 17th of March, 1868, the Legislature passed an act entitled “An Act to confirm the title of the St. Louis and Iron Mountain Railroad to Thomas Allen, his heirs and assigns, and to deliver possession thereof to the St. Louis and Iron Mountain Railroad Company, organized as a corporation on the 29th day of July, 1867.”

In the month of April, 1867, a suit was commenced by the attorney-general of the State (Wingate) against the State commissioners and purchasers of the road, to set aside the sale, as made by the commissioners and Governor, seeking at the same time to enjoin the company from going on with the road. In this latter he was overruled by the court, but his suit, prosecuted in the form it was, proved a serious detriment, embarrassing all attempts to get the public interested, and causing heavy discounts on loans. This burden, in view of the short time remaining (six months) within the first year, for the proper expenditure of \$500,000, as required by law, gave the company great anxiety. It succeeded, however, through strenuous efforts, with the aid of efficient contractors, in getting forty miles of the lower division graded, and by the time the first year had elapsed, viz., from Jan. 11, 1867, to Jan. 1, 1868, the expenditures had amounted to \$583,611.73, in addition to the sum of \$225,700 paid into the State treasury on the purchase. This was done, and the statement sworn to, certified by the Governor, and filed with the Secretary of State, in spite of the impediments put in the way by the attorney-general. The Legislature upon petition were about to pass a resolution ordering the suit dismissed as to the road, but to insist on its prosecution as to the Governor’s commissioners and the original purchasers, when the Governor, on the night of the 15th of January, 1868, seized the road. His reason, as afterwards published, was that the company had not made the expenditure, nor the annual statement, as required by law. The Legislature, however, subsequently ordered him to restore the road and all its earnings and property forthwith,

and at the same time confirmed the title forever by the act of March 17th, above mentioned, and in six days thereafter granted the balance due the State as a subsidy to aid the company in building the Arkansas Branch.

The Governor and his agents operated the road from Jan. 15 to March 18, 1868 (sixty days), when it was restored to its lawful owners. The suit of the attorney-general was dismissed, as to the road and the company, on the 16th of April ensuing, and the net proceeds of the Governor's two months' operations (\$3806.80) were turned over to the company about the 1st of the ensuing May. A claim for damages done by these acts of State officers was laid before the Legislature January, 1869, amounting to \$1,316,724. The road from St. Louis to Belmont (opposite to Columbus, Ky.) was completed in 1869.

On the 7th of April, 1870, the board of directors resolved "that the St. Louis and Iron Mountain Railroad Company desire to avail themselves of the provisions of an act entitled 'An Act to aid the building of branch railroads in the State of Missouri,' approved March 21, 1868, for the purpose of building a branch of their road from Pilot Knob southerly to the State line of Arkansas, under the name of the 'Arkansas Branch of the St. Louis and Iron Mountain Railroad.'" The act authorized a separate corporation to be governed by the parent road, the accounts to be kept separate, the stockholders having the same right to vote for the directors as those of the original company. It was therefore agreed that the capital stock of this branch should be \$2,500,000, and that bonds should be issued to the extent of \$2,500,000, payable in twenty-five years, with interest at seven per cent., payable semi-annually in gold, and secured by a special mortgage of the Branch Railroad, its property and appurtenances. The State having by law appropriated the unpaid portion of the purchase-money and interest accruing after the date of the act for the Iron Mountain and Cairo and Fulton Railroads (\$674,300), at the rate of \$15,000 per mile for every mile completed within a certain time, it became necessary to complete the first twenty miles on or before the 23d of March, 1871, and work was commenced in the fall of 1870, and the first thirty miles completed Feb. 23, 1871. The work was prosecuted during the remainder of that year, and Nov. 4, 1872, the whole line (ninety-nine miles in length) was completed to the boundary of Arkansas. It was duly accepted by the State, and the debt canceled. Trains commenced running regularly over the line April 2, 1873.

As previously stated, the road was consolidated

with other roads in May, 1874, and a through line secured to Texarkana, Texas.

The gauge of the road was changed in June, 1879, from five feet to four feet eight and one-half inches, to accommodate its running machinery to the roads east of the Mississippi, with which it connects at St. Louis by means of the great bridge.

The connections of this great railroad are,—

At *Carondelet*, five miles south of St. Louis, with the Missouri Pacific and with the East St. Louis and Carondelet Railways, by which it is enabled to handle with great economy the provision and produce business from Kansas City for Southern markets.

At *Mineral Point*, six miles from St. Louis, with a branch to Potosi.

At *Bismarck*, seventy-six miles from St. Louis, the line divides; the one to Belmont intersects at Charleston, one hundred and seventy-eight miles from St. Louis, the Cairo, Arkansas and Texas Railroad; here a ferry connects with the Mobile and Ohio Railroad for Mobile and intermediate points in Mississippi and Alabama, also with New Orleans. The St. Louis, Iron Mountain and Southern system connects at *Union City* with the Nashville, Chattanooga and St. Louis Railway for Memphis, Nashville, Chattanooga, Atlanta, Augusta, Charleston, Columbia, Port Royal, Savannah, Macon, Selma, Montgomery, Decatur, Jacksonville, and points in Florida. The other line of the St. Louis, Iron Mountain and Southern Railroad from Bismarck continues in the direction of Arkansas and Texas, passing the great iron deposits at Iron Mountain and Pilot Knob, the valley of Arcadia, the grades of the Ozark Mountains, and the Black River to Poplar Bluff, one hundred and sixty-six miles from St. Louis. At that point the branch from Cairo connects with the Arkansas division, crossing the Missouri boundary at Moark, so called from Mo. and ARK.

At *Little Rock*, three hundred and forty-five miles from St. Louis, connection is made with the Memphis and Little Rock and Fort Smith Railroads.

At *Malvern*, three hundred and eighty-eight miles from St. Louis, connection is made for the Hot Springs by the Hot Springs Narrow-Gauge Railroad.

At *Texarkana*, four hundred and ninety miles from St. Louis, the southern terminus of the St. Louis, Iron Mountain and Southern Railroad, connection is made with the Texas and Pacific Railway, and by it with New Mexico and California, and with the International and Great Northern Railroad, by which Hearne, Houston, Galveston, San Antonio, Columbia, and Palestine trade with St. Louis. When Mexico is opened to American enterprise, the St. Louis, Iron

Mountain and Southern Railway will, as heretofore indicated, be one of the chief lines of intercommunication with that great and undeveloped country, and St. Louis the *entrepôt* for its trade with the United States.

The Cairo, Arkansas and Texas Railroad Company was an independent organization, which derived its powers from a special act of the Missouri Legislature, approved May 16, 1872, authorizing the construction of a road from Greenfield, opposite Cairo, to Poplar Bluff. This road, seventy-one miles in length, was completed in September, 1873, intersecting the Belmont line of the St. Louis and Iron Mountain Road at Charleston, in Missouri County, and the Arkansas Branch at Poplar Bluff. Having a grant of government lands amounting to sixty-five thousand acres, it became a desirable adjunct of and is now controlled by the St. Louis, Iron Mountain and Southern Railroad Company.

The Cairo and Fulton Railroad was incorporated in 1853, and received a grant of land from Congress of 3840 acres per mile. In 1866 its privileges were extended for ten years and its grant enlarged to 6400 acres per mile. At that time the charter was controlled by Eastern capitalists, but being a direct link in the line from St. Louis to Texas, the St. Louis and Iron Mountain Railroad and its Arkansas Branch, the Cairo, Arkansas and Texas Railroad, entered into arrangements by which the Cairo and Fulton Railroad was consolidated with the St. Louis and Iron Mountain Railroad.

The total mileage of the Iron Mountain road is as follows:

	Miles.
St. Louis to Texarkana.....	490
Bismarck to Columbus.....	121
Iron Mountain and Helena.....	43
Potosi Branch.....	4
Cairo to Poplar Bluff.....	74
Doniphan Branch (as far as completed).....	7
Cowley Ridge Branch.....	140
Camden Branch.....	34
<hr/>	
Total.....	913

The earnings of the road for the year ending Dec. 31, 1881, amounted (\$10,691.20 per mile) to \$7,686,973.38; expenditures (\$6859.34 per mile) to \$4,931,863.70. The total assets were set down at \$56,334,799.54; capital stock, \$22,084,115; funded debt, \$31,792,929.71.

During the year 1881 the greater part of the stock of the St. Louis, Iron Mountain and Southern Railroad Company was purchased by the Missouri Pacific Railroad Company, the object of the purchase being the consolidation of the two corporations, and on the 14th of March, 1882, the following directors were elected: Henry G. Marquand, Jay Gould, Russell

Sage, Thomas T. Eckert, Sidney Dillon, Joseph S. Lowery, Samuel Shethar, John T. Terry, and George B. McClellan, of New York; Henry Whelan, of Philadelphia; Frederick L. Ames, of Boston; Rufus J. Lackland and R. C. Kerens, of St. Louis. The executive officers of the company are Jay Gould, president, New York; R. S. Hayes, first vice-president, St. Louis; Thomas T. Eckert, second vice-president, New York; S. D. Barlow, secretary, St. Louis; A. H. Calef, treasurer, New York; C. G. Warner, general auditor, St. Louis; H. M. Hoxie, general manager, St. Louis; E. L. Dudley, superintendent, St. Louis; O. A. Haynes, master-mechanic, Carondelet, Mo.; Seth Frink, general freight agent, St. Louis; F. Chandler, general passenger agent, St. Louis; Thomas Essex, land commissioner, St. Louis; J. H. Morley, chief engineer, St. Louis; R. B. Lyle, purchasing agent, St. Louis; A. E. Buchanan, superintendent of bridges, Little Rock, Ark. The principal office of the company is located at St. Louis.

The Texas and Pacific Railway Company was organized under an act of Congress, March 3, 1871, and the general railroad laws of Texas. It acquired the properties of the Southern Pacific, the Southern Transcontinental, and the Memphis, El Paso and Pacific Railroad Companies. The Southern Pacific was a consolidation of the Vicksburg, Shreveport and Texas and the Southern Pacific. The portion of the line in Louisiana, about twenty miles, was built by the Vicksburg, Shreveport and Texas, and the section from the east line of Texas to Longview, Texas, about forty miles, by the Southern Pacific Company. The rest of the line in Texas was built by the Texas and Pacific Company. The road extends from New Orleans, La., westward through Louisiana and Texas, and by junction with the Southern Pacific Railroad of California to the Pacific coast. Its length June 1, 1882, was:

	Miles.
From New Orleans to Sierra Blanca, Texas.....	1080
Other Divisions.....	312
<hr/>	
Statement of mileage as operated by divisions, June 1, 1882:	
	Miles.
New Orleans Division, New Orleans to Shreveport, La....	335
Southern Division, Shreveport, La., to Sierra Blanca, Texas.....	745
Jefferson Division, Marshall to Texarkana Junction.....	69
Transcontinental Division, Texarkana via Sherman to Fort Worth.....	243
<hr/>	
Total length of road.....	1392

During 1881 seven hundred miles of road were completed and equipped, and on the 1st of January, 1882, a junction was formed with the Southern Pacific Railroad of California, at a point five hundred and

twenty-three miles west of Fort Worth, and on the 15th of the same month the road was opened for traffic to El Paso, and a through line established from St. Louis to San Francisco *via* the Iron Mountain Road. On the 21st of June, 1881, the Texas and Pacific was consolidated with the New Orleans Pacific Railway, extending from Shreveport to New Orleans, a distance of about three hundred and thirty-five miles.

The total earnings of the Texas and Pacific Railway for the year ending May 31, 1881, amounted to (\$6208.62 per mile) \$3,201,777.08; expenditures (\$4929.78 per mile), \$2,608,021.32; total assets, \$44,609,589.03; capital stock, \$14,814,700; bonded debt, \$27,460,000.

By a general law of Texas the road, in common with others in the State, is entitled to a land grant of sixteen sections (10,240 acres) to the mile. The land earned upon the mileage constructed up to May 31, 1881, was 10,225,462 acres.

The officers of the company are: Directors, Frank S. Bond, Philadelphia, Pa.; John C. Brown, Pulaski, Tenn.; Jay Gould, Russell Sage, E. H. Perkins, Jr., T. T. Eckert, A. L. Hopkins, New York; James P. Scott, Charles O. Baird, Philadelphia, Pa.; E. B. Wheelock, New Orleans, La.; B. K. Jamison, Philadelphia, Pa.; W. T. Walters, Baltimore, Md.; W. C. Hall, Louisville, Ky.; William M. Harrison, Jefferson, Texas; R. S. Hayes, St. Louis, Mo. President, Jay Gould, New York; Vice-Presidents, R. S. Hayes and John C. Brown, St. Louis; General Manager, H. M. Hoxie, St. Louis.

The active and directing mind of the Texas and Pacific Railway since its inception has been Hon. John C. Brown. Governor Brown was born Jan. 6, 1827, in Giles County, Tenn., and was the son of a farmer in moderate circumstances. His parents were of Scotch blood, and he was the youngest of nine children. He received his earliest training in the old field school-house of that day, and then received the best education which the times afforded at Jackson College, at Columbia, Tenn. He finished his course in 1846, and then engaged in teaching while preparing for the bar, to which he was admitted in October, 1848. He opened an office in Pulaski, where his diligence, integrity, and ability secured him a large and lucrative practice, to which he mainly devoted himself until the civil war. His devotion to his profession did not interrupt his private studies of general literature; and having the means and the leisure, he supplemented his studies with a journey abroad in 1858-59, visiting the country of his forefathers and then making the tour of the Continent, Egypt, and the Holy Land.

Up to 1860 Mr. Brown had strictly devoted himself to his profession. He never sought office, and although a zealous and pronounced Whig avoided politics as a pursuit. In 1860, however, he was chosen an elector on the Bell and Everett or Constitutional Union ticket. As a consequence of Mr. Lincoln's election the Southern States determined to secede from the Union. The State of Tennessee was in a condition of intense political excitement, during which Mr. Brown took the stump and made a vigorous and fearless canvass in favor of the Union and in opposition to secession. But when Tennessee separated herself from the Union and began organizing her troops for the Confederacy, as a "son of the South" John C. Brown did not hesitate, but joined the Confederate army as a private, was elected captain of his company, became colonel of the Third Tennessee Volunteers, and as senior colonel commanded a brigade and participated in the defense of Fort Donelson. When the fort surrendered he became a prisoner of war. After his exchange in August, 1862, he was promoted to be brigadier-general, and was assigned to duty with Gen. Braxton Bragg. In the campaign in Kentucky he participated in the battle of Perryville and other actions. After the battles of Chickamauga and Missionary Ridge, and the actions incident to Gen. Joseph E. Johnston's retreat (in all of which he participated), he was promoted to be major-general. He finished his active military career at Franklin, Tenn., where he was so severely wounded as to be unable to rejoin his command until a short time before the surrender of Johnston's army at Greensboro', N. C., where he was assigned to the command of one of Johnston's best divisions. In his relations with the army he was a strict disciplinarian, and always at the post of duty. No trespassing on private property was tolerated, and marauding was severely and promptly punished. He was several times severely wounded.

In 1864 he was married to Miss Childers, an accomplished lady of Murfreesboro', Tenn., and a niece of Mrs. James K. Polk, widow of the ex-President. Mrs. Brown has contributed a woman's share in promoting her husband's fortunes, and has borne him an interesting family of four children.

At the close of the war Governor Brown returned to the practice of his profession at Pulaski, and continued in full practice till 1869, when he was elected delegate to the convention which, in January, 1870, met and framed the present Constitution of Tennessee, and was chosen, without solicitation, president of that body. In 1870 he was unanimously nominated by the Democrats of Tennessee for Governor. The issues in this canvass were of a character that seriously affected

the honor and prosperity of Tennessee. The war had greatly wasted the resources of the State. An enormous public debt had accumulated, and default had been made in payment of interest. The public credit was low and the resources for current expenses almost exhausted. Governor Brown took the statesmanlike ground that the public debt could be and must be paid. He was elected by forty thousand majority to the office of Governor, an office to which his eldest brother, Neill S. Brown (now living in Nashville), had been chosen in 1847 over Aaron V. Brown, one of the most popular Democrats of his day. The influence of Neill S. Brown, who was a central figure in State and national politics, was sensibly felt in the Presidential campaign which resulted in the election of Gen. Taylor, and Mr. Brown was subsequently tendered the post of minister to Russia, which he accepted.

In 1872, Governor John C. Brown was unanimously renominated, and re-elected, and during his administration (1871-75) the bonded debt of the State was reduced from about forty-three million dollars to a little more than twenty million dollars, a large floating debt was paid, and the State re-established its credit by resuming the payment of its current interest after funding its past-due obligations at par. He retired from office after having won the general approval of the people of the State.

In November, 1876, a new career opened to him with the offer of the vice-presidency of the Texas and Pacific Railway. This great highway from the Atlantic seaboard, through Texas and Mexico, to California, a route unexposed to snows and frosts, had been projected before the war. Such a system of railways, connecting the Mississippi River with the Pacific slope, was intended to attract the trade of California and the trans-Cordilleras to the great waterways of the United States, and at the same time open the too-long neglected commerce of the republic of Mexico to our enterprising merchants. This Texas route, south of the isothermal line of snow blockades, had been projected, a small portion of it built, and valuable franchises secured before the war. An immense grant of land from the State of Texas, which owned her own public domain, had been secured, and favorable treaties with Mexico for the right of way were in progress of negotiation, when the secession of the Southern States stopped the work. When the war had ended the Southern States found their Mississippi River commerce destroyed and their great transcontinental railway still a paper scheme, while the North and West had made rapid progress in the building of the Northern and

Central Pacific Railroads towards the Pacific slope. Governor Brown accepted the office of vice-president of the Texas Pacific, with the enlightened views of the statesman and publicist. He saw clearly if the South was not to have her *ante-bellum* river traffic there was in the projected railway through Texas and Mexico, with its liberal franchises yet preserved and its land subsidies, a ready means of reaching the trade of California and the sister republic, and he entered heartily into the project. As vice-president of the company, he issued an appeal to the people of the South, elaborating his views in relation to the enterprise in a statesmanlike, sagacious, and practical pamphlet which deserves a leading place in the railway literature of a period that was prolific of great enterprises. He also delivered numerous addresses, in which he appealed to the Southern States to lay aside all questions of sectional political strife, and urged them to address all their efforts to the improvement of their country, the fostering of education, and the creation of wealth-producing facilities. For three consecutive years he remained at Washington, appearing before congressional committees and pressing upon them the claims of his great work. His labors were onerous and difficult, but owing to the opposition of rival interests they were not fully successful. Nevertheless, he performed them to the eminent satisfaction of Col. Thomas A. Scott and the capitalists who were interested in the enterprise, and who, pending the appeal to Congress, had gone on with the work. Ultimately Governor Brown was authorized by Col. Scott to proceed to New York and effect negotiations which had been invited by Jay Gould and other capitalists. These negotiations were satisfactorily accomplished in January, 1880. Governor Brown was then continued in his confidential position, and in September, 1881, he accepted the position of general solicitor for the consolidated system, which includes the Missouri Pacific system, with the Missouri, Kansas and Texas Railway connections, the Iron Mountain, Texas and Pacific, New Orleans and Pacific, and International and Great Northern, and continued in charge and superintendence of the construction of the Texas Pacific from Fort Worth to El Paso, with headquarters in St. Louis, until the line was completed in the winter of 1881-82.

Governor Brown's identification with the interests of St. Louis was heartily welcomed, for his knowledge of the law, and his abilities as a speaker, trained in the sharp school of exciting debate and in the calmer methods of inquiry, his experience in the command of men and in the management of the most important

affairs, his careful examination and knowledge of the carrying trade and its auxiliary interests, had eminently combined to fit him for leadership in the gigantic schemes that are radiating from this centre into the undeveloped regions of the great Southwest. Each year of his present high responsibilities but adds to the reputation for talent and usefulness which he incontestably enjoys in the judgment of those best qualified to determine.

The Missouri, Kansas and Texas Railroad.—On the 20th of September, 1865, the "Union Pacific Railway Company" (Southern Branch) was incorporated for the construction of a railroad, to be one hundred and eighty miles in length, from Junction City to Chetopa. When the road was completed to Emporia, it passed into the hands of the Missouri, Kansas and Texas Railway Company, which was organized April 7, 1870, and which at the same time absorbed the Neosho Valley and Holden, the Labette and Sedalia, and the Tebo and Neosho Railroad Companies. The lines from Sedalia to Parsons and from Holden to Paola were then constructed, and being the first to reach the Indian Territory, the company became entitled to construct its road through the Territory. The progress made was so rapid that in January, 1873, the Red River at Denison was crossed and the Texas railroad system united with. Failing in the effort to obtain the control of the Missouri Pacific in 1872, by which arrangement St. Louis would have become the eastern terminus, the managers effected (April 29, 1872) the purchase of the St. Louis and Santa Fé Railroad, extending from Holden, Mo., to Paola, Kan., and (in 1874) of the Hannibal and Central Missouri Railroad, by which connection between Hannibal and Moberly was obtained. In 1873 trains were running from Hannibal to Denison. The road was leased to the Missouri Pacific Railway Company, Dec. 1, 1880, the rental paid being the net earnings of the road.

The International and Great Northern Railroad was organized Sept. 22, 1873, by the consolidation of the International Railroad Company, chartered Aug. 17, 1870, and the Houston and Great Northern Railroad Company, chartered Oct. 22, 1870. In 1881 the company's road and property were purchased by the Missouri, Kansas and Texas Railway Company.

Ohio and Mississippi Railroad.—The Ohio and Mississippi, Marietta and Cincinnati, and Baltimore and Ohio Railroads form a great highway of commerce and travel between the Mississippi River and the Atlantic seaboard, and between St. Louis and Baltimore. Practically under one management, they illustrate the genius and ability of one man and the enterprise of two great cities. To John W. Garrett,

of the Baltimore and Ohio Railroad, is due the honor of having linked St. Louis and Baltimore together by this great railroad line, thus making each city the complement of the other in all that relates to trade and commerce.

The Ohio and Mississippi Railroad was incorporated by the State of Indiana, Feb. 14, 1848, its charter authorizing the construction of a railroad from Cincinnati *via* Vincennes to St. Louis, and providing that the directors be taken from the citizens of Cincinnati, Vincennes, and St. Louis, and one or more from each county along the line of the proposed work. The directors named in the charter from St. Louis were Bryan Mullanphy, Ferdinand Kennett, Robert Campbell, George K. McGunnegele, and William Carr Lane. The St. Louis directors met at the Planters' House, St. Louis, on the 24th of March, 1848, Mr. Campbell in the chair, and Mr. Mullanphy acting as secretary.

On motion of Col. Ferdinand Kennett, it was

Resolved, That the citizens of St. Louis have heard with pleasure of the public-spirited efforts in the State of Indiana preparatory to the construction of the Ohio and Mississippi Railroad, in which they most heartily concur, and trust that at an early day a charter from the State of Illinois will enable St. Louis to connect itself with that great contemplated undertaking; that in the mean time they feel assured that the citizens of St. Louis will cheerfully aid in all preliminary steps, and subscribe liberally for the establishment of a communication so important to the whole West.

Resolved, That we will respond to any allotment of labor that may be imposed upon us towards promptly effecting the foregoing objects."

On motion of George K. McGunnegele, it was

Resolved, That we will, if it shall be judged proper by the directory, attend to the opening of subscription books in St. Louis, and to the obtaining subscriptions to stock in said railroad, and in conjunction with the public-spirited citizens of our sister State of Illinois, attend to all details necessary or proper to the procuring such charter, privileges, and powers as may be necessary to the extension of said railroad to the State of Missouri."

On motion of Dr. William Carr Lane, it was

Resolved, That the period of construction of the Ohio and Mississippi Railroad has now arrived, in the opinion of the most cautious and practical business men in the community, and that it cannot fail, so soon as completed, to realize and exceed the most sanguine anticipations of its enterprising projectors."

On the 29th of March, 1848, a meeting of the directors of the company was held at Vincennes, at which Abner T. Ellis was elected president, John Ross treasurer, and Benjamin M. Monroe secretary. At the same meeting it was resolved that a thorough survey of the route from Cincinnati to St. Louis, to be made by a competent engineer, was necessary, and that a sufficient sum should be collected for this purpose.

The directors in St. Louis, Vincennes, and Cincinnati were appointed a committee for their several towns and counties to receive subscriptions for this purpose.

On the 15th of March, 1849, the road was chartered by the Legislature of Ohio, and on the 28th of the same month an "Ohio and Mississippi Railroad mass-meeting" assembled in the rotunda of the courthouse in St. Louis to consider a proposition to loan the city's credit for five hundred thousand dollars to the proposed road. The mayor, Hon. J. M. Krum, was called to the chair, and J. M. Field appointed secretary. James J. Purdy, William M. McPherson, Archibald Gamble, D. D. Page, and William M. Campbell were appointed vice-presidents. The chairman explained the objects of the meeting, and announced his intention to sustain the proposition and to vote for the loan. After an address by Professor O. M. Mitchell the following gentlemen were appointed a committee to prepare an address to the people of St. Louis in favor of the railroad loan: Thomas Allen, Frederick Kretschmar, John McNeil, Willis L. Williams, Samuel M. Bay, Isaac N. Sturgeon, Samuel Hawken, Trusten Polk, Daniel D. Page, L. V. Bogy, A. L. Mills.

The committee reported an address, after the reading of which Judge Mullanphy addressed the meeting. The question was then put upon the adoption of the address, and it was carried unanimously.

L. V. Bogy offered the following resolution, which was unanimously adopted: "That the chairman appoint ten delegates to represent the city of St. Louis in the proposed convention to be held in the town of Salem, in the State of Illinois, on the second Monday in May next, the appointments to be made hereafter, and the names of the delegates to be published in the city papers." On his further motion, it was

"Resolved, That the chairman appoint a committee of vigilance, to consist of ten in each ward friendly to the proposition, to attend the polls on Monday next and secure the favorable consideration of the subject."

The election referred to in the last resolution was for the purpose of deciding whether the city should lend its credit to the extent of five hundred thousand dollars for the construction of the road. A large majority was returned in favor of the proposition. The vigilance committee appointed in accordance with Mr. Bogy's resolution was composed of:

"First Ward, Thomas Allen, R. J. Collins, S. Pilkington, Sol Smith, — Renick, C. Campbell, Edward Haren, J. McHose, H. D. Bacon, D. B. Hill.

"Second Ward, Isaac A. Hedges, Charles Kribben, Ellis Wainright, Fred Kretschmar, Thornton Grimsley, Patrick Walsh, Hiram Shaw, Edward Tracy, J. C. Barlow, J. C. Maigne.

"Third Ward, C. G. Henry, John Largee, Charles Keemle, L. V. Bogy, A. L. Mills, T. B. Targee, J. H. Lucas, H. E. Bridge, J. F. Darby, Joseph H. Conn.

"Fourth Ward, Austin Piggott, L. M. Kennett, William Rohb, J. L. Finney, Charles M. Vallé, T. Barnum, Amadee Vallé, T. W. Hoyt, J. A. Eddy, J. H. Lightner.

"Fifth Ward, Samuel Hawken, Charles Dean, William Blackmore, Conrad Doll, John Sigerson, Trusten Polk, Samuel Gaty, T. F. Risk, Dennis Marks, Conrad Fox.

"Sixth Ward, W. H. Belcher, Thomas Gray, W. G. Clark, E. Dobbins, J. L. Garrison, J. R. Hammond, R. B. Austin, Charles M. Pond, J. M. Wimer, L. Perkins.

"The heavy majority," said a St. Louis paper in announcing the result, "cast in favor of the subscription by the city to stock in this road must be gratifying to every friend of the measure. It is now manifest that the citizens of St. Louis are in earnest in their desire to see this work commenced and speedily completed. They have manifested their appreciation of the object and their confidence in its success by the unanimity with which they have agreed to invest their money in the enterprise.

"This vote may be hailed as a new era in the history of St. Louis. It is the first instance in which she has put forth her efforts to the accomplishment of a great enterprise, and she has come up to the full amount desired with a promptness and a heartiness which evince that she understands her interest in the proposed work. It is due to the success of this enterprise to state that the vote on this question was not controlled, to any considerable extent, by party feeling. A few men may have been actuated to oppose it by the belief that opposition would be popular, but the great body of the voters were governed purely by their own sense of the expediency or in expediency of the measure, and the probable effect of the construction of the road on business and the prosperity of the city. A few of the more wealthy citizens and large property-holders opposed it, but they were limited in number compared with those of the same class who advocated the proposition. Efforts were made to rally the holders of leased ground and the owners of small estates into opposition to it, on the ground that it would bring about an increase of taxes, but this failed to be successful except with a few persons. The only ward which gave a majority against it was the First. The Third Ward gave an overwhelming vote in favor of it.

"Now that a million and a half of dollars have been secured by the two cities of Cincinnati and St. Louis, and about eight hundred thousand dollars by the counties of Indiana, the work will doubtless be taken hold of promptly and pushed forward with proper energy. There is no longer a doubt that the road will be built. The only question is, how soon? This will, to a certain extent, depend on the early action of the Legislature of Illinois."

On the 12th of February, 1851, the Ohio and Mississippi Railroad Company of Illinois was incorporated by the Illinois Legislature to build a railroad from Illinoistown (now East St. Louis) to connect with the Ohio and Mississippi of Indiana. The incorporators named in the Illinois charter were Jos. G. Bowman, Sidney Breese, James Hall, Alfred Kitchell, Arthur McCauley, George W. Page, Benjamin Bond, J. L. D. Morrison, A. T. Ellis, John Ross, Luther M. Kennett, John O'Fallon, James H. Lucas, Andrew Christy, Daniel D. Page, John Law, Peter Chouteau, Jr., Benjamin F. Rittenhouse, Samuel B. Chandler,

John A. McClernand, John S. Martin, Aaron Shaw, William W. Roman, and Green C. Crawford.

In the latter part of March, 1851, the directors of the St. Louis and Vincennes Railroad (the Western Division of the Ohio and Mississippi) met at St. Louis for the purpose of organization. The following gentlemen were present: John A. McClernand, Shawneetown; James L. D. Morrison, Samuel B. Chandler, Belleville; Alfred Kitchell, Richland County, Ill.; Aaron Shar, Lawrence County, Ill.; Abner T. Ellis, Vincennes, Indiana; John O'Fallon, Daniel D. Page, Luther M. Kennett, and Andrew Christy, St. Louis.

The meeting was organized by calling Mr. Christy to the chair and the appointment of Mr. Morrison as secretary. An adjournment then took place until March 24th, when the board again assembled at the Merchants' Exchange, the same members being present. Col. John O'Fallon, of St. Louis, was then elected president of the company, and "it being deemed important for the dispatch of business to have an additional director in St. Louis, Mr. Bowman, of Lawrence County, one of the earliest and most prominent friends of the enterprise, tendered his resignation. It was accepted, and Charles P. Chouteau appointed to fill the place. Col. Robert Campbell was also elected to fill a vacancy caused by the resignation of Mr. Page."

On the 26th of March the directors requested the directors of the Eastern Division to instruct their chief engineer, E. Gest, to prosecute his surveys from Vincennes to Illinoistown, and report to them his estimate of the probable cost of the road. Mr. Gest reported to the board on the 1st of September following. In the latter part of September the board was advised that the directors of the Eastern Division had adopted the plan of constructing that division by letting it to an association of individuals to construct the whole line. The directors of the Western Division concurring in the views of the board of the Eastern Division as to the advantages to be gained by letting the whole line to one set of contractors, adopted the same plan, and a committee was appointed with full powers and authority to negotiate, which concluded a contract in conjunction with a similar committee appointed by the directors of the Eastern Division.

Under this authority a contract was negotiated, and concluded on the 22d of November, 1851, with Messrs. H. C. Seymour & Co., of New York, by which they agreed to construct and equip the road from Cincinnati to St. Louis for nine million dollars, the relative proportions of the cost to be paid by each company, to be determined by the amount of work done and equipment furnished on each division.

At a meeting of the directors of the Ohio and Mississippi Railroad Company held on the 7th of September, 1851, Col. John O'Fallon was unanimously re-elected president; George K. McGunnege, secretary; and Sidney Breese, of Illinois, counselor of the company.

At a meeting of the directors held Feb. 2, 1852, it was

"Resolved, That a public demonstration of the commencement of the work on the Ohio and Mississippi Railroad be had at Illinoistown on Saturday, the 7th instant, at eleven o'clock A.M., that the secretary request the insertion of a proper notice thereof in all the daily journals in this city, and that in the same an invitation be extended to the Governors of the States of Illinois and Missouri, to the people of these States generally, and to the citizens of St. Louis and Belleville and their public functionaries, and that the president appoint a committee of five to make arrangements for said celebration, and that at the same hour the work be commenced on said road at its intersection with the Central Railroad in Marion County, Ill.

"Resolved, That the secretary of this board communicate with the City Council of the city of St. Louis and request them to take action in aid of said celebration, in such manner as to the Council may seem most proper, in co-operation with the committee appointed by the board."

The resolutions were submitted to the City Council by the secretary of the company, and the invitation accepted by both boards.

The following committees were appointed by the Council to confer with the committee of the railroad company: from the Board of Aldermen, Messrs. Anderson, Sturgeon, Degenhart, and Lynch; from the Board of Delegates, Messrs. Farrar, Pilkington, Trask, and McKee.¹

On Feb. 7, 1852, the ceremony of breaking ground took place according to the announcement.

"About ten or eleven o'clock," says a contemporary account, "a large number of the citizens congregated

¹ "On Saturday next at eleven o'clock the construction of this road will be simultaneously commenced in Illinoistown and at its intersection with the Central Railroad in Marion County. The intervention of the telegraph enables the directors to have the work commenced at each point, although far distant, at almost the very same moment of time.

"At the commencement of the construction in Illinoistown there will be present Judge Ellis, the president and father of the enterprise; Professor Mitchell, who has taken from the first a most lively interest in the work; Mr. Seymour, the contractor for the construction of the entire distance; and the board of directors, at least such of them as are in the city. The public functionaries of Belleville, Collinsville, Alton, and St. Louis will be present."—*Republican*, Feb. 5, 1852.

Technically, the work had already been commenced. By the contract of Seymour & Co. it was stipulated that the construction of the road should be commenced on or before the 1st day of February, 1851, and "on Saturday last," said the *Republican* of February 2d, "Mr. Morris, the engineer for the contractors, commenced the construction by breaking ground in Illinoistown. This was necessary on the part of the contractors to save the contract."

on the ferry-boat, and proceeded across the river to take part in and witness the interesting spectacle. The spot selected for the purpose was within a few rods of the Mississippi, and there, with a plank or two for the wheelbarrows, and an old cart for a rostrum, the immense work of connecting Cincinnati and St. Louis by railroad was commenced.

"Charles D. Drake announced in a short but witty and pithy speech the programme of the ceremonies. By the arrangement Col. O'Fallon, as president of the road, opened the business of the day. Having addressed the citizens present on the magnitude of the undertaking and the great results which must follow from its completion, he proceeded to the *working part* of his duties, and in a few moments had quite a load of sand and gravel for the mayor of the city to wheel off. Col. O'Fallon is one of the oldest inhabitants. He has almost grown up with the city, and the past and present in his memory represent two views of the metropolis, one a French village on the borders of civilization, the other a magnificent emporium, the centre of commercial attraction, the nursery of refinement and science for an immense area of country, extending north to the Lake of the Woods and west to the Pacific slope. His words on the occasion were few but terse. Like the old Roman general, who was 'no orator,' he seemed to say, 'What others promise I will do.' Although silvered with the frost of many years, he looks forward to the completion of the work within 'his day.'

"Judge Ellis next took the stand. He briefly reviewed the difficulties encountered thus far in the work, spoke confidently of its completion, and dwelt for a time on the great importance of the road. He assisted Col. O'Fallon in 'breaking ground,' as an earnest that on his section of the line the great undertaking was commenced, to be prosecuted with unabated energy to a full and triumphant completion.

"Mayor Kennett then addressed the assembly, and in some happy remarks, in which he alluded to the progressive links of connection with Illinois, from sand to stone dikes, and now by iron bands, he hoped the tie would ultimately become strong and indissoluble, wedded by reciprocal interests which nothing should be able to sever.

"The officers of the Pacific Railroad Company were invited to take part in the ceremonies of the day, and they were accordingly present. The president, Mr. Allen, expressed his warmest wishes for the success of the enterprise, as one intimately connected with the prosperity of the work over which he presided." Addresses were also delivered by Professor Mitchell and Mr. Seymour, the contractor.

At an election for directors of the company, held Sept. 7, 1852, the following were chosen :

John O'Fallon, Henry D. Bacon, William H. Belcher, Joshua H. Alexander, Joshua B. Brant, Samuel Gaty, Isaac H. Sturgeon, Abner T. Ellis, Sidney Breese, J. L. D. Morrison, Charles P. Chouteau, Samuel H. Clubb, Alfred Kitchell.

The first section of the road was opened with appropriate ceremonies on April 8, 1854.

"At the hour appointed," says a writer in a St. Louis newspaper of April 9th, "we, in company with nine hundred and ninety-nine others, presented ourselves at the office of the company on Fourth Street, and there found some twenty or more omnibuses drawn up in array to receive their freight; from thence a few minutes' ride brought us to the Mill Creek station, where the invited disembarked on the horse conveyances and jumped into the railway cars. Precisely at noon the first train started, and in fifteen minutes was followed by the second.

"The line is of the six-foot or broad gauge, and is built between the banks of the Ohio and the Whitewater Canal, the scenery on both sides being most variedly picturesque. On the train moving the band struck up a lively air, the people thronged the windows, road, and bridges, and amid the vivas of the multitude, the cheers of the passengers, and the fringing of cannon the iron horse commenced its trip. All along the line the same gay scene was presented until the cars reached Sedamsville, where the train paused in its progress a few minutes. The band again played, and Mr. Sedam, from the bridge, fired several *feu de joie*s from a small piece of artillery, making the welkin ring again. A short ride from Sedamsville brought us to Industry, a flourishing little town of some fifteen hundred inhabitants. Once again the iron horse moves on through the valley, between the hills of Indiana and Kentucky, till it reaches the bank of the Great Miami, at the junction of the Lawrenceburg and Indianapolis Railroad.

"Here we were met and welcomed by a train from Aurora (our destination), filled with the gallant sons of Indiana. With this accession of numbers the cars crossed the Miami bridge, a plain but substantial and ingeniously built structure of wood. A few hundred yards over this a halt was made at Lawrenceburg. Leaving Lawrenceburg and its inhabitants behind, Farmer's and Miller's Creeks are passed (both spanned by wooden trestle bridges), and the train approached Aurora, which lies at the foot of surrounding hills, with the Ohio on one side and Hogan's Creek on the other. Here some time was passed in examining the machine- and locomotive-shops, which are built of stone, and in size commensurate with the prospective business of the road. The train started homeward at 4.30 P.M., stopped on the road at Lawrenceburg, at Gen. Harrison's seat, where the band played 'Auld Lang Syne,' at Sedamsville, where the cannon was again fired, and finally arrived at the Mill Creek station at six P.M., the passengers having had a most pleasant trip, attended with unmixed pleasure."

The "last spike" on the road was driven Aug. 15, 1857.¹

¹ "We have official information that the grandest internal improvement work of the West will be completed to-day at noon, by the driving of the last spike necessary to close up the gap in the Eastern Division of the Ohio and Mississippi Railroad. A company of gentlemen left here last evening to meet one from Cincinnati at the point of completion, near Mitchell, Ind., where, with appropriate extemporaneous observances, the happy event will be duly inaugurated."—*Republican*, Aug. 15, 1857.

Two years after the "last spike" was driven, Aug. 2, 1859, the following notice appeared in the *Republican* of that date:

"To *St. Louis Merchants*.—The Baltimore and Ohio Railroad Company is receipting for goods through from all Eastern cities from St. Louis, all rail *via* the Ohio and Mississippi Railroad, without the necessity of insurance against the perils of river navigation, and in as short time as by any other route."

The well-laid plans and bright anticipations with which the Ohio and Mississippi Railroad began its career did not avail to save it from the influence and effects of the panic of 1857, and both companies of that name succumbed before the blows of a financial disaster that destroyed almost all commercial values and prostrated enterprises of every kind. In order to save the property, the "Ohio and Mississippi Railroad Company of Illinois" was organized in 1861, and under the authority of its charter purchased the whole road from East St. Louis to Vincennes. Similar action was taken by the Indiana Company, and in 1869 the two companies were consolidated. In 1871 steps were taken to reduce the gauge from six feet to four feet eight inches, in conformity with that of the Marietta and Cincinnati and Baltimore and Ohio Roads, over and by which its "through" business with Baltimore must be transacted. This feat, then considered very remarkable, but now not so much so, was completed in seven hours on the 23d of July, 1871. It was during the administration of J. L. Griswold as general superintendent that the change of gauge was effected.

Before this time the gauge of the Ohio and Mississippi had conformed to that of the Erie Road of New York, with which it connected *via* the Atlantic and Great Western, across the State of Ohio. Hence freights reaching Cincinnati from St. Louis and farther West *via* the Ohio and Mississippi road, and destined for the Atlantic seaboard, must have gone forward to New York by the Erie connection or been reshipped at Cincinnati, subject to the additional expense of that operation. To obviate this great obstruction to the trade of Baltimore as well as of St. Louis, the Baltimore and Ohio Railroad, by a large subscription to the new loan of the Ohio and Mississippi, obtained an influence and power in the management of that company which effected first the change of gauge, and subsequently a practical consolidation of the Ohio and Mississippi, the Marietta and Cincinnati, and the Baltimore and Ohio in one great central line.

The *Louisville Branch* of the Ohio and Mississippi, from North Vernon to Jeffersonville, Ind., was built under an act of March 3, 1865, and opened in 1869.

Surveys for the Springfield Division, extending from Beardstown, on the Illinois River, to Shawneetown, on the Ohio, were commenced in 1865. The organization that completed that part of the road was the Springfield and Illinois Southeastern Railroad Company. The road was opened from Springfield to Pana in 1869, from Shawneetown to Flora in 1870, from Springfield to Beardstown in 1871, and from Pana to Flora in 1872. The panic of 1873, and the years of business depression that followed, caused, in 1874, a sale under foreclosure proceedings, at which, on the 1st of January, 1875, the property was purchased by the Ohio and Mississippi Railway Company for \$1,700,000 in bonds secured by mortgage on that division.

On the 17th of November, 1876, the Ohio and Mississippi Railway was placed in the hands of a receiver.

The Ohio and Mississippi Railway is a direct line between St. Louis and Cincinnati, and the main stem is three hundred and forty-one miles in length. It has intersections at Sandoval, Olney, Vincennes, and other points along the road. At North Vernon, two hundred and sixty-eight miles from St. Louis, the Louisville Branch leaves the main line, making fifty-five miles to Louisville. At Flora, Ill., the Springfield Division crosses the main line, connecting Shawneetown and Beardstown, two hundred and twenty-eight miles, and joining at the north with the St. Louis and Rock Island Division of the Chicago, Burlington and Quincy Railroad.

The mileage of the Ohio and Mississippi Railroad on Dec. 31, 1882, was as follows:

	Miles.
St. Louis to Cincinnati.....	341
Louisville to North Vernon.....	55
Shawneetown to Beardstown.....	228
Total.....	624

The earnings for the year ending Dec. 31, 1881, amounted to \$4,074,407.81; operating expenses, \$3,115,355.19; net earnings, \$959,052.62. The share capital of the company is \$24,030,000, of which \$20,000,000 is common and \$4,030,000 preferred. The total funded debt is \$12,872,000.

After the road was placed in the hands of a receiver, it was proposed to reorganize the company as follows: To create a series of five per cent. fifty year bonds secured by mortgage on road, equipment, and personal property of the company to the amount of \$16,000,000, of which \$12,784,000 will be exchanged for old bonds as they mature as follows: Income and funded debt bonds, due Oct. 1, 1882, \$174,000; first consolidated mortgage bonds, due Jan. 1, 1898, \$6,772,000; second consolidated mortgage bonds, due

April 1, 1911, \$3,829,000; Springfield Division bonds, due Nov. 1, 1905, \$2,009,000. The residue (\$3,216,000) to be used for the following purposes: To pay past-due coupons on the first mortgage, \$48,825; on second mortgage, \$536,060; on Springfield Division, \$351,575; to pay contributions first mortgage sinking fund, \$177,000; second ditto, \$165,845; to pay second mortgage, Western Division bonds, \$97,000; debenture bonds, \$140,000; special loans (for which Springfield Division bonds have been hypothecated), \$250,000; remainder of floating debt, \$150,000; contingent liabilities, \$300,000; additional equipment and terminal facilities, \$999,695. The \$3,216,000 issue is to be further secured by a pledge of \$991,000, Springfield Division bonds, which will be canceled on the retirement of the present first mortgage bonds of the company. The \$12,784,000 to be held for the sole purpose of retiring the old bonds as they mature. The above proposition of the committee on reorganization, which was under date of Jan. 20, 1882, was accepted by the stockholders of the company on the 7th of April, 1882. The officers of the company are: Directors, W. T. McClintick, Chillicothe, Ohio; Charles A. Beecher, John Waddle, Cincinnati; R. L. Cutting, Jr., Henry M. Day, New York; Robert Garrett, Osmun Latrobe, James Sloan, Jr., T. H. Garrett, Baltimore, Md.; F. W. Tracy, Springfield, Ill.; F. Janssen, Louisville, Ky.; H. Pearson, London, Eng. President, W. F. McClintick, Cincinnati; Receiver, J. M. Douglas, Cincinnati; Superintendent, W. W. Peabody, Cincinnati; Secretary, W. M. Walton, New York; Treasurer, Charles S. Cone, Cincinnati; Chief Engineer, N. A. Gurney, Cincinnati; Master of Car Repairs, J. P. Coulter, Cochran, Ind.; General Passenger Agent, W. B. Shattuck, Cincinnati; General Freight Agent, William Duncan, St. Louis; Purchasing Agent, G. E. Atwood, Cincinnati; Road Master, H. D. Hanover, Aurora, Ind.; Superintendent of Bridges, H. M. Hall, Olney, Ill.

The Ohio and Mississippi Railroad Company has contributed immensely to the development of East St. Louis. "The Ohio and Mississippi Railroad at East St. Louis," said a St. Louis newspaper of April 16, 1864,

"has congregated a population large enough to constitute quite a populous village of most industrious inhabitants. The company owns there forty-two acres of ground about a mile from the river. On that tract, with great labor and expense, they have constructed an elevated plateau of more than four acres of ground, about twelve feet above the average level of the surrounding bottom land, and about six feet above the high-water mark of 1858. On these four acres are the extensive machine-shops of the company, which, with necessary

yard-room, occupy nearly the whole of that large space. Within these shops over two hundred and seventy men are employed,—machinists, carpenters, blacksmiths, painters, glaziers, upholsterers, copper- and tin-workers, and common laborers. In the various departments the workmen are of the best class, skillful machinists, carpenters, and painters, who all command the highest wages, and would be in demand in any city where skilled labor is required."

The Marietta and Cincinnati and the Baltimore and Ohio Railroads, continuing the great central St. Louis and Baltimore line to the Atlantic Ocean, fill a place in the railway system of which St. Louis is the commercial and business centre, which requires some description and explanation. The Belpre and Cincinnati Railroad Company was chartered in 1848 to construct a line of railway from the Ohio River opposite Parkersburg, W. Va., up the Hocking valley to the Little Miami Railroad, and by an amendment to the charter in 1851, was authorized to construct to Cincinnati and to consolidate with the Franklin and Ohio River Railroad, under the corporate title of the "Marietta and Cincinnati Railroad Company." For seven years the work of construction was prosecuted slowly; and the company having become embarrassed, was placed in the hands of a receiver in 1857, in which year (April 20th) it was opened, the Little Miami Railroad being used from Loveland to Cincinnati. From this receivership the company emerged in 1860, barnacled with "first preferred," "second preferred," and "common stock." Other legal obstructions as to the character of its franchises kept the company "in chancery" until relieved by legislative action in 1863. The Union Branch Railroad from Scott's Landing to Belpre was soon after purchased, and also the road from Hillsboro' to Loveland from the Hillsboro' and Cincinnati Railroad Company. In December, 1863, the Marietta and Cincinnati Railroad Company purchased that part of the Scioto and Hocking Valley Railroad between Portsmouth and the track of the Cincinnati and Muskingum Valley Railroad, now known as its "Portsmouth Branch."

The extension from Loveland to the Cincinnati, Hamilton and Dayton Railroad was completed Feb. 17, 1866, and the Cincinnati and Baltimore Railway, which continues the line into Cincinnati, was opened June 1, 1872. The Baltimore Short-Line Railway was opened Nov. 15, 1874. The Marietta and Cincinnati Railroad Company guaranteed the stock and bonds of these companies.

Owing to the non-completion of the Northwestern Virginia Railroad, now known as the Parkersburg Branch of the Baltimore and Ohio, from Grafton to Parkersburg, it was not until 1857

that through business with Baltimore could be effected. The material aid extended by the Baltimore and Ohio kept the company afloat until June 27, 1877, when, having made default in the interest on its fourth mortgage bonds, its property was placed in the hands of a receiver. After remaining under the control of receiver John King, Jr., for several years, J. H. Stewart was appointed receiver, and in 1880 a committee on reorganization was named by the bondholders, as follows: Augustus Kountze, E. R. Bacon, George Arents, and J. B. Dumont, of New York; T. Edward Hambleton, Skipwith Wilmer, and H. Irvine Keyser, of Baltimore. This committee adopted plans looking to the reorganization of the road, which was finally sold for \$4,375,000 to the purchasing committee of security-holders, composed of Messrs. E. R. Bacon, of New York, T. Edward Hambleton, and Robert Garrett. The Baltimore and Ohio interest, in the absence of Robert Garrett, was represented by John K. Cowen. The price was about two-thirds of the appraised value of the property, the lowest amount at which it could be sold under the order of the court. As the transaction was entirely formal and in accordance with the plan of reorganization, which was assented to by ninety-eight per cent. of the security-holders, the price is not a criterion of the value of the road. Under the reorganization, the leased short line at each end becomes part of the new line, one hundred and ninety-five miles long, from Cincinnati to Parkersburg, with branches, etc., that make the total length two hundred and fifty-five miles. The purchasers paid \$100,000 cash and the remainder in the securities of the corporation. After the ratification of the sale new securities were issued. Their classification is as follows: First mortgage bonds, four and a half per cent. guaranteed, \$7,185,000, subject to reduction; second mortgage, five per cent., \$3,040,000; third mortgage, three per cent. for ten years and four per cent. thereafter, \$2,270,000; fourth mortgage, first income, five per cent., \$3,410,000; fifth mortgage, second income, five per cent., \$4,000,000, together with preferred and common stock to be issued upon the completion of the reorganization. Some claims in litigation remained to be settled by the courts. The old first and second mortgages were seven per cents., and the thirds and fourths were eight per cents.

After confirmation of the sale by the court a new company was incorporated, which was styled the Cincinnati and Baltimore Railroad Company. It forms the connecting link between Parkersburg and Cincinnati, in the St. Louis line of the Baltimore and Ohio,

and is fully under the control of the Baltimore and Ohio corporation. J. H. Stewart, formerly receiver of the Marietta and Cincinnati, is general manager of the reorganized road.

The length of the Marietta and Cincinnati Railroad proper, from Cincinnati and Baltimore Junction, Ohio, to Main Line Junction, Ohio, in 1882, was 156.80 miles.

Branches:

The directors of the company, elected Feb. 15, 1882, were Robert Garrett, W. T. Burns, Theodore Cook, W. W. Peabody, Baltimore, Md.; George Hoadley, H. C. Smith, R. M. Bishop, W. W. Scarborough, James D. Lehmer, W. B. Loomis, John Waddle, Cincinnati, Ohio; William T. McClintick, William Waddle, Chillicothe, Ohio. General superintendent, W. W. Peabody, Cincinnati, Ohio; ticket agent at St. Louis, J. D. Phillips.

Baltimore and Ohio Railroad Company.—The history of the Baltimore and Ohio Railroad Company is too voluminous for more than brief and cursory treatment in this work. As early as 1827 the merchants of the Atlantic cities were looking to that vast and fertile region of the great West between the Alleghenies and the Mississippi River, for the bulk of the productions that were to constitute the commerce and subsistence of the country. The Erie Canal of New York and the public works of Pennsylvania promised to New York City and Philadelphia a future interest in that great valley, from which Baltimore would be practically cut off for want of something better than the "National road." The Chesapeake and Ohio Canal, confronted by the elevations of the Alleghenies, could promise but little, and that little would go to Georgetown on the Potomac, hindering rather than promoting the commerce of Baltimore. Steam railroads at that day were unknown, none having been built either in England or elsewhere for the transportation of passengers and produce. Iron tramways for coal and other heavy productions were in use only to a very limited extent. It was a bold thought which induced Philip E. Thomas, then presi-

dent of the Mechanics' Bank of Baltimore and commissioner of the Chesapeake and Ohio Canal, to resign the latter position and undertake to enlist his fellow-citizens of Maryland in the work of constructing a railroad from the Chesapeake Bay to the Ohio River. Nevertheless, Mr. Thomas entered upon the work with a zeal born only of conviction, and succeeded in obtaining the co-operation of George Brown, another prominent and influential capitalist of Baltimore.

At a public meeting held in Baltimore, Feb. 12, 1827, these two gentlemen expressed the conviction that rail transportation must supersede that of water, and induced the appointment of a committee to collect facts and carefully consider the novel proposition. That committee was quick to observe and note the facts that the *trend* of the Atlantic coast shortened the line from the East to the West, placing Southern cities nearer to the great valley than Northern cities; and that Baltimore was two hundred miles nearer to the navigable waters of the Mississippi valley than New York, and one hundred miles nearer than Philadelphia. The committee also strongly sustained in its report the idea that railroads would supersede canals in transportation, and earnestly recommended the construction of a railroad from Baltimore to the Ohio River. John V. L. McMahon prepared the charter of the Baltimore and Ohio Railroad Company, the charter for the first railroad in the United States, which, from its very great clearness, became the model for many subsequent charters. At the session of the General Assembly of Maryland in 1828, the sum of five hundred thousand dollars was voted to aid in the construction of the work. The surveys of 1827 and those of 1828 made apparent the feasibility of the route to the Ohio River along the valley of the Potomac, and on July 4, 1828, the venerable Charles Carroll of Carrollton "broke ground," and on the 1st of October, 1828, the work was fairly commenced "all along the line" from Baltimore to Ellicott's Mills. Congress was petitioned at the session of 1828-29 to aid in this important work, but notwithstanding a favorable consideration by many members, the influence of the Chesapeake and Ohio Canal Company was potent enough to prevent any favorable action. The first division of the road to Ellicott's Mills was opened for traffic in 1830, and the "brigade of cars,"¹ as trains were then called, hauled by horses or mules, left "the depot on Pratt Street at six and ten o'clock A.M., and at three and four o'clock P.M., and will leave the depot at Ellicott's

Mills at six and eight and a half o'clock A.M., and at twelve and a half and six o'clock P.M." It was in 1830 that George Stephenson's locomotive, "The Rocket," made fifteen miles per hour on the Liverpool and Manchester Railroad. But the England of 1830 was very much farther from America than that country is to-day. Ideas traveled then by sail-vessels, and not by electricity, and it was to "put fire on their backs" that the Baltimore and Ohio Railroad Company offered to the mechanical genius of America rewards of five and four thousand dollars respectively for locomotives which, upon trial, should prove to be the first and second best in complying with the specifications. "The York," an engine built at York, Pa., by Davis & Gartner, attained upon trial a speed of fifteen miles an hour, and practically demonstrated the feasibility of steam as a traction agency. The charter of the "Washington Branch" was obtained in 1832, as well as authority to extend the tracks of the company to the harbor of Baltimore from Mount Clare shops and depot. The road was opened from Baltimore to Point of Rocks in 1832, but further prosecution of the work to Harper's Ferry was temporarily arrested by injunction sued out by the Chesapeake and Ohio Canal Company. The delay continued for about a year, and the road was not opened to Harper's Ferry until 1834. The charter of the Washington Branch had been saddled with objectionable provisions, which were not removed until 1833, after which so energetically was the work of construction pushed that in July, 1835, the branch was opened to Bladensburg, and to Washington City in August of the same year. The controversy with the Chesapeake and Ohio Canal Company impeded and obstructed the work of the railroad company west of Harper's Ferry until the Legislature of 1835-36 removed all obstructions to the extension westward of the company's lines. The State of Maryland and the city of Baltimore each about this time subscribed three million dollars to the capital stock of the company.

The Harper's Ferry viaduct over the Potomac River was completed in December, 1836, opening a connection with the valley of Virginia by the Potomac and Winchester Railroad. From Harper's Ferry to the Ohio River the work of construction was not pushed forward steadily. Preliminary surveys were completed in 1838, but the period of time fixed in the charter of the company by the State of Virginia for the occupancy of that part of the State to be entered upon by the company having expired, an extension of five years for completion to the Ohio River was granted by the State, coupled with the condition that Wheeling should be one of the termini, and a

¹ *Baltimore American*, July, 1830.

subscription of \$1,058,420 to the capital stock of the company was made by the State of Virginia. In 1842 the road was opened to Hancock and Cumberland, and in 1853 to Wheeling, a total distance of three hundred and seventy-nine miles. The formal opening took place on the 12th of January, 1853. The successive periods of progress by this great road in reaching its destination on the Ohio are worthy of being preserved. They are:

	Miles.
May 24, 1830, to Ellicott's Mills, by horse-power.....	14
Aug. 30, 1830, " " steam "	14
Dec. 31, 1831, to Frederick.....	61

July 22, 1852, to Fairmont.....	302
Jan. 12, 1853, to Wheeling.....	379

The Northwestern Virginia Railroad was leased by the Baltimore and Ohio in 1857, for a period of five years, renewable, and became the Parkersburg Branch, extending from Grafton on the main line to Parkersburg, on the Ohio River.

The civil war was a period of repeated raids and injuries to the road, but the work of reconstruction was promptly entered upon immediately after the termination of actual hostilities in 1865, and at the same time the policy of the president, John W. Garrett, looking to more intimate and thorough connections with the railway system west of the Ohio River, took active shape. In pursuance of this general plan the Central Railroad of Ohio, between Bellaire and Columbus, was leased in 1866 by the Baltimore and Ohio, and an unbroken line opened between Baltimore and the capital of Ohio, where connection was made with Cincinnati, Indianapolis, and other points in the Western States.

The Winchester and Potomac Railroad, leased in 1867, opened the great valley of Virginia to this railroad, and the line was further extended up that valley by the lease in 1870 of the Winchester and Strasburg Railroad and the Manassas Division, in the valley, of the present Virginia Midland Railroad Company.

In 1869 the Sandusky, Mansfield and Newark Railroad having passed under the control of the Baltimore and Ohio, opened the lakes to the Lake Erie Division of the road. The great iron bridge at Parkersburg was opened in 1871, and in the same year the Hempfield Railroad, from Wheeling to Washington, Pa., was purchased, and has since been operated as the Wheeling, Pittsburgh and Baltimore Branch. The Pittsburgh and Connellsville Road, which was leased

from Jan. 1, 1876, offered another outlet, and brought Baltimore and Pittsburgh into a direct interchange of trade and business. The Metropolitan Branch, from Washington to the main line, was commenced in 1870, and completed May 28, 1873. The Newark, Somerset and Straitsville Railroad Company passed into the control of the Baltimore and Ohio in 1872, and in the same year the charters from the States of Ohio, Indiana, and Illinois for the Baltimore, Pittsburgh and Chicago Railroad Company were granted, and the road was completed from Centreton to Chicago in 1874, thus providing a through line between Baltimore and Chicago.

The different lines of the Baltimore and Ohio system in 1882 were:

	Miles.
Main Stem, from Baltimore to Wheeling.....	379
Parkersburg Division, from Grafton to Parkersburg.....	104
Washington Branch, Relay to Washington.....	31

Marietta and Cincinnati Railroad.....	297
Ohio and Mississippi Railway.....	620
Total.....	2409½

The "terminal facilities" of the Baltimore and Ohio Railroad Company at Locust Point, Baltimore, inuring indirectly but most materially to the trade and commerce of St. Louis, constitute a factor in the railroad facilities of St. Louis as well as of Baltimore. As early in the history of the road as 1848 the coal trade demanded and received the means of easy and inexpensive trans-shipment from the cars to the boat. In 1851 the Locust Point lands, purchased by Hon. Thomas Swann, president of the company, were increased in area by means of inducements held out to private parties to erect their own wharves at Whetstone Point. It was not until 1860, however, when connections had been established with the West, and the fruits of Mr. Garrett's sagacity were beginning to be realized, that the development of the "terminal facilities" at Locust Point took their present definite and complete shape. The experimental European line established by Mr. Garrett's purchase of the "Allegheny," the "Carroll," the "Somerset," and the "Worcester" steamships from the United States government was the beginning of that Atlantic extension of the Baltimore and Ohio, by which Western grain and produce are shipped in bulk to

Europe on through bills of lading. The erection of piers, wharves, and warehouses followed immediately upon the establishment of this European line. The management of so vast an enterprise demanded the sagacity and nerve of a man like Mr. Garrett to demonstrate its feasibility, before the more timid would take hold of a doubtful and untried business. The experimental line finally gave way to others which are now reaping the harvest of the seed which Mr. Garrett sowed.

Elevators followed and facilities increased until Baltimore offers cheaper and easier trans-shipment of heavy products than any Atlantic port in the country. The largest steamer in the United States transfers trains of cars across the harbor of Baltimore to the tracks of the Philadelphia, Wilmington and Baltimore Railroad, and an independent connection with Philadelphia and New York will in the near future make the Baltimore and Ohio a separate and distinct line from New York as well as from Baltimore. When this great object shall have been consummated it is fair to presume, from his past career, that Mr. Garrett will give greater freedom to transportation between the East and the West, as he has given cheaper rates, and forced upon others the lesson that Baltimore is an important factor in the foreign commerce of the Western States.

To the great executive powers and financial talents of John W. Garrett, ably seconded by his son, Robert Garrett, now first vice-president of the company, the present vast development of the Baltimore and Ohio Railroad is unquestionably due. Under Mr. Garrett's prudent, wise, and at the same time aggressive management the company has successfully weathered all the financial storms that have threatened it in common with other railroad properties, and has come off more than conqueror in all the "wars" that have been waged by it with rival companies. Mr. Garrett has also preserved his company from the injurious effects of "watered stock," and now enjoys the satisfaction of seeing it command a place in the markets surpassed by no other railroad corporation.

Several years ago Mr. Garrett called to his aid the vigorous energies of his son, Robert Garrett, who had been educated and trained to railroad management, and who has since abundantly demonstrated his peculiar fitness for the position.

To the facilities of transportation offered by the Baltimore and Ohio Railroad and its extensive connections, Mr. Garrett has added those of the telegraph and express systems. By the former he provides competition with the former telegraphic monopoly of the Western Union Company, and by the latter he extends

the competition to the transportation of valuable and perishable articles. He has also organized an Atlantic Cable Company for telegraphic communication with Europe, which will probably soon have in operation two cables connecting the land wires of the Baltimore and Ohio Telegraph Company with all European capitals and commercial centres. It is doubtful whether any single life has been more fruitful of grand achievements in railroading than that of John W. Garrett.

The labors of Mr. Garrett in the many departments of his great railroad system have demanded the assistance of men of marked ability and fertility of resource at points distant from the headquarters of the company. The selection at St. Louis has been a most fortunate one. To W. W. Peabody, general superintendent of the Ohio and Mississippi Railroad, the great success of this line has been pre-eminently due. His zeal, ability, energy, and integrity have established with the commercial and traveling community a confidence in the safety and reliability of the great line of railroad possessed by no other company to a greater degree and enjoyed by very few to an equal extent.

The Ohio and Mississippi Railway claims to be the shortest and quickest route between St. Louis and Cincinnati, and between St. Louis and Louisville. The road being under the management of one general superintendent, all trains leaving St. Louis for Louisville and Cincinnati are run through promptly on time, and a continuous trip is guaranteed. In connection with the Marietta and Cincinnati and the Baltimore and Ohio Railroads, trains are run through to Washington, D. C., without the change of a single car in all the chain of day-coaches, parlor-, palace-, and other cars. It is worthy of remark in this connection that the Baltimore and Ohio Railroad Company operates a sleeping-, dining-, and parlor-car system of its own, and that it is the only line that passes through the national capital in going East.

The Wabash, St. Louis and Pacific Railway Company originated in the Toledo and Illinois Railroad Company, which was organized April 25, 1853, under the laws of the State of Ohio, to construct a railroad between Toledo and the western boundary of the State. On the 19th of August following the Lake Erie, Wabash and St. Louis Railroad Company was organized under the laws of Indiana to build a road from the east line of the State through the valleys of the Little River and Wabash River to the west line of the State in the direction of Danville, Ill. The road from Toledo through Ohio and Indiana was constructed under these two charters. On the 25th of June, 1856, the two companies were consolidated under the style of the Toledo, Wabash

and Western Railroad Company. This organization having become financially embarrassed in the general panic of 1857-58, its property was sold in October, 1858, under foreclosure proceedings, and purchased by Azariah Boody, who conveyed it to two new companies, under the style of the Toledo and Wabash, of Ohio, and the Wabash and Western, of Indiana, the two being consolidated Oct. 7, 1858, under the corporate name of the Toledo and Wabash Railroad Company, which operated the road through the States of Ohio, Indiana, and Illinois until 1865, when all interests between Toledo and the Mississippi River at Quincy and Hamilton were consolidated under an agreement between the Toledo and Wabash, the Great Western of Illinois, the Quincy and Toledo, and the Illinois and Southern Iowa Railroad Companies, under the style and designation of the Toledo, Wabash and Western Railway Company. The Great Western Railroad Company of this combination was organized in 1859, and its road extended from the Indiana State line to Meredosia, in Illinois, with a branch from Bluff City to Naples. The road from Meredosia to Camp Point was owned by the Quincy and Toledo Railroad Company, and the road from Clayton, Ill., to Carthage, Ind., was owned by the Illinois and Southern Iowa Railroad Company.

In 1870 the Decatur and East St. Louis Railroad Company constructed and equipped a road between Decatur and East St. Louis, which in the same year came under the management and control of the Toledo, Wabash and Western Railway Company, and which was opened to St. Louis in 1871. The Hannibal and Naples Railroad, between Naples and Hannibal, with a branch to Pittsfield from Maysville, was leased in 1870 by the Toledo, Wabash and Western Railway Company, and in 1871 the same company obtained control of the Hannibal and St. Louis Central Railroad, from Hannibal to Moberly, and also of the Pekin, Lincoln and Decatur Railroad, which was thenceforth operated as the "Pekin Division." In 1872 the Lafayette and Bloomington, from Lafayette Junction to Bloomington, was added to the lines of the Toledo, Wabash and Western Railroad Company, making a total of over nine hundred miles of road operated under ownership and lease by this corporation. In 1874 financial disaster overtook the company, and its property passed under decrees of the courts into the hands of John D. Cox as receiver. Mr. Cox retained control until 1877, when a reorganization was effected under the style of the Wabash Railway Company. The leases of the Pekin, Lincoln and Decatur and the Lafayette and Bloomington Railroads were set aside during the receivership, as

well as that of the bridge at Quincy. In 1877 the Edwardsville Branch passed under the control of the Wabash, and on the 7th of November, 1879, the Wabash, St. Louis and Pacific Railway Company was organized by the consolidation of the Wabash and the St. Louis, Kansas City and Northern Railway Companies and their branches.

The St. Louis, Kansas City and Northern Railway Company is the outgrowth of the North Missouri Railroad Company, which was chartered March 1, 1851, to build, equip, and operate a railroad from St. Louis to the boundary line between Missouri and Iowa, and thence on to Ottumwa and Chariton.

The work of construction was commenced in May, 1854, and the road was completed to the Missouri River, opposite St. Charles, on the 2d of August, 1855; to Warrenton in August, 1857; to Mexico in May, 1858; to Moberly Nov. 30, 1858, and to Macon in February, 1859. The civil war affected all works of this character, and the North Missouri remained stationary at Macon until 1864. Unable to meet its obligations to the State for interest, in consequence of the war and its effects, the company met with most favorable action on the part of the Legislature of 1866-67, which relinquished the State lien, upon the condition that the company should build a branch from Moberly to Kansas City and the western boundary of the State, and extend the road from Macon to the Iowa line. By this generous action on the part of the State the company was enabled to push its extensions both north and west. In 1868 the road was completed to the State line at Coatesville, and in 1869 the road was opened to Kansas City, on the western line, and to Ottumwa, on the northern line, which was reached over the St. Louis and Cedar Rapids Railroad, built by an independent corporation and leased by the North Missouri. The Chariton and Randolph and the Missouri River Valley Railroad Companies were consolidated into the North Missouri in 1864. The line of the latter companies was opened from Moberly to Brunswick Dec. 15, 1857; to Carrollton Aug. 15, 1868; to Lexington Junction Oct. 1, 1868, and to the junction with the Hannibal and St. Joseph Railroad Nov. 28, 1868.

In 1871 financial embarrassments overtook the North Missouri Company, and foreclosure following, the road was purchased by M. K. Jessup, of New York, who in February, 1872, assigned it to the St. Louis, Kansas City and Northern Railroad Company, a corporation organized under the general railroad law of Missouri. A new line from Ferguson into St. Louis and the Union Depot was built in 1876, and the road was extended from North Missouri Junction to Kan-

sas City and from Pattensburg to Council Bluffs, with a branch to Clarinda, in 1879.¹

The capital stock of the new consolidated company (Wabash, St. Louis and Pacific Railway) on Jan. 1, 1880, was \$40,000,000, half common and half preferred, of which \$12,000,000 of each kind was assigned to the former stockholders and creditors of the St. Louis, Kansas City and Northern, and \$8,000,000 of each kind to those of the Wabash Company. The indebtedness of the two companies, \$35,469,550, was assumed by the new company upon consolidation, making the capital and bonded debt of the new company Jan. 1, 1880, \$75,464,550.

Twenty-one railroad organizations which were at one time operated as distinct lines have been merged in order to form what is now known as the great Wabash, St. Louis and Pacific Railroads, one of the largest systems in the United States. Previous to 1880 the Wabash proper extended from Toledo to St. Louis, Hannibal, Quincy, and Keokuk, with a branch from Logansport to Butler, Ind., or a total length of seven hundred and eighty-two miles. But in the fall of 1879, as we have seen, the Wabash was consolidated with the St. Louis, Kansas City and Northern Railroad, extending from St. Louis to Kansas City, St. Joseph's, Ottumwa, and Council Bluffs, with several small branches, having in all seven hundred and sixty-nine miles of road. The corporation thus formed, with a mileage of fifteen hundred and fifty-one miles, established its headquarters at St. Louis. During the same year entry to Chicago was effected by the purchase of the Chicago and Padueah, extending from Effingham and Altamont to Chester, Ill., and the construction of a branch from Strawn, ninety-six miles northward. Subsequent acquisitions were the Toledo, Peoria and Warsaw Road, extending from State line, Indiana, through Peoria to Burlington, Warsaw, and Keokuk, a distance of two hundred and forty-six miles, and before the close of the same year, the Quincy, Missouri and Pacific, Champaign, Havana and Western, Missouri, Iowa and Nebraska, and Centreville, Moravia and Albia Roads, all connecting at different points with the main line. On Dec. 31, 1880, the system comprised two thousand four hundred and seventy-nine miles.

The lines built and acquired during 1881 were the Detroit and Butler, an extension of the Logansport and Butler Division to the city of Detroit, one hundred and thirteen miles; and the purchase of the In-

dianapolis, Peru and Chicago Railway, extending from Indianapolis to Michigan City, a distance of one hundred and sixty-one miles. Other roads added to the system the same year were the Cairo and Vincennes, the Danville and Southwestern, the Quincy, Missouri and Pacific, the Des Moines and Northwestern, and the Attica and Covington, making the actual revenue-earning mileage of the Wabash at the close of the year 1881 three thousand three hundred and eighty-four miles.

The Butler and the Detroit, in connection with the Toledo, Peoria and Warsaw, completed the second independent trunk line of the system from the Mississippi River to Lake Erie, besides securing new connections upon its entrance to Detroit.

Several extensions and branches were finished during 1882, the most important of which were the Shenandoah and the Des Moines Divisions. The former continued the second trunk line from the Mississippi to Lake Erie through to the Missouri, and established another to Council Bluffs and Chicago line. The cities of St. Louis and Des Moines were connected in a more direct manner than heretofore. The total length of the Wabash is 3670.6 miles, being the third largest mileage of any distinct railroad company in the world. The details of the mileage of the lines east of the Mississippi are as follows:

	Miles.
Toledo, Ohio, to St. Louis, Mo.....	435.7
Decatur, Ill., to Quincy, Ill.....	150.7
Bluffs, Ill., to Hannibal, Mo.....	49.8
Maysville, Ill., to Pittsfield, Ill.....	6.2
Clayton, Ill., to Keokuk, Iowa.....	42.3
Logansport, Ind., to Detroit, Mich.....	213.8
Edwardsville, Ill., to Edwardsville Crossing, Ill.....	8.5
Indianapolis, Ind., to Michigan City, Ind.....	161.0
Havana, Ill., to Springfield, Ill.....	47.2
Hollis, Ill., to Jacksonville Junction, Ill.....	75.3
West Lebanon, Ind., to Le Roy, Ill.....	76.0
Vincennes, Ind., to Cairo, Ill.....	158.0
Danville, Ill., to St. Francisville, Ind.....	113.1
Toledo, Ohio, to Milan, Mich.....	34.0
Attica, Ind., to Covington, Ind.....	14.5
State Line, Ind., to Burlington, Iowa.....	214.8
La Harpe, Ill., to Elvaston, Ill.....	20.8
Hamilton, Ill., to Warsaw, Ill.....	5.0
Chicago, Ill., to Altamont, Ill.....	215.5
Streator, Ill., to Streator Junction, Ill.....	39.6
Shumway, Ill., to Effingham, Ill.....	8.5
Urbana, Ill., to Havana, Ill.....	102.2
White Heath, Ill., to Decatur, Ill.....	29.7
Bates, Ill., to Grafton, Ill.....	71.4
Champaign, Ill., to Sidney, Ill.....	14.0
Total.....	2307.6

The Western Division, connecting the Missouri River with the great lakes, is the great Northwestern feeder of St. Louis commerce, penetrating all portions of Missouri, and furnishing an outlet to St. Louis for a large portion of the commerce of Central and Northern Iowa. The Western Division is being pushed forward, and will ultimately be extended to Estherville, Dickinson Co, in the northern border of Iowa, and

¹ On the 2d of February, 1878, the *Republican* announced that on "Monday morning the first through train from St. Louis to St. Paul will leave the Union Depot via the St. Louis, Kansas City, and Northern Railroad."

will some day penetrate the great wheat-fields of Minnesota and Dakota. Various short lines have been extended, until now the total mileage of the Wabash west of the Mississippi is in detail as follows:

	Miles.
St. Louis, Mo., to Kansas City, Mo.....	276.8
Brunswick, Mo., to Council Bluffs, Iowa.....	224.4
Roseberry, Mo., to Clarinda, Iowa.....	21.5
Moberly, Mo., to Ottumwa, Iowa.....	131.0
North Lexington, Mo., to St. Joseph, Mo.....	76.3
Centralia, Mo., to Columbia, Mo.....	21.8
Salisbury, Mo., to Glasgow, Mo.....	15.0
Ferguson, Mo., to Biddle Street, St. Louis.....	10.6
Quincy, Mo., to Trenton, Mo.....	135.9
Keokuk, Iowa, to Shenandoah, Iowa.....	244.0
Relay, Iowa, to Des Moines, Iowa.....	91.3
Des Moines, Iowa, to Fonda, Iowa.....	115.0

RECAPITULATION.

Lines east of the Mississippi River.....	2307.6
“ west “ “ “	1363.0
Total.....	3670.6

From Toledo the Wabash makes connection with the Atlantic cities *via* the Lake Shore and also the Canada Southern Road. The Wabash is located in the States of Ohio, Indiana, Illinois, Missouri, and Iowa, or in that portion of those States lying between thirty-seven degrees and forty-two degrees of latitude, and between eighty-two degrees and ninety-six degrees of longitude. Within these boundaries is contained one of the most productive regions on the continent.

The elements of agricultural, forest, and mineral strength combined make it now, under partial development, a region of unsurpassed richness. The largest agricultural production is of wheat and corn. The production of wheat in the United States for 1882 was 502,798,600 bushels. Of this, 196,244,100 bushels was grown in the five States through which the road passes, being thirty-nine per cent. of the whole crop. The production of corn in the same year was 1,624,917,800, and the amount grown in the same States was 740,665,000 bushels, being forty-six per cent. of the whole crop. Other farm productions were proportionately large.

All the climatic and soil conditions are the most favorable for the growth of the staple crops of the temperate zone. In Ohio, Indiana, and Missouri are yet extensive and valuable timbered areas, from which the manufacturing establishments of these and adjoining States draw large supplies. The manufacturing establishments of the United States turned out productions valued at \$5,369,667,706 in 1880; the five States above mentioned, embracing an area of 256,880 square miles, about nine per cent. of the entire area of the United States, turned out from their manufactories a product valued at \$1,147,606,405, or twenty-one per cent. of the whole product of the country.

The mineral wealth of all these States is destined at no distant period to make them the central manufacturing ground of the country.

The large area of bituminous coal contained in them, of a quality suitable for the manufacture of iron, with the unlimited supply of Missouri ore of the best quality located so near the coal, must place these States in the front rank as manufacturing localities. Their central location will give them great advantages in distribution, much greater than any other locality can command. This area also presents the rarest and strongest combination of elements for future growth and greatness.

The population of these States was, by the census of 1880, 12,048,764, averaging in the States as a group only 47 to the square mile. Their area has the capability of sustaining and profitably employing five times the population it now has, and there is no other area on the continent of equal extent that has within its boundaries so small a percentage of waste or unproductive land.

The transportation facilities for movement of productions, by natural and artificial means, are better adapted to its wants than those of any other region of equal extent. These are considerations of the greatest importance, which will have a potent influence on this region.

The officers of the Wabash, St. Louis and Pacific Railway Company are: Directors, Frederick L. Ames, Boston; A. L. Hopkins, Jay Gould, Russell Sage, Sidney Dillon, Solon Humphreys, Samuel Sloan, G. G. Haven, New York; Charles Ridgeley, Springfield, Ill.; James F. Joy, Detroit, Mich.; James Cheney, Fort Wayne, Ind.; B. W. Lewis, James F. How, Thomas E. Tutt, St. Louis; George L. Dunlap, Chicago. President, Jay Gould, New York; First Vice-President, A. L. Hopkins, New York; Second Vice-President, John C. Gault, St. Louis; Third Vice-President and Secretary, James F. How, St. Louis; Treasurer, W. B. Corneau, St. Louis; Auditor, D. B. Howard, St. Louis; Assistant Auditor, M. Trumbull, St. Louis; General Superintendent, R. Andrews, St. Louis; Assistant General Superintendent, W. F. Merrill, St. Louis; General Solicitors, W. H. Blodgett, St. Louis, and W. Swayne, New York; Chief Engineer, W. S. Lincoln, St. Louis; General Freight Agent, A. C. Bird, St. Louis; First Assistant General Freight Agent, M. Knight, St. Louis; Assistant General Freight Agent, C. L. Wellington, St. Louis; General Passenger Agent, H. C. Townsend, St. Louis; General Baggage Agent, C. P. Maule, St. Louis; Purchasing Agent, R. W. Green, St. Louis; Paymaster, G. F. Shepherd, St. Louis; Commercial

Agent, J. M. Osborn, Toledo, Ohio; Car Accountant, C. P. Chesebro, St. Louis; Superintendent Telegraph, C. Selden; Assistant Superintendent Telegraph, G. O. Kinsman; General Master-Mechanic, J. Johnson, Springfield, Ill.; General Master Car-Builder, U. H. Kohler, Toledo, Ohio.

Vandalia Line.—The St. Louis, Vandalia and Terre Haute Railroad Company, which, in connection with the Terre Haute and Indianapolis Railroad, is commonly known as the "Vandalia Line," originated in a project for an eastern connection along the general route of this road, which was very early considered by the people of St. Louis.

"So early as 1837," says the *Republican* of Feb. 2, 1847, "the subject of connecting the improvements in the States of Indiana and Ohio with the Mississippi River commanded the attention of the Legislature, and it was deemed advisable to authorize the construction of what is called the Northern Cross Railroad, a route by which the works in our sister States could be connected with the great commercial artery of the nation, and a continuous line of communication formed between the East and West, affording every facility to a free commercial and social intercourse between the different and otherwise almost disconnected sections of our common country. The route had in contemplation not only the accommodation of a numerous population along the line through which it would pass, but a point nearly central in the State, and being the seat of government, so that from that point roads or branches of the main trunk would radiate to points upon the Mississippi and Illinois River, and insure the building up of commercial marts within our own State."

The Northern Cross Railroad was ultimately located between Galesburg and Quincy, Ill., and was sold in 1860 to the Chicago, Burlington and Quincy Railroad.

In 1847, by "An Act to incorporate the Mississippi and Atlantic Railroad Company," it was provided that "J. B. Drake, M. G. Dale, James Bradford, William S. Wait, W. S. Smith, Henry Willis, Curtis Blake-man, G. T. Allen, A. B. Chambers, Ferdinand Kennett, T. A. Madison, R. K. McLaughlin, and their associates and successors, are hereby created a body corporate under the name of the Mississippi and Atlantic Railroad Company for the term of fifty years. The incorporators were authorized and empowered "to locate and construct a railroad from the banks of the Mississippi opposite St. Louis through Greenville and Vandalia to the east line of the State, and terminating in Clark or Edgar County, most convenient for the continuation of the same to Terre Haute, and following as near as may be the line of the great Cumberland Road."

In 1850 a convention was held at Vandalia for the purpose of organizing a company to construct a railroad from Terre Haute to Illinoistown, opposite St. Louis. "Such a road when built," said the *Republican* of

March 21, 1850, "will connect Philadelphia, New York, and Baltimore in a continuous line of railway with St. Louis. It is now, we believe, the only piece of route not under contract or unprovided for."

It was not, however, until 1865, when the St. Louis, Vandalia and Terre Haute Railroad Company was chartered (Feb. 10, 1865) for the construction of a line *via* Vandalia, Effingham, and Marshall to the Indiana line, that the project of 1847 took definite shape. Though the work of construction was begun in 1866, the enterprise would probably have eventuated in a merely local road if the lease of the St. Louis, Alton and Terre Haute Railroad to parties inimical to the Pennsylvania Railroad Company had not threatened the traffic of that great corporation with hostile action and compelled it to seek other connection with St. Louis. Under the influence and by the aid of the Pennsylvania Railroad Company, the St. Louis, Vandalia and Terre Haute Railroad progressed so rapidly that in 1868 trains were running between East St. Louis and Highland, and the road was completed to Effingham in July, 1869, and a through train arrangement between St. Louis and Chicago effected by the Illinois Central connection in 1870.¹

The Terre Haute and Indianapolis Railroad Company leased the St. Louis, Vandalia and Terre Haute Line as soon as it reached the Indiana State line. In 1876, the Vandalia Line and the Indianapolis and St. Louis Line came under one management, and were so operated until 1878.

The Terre Haute and Indianapolis Railroad Company, an integral part of the Vandalia Line, was organized as the Terre Haute and Richmond Railroad Company in 1847, under the railroad laws of Indiana, to construct a railroad from Terre Haute to Richmond, to connect with the Columbus and Indiana Central Railroad. In 1851 the company was reorganized, and built a line between Terre Haute and Indianapolis. In 1866 the title of the company was changed from the Terre Haute and Richmond Railroad Company to the Terre Haute and Indianapolis Company.

The St. Louis, Vandalia and Terre Haute Railroad Company, under the existing arrangement, is leased to the Terre Haute and Indianapolis Railroad Company, for account of itself and the Pittsburgh, Cincinnati and St. Louis Railway Company and the Columbus, Chicago and Indiana Central Railway Company, which jointly guarantee the first mortgage bonds and

¹ "The railroad excursion from Indianapolis and Terre Haute to this city, given in celebration of the opening of the St. Louis, Vandalia and Terre Haute Railroad, occurred yesterday, and the excursionists will be publicly received to-day."—*Republican*, June 9, 1870.

one million six hundred thousand dollars of second mortgage bonds, the obligation of the Pittsburgh, Cincinnati and St. Louis Railway Company in this respect being guaranteed by the Pennsylvania Railroad Company. The Terre Haute and Indianapolis Railroad operates the Vandalia Road under a lease for nine hundred and ninety-nine years, at an annual rental of thirty per cent. of the gross earnings, and guarantees interest on the mortgage bonds. The Terre Haute and Logansport Railroad is also leased and operated and its bonds guaranteed by the same company.¹

¹ Maj. John E. Simpson, general manager of the Vandalia Line, died at the Lindell Hotel, St. Louis, Aug. 2, 1880. Maj. Simpson was born near Londonderry, Ireland, Nov. 1, 1839, his father being a wealthy farmer of Scotch and Irish extraction. In 1840 his family emigrated to America, his father engaging in the grocery business in New York City. In 1843 the family moved to Detroit, where the elder Simpson was occupied in building light-houses for the government. He also became engaged in the Michigan Central Railroad. While thus employed he removed to Michigan City, Ind., where young Simpson attended the free school, and at the age of eleven years started out in life, selling Chicago papers. He was next employed as messenger-boy in a telegraph-office, and during the illness of the operator learned the art of telegraphing, by which means he secured a position as telegraph operator at Detroit when but thirteen years old. He remained in that position five years, when he obtained a position with the Michigan Central Railroad in order that he might perfect himself in running trains by telegraph. At the expiration of two years he received the appointment from Col. Ricker, general superintendent of the Louisville, New Albany and Chicago Railroad, of assistant train dispatcher, and as such had charge of the movements of all trains between Michigan City and Lafayette, Ind. While in Michigan City he was chosen captain of the Zouaves, an independent military company, and was made president of the Literary and Library Society for the engagements of lectures, etc. At the beginning of the war in 1861 he enlisted as a private, and was soon elected captain of Company H of the Fifty-ninth Indiana Volunteers. Previous to this he joined a regiment composed entirely of railroad men raised as engineer troops, and went to Chicago. After remaining in camp at Chicago for six months it transpired that there was no law in existence authorizing the raising of this regiment, and as a consequence it was disbanded. Capt. Simpson, returning from Chicago with his company, joined the Fifty-ninth, and soon after the battle of Pittsburgh Landing joined the Army of the Tennessee, with which he remained four years, participating in all the battles, including the siege of Vicksburg and the march to the sea. During the last two years he served on the staff, of Maj.-Gen. John E. Smith, commander of the Third Division of the Fifteenth Army Corps of the Army of the Tennessee, ranking as major. While in active service in the field he filled several responsible positions. He was provost-marshal at Huntsville, Ala., and performed that duty at other places. At the close of the war he was appointed in the regular army, but declined. On being mustered out in August, 1865, at Indianapolis, he accepted the position of train dispatcher and superintendent of telegraph for the Terre Haute and Richmond Railway, under Col. Ricker, and in 1867 was appointed assistant superintendent of the Terre Haute and Indianapolis Railway.

In June, 1870, the Vandalia Line having been completed,

The lines owned and operated by the Terre Haute and Indianapolis Railroad in 1882 were:

	Miles.
Main line from Indianapolis to Illinois State line.....	79.40
Coal branches	33.92

Leased:

Terre Haute and Logansport Railroad,—Logansport to Rockville, Ind.....	94.00
St. Louis, Vandalia and Terre Haute,—East St. Louis, Ill., to Indiana State line	158.10
Total length of line operated.....	365.42

The general balance sheet Oct. 31, 1881, placed the assets at \$5,734,507.43; capital stock, \$1,988,150; funded debt, \$1,600,000.

The president of the company is W. R. McKeen, Terre Haute, and the general superintendent is Joseph Hill, St. Louis. The principal office is located at Terre Haute. The general freight agent at St. Louis is H. W. Hibbard, and the general ticket agent E. A. Ford.

The Vandalia Line stretches one hundred and sixty-seven miles across Illinois and Indiana, connecting at Effingham with the Illinois Central, furnishing an outlet to Chicago on the north and Cairo on the south, and terminates at Terre Haute. From there it runs *via* Indianapolis and Columbus over the Pan Handle, connecting at Pittsburgh with the Pennsylvania Railroad. This road has a great many small branches and coal connections, but its total direct mileage is three hundred and fifty-six miles between St. Louis, Terre Haute, Indianapolis, and Logansport. The general offices of the Vandalia are nearly all located at St. Louis. Within the past two years the road-bed has been put in the most thorough

Maj. Simpson was appointed division superintendent in charge from Indianapolis to Terre Haute. In July, 1871, he was made general superintendent of the entire line from Indianapolis to St. Louis, and continued thus until November, 1875, when the Vandalia and St. Louis and Indianapolis Lines having been combined under one management, Maj. Simpson was made general manager of the consolidated lines. This position he held up to the time of his death, with headquarters in St. Louis. He was married December, 1866, to Miss Hattie L. Sherman, second daughter of Dr. W. G. Sherman, of Michigan City. During his residence in St. Louis he filled numerous positions. He was president of the Railway Employés Mutual Benefit Association, president of the Governing Board of the Union Depot, and chairman of the committees in charge of relay depots at East St. Louis and at Indianapolis. He was a member of the Society of the Army of the Tennessee, and belonged to the Cincinnati Society of ex-army and navy officers. He was also a member of the Ancient Landmarks lodge of Masons at Indianapolis, and belonged to the Order of Elks.

Maj. Simpson was pre-eminently a self-made man, rising to a position of great responsibility by sheer energy and faithful performance of duty. His integrity and honesty were unquestioned, and he was honored and esteemed for many sterling qualities.

order, and the iron rails between St. Louis and Indianapolis have been replaced with steel rails. Many other improvements have been made.

The eastern prolongation of the Vandalia Line is the Pittsburgh, Cincinnati and St. Louis Railroad, which operates in addition to its own line the Columbus, Chicago and Indiana Central Railway. The latter road, beginning at Indianapolis, where the Terre Haute and Indianapolis Railroad terminates, extends to Columbus, Ohio, where it meets the Pittsburgh, Cincinnati and St. Louis Railway. The latter road extends to Pittsburgh, Pa., and forms part of the Pennsylvania Railroad system.

The Pennsylvania Company was chartered by the Legislature of Pennsylvania, April 7, 1870, for the purpose of managing in the interest of the Pennsylvania Railroad Company the railroads leased and controlled by it west of Pittsburgh. The organization of the company dates from April 1, 1872. The aggregate length of the lines operated in 1882 was 3422.70 miles. Of this vast network of roads the Vandalia Line is one of the most important.

The Pennsylvania Railroad Company was chartered April 13, 1846, to construct a railroad from Pittsburgh to Harrisburg, to unite with the Harrisburg, Portsmouth, Mountjoy and Lancaster Railroad or by extension eastward with the Columbia Railroad. Authority was also conferred upon the company to connect with the Portage Railroad over the Allegheny Mountains at or near Hollidaysburg or Johnstown. The work of construction was begun at Harrisburg in July, 1847, and the division from that point to the junction with the Portage Railroad at Hollidaysburg was opened Sept. 16, 1850. The Western Division, from the western end of the Portage Railroad at Johnstown to Pittsburgh, was opened Sept. 10, 1852. The Mountain Division, and with it the whole line, was opened Feb. 15, 1854. From Harrisburg to Philadelphia the line is made up of the old Philadelphia and Columbia Railroad and the Harrisburg, Portsmouth, Mountjoy and Lancaster Railroad, which was leased in 1849.

The capital stock of the company was authorized to be increased in 1853, under which authority the company has been able to aid its western connections. In 1856 authority was obtained for the construction of a railroad to the Schuylkill River from the Philadelphia and Columbia Railroad, as well as for the construction of wharves, warehouses, etc. In 1857 the policy of disconnecting the State with the public works by the sale of all the works then owned by the State was confirmed by legislative action. These public works consisted of the Philadelphia and Co-

lumbia Railroad, the canal from Columbia to Duncan's Island, the Juniata Canal, the Allegheny Portage Road, and the canal from Johnstown to Pittsburgh. The property thus disposed of was purchased by the Pennsylvania Railroad Company. In 1860 the Lancaster and Harrisburg Railroad was leased, and in 1861 the Philadelphia and Erie Railroad was also leased. In 1864 the Philadelphia and Erie was opened for through traffic by means of the Western Pennsylvania Railroad. In 1865 the old canal below Freeport was converted into a railroad to connect the Western Pennsylvania and the Fort Wayne Railroad at Allegheny City, and during this year the "Connecting Railway" from Frankford to Mantua Junction, West Philadelphia, was constructed. "Fast freight" lines were introduced upon the road in 1865. In 1868-69 were effected those extended leases of Western lines by which communication was secured with Indianapolis, St. Louis, Louisville, and Chicago. In 1869 the Pittsburgh, Fort Wayne and Chicago Railroad was leased by the Pennsylvania Railroad Company; in 1870, the Erie and Pittsburgh; in the same year also the Wrightsville, York and Gettysburg Railroad came into the possession of the Pennsylvania Railroad Company. In 1870, as previously stated, the "Pennsylvania Company" was chartered to give greater efficiency to the management of the Western leased roads, and to the latter company all the interests of the Pennsylvania Railroad Company were transferred. In 1876 arrangements were effected with the Northern Central Railway Company which opened direct communication with Baltimore, and resulted in the construction of the Baltimore and Potomac Railroad, which gave the Pennsylvania Railroad a through line to Washington in 1873. In May, 1871, the railways and canals of the United Companies of New Jersey were leased by the Pennsylvania Railroad Company, and the amplest terminal facilities at Jersey City were secured. In the same year the Cleveland and Pittsburgh was transferred to the Pennsylvania Railroad Company, and also a controlling interest in the Jeffersonville, Madison and Indianapolis Railroad.

In 1881 the company purchased a controlling interest in the Philadelphia, Wilmington and Baltimore Railroad (including the Delaware, the West Chester and Philadelphia, and the Philadelphia and Baltimore Central Railroads), and thus secured another and more direct line connecting Philadelphia and Baltimore.

The total mileage of the Pennsylvania Railroad proper, including branches, leased and operated lines, etc., in 1882 was:

Pennsylvania Railroad proper, with leased lines and branches.....	1172.50
Lines operated by the Pennsylvania Company	3422.70
Total.....	4595.20

The above statement includes the lines operated between Philadelphia and Pittsburgh and west of Pittsburgh, but does not comprise the New Jersey roads, the Philadelphia, Wilmington and Baltimore, the Northern Central, and the Baltimore and Potomac, with their branches in Pennsylvania, Maryland, Delaware, and New Jersey.

Chicago and Alton Railroad.—The Alton and Sangamon Railroad, chartered in 1847, commenced in 1849, and completed in 1852, was the first link in one of the most important railroads in the country, and the parent of the Chicago and Alton Railroad. After completion to Springfield, the road was extended to Bloomington, thence to Joliet, and thence to Chicago. The Chicago and Mississippi Railroad, chartered Feb. 27, 1847, was the organization that completed the road to Joliet. In December, 1857, the road from Alton to Joliet was sold for the paltry sum of five thousand dollars to Governor Matteson. The road represented an expenditure at the time of the sale of nine million five hundred and thirty-five thousand dollars. The purchaser was the St. Louis, Alton and Chicago Railroad, from whose hands the property passed in 1860 to James Robb, receiver. Under the financial and executive management of Mr. Robb the property improved in value, resources, and revenues rapidly, and in 1861 measures were inaugurated looking to the rehabilitation of the company, and in that year (February 16th) the Chicago and Alton Railroad Company was formed, with Mr. Robb as president. The proper termini of the road were recognized as being Chicago and St. Louis, and the offer of John J. Mitchell to build an independent line from Alton to East St. Louis, provided the Chicago and Alton Railroad Company would merge its franchises with those of the Alton and St. Louis Company, was accepted, and the road completed between East St. Louis and Alton. In 1868 the Chicago and Alton secured control of the Bloomington and Godfrey Line, a distance of one hundred and fifty miles, which had been built under the charter of the St. Louis, Jacksonville and Chicago Railroad Company. The lease under which this important connection was made runs for nine hundred and ninety-nine years, and the rental to be paid is forty per cent. of the gross earnings, provided the forty per cent. does not exceed two hundred and forty thousand dollars in any one year. In 1870–71 arrangements were entered into with the St. Louis, Jacksonville and Chicago Rail-

road Company by which a branch road from Roodhouse, Ill., to Louisiana, on the Mississippi River, was built, and at the same time the charter and franchises of the Louisiana and Missouri River Railroad Company were transferred to the Chicago and Alton Railroad Company. This latter charter contemplated the construction of a road two hundred and sixteen miles in length (with a branch from Mexico to Cedar City, fifty miles in length), to a point opposite Jefferson City. The road from Louisiana to Mexico, Mo., was opened in the year 1871–72, from Mexico to Fulton March 6, 1872, and from Cedar City to Fulton in July of the same year. Legal difficulties intervened to prevent the construction of the contemplated line from Louisiana to Kansas City, and arrangements were made with the St. Louis, Kansas City and Northern Railroad for traffic and passenger transportation over the road of the latter company from Mexico, Mo., to Kansas City, and for running passenger-trains on the line *via* Bloomington, Roodhouse, Louisiana, and Mexico, Mo., between Chicago and Kansas City. In 1878 the formation of an independent company to be controlled by the Chicago and Alton Company was effected, to build the Missouri extension from Mexico, Mo., to Kansas City. The corporate name of this company is the Kansas City, St. Louis and Chicago Railroad Company. Its road was opened through on the 1st of May, 1879.

The Chicago and Alton Road, main line, extends to Chicago, making connection there with the great number of roads running to the north and east. The Missouri Division uses the main line to Roodhouse. The length of the main lines east of the river and all in the State of Illinois, including branches, is five hundred and sixty-seven miles. This road is now in the twenty-first year of its existence, and, including side tracks, is one thousand and seventy miles in length east and west of the river. It forms a triple link between the cities of Chicago, St. Louis, and Kansas City, and there is a branch from Dwight to Washington, Ill., 86.96 miles in length. Very nearly the entire road has been relaid with steel rails within the past few years. The line traverses rich sections of country, and has a splendid freight and passenger business.

In 1877 the Chicago and Alton Company built a bridge across the Mississippi at Louisiana.

The directors of the Chicago and Alton Railroad Company are T. B. Blackstone, John B. Drake, Chicago, Ill.; Morris K. Jesup, New York; John F. Slater, Norwich, Conn.; George Straut, Peoria, Ill.; James C. McMullin, John Crerar, Chicago; Lorenzo Blackstone, Norwich, Conn.; John J. Mitchell, St.

Louis. The president of the company is T. B. Blackstone, Chicago. The Louisiana and Missouri River Railroad, extending from Louisiana, Mo., to Cedar City, Mo., a distance of 100.80 miles, was chartered in 1865, completed in July, 1872, and leased in perpetuity to the Chicago and Alton Railroad Company from Aug. 1, 1870. R. P. Tansey, St. Louis, is president of the company, and W. W. Pope, St. Louis, is secretary and treasurer.

The Chicago, Burlington and Quincy Railroad Company had its origin in the organization in 1849 of the Aurora Branch Railroad Company, and the construction of a railroad from Aurora to Geneva. In 1852 the Chicago and Aurora Railroad Company was organized, and built the road from Chicago to Aurora. In 1856 this latter road was consolidated with the Central Military Tract Railroad Company, which owned the road from Mendota to Galesburg, the new company being known as the Chicago, Burlington and Quincy Railroad Company. The Northern Cross Railroad Company, owning a line between Galesburg and Quincy, became embarrassed, and was purchased in 1860 by the Chicago, Burlington and Quincy. The Peoria and Aquatoka Railroad, which was purchased in 1862, gave the company a line from Peoria to East Burlington, with a terminus on the Mississippi River. In 1862 the company built the line from Gates City to Lewiston, and in 1868 the road from Lewiston to Rushville, under the charter of the Peoria and Hannibal Railroad Company. The Dayton, Peoria and Hannibal Railroad Company's charter was obtained about the same time. From Galva to New Boston and Keithsburg, the road was built under the charters of the American Central and of the Dixon and Quincy Railroad Companies, and leased by the Chicago, Burlington and Quincy. The Fox River Line was built under the charter of the Ottawa, Oswego and Fox River Valley Railroad Company, and leased by the Chicago, Burlington and Quincy. The road from Mendota to East Clinton was built by the Illinois Grand Trunk Railroad Company, and leased by the Chicago, Burlington and Quincy. By the lease of the Chicago and Iowa Railroad by the Chicago, Burlington and Quincy the Chicago and Rock River Railroad was reached, and by the lease of the Quincy and Warsaw Railroad and of the Carthage and Burlington Railroad the line from Quincy to Burlington was obtained, while the Keokuk and St. Paul Railroad Company opened the trade and travel of Keokuk to the Chicago, Burlington and Quincy. The Quincy Division, from Quincy to East Louisiana, was built by the Quincy, Alton and St. Louis Railroad Company, and was

leased to the Chicago, Burlington and Quincy in 1876. The St. Louis, Rock Island and Chicago, built under the charter of the Rockford, Rock Island and St. Louis Railroad Company, and leased in 1876 to the Chicago, Burlington and Quincy, extends from the Chicago and Northwestern, near Sterling, to Rock Island, and thence to St. Louis.

The Burlington and Missouri River Railroad was consolidated with the Chicago, Burlington and Quincy in 1872, and became the Iowa Division. During 1881 a number of extensions and new lines of road were built in Missouri, Nebraska, Illinois, Iowa, and Colorado.

The St. Louis Division of the great Burlington Road consists of the old Rockford, Rock Island and St. Louis Railroad, two hundred and forty-seven miles in length, to Rock Island, and connects St. Louis with the Chicago, Burlington and Quincy system, with two thousand five hundred and eighty-six miles of road in Illinois, Iowa, Missouri, Kansas, Nebraska, and Colorado. The St. Louis Division was opened up in 1877. Previous to that time the Burlington had no line of its own into St. Louis, though it had good connections. From St. Louis a through line is formed in connection with the Burlington, Cedar Rapids and Northern and Minneapolis and St. Paul Roads to points in the Northwest. *Via* Rock Island and the Chicago, Milwaukee and St. Paul a line is formed for all Missouri River and Wisconsin points, Manitoba, Montana, and Idaho. The Denver extension of the Burlington was completed July 1, 1882, and it is the only one of the lines from St. Louis which has its own track to that city. It penetrates the most fertile portions of Nebraska, and has opened up a section of country the trade of which ought to be very valuable to the merchants and manufacturers of St. Louis if the proper efforts are put forward to secure it.

The south end of the St. Louis Division of the Burlington passes through a rich wheat country. North of Vermont, Ill., the corn country along the line is reached and extends on through Illinois and Iowa, and in that section are also the great dairy farms of the West. This road brings over four million pounds of butter to St. Louis annually in its refrigerator-cars. The business both in and out of St. Louis is rapidly increasing.

The president of the company is C. E. Perkins, Burlington, Iowa; First Vice-President, A. E. Tonzalin, Boston; Second Vice-President and Treasurer, J. C. Peasley, Chicago; Third Vice-President and General Manager, T. J. Potter, Chicago. Officers of the St. Louis Division: Superintendent, W. R. Crumpton, St. Louis; Freight and Passenger Agent, W. D.

Sanborn, St. Louis; Master-Mechanic, A. Forsyth, Beardstown, Ill.

The Texas and St. Louis Railway Company was organized on the 14th of April, 1879, as the successor of the Tyler Tap Railroad, and the road was opened to Trinity, one hundred and eighty-one miles, at the close of 1880. It was extended to Corsicana, a distance of two hundred and three miles, on the 1st of April, 1881, and to Waco, two hundred and sixty miles, Sept. 1, 1881. The company purchased the Little River Valley and Arkansas Railroad in Missouri, and organized under the name of the Texas and St. Louis Railway Company of Arkansas and Missouri, to build a railroad from Texarkana to Cairo, the object being to run through cars from Bird's Point, opposite Cairo, Ill., to Gatesville, Texas, a distance of seven hundred and thirty-two miles. On the 29th of May, 1882, the company effected a traffic alliance with the Illinois Central Railroad and the St. Louis, Alton and Terre Haute, commonly known as the Cairo Short Line, by which those companies agreed to interchange business and operate their respective roads as one line. Under this agreement the company is enabled to run its trains into St. Louis and Chicago. On the 16th of May, 1882, a similar arrangement was effected with the Arkansas Midland and the Batesville and Brinkley Railroad Companies, by the terms of which those companies agreed to change their gauge from three feet six inches to three feet and to complete their lines to their respective termini. This agreement secures to the Texas and St. Louis Company a line into Little Rock and Helena, Ark., and also to Augusta, Newport, Jacksonport, and Batesville, in the White River valley. Arrangements were also made to extend the line from Waco to Laredo, and to construct a branch from Mount Pleasant to Dallas, Texas.

The road is known as the "Cotton Belt" route, and is a most important addition to the railroad interests of St. Louis. The project originated among the cotton men of St. Louis, who saw an opportunity to penetrate one of the richest cotton belts in the South and draw the staple to the St. Louis market. With the exception of a gap of forty-five miles to be filled in Arkansas, this road has a continuous track between Bird's Point, Mo. (opposite Cairo, Ill.), and Gatesville, Texas, or a distance of seven hundred and fifty-two miles. There is a branch from New Madrid, Mo., to Malden, the county-seat of Dunklin, the "banner" cotton-producing county of Missouri, and also producing a large amount of corn. A branch will soon be constructed to Dallas, Texas, and as soon as the forces can be transferred from Arkansas the extension through Texas to Laredo, on the Rio Grande, will be

pushed along as fast as men and money can accomplish it. When the road reaches Laredo a connection will be formed with a narrow-gauge road which will be running into the city of Mexico by that time,—the Mexican National. From Texarkana the road runs parallel with the Iron Mountain Railway through Arkansas, and divides the country between it and the Mississippi River. While the richest cotton counties are traversed, there are also along the route some of the heaviest and best timber forests to be found in the United States. In Arkansas and Texas there have already been over fifty saw-mills started along the line of the narrow-gauge; new towns are being established, and immigration is pouring into the counties through which the road passes.

From Cairo the connection is made by change of trucks with the Cairo Short Line, over which road the freight will be transported to East St. Louis. During the past year a large and substantial brick building was put up at East St. Louis and supplied with the machinery necessary to establish there a cotton compress, the total cost of which was two hundred thousand dollars. This press will receive and handle the staple from along the narrow-gauge line, and it is expected that the cotton trade of St. Louis will be largely increased by the receipts over the Texas and St. Louis and Cairo Short Line roads.

The earnings during 1881 amounted to \$198,039.90, and the expenses to \$166,237.49. The company has a land grant of 10,240 acres to each mile of completed road, and capital stock is provided for at the rate of \$10,000 per mile; funded debt, first mortgage six per cent. thirty-year bonds, dated June 1, 1880, interest June and December, \$10,000 per mile; land grant and income six per cent. thirty-year bonds, dated June 1, 1880, \$10,000 per mile, interest payable if earned. Up to April 1, 1882, there had been issued \$2,660,000 first mortgage bonds, \$2,660,000 income bonds, and \$2,660,000 of stock, a total of \$7,980,000. On the Missouri and Arkansas Division bonds were issued upon 160 miles of road at \$10,000, or \$1,600,000 first mortgage, and the same amount of income bonds.

The officers of the company are: Directors, J. W. Paramore, W. M. Senter, J. L. Sloss, St. Louis; L. H. Roots, Little Rock, Ark.; T. R. Bonner, L. B. Fish, Tyler, Texas; L. C. De Morse, Texarkana, Ark.; T. J. Lowe, Gilmer, Texas; C. M. Seley, Waco, Texas. President, J. W. Paramore, St. Louis; Vice-President, W. M. Senter, St. Louis; Treasurer, L. B. Fish; Secretary, C. T. Bonner; General Freight and Ticket Agent, G. W. Lilley, all of Tyler, Texas; Master of Machinery, G. W. Prescott,

St. Louis; General Superintendent, J. B. Van Dyne, Tyler, Texas; Chief Engineer, C. F. Stephens, Pine Bluff; Purchasing Agent, F. W. Paramore, St. Louis; Master of Car Repairs, W. J. Lewis, Tyler, Texas. The principal office of the company is at St. Louis.

Col. James W. Paramore, president of the Texas and St. Louis Railway Company, was born near Mansfield, Ohio, Dec. 27, 1830,—a farmer's son and the tenth of a family of eleven children. He early determined to secure a college education, and as his father was only in moderate circumstances, he decided that it should be obtained at his own expense. After some debate his father gave his consent, on condition that he should relinquish his share of the paternal estate. At seventeen he prepared for college at Mansfield Academy, and then went through Granville College (now Denison University), graduating in the class of '52 with high honors. During this entire period he supported himself by his own labor. He then taught two years in the Montgomery (Ala.) Academy, and studied law in the office of Bortley & Kirkwood, at Mansfield, Ohio. Mr. Bortley was afterwards elected supreme judge, and also became Governor, while Mr. Kirkwood moved to Iowa, and became Governor and United States senator, and was a member of President Garfield's cabinet.

Young Paramore then attended the Albany Law School, graduating in 1855 as Bachelor of Laws, and subsequently opened a law-office at Cleveland, and made an excellent beginning. A disastrous commercial speculation, however, in 1857, induced him to seek a new field in the West, and he settled at Washington, Mo., where, in addition to conducting a promising law business, he published the *Washington Advertiser*, a local paper of fair circulation and influence.

Upon the breaking out of the war he returned with his family to Ohio, and promptly responded to the call for troops, becoming major in the Third Ohio Cavalry, and serving under Buell, Roscerans, and Thomas, in the Armies of the Ohio and the Cumberland. He participated in twenty-seven engagements (many of them very severe ones), without, however, receiving a wound. He was very popular and efficient as an officer, and after the battle of Stone River was promoted to the colonelcy of the regiment over the lieutenant-colonel and the senior major, and for a considerable period commanded the Second Cavalry Brigade.

In 1864 he resigned from the army and engaged successfully in business at Nashville, Tenn. In 1867 he turned his attention to railroading, and obtained a charter for the Tennessee and Pacific Railroad, a link designed to connect the Southern Pacific with

the Atlantic waters at Norfolk, Va. Under the stimulus of liberal aid from the State, a portion of the line was completed, but unfriendly legislation followed and the work was suspended. As superintendent, etc., Col. Paramore continued to operate the finished portion until the adoption of the new Constitution forbade any further hope of help from the State, and then he sold his interests and removed to St. Louis, attracted by the grand capabilities of the city. He here began to urge upon others the possibilities of St. Louis becoming a great cotton market, but generally his ideas were declared to be Utopian. The Iron Mountain Railroad had just been completed into the cotton belt, and his quick perception grasped the idea that this highway, extending into the very heart of the cotton-producing region of Arkansas and Texas (the finest in the world), opened a new enterprise for St. Louis and made it possible to establish here one of the leading cotton markets of the world. To accomplish this two things were requisite: 1. Reasonable transportation charges to St. Louis, which were readily conceded by Mr. Allen, the president of the Iron Mountain Railroad; and 2. The reduction of the expense of handling the staple to the lowest possible figures. The latter could be accomplished only by the use of machinery more powerful than had been previously considered necessary. Chiefly through his labors the Cotton Compress Company was formed in 1873, with himself as president. It started with seventy-five thousand dollars, but now has one million two hundred and fifty thousand dollars paid-up capital, and maintains the largest and most convenient warehouses for handling cotton in the world. The company occupies about eighty acres of land, and has a handling capacity of fully five hundred thousand bales of cotton a year, and a compressing capacity of three thousand bales daily.

Col. Paramore was president of the company, and the architect of all the buildings and compresses that now comprise this magnificent system of handling cotton, which (by the way) is being copied by other cotton markets of the country.

This was the pioneer of other establishments of a similar character, and the result of Col. Paramore's prompt and far-sighted action has been to place the cotton trade of St. Louis on a substantial basis. From an average of 28,575 bales from 1866 to 1873 it has risen to 480,028 bales in 1879-80, and 402,706 bales in 1880-81.

In such esteem were Col. Paramore's services in this respect held, that in December, 1880, the business men of St. Louis presented him with a silver service, accompanied by the following letter:

J. W. Paronore

LIBRARY
OF THE
UNIVERSITY OF ILLINOIS.

"MR. J. W. PARAMORE:

"Dear Sir,—By this testimonial we desire to express our high regard for your character as a friend, and to offer our tribute of admiration for the rare ability you have shown in the successful management of the large business enterprise under your control. To you more than to any other person is due the credit for erecting the compress warehouses, by which a flourishing trade in cotton was created; and to you, also, should be accorded especial praise for your untiring efforts to build a railroad into Texas, that our commerce with that State might be increased and forever secured. Not alone as a leader in these enterprises have you manifested that consummate skill and courageous, indomitable energy which have marked your conduct as a business man, but in every useful measure with which you were concerned, whether for the public good or for private gain, you have always shown the fidelity and disinterested zeal of a true friend and benefactor. Please accept this solid silver service as being the token of our esteem commemorative of your career."

While studying the cotton question, Col. Paramore observed that in Arkansas, Texas, Southern Kansas, and the Indian country there was a region capable of producing more than two million bales of cotton yearly legitimately tributary to St. Louis, but with no economical means of reaching a market, and he conceived the system of roads known as the "Cotton Belt Route" to penetrate this region. In the fall of 1881 he resigned the presidency of the Cotton Compress Company, and has ever since given his undivided attention to the prosecution of this great work. It is a system of narrow-gauge railroads, extending from Cairo, Ill., to Laredo, Texas, with "feeders" at various points, embracing, when completed, over one thousand five hundred miles of railroads, and penetrating a section of the Southwest unrivaled for the raising of cotton and miscellaneous produce. At Laredo the system connects with the road now building under the "Palmer-Sullivan concession" through Mexico, and at Cairo it has an extremely advantageous traffic contract with the Illinois Central Railroad, by which, as previously stated, it makes direct connection with St. Louis, and also Chicago and all Eastern cities.

It is not by chance that Col. Paramore has selected the three-foot gauge for his system of railroads. His is a strong, analytical mind, and before engaging in any enterprise he is accustomed to give it a thorough and exhaustive study from every stand-point. He chose the three-foot gauge, not on grounds of present expediency merely, but in the firm belief that this system is the one best adapted to the South, and must crowd the old "broad-gauge" roads to the wall. He argues that since the product of about eighty acres of cotton may be carried in one car, while only five to ten acres of the staple products of the North are required to fill a car, the South does not need the heavy and expensive system of broad-gauge railroads. He asks, "Why send a four-horse wagon to bring a two-

horse load?" In other words, why maintain broad-gauge roads when narrow-gauge will answer the same purpose?

In his investigation of the matter, Col. Paramore has come to the most important conclusions, if true. He not only claims the absolute economy of a three-foot gauge road, but he believes that such a road, with a debt limited to the expense of building and operating, can hold in check the vast railway monopolies already in existence, with their roads bonded for many times their value. It must be apparent that a railway whose fixed charges for interest do not exceed six hundred dollars per mile, and which if substantially built can be worked for 33½ per cent. of its gross earnings, can afford to give lower rates, both for freight and passenger traffic, than one whose fixed interest charges are twelve hundred to fifteen hundred dollars per mile annually, and which, under the most favorable circumstances, cannot be worked for much less than sixty per cent. of its gross earnings.

There seems little room to doubt the correctness of Col. Paramore's belief that this system of railroads will effectually protect the people of the South against the concentrating tendencies of the great broad-gauge roads. In the judgment of Col. Paramore the narrow-gauge railroad is the one upon which the future business of the country will be done; the present standard gauge must ultimately give way before it, since it embraces economy in construction and economy in operation, and lessens immensely the cost of moving the products of the farmer and manufacturer. There is also the important consideration that such roads, properly managed, will always be able to respond to the popular cry of cheap transportation, and will effectually spike the guns of those who are demanding that "government should lay its iron hand on the railroads and undertake to regulate their charges."

Upon the subject of cheap transportation Col. Paramore holds novel and striking views, contrary to the belief generally entertained by the people in the Mississippi valley, viz., "that railroad transportation is cheaper than river." While others have proclaimed the Mississippi to be "God's great highway for commerce," he views it as merely a great "national sewer," and says that to man has been left the labor of providing "cheap and rapid transportation" by the construction of railroads. He energetically insists that, as a matter of fact, cotton can to-day be shipped from Arkansas and Texas *via* St. Louis to Europe cheaper than from the gulf port cities.

This discussion illustrates very forcibly the original and striking methods of thought that characterize

Col. Paramore. Whether his conclusions agree with those of previous investigators in the same field matters little to him; like every independent and original thinker, he has supreme confidence in his own judgment, and follows it unflinchingly, although it may lead him to abandon old traditions and attack old idols. Living in a period celebrated for great railroad men, he loses nothing by comparison with the greatest of them. In one short decade he has written his name indelibly on the history of St. Louis and the great Southwest. As has been well said, "He has been the chief promoter, and in some sense the creator, of one of the richest trades that pay tribute to St. Louis, and has now laid hold upon the carrying trade of the Southwest with a boldness and vigor and originality that make him one of the most conspicuous and able leaders of the time."

Col. Paramore has not only shown St. Louis how to be a great cotton market, but he has also exerted himself to make it the centre of a system of railroad transportation which now seems destined to revolutionize the railroad system of the South and Southwest, and work incalculable benefits to the industries of those regions.

Col. Paramore is still in the full vigor of manhood, when judgment is at its best, and although he has already done more for St. Louis than often falls to the lot of one man to accomplish for a community, his fellow-citizens are encouraged to hope that what he has already performed is only a promise of a yet more brilliant and useful future.

Indianapolis and St. Louis Railroad and the St. Louis, Alton and Terre Haute Railroad.—The Terre Haute and Alton Railroad was chartered Jan. 28, 1851. In 1852 the Belleville and Illinoistown Railroad Company was incorporated by the Illinois Legislature to construct a railroad from Illinoistown (now East St. Louis) to Belleville. In 1854 an act was passed by the Illinois Legislature authorizing the consolidation of both of the above railroads under the style of the Terre Haute, Alton and St. Louis Railroad Company. The consolidation was not effected until 1856, when the whole line from East St. Louis to Terre Haute and from East St. Louis to Belleville was completed and opened to traffic. Financial embarrassments overtaking the new company it was placed in the hands of a receiver, and on the 18th of February, 1861, reorganized under the style of the St. Louis, Alton and Terre Haute Railroad Company, which took possession in 1862.

The Indianapolis and St. Louis Railroad was chartered Aug. 31, 1867, and opened July 11, 1870, having been built in the interest of and leased to the

Pennsylvania Company (Pennsylvania Railroad). In 1867 it leased the St. Louis, Alton and Terre Haute Railroad for ninety-nine years; the Cleveland, Columbus, Cincinnati and Indianapolis, the Lake Shore and Michigan Southern, the Indianapolis, Cincinnati and Lafayette, and the Pittsburgh, Fort Wayne and Chicago Railroad Companies being guarantors of the lease. The Indianapolis, Cincinnati and Lafayette Railroad having passed into the hands of a receiver, the other companies were left to guarantee the provisions of the lease, which they did until April 1, 1878, when the Indianapolis and St. Louis Railroad Company refused to pay the monthly rental unless the St. Louis, Alton and Terre Haute consented to a reduction of the rental to three hundred thousand dollars. Litigation ensued to compel a performance of the lease.

The Cairo Short Line, as the St. Louis, Alton and Terre Haute is generally called, is the connecting link between St. Louis and New Orleans. It is also closely allied with the Illinois Central, and the latter now controls the Chicago, St. Louis and New Orleans, or Great Jackson route, which with the Cairo Short Line forms the through line between St. Louis and New Orleans, the entire distance being six hundred and ninety-eight miles. The distance between St. Louis and Cairo by the Short Line is one hundred and fifty miles. The traffic agreement with the Texas and St. Louis, it is confidently believed, will result in a large exchange of business between the two roads. The narrow-gauge has opened up an entirely new section of country, and one, too, that is rich in resources, and rapidly filling up with a good class of settlers. At Cairo adequate transfer facilities have been provided, and very little time will be lost in changing the cars from the trucks of the two lines, which is to be done in order not to break bulk. The Cairo Short Line not only has a large through business, but its local business is exceptionally fine. It is one of the heaviest of the coal-carrying roads.

The Indianapolis and St. Louis Railroad is a part of the "Bee-Line System," the other lines in the system being the Cleveland, Columbus, Cincinnati and Indianapolis Railroad and the Dayton and Union, all of which are practically under one management. The Bee Line has been in operation more than twenty years. The mileage of the system is as follows:

	Miles.
Indianapolis and St. Louis Line, from St. Louis to Indianapolis	263
Cleveland, Columbus and Cincinnati, from Indianapolis to Cleveland.....	283
Cincinnati to Cleveland.....	245
Columbus to Delaware, Ohio	25
Dayton to Union.....	47
Total.....	863

The president and receiver of the company is J. H. Devereux, of Cleveland, Ohio. The president of the St. Louis, Alton and Terre Haute Company is W. Bayard Cutting, of New York; Vice-President, Treasurer, and General Manager, George W. Parker, St. Louis; Secretary, E. F. Leonard, St. Louis.

Louisville and Nashville Railroad.—The St. Louis and Southeastern Railway (Louisville and Nashville Railroad, St. Louis Division) was the outcome of railroads chartered by the States of Illinois, Indiana, Kentucky, and Tennessee. The St. Louis and Southeastern and the Evansville and Southern Illinois were chartered by the State of Illinois in 1869. The Evansville, Carmi and Paducah Railroad Company was chartered by Indiana in the same year. Under these three charters the main line from St. Louis to Evansville, Ind., and the Shawneetown Branch were constructed. The road from Mount Vernon to Ashley and from Ashley to St. Louis was put under contract immediately, and trains were running to Mount Vernon in 1870, and to East St. Louis in 1871. The Illinois companies were consolidated in 1870 under the name of the St. Louis and Southeastern Railway Company of Illinois and Indiana.

In 1872 negotiations were finally completed by which the franchises of the Evansville, Henderson and Nashville Railroad, incorporated by Kentucky in 1867 to build a railroad from Henderson to the State line of Tennessee, were transferred to the St. Louis and Southeastern. The length of the road proper is 208 miles, divided into the St. Louis Division, from East St. Louis to Evansville, 160.8 miles; the Shawneetown Branch, 41.5 miles; and the O'Fallon Branch, 5.9 miles. The Kentucky Division, from Henderson to Guthrie, is 98 miles in length, and the Tennessee Division, from Guthrie to Nashville, is 47 miles in length.

In 1880 the road passed under the control of the Louisville and Nashville Railroad, and now forms a part of that great system.

The Louisville and Nashville Railroad connects St. Louis with Nashville, Tenn., it being three hundred and sixty-one miles to the latter point, and there joins the system which extends through the Southeast, penetrating with its leased lines and allied roads the States of Illinois, Kentucky, Tennessee, Georgia, and Florida. The Louisville and Nashville system proper, without including the leased lines, is two thousand three hundred and twenty miles in length. The headquarters are at Louisville, and it is regarded as one of the most valuable of the lines classed as Southern roads.

In conjunction with the Chesapeake and Ohio Road, with which it connects at Louisville, a through route to points in West Virginia, Virginia, Washington, Baltimore, and Georgia is formed. During the past year the Louisville and Nashville opened up a line between St. Louis and the city of Louisville, the route being formed over the Louisville Air Line, which meets the Louisville and Nashville at Mount Vernon, Ill. The line passes the county-seat of every county on the route in Illinois, and traverses one of the best wheat-growing sections of that State. There is a large milling interest on the road, and it is one of the heaviest coal-carrying roads that enters the city of St. Louis.

St. Louis and Cairo Railroad.—The Cairo and St. Louis Railroad Company was chartered Feb. 16, 1865, to construct a railroad from East St. Louis, *via* Columbia and Waterloo, Red Bud and Sparta, Murphysboro' and Jonesboro', to Cairo. Ground was broken Aug. 30, 1871, and the road was completed and opened on the 1st of March, 1875. On July 14, 1881, the road was sold, under foreclosure of the first mortgage bonds, and a new company organized, under the name of the St. Louis and Cairo Railroad Company, which took possession of the road on Feb. 1, 1882. The line of the road extends from East St. Louis to Cairo, Ill., a distance of 146.5 miles. The St. Louis and Cairo Railroad is a narrow-gauge line, and was the first of its kind built near St. Louis. Its business has been chiefly of a local nature, and principally between the points from which the name is derived. It passes through some of the most prosperous counties of Illinois, and has built up a business which, while not being regarded as large, is fairly satisfactory. One of the drawbacks has been the gauge, on account of which the exchange of business with the standard gauge roads has been comparatively light. About a year ago it was generally supposed that the St. Louis and Cairo would make connection with the Texas and St. Louis (the Paramore system), and thus form the connecting link between that chain of narrow-gauge lines and the Toledo, Cincinnati and St. Louis, the latter now practically completed to East St. Louis. The arrangement, however, was not carried out, as the Texas and St. Louis some time since made a traffic arrangement with the Cairo Short Line and the Illinois Central.

The directors of the company in 1882 were S. Corning Judd, H. B. Whitehouse, Chicago; J. A. Horsey, E. Norton, New York; J. B. Livingston, East St. Louis; F. Bross, Cairo. President, W. F. Whitehouse, Chicago; General Superintendent, Charles Hamilton, St. Louis.

The Toledo, Cincinnati and St. Louis Railroad is the longest narrow-gauge road east of the Mississippi River, and is now practically finished to East St. Louis, where track-yards, freight-houses, and depots are being provided. The original name of the road was the Toledo, Delphos and Bloomington, but it was subsequently changed to the style given above. The system now embraces a mileage of about nine hundred miles, and the necessary amount of money has been secured to put in order and equip the St. Louis end. At Delphos, Ohio, the line branches to St. Louis, making nearly a direct route from St. Louis to Toledo, Ohio. This will be a most important road to St. Louis, as it runs through the upper Ohio valley, and thus opens up to trade a territory not heretofore directly tributary to this market.

The West End Narrow-Gauge Railway extends from Grand Avenue, St. Louis, to Florissant, Mo., a distance of sixteen miles. It was opened Oct. 1, 1878, and sold under foreclosure in March, 1879. The president of the company is Erastus Wells; Superintendent, Rolla Wells; Secretary and Treasurer, William D. Henry.

The East St. Louis and Carondelet Railway was chartered on the 18th of February, 1857, and opened Sept. 26, 1872. It is used chiefly as a connecting road for all lines terminating at East St. Louis. It extends from East St. Louis to Falling Springs, Ill., a distance of 9.25 miles, with a branch to East Carondelet, a distance of 2.25 miles. At East Carondelet, by means of the Missouri Pacific steam ferry, cars are transferred to and fro between the Missouri Pacific and San Francisco and Iron Mountain Roads and the roads on the east bank of the river. The officers of the company are Thomas D. Messler, president, Pittsburgh; John B. Bowman, secretary, East St. Louis; W. H. Barnes, treasurer, Pittsburgh; Joseph Hill, general superintendent, St. Louis.

The East St. Louis Connecting Railway extends along the levee in East St. Louis a distance of 1.25 miles. The company was chartered Dec. 26, 1877, and the road was opened Oct. 28, 1879. The officers are S. C. Clubb, president, St. Louis; S. A. Chouteau, secretary, St. Louis; Gordon Willis, general freight agent, East St. Louis; H. L. Clark, treasurer, St. Louis; Robert Henry, road-master, East St. Louis.

The Illinois and St. Louis Railroad and Coal Company was chartered originally as the St. Clair Railroad Company on the 26th of February, 1841, and the name was changed to that of the Pittsburgh Railroad and Coal Company, chartered Feb. 10, 1859. The corporation was reorganized under its present

title on the 16th of February, 1865. The line extends from Belleville, Ill., to East St. Louis, Ill., a distance of fifteen miles, and has coal-mine branches aggregating three miles in length.

The St. Louis Bridge Railroad was operated until 1881 by the St. Louis Bridge Company, which succeeded (March 17, 1879) the Illinois and St. Louis Bridge Company, sold out under foreclosure. On the 1st of July, 1881, the bridge was leased to the Missouri Pacific and Wabash, St. Louis and Pacific Railway Companies. The length of the track on the great bridge across the Mississippi and its approaches is 6439 feet, and the length in St. Louis is 11.19 miles, and in East St. Louis 5.77 miles. The bridge has two roadways,—the lower one for steam railway traffic alone, the upper one for horse railways, wagons, and foot-passengers.

The St. Louis Coal Railroad is owned and controlled chiefly by capitalists of St. Louis, mostly manufacturers and coal-miners. Its length is now about one hundred miles. It runs to some of the largest coal-mines in Illinois, and there are being started on the line some iron- and steel-works that promise to be the largest in the State. It reaches St. Louis over the Cairo Short Line track.

The Tunnel Railroad of St. Louis was formerly the St. Louis Tunnel Railroad, which was sold under foreclosure, and a new company formed under the title of the Tunnel Railroad of St. Louis, with a capital of one million two hundred and fifty thousand dollars, divided into shares of one hundred dollars each. In July, 1881, this company leased its road and property to the Wabash, St. Louis and Pacific and the Missouri Pacific Railway Companies, which agreed to pay as rental an annual dividend of six per cent. on the capital stock, to pay two thousand five hundred dollars a year for the expenses of organization, to provide and maintain offices in New York and St. Louis, and to pay all expenses of advertising, etc. The president of the company is Julius S. Walsh, of St. Louis. The length of the tunnel is about one mile.

St. Louis, although advantageously situated, with sixteen railroads and three great rivers, has labored under many disadvantages in respect to freight rates, and an attempt is now being made through the organization of a Freight Bureau to obtain her just rights in the premises. The amount of business in the past year, as indicated by the tonnage handled, shows a steady increase, as will be seen by the following table :

	1882.	1881.	1880.
Tons freight received...	7,702,702	7,602,985	6,990,384
Tons freight shipped.....	4,519,065	4,346,937	3,793,205
Total by river and rail	12,221,767	11,949,922	10,783,589

Union Depot, on the south side of Poplar Street, between Ninth and Twelfth, is the central point at which converge the railroads entering St. Louis. It is a large building of brick and stone, and was erected by a company organized on the 10th of June, 1871. At the preliminary meeting held for the purpose of completing the organization "for the establishment of a union passenger depot and tunnel in St. Louis" the following persons were present :

Daniel Torrance, president O. and M. R. R. Co.; A. N. Christie, vice-president O. and M. R. R. Co.; Gen. L. B. Parsons, director O. and M. and North Mo. R. R.; W. R. McKeen, president St. Louis, Vandalia and Terre Haute Railroad; W. G. Broughton, superintendent St. L. and St. J.; E. W. Woodward, president Indianapolis and St. Louis R. R.; Oscar Townsend, president C. C. C. and I. R. R. Co.; J. J. Mitchell, director C. and A. R. R.; J. C. McMullen, general superintendent C. and A. R. R.; Gen. E. F. Winslow, president St. L. and S. E. R. R.; A. Carnegie, director U. P. R. R.; Capt. James B. Eads, chief engineer Bridge Company; Dr. William Taussig, chairman executive committee Bridge Co.; William P. Shinn, general agent Penn. Central R. R. Co.; James Smith, of Jamison, Smith & Cotting, bankers, New York; Col. T. A. Scott, president Penn. Central R. R. Co.; J. A. McCullough, general manager Penn. Central; J. N. Drummond, assistant president T. W. and W. R. W. Co.; Gen. A. Anderson, vice-president T. W. and W. R. W. Co.; Hon. W. M. McPherson, director in Bridge Company and N. M. R. R. Co.; Col. George E. Leighton and B. M. Chambers, directors in Mo. Pacific R. R. Co.; Thomas Allen, president Iron Mountain R. R.

On motion of Col. Thomas A. Scott, the following plan of organization was adopted :

"1. The company to be organized on a basis of five millions of dollars, as follows :

"First mortgage seven per cent. gold bonds, free of tax.....	\$2,000,000
Three millions capital stock.....	3,000,000
	\$5,000,000
"From which it is expected to realize—	
Two millions of bonds, at say 85.....	\$1,700,000
Three millions capital (assuming that only one-third will be called).....	1,000,000
	\$2,700,000
"Which will cover the following estimated cost :	
Real estate.....	\$750,000
Tunnel (according to engineer's estimates)....	615,000
Depot building (according to engineer's estimates).....	1,000,000
Interest on bonds during construction.....	100,000
Contingencies.....	235,000
	\$2,700,000

"2. The amount necessary to pay the annual interest on the bonds and the premium thereon (say \$155,000), also eight per cent. interest on the paid-up capital (\$80,000), also the costs and expenses of maintenance (say \$50,000), and a sufficient amount to provide a sinking fund of not less than \$50,000 per annum, which shall be used by the trustees, first, to reduce by lot annually the bonded indebtedness until it is paid off, and thereafter to return ratably to each shareholder ninety per cent. of his stock investment, and when this is accomplished, the depot and its business shall ever thereafter be subject only to such assessment as will be required to pay its maintenance. Taxes and working expenses with eight per cent. per annum on the remaining ten per cent. of stock, which shall be preserved for the purpose of holding intact the corporate organization and franchises of the company, shall be assessed *pro rata* against all the roads using the depot and tunnel.

"3. Contracting roads pay only the net amount of such assessment; non-contracting roads or future lines shall pay thirty (30) per cent. in addition to their *pro rated* assessment, of which additional percentage one-half is to be returned to the contracting roads according to their *pro rata*, and the other half, together with all the rents obtained from the building proper, such as offices, eating-houses, restaurants, etc., goes to stock.

"4. With the consent of the depot company and two-thirds of the contracting lines, the additional percentage of the assessment against non-contracting lines may be reduced to not less than ten (10) per cent.

"5. The *pro rating* shall be made on the tonnage of freight passing through the tunnel or going to the depot, whether through the tunnel or otherwise, and also on each passenger-, baggage-, and express-car entering the depot or tunnel (an account of which shall be kept by the depot company), and each passenger-, baggage-, and express-car shall be assessed the same as ten tons of freight. But the board of directors shall, by the assent of two-thirds of its entire body, have authority to make and establish from time to time such tariff of rates and charges, both as regards the through and local business that may be done in said tunnel and depot, as they may deem just and equitable, it being, however, provided that the rates so established shall produce the amount required as stated in Section 2.

"6. No charge shall be made to contracting roads for locomotives or empty cars.

"7. The privileges of the depot consist in the use of tracks in the depot proper and sidings for empty trains, waiting-rooms, baggage- and conductors' rooms, ticket- and telegraph-offices.

"8. The choice of tracks and other depot facilities shall be at the option of contracting roads. In case of disagreement it shall be determined by lot.

"9. The passage of trains through the tunnel shall be regulated in the same order of precedence as that established by the bridge company.

"10. Each contracting road shall bind itself to use the passenger depot and tunnel during the term of the corporate existence of the Union Depot Company, and they further respectively agree to run each and all of their passenger-trains running through the present limits of St. Louis to and from said company's depot in St. Louis, and to pay such rates, for their use and maintenance (according to provisions of paragraph 2) as may be equitably assessed against it according to their use, and shall subscribe not less than fifty thousand dollars to its capital stock, payable in installments, as called for by the board during the progress of the work.

"11. Every contracting road terminating in East St. Louis or in St. Louis shall be entitled to be represented by one director in the board of directors, and provision shall be made as soon as possible to carry this article into effect."

The following were the articles of association :

"ARTICLE 1. The corporate title of this association shall be the Union Depot Company of St. Louis.

"ART. 2. The object of this company shall be the acquisition of the necessary grounds and the erection of the necessary buildings for the establishment and maintenance of a union passenger depot in the city of St. Louis, also, ultimately, of a union freight depot for the accommodation of through and local freight, and to make such arrangements with the bridge company as may be found needful for the early completion of the connections leading from the bridge to the depot or depots of this company or other companies, by tunnel or otherwise.

"ART. 3. The company shall organize under the provisions of the act of the General Assembly of the State of Missouri, approved March 10, 1871, providing for the formation of such companies.

"ART. 4. The capital of the company shall be three million dollars, to be represented by thirty thousand shares of one hundred dollars each, and its corporate existence shall continue for nine hundred and ninety-nine years.

"ART. 5. So soon as five hundred thousand dollars are subscribed to the capital stock, the subscribers thereto shall, either in person or by duly executed proxy, elect a board of nine directors, who shall continue in office for one year, and who, immediately after their election, shall organize by the choice of a president from among their number, and of a secretary and treasurer. Until such time as the company has its own offices, such election and meetings of the board shall be held at the office of the Illinois and St. Louis Bridge Company.

"ART. 6. Five per cent. of the amount subscribed shall be paid in cash at the time of subscription, and until a treasurer is elected William Taussig, of the city of St. Louis, is authorized to collect such first cash payment.

"ART. 7. The board of directors shall, as soon as practicable, enact by-laws for the government of the company, and the 'plan of organization' hereto attached shall form the basis of such by-laws.

"The undersigned agree to the above articles of association, and subscribe the number of shares set opposite their names to the capital stock of the Union Depot Company of St. Louis :

Stock having been subscribed to the extent of fifteen thousand shares, a meeting of the stockholders was held. Thomas A. Scott was elected chairman, and William P. Shinn secretary.

On motion of Capt. Eads it was resolved that the subscribers proceed to an election of nine directors of the company by ballot. Messrs. Smith and Britton were appointed tellers. The election having been held, the tellers reported the whole number of votes cast fourteen thousand three hundred; necessary to a choice, seven thousand one hundred and seventy-six.

The following gentlemen were declared duly elected for the ensuing year, each receiving fourteen thousand three hundred and fifty votes, to wit: D. Torrance, E. W. Woodward, William R. McKeen, Thomas Allen, J. B. Eads, Thomas A. Scott, J. J. Mitchell, A. Boody, William Taussig. The meeting then adjourned.

The board of directors then met, and was called to order by Col. T. A. Scott. Dr. William Taussig was then elected president of the board, and Daniel Torrance vice-president; E. W. Woodward was chosen secretary *pro tem.*; Col. James H. Britton was elected treasurer of the board.

On motion of Col. Scott, it was resolved that the president be requested to collect and prepare a report of all the data and information respecting sites and plans for depot purposes, with power to employ proper persons to assist in obtaining such data.

On motion of Mr. Mitchell, it was resolved that the books of subscription to the stock of the company be closed until otherwise ordered by the board.

At a meeting of the directors held on the 27th of June, 1871, it was

"Resolved, That a special committee of five be appointed to confer with the authorities of the city of St. Louis, with the officers of the several lines of railroads west of the river that terminate in St. Louis, and such other parties as said committee may deem needful, in order to ascertain whether the facilities and united action can be obtained, said committee to have

power to call the board together whenever they are prepared to submit a report for consideration of the board.

"Resolved, That no location of the depot west of Fourth Street should be considered."

The resolutions were adopted unanimously, and the following gentlemen were appointed the committee: Col. Thomas A. Scott, D. Torrance, A. Boody, Thomas Allen, J. B. Eads. The president, Dr. Taussig, was added to the committee. The site on Poplar Street was finally chosen, and the building erected.

On the 9th of May, 1874, the St. Louis Union Depot Company was chartered under an act authorizing the formation of union depots and stations for railroads in the cities of Missouri, approved March 18, 1871. The charter was to run ninety-nine years. The capital stock of the company was \$1,000,000, divided into ten thousand shares of one hundred dollars each. The following is the list of incorporators, with the amount of stock subscribed by each:

William D. Griswold.....	\$10,000
William H. Clement.....	25,000
Joseph N. Kinney.....	25,000
Robert M. Shoemaker.....	25,000
Peter W. Strader.....	25,000
William Taussig.....	5,000
Samuel Gaty.....	2,500
Total.....	\$117,500

OMNIBUS AND STREET-CAR LINES.

In St. Louis as elsewhere the omnibus preceded the street-car, just as the stage preceded the railway train.

In March, 1838, Mr. Belcher was proprietor of an omnibus line which a local journal stated was "deserving of the praise and patronage of the public for the handsome and convenient style in which his carriage is fitted up." This enterprise did not, however, receive the patronage it deserved, and Mr. Belcher's omnibus line soon suspended operations. In the fall of 1844, Erastus Wells, now one of the leading citizens of St. Louis, associated himself with Calvin Case, and the firm of Case & Wells established an omnibus line. Referring to the enterprise a St. Louis newspaper of June 11, 1845, said,—

"It is but a few months since our opinion was asked as to the probable profits of an omnibus to be run in a certain part of the city. At that time no omnibuses were run in the city. The experiment was attempted. The first was started by Messrs. Case & Wells, to run from the National Hotel, on Market Street, to the ferry at the upper end of the city. We believe it has been as successful as could have been expected from a new undertaking. At first people were a little shy of it; some did not think it exactly a genteel way of traveling the streets. These scruples have entirely disappeared, and everybody now rides in them, and is glad of the opportunity. Messrs. Case & Wells manifest a determination to keep up with the encouragement given, and have lately put on their line a new and beautiful

omnibus manufactured in Troy, N. Y. It is a fine specimen of workmanship, and is a very comfortable carriage. In addition to the line above mentioned, we now have regular lines running from the National Hotel to the arsenal, along Second Street; a line from the Planters' House to the arsenal, along Fourth Street; a line from the corner of Fourth and Market Streets to the Camp Springs, and a line to the Prairie House. All seem to be doing a flourishing and profitable business, and they prove to be a great convenience to persons residing in distant parts, and to those having business to attend to in remote parts of the city. They have contributed not a little to give an increase of value to real estate lying at a distance from the centre or business part of the city."

The first omnibus of St. Louis manufacture was placed upon the Market Street and Carondelet Avenue line Sept. 17, 1845. It was constructed by T. Salorgne, and was "in every respect equal to those used on the Case & Wells line."¹ The Sunday idea in 1846 entered into the legislation about omnibuses, and the City Council adopted the following ordinance:

"It shall not be lawful for any omnibus or vehicle capable of containing more than four persons to be driven in the streets of this city on Sunday after the hour of two o'clock in the afternoon, for the purpose of carrying passengers from point to point within the city, or from a point within the city to a point without the same, or from a point without the city to a point within the same. For any violation of this section, the owner, driver, or person in charge of any such vehicle shall forfeit and pay for the first offense not less than twenty dollars, for the second offense not less than fifty dollars, for the third offense not less than one hundred dollars, and upon a third conviction the license to run such vehicle shall be adjudged to be forfeited."

"The above," said the *Republican* of June 22d, in reference to the ordinance, "is a fair specimen of the legislation of the Native American City Council. The distinction drawn between the morning and evening of Sunday, making an act lawful if done before 2 o'clock p.m. and unlawful if done after that hour, the distinction between carriages that will hold four and those that will hold five persons, the allowing the rich and prodigal who can own or hire a carriage an unbounded latitude to ride and drive through the streets at all hours, while the laboring and less prodigal must not enjoy a ride, although it only costs a dime, is worthy of this enlightened age and the liberal spirit of the board that can sanction it."

In 1850, Erastus Wells, with Calvin Case, Robert O'Blennus, and Lawrence Matthews, formed a combination which purchased and operated all the omnibus lines in St. Louis. In the following year there were six lines in existence, as follows: First, from the arsenal to Carondelet; second, from the corner of Market and Second Streets to the arsenal; third, from the corner of Main and Market to Camp Springs; fourth, from the corner of Broadway and Franklin Avenue to Rising Sun Tavern; fifth, from the corner of Market and Third to Bremen; sixth, from Bremen to Bissell's Ferry. The omnibuses from these points started from every four to ten minutes,

¹ *Republican*, Sept. 17, 1845.

and the lines comprised in all ninety omnibuses, four hundred and fifty head of horses, four stables, and about one hundred hands.

Luther Case also had a line running on Seventh Street, from the corner of Morgan Street and Broadway to the Flora Garden, and comprising seven omnibuses, forty-five head of horses, and about fifteen hands.

William Billings was just entering into the business, and had three omnibuses on Broadway, which ran from the corner of Second and Market Streets to Bremen.

In 1859 the city's territory had grown to such dimensions that the introduction of the street-car system had become a necessity. On the 3d of January of that year a meeting of citizens of the First Ward was held at Jaeger's Garden, "to consider the subject of horse railroads." T. C. Chester called the meeting to order, and David Bayles was elected chairman. Benjamin Bryson, Sebastian Burbeck, and Noah H. Whittemore were chosen vice-chairmen, and William S. Hilyer secretary. On taking the chair, Mr. Bayles made a short address, in the course of which he argued that the establishment of a safe, speedy, and comfortable mode of travel from one end of the city to the other parts would enhance the value of suburban property, increase the population of the outskirts, and build up business in those localities. A committee consisting of Thomas C. Chester, H. C. Lynch, B. Vanewitz, A. Hammer, and Joseph N. Lock, was appointed by the chairman to draft resolutions expressive of the sense of the meeting. While the committee were absent, W. S. Hilyer addressed the meeting.

The committee on resolutions reported through Mr. Chester the following:

"Resolved, By the citizens of the First Ward, in mass-meeting assembled,—

"1. That the construction of horse railways upon the public streets, connecting the suburbs more closely with the centre and with each other, and affording increased facilities for rapid and convenient communication with all parts of the city, is a measure commending itself highly to our favor and encouragement.

"2. That the successful completion and operation of such railways will contribute in an especial manner to the growth and prosperity of our own ward, by inducing settlement and improvement within its limits, and filling up our now large vacant territory with an industrious and thrifty population.

"3. That the aldermen and delegates of the First Ward in the City Council be, and they are hereby instructed to encourage and promote by all lawful means within the sphere of their official duties the granting of the right of way for one track on Carondelet Avenue, and one on Seventh Street, and such other necessary facilities to city railway companies as will contribute to the speedy completion of the roads, limiting them, however, to passenger traffic alone, and surrounding them with

such proper and wholesome restrictions as will insure the safety and convenience of the public."

Mr. Chester, on reporting the resolutions, made a few appropriate remarks. Dr. Hammer also spoke, "criticising the action of the late meeting of citizens of the Second and Third Wards, and ascribing the disaffection manifested there to the influence of a few politicians who had axes to grind."

T. E. Courtenay followed in a brief speech, setting forth the advantages of street railroads, and answering the arguments of their opponents.

The resolutions were then submitted to the action of those present, and were adopted by a large vote.

The first street car corporation in St. Louis was the Missouri Railroad Company, and the first car was run on the 4th of July, 1859, the driver being the president of the company, Hon. Erastus Wells. A contemporaneous account thus describes the event:

"In accordance with previous arrangements and expectations, this the first horse railroad in St. Louis was brought into practical use yesterday at ten o'clock by running over its track the first car, which arrived *via* the Ohio and Mississippi Railroad yesterday morning, and was immediately placed upon the track at the Fourth Street termination of the road, in the presence of a large number of spectators congregated there to witness the somewhat novel sight of a horse-car. It is a beautiful vehicle, light, elegant, and commodious, built with fifteen others of the same style for the Missouri Railroad Company by Kimball & Gorton, Philadelphia, at a cost of nine hundred dollars, including freights, etc.

"At ten o'clock a few invited guests with the directors of the road took their seats within the car, and the horses were attached to the pole, which can readily be shipped to either end of the car. Mr. E. Wells, president of the road, then took the reins, and after a jerk or two the first car moved slowly but steadily up the track, amidst loud shouts and cheers from the crowd. Troops of urchins followed in its wake, endeavoring to hang on, and we fear unless this is prevented in future serious accidents may occur. The centre of the track, or footpath, being macadamized and not sufficiently settled, small pieces of rock were constantly being detached by the horses' feet, and falling upon the track materially retarded the progress of the car, in several cases throwing it from the track. The switches or turn-outs, too, require some alteration, as they do not answer entirely the purpose intended. Several times the car failed to run upon the track intended, and a general backing out was found necessary before the car could proceed. But after various delays of this nature the car arrived at Tenth Street, the track having been cleared of stone only that distance. The horses were then attached to the other end, and the return trip progressed, and after but few delays, the track being much improved by the first trip, the pioneer car arrived at Fourth Street, where it was again greeted by a large crowd of persons, each waiting an opportunity for a free ride. During the progress of the car through the streets its presence was greeted by hundreds of fair faces beaming from every window and door, while shouts of joy from scores of urchins heralded its approach. The first trip has proved the enterprise a complete success, and at each subsequent trip which was made with the car crowded to repletion fresh laurels were won, as the horses pulled the enormous load without apparent effort."

During the same year the St. Louis, Citizens', and People's Lines were started in close succession in the months of August, September, and October. With each succeeding year new companies have been organized and new lines constructed, until now the city is amply supplied with transportation facilities. The first two-story car, or "double-decker," was used on the Northwestern St. Louis Railway, Oct. 25, 1874. The running of a steam motor was attempted in the suburbs, but the accidents occurring from the frightening of horses caused the experiment to be abandoned. In April, 1881, a general strike was inaugurated on the part of the conductors and drivers on all the lines, and resulted in a general suspension of business. On April 24th, 25th, 26th, and 27th no cars were run in the city. On the 28th of April the Missouri Railroad Company and the Lindell Company effected a compromise with their employes and resumed business on their respective lines. On the 29th and 30th the other roads followed their example. The various roads with their connections form one complete network, and afford the traveling public every facility for going to any portion of the city on short notice. A uniform fare of five cents is charged, the tickets on any road being good on all others.

According to the assessment of 1882, the valuation of the different street railway companies of St. Louis is as follows:

Benton and Bellefontaine, $6\frac{1}{2}$ miles of track, \$10,330; real estate, \$32,760. Total, \$43,090.

Cass Avenue and Fair Grounds, 8.62 miles of track, \$26,550; real estate, \$32,850. Total, \$59,400.

Lindell Railroad, $9\frac{1}{2}$ miles of track, \$33,250; real estate, \$54,020. Total, \$87,270.

Missouri Railroad (Olive and Market Streets), $8\frac{1}{2}$ miles of track, \$29,750; real estate, \$57,240. Total, \$86,990.

Mound City, $6\frac{1}{2}$ miles of track, \$15,000.

People's Railway, 8 miles of track, \$28,000.

St. Louis (Fifth Street), $14\frac{1}{4}$ miles, \$44,000; real estate, \$39,100. Total, \$83,100.

South St. Louis, 12 miles of track, \$24,400.

Tower Grove, 1 mile, \$2000.

Tower Grove and Lafayette, $3\frac{1}{2}$ miles, \$8000; real estate, \$6790. Total, \$14,790.

Union Line (Fourth and Locust), 8 miles, \$28,000; real estate, \$15,030. Total, \$63,030.

Union Depot, 10 miles, \$25,000; real estate, \$14,390. Total, \$39,390.

The total length of the roads is 119.6 miles; total number of cars, 496; total number of horses, 2280; total number of men employed, 1010; total number of passengers carried, 19,600,000.

These companies return horses and mules as follows: Benton and Bellefontaine, 132; Cass Avenue, 193; Lindell, 356; Olive and Market, 295; Mound City, 93; People's, 250; Fifth Street, 437; South St. Louis, 75; Tower Grove and Lafayette, 93; Union, 210; Union Depot, 366.

THE MISSOURI RAILROAD COMPANY was organized May 10, 1859, with a capital stock of three

hundred thousand dollars, as authorized by an act of the Legislature of Missouri dated Dec. 13, 1855, and by an ordinance of the City Council May 6, 1859. The incorporators were William Vanzandt, Marcus M. Hodgman, Charles Hathaway, Erastus Wells, George Trask, Marshall Brotherton, and William M. McPherson. Erastus Wells was chosen president of the company upon its organization, and was successively re-elected and held the position until Nov. 5, 1881. The construction of the road was commenced in the early part of 1859, and was completed from Fourth and Olive Streets as far west as Twelfth Street in July of that year. On July 4, 1859, as previously stated, the first car was run over the track. The Fourth and Olive Streets line has since been extended, running west as far as Grand Avenue. In 1859 the Market Street line extended from Fourth to High Street, but has since been extended west to Grand Avenue, and to Tower Grove Station. This road was controlled and managed by the original incorporators until Nov. 5, 1881, when the stock was transferred to the present corporation and an election held, resulting as follows: P. Chouteau Maffitt, president; John R. Lionberger, vice-president; William D. Henry, secretary and treasurer, and Charles M. Allen, superintendent; P. C. Maffitt, John R. Lionberger, Charles Parsons, Daniel Catlin, and James Clarke, directors. Under the new management the capital stock of the road was increased from three hundred thousand dollars to six hundred thousand dollars. The route at present is from Fourth and Market Streets to Bellevue House, Manchester road, and Olive Street to Grand Avenue. The offices and Market Street stables are located at No. 1827 Market Street, and the Olive Street line stables on Olive, between Leonard and Channing Avenues.

THE ST. LOUIS RAILROAD COMPANY was organized Feb. 1, 1859, and incorporated March 24, 1859, the incorporators being Hudson E. Bridge, D. A. January, John How, Alexander Peterson, Robert A. Barnes, James H. Lucas, William M. McPherson, D. H. Armstrong, Frederiek Meyer, and George R. Taylor. The original capital stock was three hundred thousand dollars, but it has since been increased to nine hundred thousand dollars. D. H. Armstrong was elected president of the company in 1859, and his successors in order have been D. A. January, Hudson E. Bridge, W. T. Sherman (afterwards the distinguished general), D. H. Armstrong, Hudson E. Bridge, J. O. F. Farrar, James H. Blood, Benjamin Farrar, John F. Madison, Robert A. Barnes, and Christian Peper. The road was built and the running of

cars commenced in 1859, the line of route being from the old city limits on the north to Keokuk Street on the south (Wild Hunter), *via* Bellefontaine road, Broadway, Fifth and Seventh Streets, and Carondelet Avenue. The total length of the company's tracks is seven and one-half miles. The officers of the company are Christian Peper, president; Robert A. Barnes, vice-president; Robert B. Jennings, secretary and treasurer; Smith P. Gault, attorney; and Charles Ischer, superintendent. Directors, Christian Peper, Robert A. Barnes, Henry Blakesley, F. E. Schmieding, John N. Straat, B. Brockmann, and Gerhard Dröge.

THE CITIZENS' RAILWAY COMPANY was organized in 1859, and commenced running during that year. The present organization was chartered in July, 1874, with a capital stock of three hundred thousand dollars. Among the incorporators and officers were B. Gratz Brown, president; Edward Walsh, Henry T. Blow, James B. Eads, B. Gratz Brown, G. S. Case, John Doyle, and Cary Gratz, directors. The track was laid on Franklin Avenue and Morgan Street, from Fourth to Garrison Avenue. In 1864 the company extended the line from Garrison Avenue to Prairie Avenue, along Easton Avenue, also from Easton Avenue, along Grand Avenue, to the fair-grounds. In 1865 the capital stock was increased from three hundred thousand to five hundred thousand dollars. Another extension was made in 1881 from Prairie Avenue, along St. Charles Rock road, to Renkelville, and along Papen Avenue to the National Bridge road and King's Highway. The total length of the company's lines with extensions is fourteen miles of single track. The stables and depot are located on Prairie Avenue and St. Charles Rock road. The first and successive presidents have been B. Gratz Brown, James B. Eads, A. R. Easton, and Julius S. Walsh, who still retains the position. The other officers of the company are J. P. Helfstein, vice-president; George Kaufhold, secretary and treasurer; and Thomas Gartland, superintendent. Directors, Julius S. Walsh, J. P. Helfstein, A. R. Easton, G. S. Case, John A. Walsh, J. N. Straat, and G. H. Plant.

THE PEOPLE'S RAILWAY COMPANY was organized in 1859, and chartered June 22d of that year by special act of the State Legislature, with a capital stock of three hundred thousand dollars. The incorporators were R. M. Renick, B. Able, J. H. Lightner, P. L. Foy, H. Crittenden, J. B. Sickles, and John S. Cavender. The first president of the road, elected in 1859, was R. M. Renick, who was succeeded in turn by G. W. Dreger, J. H. Lightner, James H. Britton, J. R. Lionberger, D. E. Walsh, and Julius S. Walsh.

In the fall of 1859 the road was completed from Morgan Street, running along Fourth Street and Chouteau Avenue, to St. Ange Avenue. In 1864 the track was extended from St. Ange Avenue to Lafayette Park. In 1882 another extension was made from Lafayette Park, running along Lafayette Avenue, to Grand Avenue. The total length of the road at the present time is eight miles of single track, which is fully equipped and supplied with all the latest and most improved rolling stock, etc. The stables and depot, located on Park Avenue, between Mississippi and Second Carondelet Avenue, are substantial brick buildings, being especially constructed for the purpose for which they are being used. The officers of the company are Julius S. Walsh, president; Wm. B. Ryder, secretary, and Patriek Shea, superintendent. Directors, Julius S. Walsh, John R. Lionberger, J. T. Sands, Chas. Green, J. H. Lightner, James F. How, and John Jackson.

Julius S. Walsh, the present able and popular president of the Citizens', People's, Tower Grove, and Union Lines, has been conspicuously identified with the growth and development of St. Louis for twenty-five years, and his name has been associated with many important enterprises. Mr. Walsh was born in St. Louis, Dec. 1, 1842, and was a son of the late Edward Walsh and Isabelle de Mun. His father was a native of Ireland, who emigrated to America as early as in 1815, first settling at Louisville, Ky. In 1824 he removed to St. Louis, and during that year established the well-known firm of J. & E. Walsh.

After receiving the usual primary instruction in the preparatory schools, Julius entered the St. Louis University, where he prosecuted his studies until 1859, when he entered St. Joseph's College, Bardstown, Ky., from which institution he graduated in 1861. In 1863 the St. Louis University conferred upon him the degree of Master of Arts. In 1864, Columbia College, New York, conferred upon him the degree of LL.B., and he was also admitted to the bar in the State of New York.

In 1864 he returned to St. Louis and entered the office of the firm of J. & E. Walsh. In 1866, Edward Walsh, the senior member of the firm, died, leaving the management of the business to Julius, and from 1866 until 1870 he was occupied in settling up the affairs of his father's estate. The assets were of a varied character, consisting of steamboats, railroad stocks, real estate and other securities. During these years he was elected director in several corporations.

Abandoning mereantile life, Mr. Walsh turned his attention to the street railway system of St. Louis, and

Julius J. Walsh.

UNIVERSITY OF ILLINOIS.

is among the most active of those who have contributed to its extension and development. In 1870 he was elected president of the Citizens' Railway Company, and of the Fair Grounds and Suburban Railroad Company; the last named road having since been consolidated with the Citizens', of which company he is still the chief executive officer. In 1880, Mr. Walsh was elected president of the People's Railway Company, the Park Railroad Company, and the Tower Grove and Lafayette Railroad Company, which positions he still retains. In 1882 he was chosen a director in the Third National Bank of St. Louis.

In 1874 he was elected president of the St. Louis Agricultural and Mechanical Association, and served as its chief executive officer for four consecutive years, infusing into the management an energy and method strikingly characteristic of all his business operations. At the time he became president of the association, its eighty-three acres were occupied only one week during the entire year, which was during the annual fair, while the remainder of the year it remained closed to the public. He at once set to work to make the grounds attractive at all seasons and on every day of the year. He commenced this improvement by first erecting the Art Gallery, and next founded the Zoological Gardens, which have since become so popular and such a favorite public resort. The gardens contain some of the finest and rarest specimens of the animal kingdom in America. During his term of office as president of the association, all the beautiful buildings of the department of natural history were erected, and the grounds converted from an unsightly waste to a beautiful landscape. These improvements were most beneficial to the association, securing to it a daily revenue instead of during only one week of the year. The grounds were embellished with fine trees, handsomely inclosed and ornamented with shrubbery, flowers, drives, graded walks, etc., and were made one of the most beautiful spots of the kind in the country.

In 1875 the Illinois and St. Louis bridge passed into the hands of receivers, and Julius S. Walsh was appointed agent in St. Louis. The affairs of the Bridge Company at that time were much complicated and embarrassed; but upon his resignation as agent in 1876 he received the most complimentary letters from J. Pierpont Morgan and Solon Humphreys, of New York, who were the receivers, and from Messrs. J. S. Morgan & Co., of London, the agents of the bondholders, expressing their entire satisfaction at the manner in which he had conducted the affairs of the corporation, and urging him to continue his relations with the Bridge Company.

In 1875 he was made president of the South Pass Jetty Company, and continued to hold that position for the term of three years, when he resigned on account of the pressure of other business. Mr. Walsh was the first person to subscribe to the stock of the corporation, and it was largely owing to his individual efforts that its financial success was secured.

On the reorganization of the Tunnel Railroad Company of St. Louis, at the first meeting of the directors, on Dec. 19, 1878, Mr. Walsh was elected president, and has ever since retained that position. In 1880, having served for a number of years as director in the St. Louis, Kansas City and Northern Railroad Company, he was, upon its consolidation with the St. Louis, Wabash and Pacific Railway, made a director in the last-named corporation, which position he afterwards resigned to accept the presidency of the St. Louis Bridge Company. The executive ability of Mr. Walsh is well known, and has been exhibited in several other positions of great responsibility.

Notwithstanding his great popularity and widespread influence, Mr. Walsh has never aspired to municipal, State, or national office, but has always exhibited the keenest interest in every important movement concerning the growth and welfare of the city. All the corporations with which he is connected are upon a firm financial basis, and are among the most important and solid institutions of St. Louis.

In 1870 he was married to Miss Josephine Dickson, daughter of the late Charles K. Dickson, of St. Louis.

Mr. Walsh has aided in building up and maintaining some of the most important corporations of the city, and to his unswerving business integrity and indefatigable, though unostentatious, energy their success is largely due. As a citizen, he stands without reproach, and as a business man, second to none in the community. His benevolence of disposition is proverbial among all who know him. Strictly moral in every walk of life, and a truly high-minded, honorable gentleman, but few men possess in so marked a degree the merited confidence and friendship of their fellow-citizens.

Julius de Mun, grandfather of Julius S. Walsh, was descended from one of the most ancient and influential families of the province of Bigorre, France, where the castle and the domain bearing the name of De Mun—to which the family possessed a title until 1690—were situated. The first of the family, or rather the first seigneur known by name, was Anstor de Mun (knight), who was born about the year 1180. Of this Anstor, Julius de Mun was a lineal descendant.

The immediate ancestor of Mr. de Mun was Sieur Jacques de Mun, knight of the Old Guard of the

person of His Majesty, and of the Lady Marie Madeleine le Meilleur, his wife. The children of Jacques de Mun and wife were :

Juliette Marie Madeleine, who married M. de Pestre. She accompanied her mother in 1817 to the island of Cuba, where she remained until her children required education beyond the ability of the neighboring schools to furnish, when she removed to Philadelphia to complete their training. Having accomplished this object she returned to Cuba, and when her grandchildren required similar advantages, she again repaired to Philadelphia for that purpose, and finally died there after the year 1854.

Louis de Mun, who became an *attaché* to the embassy of Baron Hyde de Neuville, French minister to the United States, and from that position went to Cuba, became a sugar-planter in that island, and died there unmarried.

Auguste Elizabeth Vincent de Mun, killed at Ste. Genevieve, Mo., by McArthur, about the year 1816, unmarried.

Jules Louis René Marie de Mun, known in St. Louis as Jules or Julius de Mun, and Amadée de Mun, who was lost at sea, unmarried. Julius de Mun was born in Port au Prince, in the island of San Domingo, on the 25th of April, 1782, his parents having visited that island to look after their large possessions. Here they remained, in consequence of the disturbed condition of France, until the massacre of the whites during the insurrection of the negroes, from which they escaped after great peril and difficulty. They went to England, the condition of France (then convulsed by the Reign of Terror) not permitting them to return there with safety. Shortly after this, Jacques de Mun died, and the family remained in England for the purpose of educating their children, until the year 1808, when they came to the United States, stopping in New Jersey, from whence they moved to Ste. Genevieve, Mo. (then the largest town in the State), in 1810. Here they remained until the year 1817, when Mrs. de Mun, heart-broken by the death of her son Auguste, removed with her family (except her son Julius, who was married) to Baltimore, Md., and from thence to the island of Cuba, where she died.

The life of Julius de Mun was filled with extraordinary incidents. Born, as we have seen, in San Domingo of noble parentage, he was sent with his brother Auguste, when quite young, to Paris, France, to be educated, where he remained until his parents removed from San Domingo to England, when word was conveyed to the brothers of their father's desire that they should join him. In charge of a devoted servant, who disguised them in the habiliments of

poverty, they then started for the coast, and arrived safely in England. As they were passing through Paris they witnessed the scenes of blood and death near the guillotine when Robespierre was being executed. The little boy Julius began to cry, whereupon his brother shook him and told him to be quiet, and not to attract attention.

In the year 1816, Mr. de Mun formed a partnership with Auguste P. Chouteau and Pierre Chouteau for the purpose of trading with Santa Fé and Chihuahua; Auguste P. Chouteau and Mr. de Mun, with their employés, going on the expedition. When they arrived at Chihuahua they were robbed of their goods and the whole party imprisoned. They remained in duranee for nearly two years, when, owing to the pressure brought to bear by the government of the United States on the central government of Mexico and the good offices of the French minister at Washington, they were released and returned to St. Louis.

In the fall of 1819, Mr. de Mun and family left St. Louis for the island of Cuba, where he arrived early in 1820 and purchased a coffee estate, which he cultivated until the fall of 1830, when he returned to St. Louis, arriving in January, 1831. Shortly after his return he was appointed secretary and translator to the board of United States commissioners for adjusting the titles of the French and Spanish grants to lands in Missouri, the duties of which position he discharged with marked ability. Mr. de Mun was afterwards appointed United States register of the land office at St. Louis, and subsequently was elected recorder of deeds for the county of St. Louis, which office he held at the time of his death.

On the 31st of March, 1812, Mr. de Mun was married to Miss Isabelle Gratiot, daughter of Charles Gratiot, who was considered the most beautiful woman in St. Louis, and of charming manners. She died July 13, 1878.

The issue of this marriage were Isabelle, married to Edward Walsh; Julie, married to Antoine Leon Chenie; Louise, married to Robert A. Barnes; Emilie, married to Charles Bland Smith; and Clara, who died unmarried just after becoming of age.

Upon the restoration of the Bourbon family to the throne of France royal letters were forwarded by the government of Louis XVIII. to Julius de Mun through the French ambassador, inviting himself and family to return to France, and accompanying these letters was the decoration of the order of the Fleur de Lys, the highest honor in the gift of the king.

Mr. de Mun died in St. Louis on the 15th of August, 1843.

Julius de Mun had a fine English and French education, also speaking and writing Spanish, and was possessed of accomplishments not common to the gentlemen of this country at that period. He was of gentle but distinguished manners, modest and retiring in his disposition, of perfect integrity and pure morals, and of the most delicate sense of honor.

THE UNION DEPOT RAILROAD COMPANY, which was originally known as the "Gravois Railway," was chartered under an act of the Legislature of the State of Missouri on April 27, 1862. After its construction the road was sold under foreclosure of a second mortgage, and purchased by Green Erskine and Thatcher S. Johnson, who afterwards sold it to the present corporation. The original incorporators were John Scullin, C. M. Seaman, Francis Carter, Thatcher S. Johnson, Green Erskine, and James H. Roach. The road was constructed in 1862 from the corner of Fourth and Pine Streets west to Gravois road, a distance of three and one-half miles. Since that time extensions have been made, the route at present being: Gravois Branch (yellow cars), from Fourth Street, corner of Pine, on Ninth; Clark Avenue, Twelfth; south on Park Avenue to Ninth; Gravois road to Jefferson Avenue, with extension to Tower Grove Park. Lafayette Branch (blue cars), same to Park Avenue; thence north to State, Carroll, Linn, and Lafayette to Lafayette Park. The present capital stock of the company is three hundred thousand dollars, with first mortgage bonds of one hundred and seventy-five thousand dollars. John Scullin was elected president of the road in 1876, at the time of the sale of the "Gravois Railway" to the present company, and has filled the position ever since. The general offices and stables are located on the corner of Gravois road and Jefferson Avenue. The officers of the company are John Scullin, president; Clement M. Seaman, vice-president and treasurer; James H. Roach, secretary; John Scullin, Clement M. Seaman, Francis Carter, Francis Erskine, and James H. Roach, directors.

THE BENTON-BELLEFONTAINE RAILROAD COMPANY was incorporated under a special charter Feb. 8, 1864, with a capital stock of \$500,000. The incorporators were A. W. Henning, Felix Coste, William W. Warren, Norman Cutler, Silas Bent, Jacob B. Terrell, Charles L. Holmes, and H. M. McKittrick. The construction of the road was begun in 1864, and completed in 1866. In 1876 the road was sold for the payment of first mortgage bonds, the present corporation becoming owners of the franchise. Under the present management the capital stock was reduced to \$300,000. The lines extend from Third Street

and Washington Avenue *via* Washington Avenue, Tenth and Eleventh Streets to the Water Tower, the length being seven miles of single track. The officers are George H. Chase, president, and Robert McCullough, secretary and treasurer.

THE LINDELL RAILWAY COMPANY was chartered on Feb. 26, 1864, with an authorized capital stock of \$600,000. Among the applicants for the charter and the original stockholders were John H. Lightner, Wayman Crow, Dwight Durkee, Levin H. Baker, John M. Krum, D. R. Garrison, William Patrick, Joshua Cheever, Bernard Crickard, William D'Oench, Charles K. Dickson, William Mayer, and Morris Taussig. Dwight Durkee was elected president of the company in 1864, and continued to hold the position until March, 1870, when he was succeeded by John H. Maxon, the present incumbent. The road was begun in October, 1864, and cars commenced running on Washington Avenue March 15, 1867, and on the Fourteenth Street line May 12, 1867. The route extends from Third and Washington to Ware and Lucas Avenues, along Lucas Avenue to Grand Avenue, north on Grand Avenue to Delmar Avenue, west on Delmar Avenue to Vandeventer Avenue, thence north on Vandeventer Avenue to Finney Avenue, thence east on Finney to Grand Avenue, thence south on Grand Avenue to Morgan, thence east on Morgan, connecting with regular tracks (blue cars), to Summit Avenue, *via* Fourteenth Street and Chouteau Avenue. The offices and stables are located at No. 2305 Washington Avenue, and there are stables also at 2330 Chouteau Avenue, corner of Finney and Vandeventer Avenues. The officers of the company are John H. Maxon, president; John H. Lightner, vice-president; and G. W. Baumhoff, secretary and treasurer. Directors, John H. Maxon, John H. Lightner, G. W. Baumhoff, John M. Gilkeson, E. Catlin, and W. A. Hargadine.

THE BADEN AND ST. LOUIS RAILROAD COMPANY was organized in 1865, and chartered during the same year. The road was finished and equipped in 1866. The line of route is from Grand Avenue and Bellefontaine road to Baden, a distance of two and one-half miles. The capital stock is \$100,000. The offices and stables are located on the east side of Bellefontaine road, near Dowling Avenue. The officers of the company are George S. Case, president; John H. Reel, vice-president; and John W. Archer, superintendent.

THE UNION RAILWAY COMPANY was organized in 1865, and chartered July 29, 1865, with a capital stock of \$300,000. Among the incorporators were C. D. Colman, C. D. Blossom, W. E. Saltmarsh, H.

M. Blossom, and C. W. Horn. During 1865 the road was constructed from the corner of Fourth and Locust Streets west to Hyde Park. In 1875 the lines were extended from Hyde Park to the fair grounds, and at present their entire length is eight miles of single track. Hon. B. Gratz Brown was elected first president of the road, and was succeeded by John Brown, who held the position for a short term, being followed by Julius S. Walsh, who has ever since retained the presidency of the company. In 1866 the capital stock was increased from \$300,000 to \$600,000. In 1882 the officers were Julius S. Walsh, president; J. P. Helfestein, vice-president; M. J. Moran, secretary and treasurer; and Michael Moran, superintendent. Directors, Julius S. Walsh, B. Gratz Brown, A. R. Easton, J. P. Helfestein, J. A. Walsh, Charles Greene, and George S. Case.

THE TOWER GROVE AND LAFAYETTE RAILWAY COMPANY was chartered March 20, 1866, with an authorized capital stock of \$300,000, the incorporators being H. N. Switzer, John J. Roe, James B. Eads, C. K. Dickson, and J. O. Cavender. The road was constructed and put in operation during 1866, over Second and Third Streets from the corner of Fourth and Morgan to Anna Street, the total length being six miles of track. G. W. Dreyer was elected first president of the road in 1866, and his successors in regular order have been J. H. Lightner, J. H. Britton, J. R. Lionberger, D. E. Walsh, and Julius S. Walsh, the latter being still the chief executive officer. W. B. Ryder is secretary and treasurer of the company, and the directors are Julius S. Walsh, John R. Lionberger, J. T. Sands, Charles Green, J. H. Lightner, James T. How, and John Jackson.

THE CASS AVENUE AND FAIR GROUNDS RAILWAY COMPANY was organized in 1874, its incorporation being approved by the City Council Jan. 19, 1874, and the charter granted Feb. 9, 1874. The first directors were James Edwards, William T. Wernse, Louis H. Stroube, Joseph M. Fitzroy, Jeremiah Fruin, H. Klages, William Miller, Thomas Bowe, John Cunningham, Sol. Lawrence, and D. E. Lockwood. The construction of the road was begun during the latter part of 1874, and it was completed and equipped with the cars running on June 25, 1875. William K. Patrick was elected the first president, and held the position during the construction of the road. He was succeeded in June, 1875, by W. R. Allen, who has since retained the position. The capital stock of the company originally was five hundred thousand dollars, but it has since been reduced to three hundred thousand dollars. At the present time the company has no bonded indebted-

ness. The line extends from Fifth and Walnut Streets north on Seventh Street to Cass Avenue, thence to Glasgow Avenue, north to St. Louis Avenue, west to Grand Avenue and the Fair Grounds, returning by the same to Eighth Street, south to Walnut Street, and thence to Fifth Street. The entire length of the road is nine miles of single track. The stables and ear-sheds were erected in the spring of 1875. The officers of the company are W. R. Allen, president; George W. Allen, vice-president; and G. G. Gibson, secretary and treasurer. Directors, W. R. Allen, George W. Allen, Thomas Allen, William R. Donaldson, J. D. Barlow, James W. Wallace, and E. M. Smith. The general offices are located in the Southern Hotel building, corner of Fifth and Walnut Streets, and the stables and ear-sheds on the corner of Cass and Glasgow Avenues.

THE MOUND CITY STREET RAILWAY COMPANY was organized in 1875, as the successor of the Mound City Railway Company, chartered in December, 1865, with a capital stock of one hundred thousand dollars. The original incorporators were John Scullin, Clement M. Seaman, William Nichols, A. D. Jaynes, Francis Carter, J. B. Johnson, and Thateher S. Johnson. The first and only president of the company, elected in 1875, is John Scullin, who has ever since retained the position. Immediately after the organization of the company the charter and franchises of what was then known as the "Northwestern St. Louis Railway" were sold on foreclosure to J. B. Johnson, by whom they were transferred to the present corporation. The road was completed and the cars commenced running in January, 1866. The route extends from the corner of Fourth and Pine Streets west to Ninth Street, thence north to North Spring Street, thence west on Spring Street and St. Louis Avenue to Jefferson Avenue; returning by St. Louis Avenue, North Spring, Fourteenth, Locust Avenue, Twelfth, Locust, Ninth, and Pine Streets to Fourth Street. The total length is seven miles of single track. The cars of the Mound City Line pass by the new post-office and government building, Pope's Theatre, St. Luke's Hospital, St. Louis University, St. Louis Place Park, Lindell Park, Base-Ball Park, Fair Grounds, and Zoological Garden. The officers of the company are John Scullin, president; Francis Carter, vice-president; and Clement M. Seamen, secretary and treasurer. Directors, John Scullin, Francis Carter, Clement M. Seaman, George A. Madill, and James H. Roach. The offices are located at 623½ Olive Street, and the stables on the southwest corner of St. Louis Avenue and Twenty-first Street.

THE SOUTH ST. LOUIS RAILWAY COMPANY was

incorporated in April, 1876, with a capital stock of one hundred thousand dollars, the incorporators being Charles P. Chouteau, P. A. Hadney, A. Habsinger, and others. Soon after its organization the company absorbed the Carondelet Railway Company, with its franchises, tracks, etc., and extended the tracks of that road to the corner of Sixth and Market Streets. I. C. Terry was elected the first president of the road in April, 1876, and was succeeded by Pierre Chouteau, who in turn was followed by Theo. Plase, the present incumbent, who is also the treasurer of the corporation. The secretary is J. B. Greensfelder, and the directors are F. W. Moss, J. S. Robertson, M. A. Wolff, L. Gottschalk, and C. F. Hermann. The route extends north from the stables along Main Street, Carondelet road, and Jefferson Avenue, east on Pestalozzi Street, north along Eighth and Decatur Streets, east on Lafayette to Fulton, north to Hickory, east to Fifth, north to Market; returning same to Pestalozzi, south on Eighth to Arsenal, thence west to Jefferson Avenue, and south to the stables, which are located on the north side of Davis, near Main Street. The general office is at the corner of Sixth and Walnut Streets.

THE ST. LOUIS TRANSFER COMPANY was chartered Dec. 12, 1859, as the Ohio and Mississippi Transfer Company, the original incorporators being P. W. Strader, Joseph N. Kinney, Alex. H. Lewis, Thomas Lowe, Henry C. Cooling, and Alfred Gother. P. W. Strader was elected the first president in 1859, and was succeeded by Samuel Gaty, the present incumbent. The capital stock is eight hundred and fifty-nine thousand two hundred dollars, and the company transacts a general transfer business, handling passengers, baggage, and freight to and from railroad depots, steamboats, etc. S. H. Klinger is secretary of the company; T. B. Thompson, treasurer; and R. P. Tansey, manager. The directors are Samuel Gaty, R. P. Tansey, S. C. Clubb, W. H. Clement, J. J. Mitchell, D. S. Gray, and J. M. Thompson. The office is located at No. 213 North Third Street.

THE RAPID TRANSIT COMPANY was chartered June 3, 1880, with an authorized capital stock of fifty thousand dollars, the incorporators being M. A. Wolff, Charles McClaren, John H. Terry, John Lumsden, John T. Davis, George D. Reynolds, and Henry Gennett. The company commenced operations with twenty of the "Herdie" coaches on Sept. 16, 1880, and continued the transfer of passengers over various streets in the city up to May 1, 1882, when the coaches were taken off and the company changed in character to that of one doing a general livery business. The first president was M. A. Wolff,

who was elected in 1880, and was succeeded by John H. Terry in 1882. The other officers of the company are Geo. D. Reynolds, secretary; M. A. Wolff, treasurer; M. A. Wolff, Geo. H. Shields, E. S. Barnes, E. G. Obear, Peter Lehman, John H. Terry, and John T. Davis, directors.

CHAPTER XXX.

TRADE, COMMERCE, AND MANUFACTURES.

EVERY great centre of trade must possess or control a maximum of natural and acquired facilities for all the particular operations of PRODUCTION, CONVERSION, and EXCHANGE.

Production includes agriculture, mining, forestry,—the *ensemble* of all those arts which supply men with food and the raw materials which he converts into food, fuel, shelter, clothing, light, conveniences, luxuries; *conversion* includes the processes and the instruments of manufacture in all its branches; *exchange*, or commerce, is the duplex process and machinery by which the producers are brought together and enabled to barter their products, by which the raw materials are gathered in and the converted products distributed and exchanged; it includes banking and transportation, capital and credit.

Every operation of production, conversion, and exchange depends upon the existence of facilities acquired from nature or created and bestowed by man. Without these facilities there would be no trade, and to be a centre of trade a city must not only possess them very largely, but possess also the means and the will to enlarge, develop, and increase them steadily and rapidly. Rivalry may be submitted to, superiority tolerated in other things, but no city determined upon success can tolerate rivalry, much less superiority, in the spirit of improvement.

The natural advantages of St. Louis as a centre of production are in part the result of the co-operation of soil and climate with intelligent labor; in part they are derived from the geological configuration of the earth,—the distribution of its mineral strata and the superficial contour,—determining the course and volume of streams. St. Louis could not occupy its present commanding position and maintain its lofty attitude as a trade centre if it were seated upon a bog, like those of Ireland, or amid the granite boulders and masses of trap and sand which diversify the soil of New England, or upon the margin of a swamp, like New Orleans, or in the gateway of a great freshwater pond, like Chicago. As has been sufficiently

shown in other parts of this work, St. Louis combines more of the advantages of site and location—which are necessary to the building up of a great city—than any other interior city in the world. It is the focal point, the centre, the key to the greatest river system, the largest and most magnificent valley, the widest area of the richest and most productive soils, the finest juxtaposition of exhaustless mineral wealth, and the most comprehensive and far-reaching railroad system upon the face of the globe.

What nature bestows, man has seized upon and is improving to the utmost with energy and intelligence. "Science, whence foresight, foresight, whence action,"—excellent words of Auguste Comte,—is the guiding rule of man's action upon nature for the development of the resources of St. Louis. "Man commands nature only by obeying her laws," the philosophers have declared, and the limitation is thoroughly well understood in St. Louis. Capital, labor, talent—meaning by talent natural capacity developed and shaped by acquired skill—are the three forces which have worked together in harmonious unison to promote the growth and expand the trade of this "the great city of the future." St. Louis is not so rich in money capital as many older and larger cities, but what she possesses is entirely in hand, absolutely active, and so thoroughly energized and vitalized by will, purpose, and intelligent co-operation, that somehow each dollar seems to do the work which it requires three to do elsewhere. In that capital which money does not always stand in place of and which often money cannot buy,—business talents, business judgment, business pluck, business co-operation and association,—St. Louis allows no rivalry, admits of no equal.

In different parts of this work we have spoken in detail and given the complete statistics of the resources of St. Louis in production and for conversion and exchange. It only remains to speak of these things in a group as the essential qualifications for producing a great and unrivaled centre of trade. The promise of the future can best be seen by comparing the results and accomplishments of the past and the present. St. Louis may reasonably expect to become the greatest *market* on the continent, because the tendencies of the city's development, ever since it began to grow, have been favorable to that expectation, and because the character of the improvements made and the facilities enjoyed are all in the direction of consummating and perfecting a great central mart for the conversion and exchange of the products of a very wide and very rich area. No city in the world has such an extent of back country convenient to it, and which is or can be made *tributary* to it.

Let us give an example of what we mean by a region which has or must become tributary to St. Louis. Take the cotton manufacture, which is as yet only a nascent industry in St. Louis, although nothing can prevent it from becoming a supreme and controlling one, if St. Louis will but make a proper use of its many and superb advantages in this respect. The cotton of Arkansas, Texas, West Tennessee, West Louisiana, and Middle and North Alabama—an area in which more than half the entire cotton crop of the country is grown—can be delivered by rail or river on the Levee at St. Louis as cheaply as it can at Atlanta, Mobile, New Orleans, Chattanooga, and any other distributing centre in the country, excepting only Memphis, and more cheaply than at Chicago, Boston, New York, Baltimore, Cincinnati, Norfolk, Charleston, and Savannah. To convert this cotton into fabrics there are needed capital, food, fuel, machinery, labor, and skill. Now how does the case stand? The cotton gathered at St. Louis is sent fifteen hundred miles farther east to New England, or four thousand miles farther east to England, to be manufactured. To aid in this distant manufacture,—the finished products of which are returned to St. Louis to be distributed by her merchants in every region to which their trade extends,—St. Louis further contributes food-supplies for the labor employed in it, and iron for the manufacture of the machinery used. Thus St. Louis, having the capital, having the raw material, having the cheap food and the cheaper fuel, sends all these things thousands of miles away, and fetches the finished products thousands of miles back again, instead of employing the means necessary to invite or compel the capitalists engaged in this industry to bring their plant and their skilled labor to the trade centre, where there is not only the newest and most complete conjunction of cheaper food and cheapest fuel, with cheap raw material, but where also there is the best market for the sale and distribution of the finished fabrics. This is an unnatural perversion of ways and means, an unnatural misuse of superior facilities, and it cannot last. The cotton manufacturer, other things being equal, will not pay for the transportation of his raw materials and his products over such long distances when he can produce and sell his fabrics on the spot where cheap raw materials meet cheaper food and cheapest motive power. Mohammed will go to the mountain, for the reason that it is cheaper than for the mountain to go to Mohammed. There can be but one settlement of this problem. It has been delayed by the rapid cheapening of transportation, the reluctance of capital and manufactures to change their sphere of operation,

and by other causes; but it is certain to come in the end, for St. Louis, whenever the right use is fully made of her facilities, is the place where cotton can be manufactured most cheaply. A hundred years hence, perhaps, Alabama, Georgia, and Texas may be competing with St. Louis, through their natural advantages, for the position of cheapest manufacturing point; but this will not be the case so long as St. Louis maintains her superiority as a centre for cheap food, cheap fuel, and cheap exchange.¹

The Cotton-Trade.—The cotton manufacture will grow as the cotton-trade has grown. From a few bales in 1844, from twenty thousand bales in 1863, to five hundred thousand in 1880 looks like a considerable stride, but it is the work of a very few years, and it is only the beginning, for the cotton country properly tributary to St. Louis yields three million bales and upwards per annum. That trade trickled along like a feeble rivulet for some time, then suddenly it expanded into a great river. It must continue to expand with every mile added to the Southern railroad connections of St. Louis, which are already so extensive. So will it be with the cotton manufacture of St. Louis. That appears to be feeble and small, but it must expand and grow to greatness, because all the conditions are exceptionally favorable to it. The census of 1880 only shows three factories, with capital of \$625,500, hands 444, \$86,325 wages, \$318,156 value of materials, and \$453,295 value of products,—an infant indeed; wages \$192.40 per capita per annum for employes, of whom three-fourths were women and children, and profits inside of eight per cent. on the invested capital; but it is the beginning, the foundation of a controlling industry of the future.

The first indication we have of the establishment of a cotton-factory in St. Louis appears in the old *Missouri Gazette* of the 31st of January, 1811. The paragraph reads,—

¹ "Forty years ago the trades and industries of St. Louis were already extensive and flourishing. At this time (1841) there were in St. Louis two foundries, twelve stone, grate, tin, and copper manufactories, twenty-seven blacksmiths and house-smiths, two white-lead, red-lead, and litharge manufactories, one eastor-oil factory, twenty cabinet- and chair-factories, two establishments for manufacturing linseed-oil, three factories for the making of lead-pipe, fifteen tobacco and cigar manufactories, eleven coopers, nine hatters, twelve saddle, harness, and trunk manufactories, fifty-eight boot- and shoeshops that manufactured, six grist-mills, six breweries, a glass-cutting establishment, a Britannia manufactory, a carpet manufactory, and an oil-cloth factory. There was also a sugar-refinery, a chemical and fancy soap manufactory, a pottery and stoneware manufactory, an establishment for cutting and beautifying marble, two tanneries, and several manufactories of plows and other agricultural implements."—*Edwards' Great West*, pp. 376-77.

"An event, not viewed as of public importance in itself, may yet be highly interesting from the reflections to which it gives rise. An English gentleman (Mr. Bridge), of considerable capital, arrived here on Tuesday evening last, with his family, for the purpose of establishing himself in this place. We understand he has brought with him the machinery of a cotton-factory and two merino rams. Such an emigrant is an important acquisition to the country."

Whether Mr. Bridge ever carried his purpose into execution does not appear, but the probability is that the "two merino rams" may have diverted him into the wool business, as seven years afterwards "carding-machines and cotton-spinning machinery" were preparing to commence, in the spring of 1818, in St. Louis.

Adolphus Meier² enjoys the distinction of having been the first to establish a cotton-factory in St. Louis.³

² Adolphus Meier was born in the city of Bremen, Germany, on May 8, 1810. His father, Dr. G. Meier, occupied a very honorable and influential position, being a lawyer of that city and secretary of the Supreme Court. He gave his son Adolphus all the opportunities of an early education, which were ample in Bremen, and further to improve it sent him for some time to Switzerland.

After completing his education, Adolphus Meier spent three years in a large banking-house, where he became instructed in the business of banking, but wishing for a more active field engaged for some time in the shipping business. On May 9, 1831, he commenced business on his own account, and was successful from the outset; and feeling comfortable in life, on April 21, 1835, was married to Miss Anna R. Rust, daughter of a respectable merchant of his native city. Mr. Meier having freighted many vessels with emigrants at Bremen, and hearing much of the fertility of the great Mississippi valley, embarked at Bremen for New Orleans on Oct. 20, 1836, with his wife, child, and "household gods." After landing at New Orleans, Mr. Meier took passage for St. Louis, and arrived there on March 2, 1837. He opened a hardware-store in an old rickety building on the corner of Main and Chestnut Streets. He occupied this spot for many years, until the old building was torn down and a splendid edifice erected in its stead, where the firm of Adolphus Meier & Co. conducted their extensive operations. The firm at this time (1860) consisted of Adolphus Meier, his eldest son, and John C. Rust.

³ The statement that Mr. Meier was the first to establish a cotton-factory in St. Louis is denied by a correspondent in the *Republican* of March 15, 1857, who says, "The first establishment of the kind (a cotton-bating factory) was put in operation by Mr. J. T. Dowdall, now of the firm of Dowdall, Markham & Co. The demand increased so rapidly that within twelve months from the commencement it required about two thousand pounds per day to fill the orders. The proprietors, Messrs. J. T. Dowdall & Co., when starting in St. Louis had connected a finishing-shop with their factory, and as the demand for machinery increased it became necessary to enlarge this branch of their business. The starting of a cotton-bating factory in St. Louis attracted the attention of persons wanting such descriptions of machinery, and a demand for cotton- and wool-carding machines having sprung up, they determined to dispose of their cotton-factory, and devote their entire attention to the manufacture of steam-engines, mill-work, and carding-machines. Messrs. Doan, King & Co. became the purchasers of the factory, and continued their business in connection with

In 1844, Adolphus Meier & Co. started a cotton-factory at the corner of Main and Chestnut Streets. It had at first twelve spinning-machines and eight hundred spindles, which were soon increased to double the number. The business proved successful from the start, and the firm soon erected a new and commodious building at the corner of Eleventh and Souard Streets, sixty feet wide by about one hundred and fifty in length and four stories high. They introduced new and improved machinery, and in 1854 it was the only factory west of the Mississippi River making yarn carpet warp and "bats" and lamp-wick. It is thus described in the account of that year's industries, under the head of the St. Louis Cotton-Factory :

"This is one of our earliest and most extensive manufacturing establishments; Adolphus Meier & Co. are the proprietors. The factory itself is built on a square of ground, three hundred by one hundred and fourteen feet, between Souard and Lafayette Streets. One-half of the block is covered with substantial brick buildings, and full of machinery of the latest and most improved kinds. The factory employs about one hundred and ten hands, and runs over one thousand spindles. We learn that its annual capacity of production may be thus stated: 570,000 pounds of yarn, 90,000 pounds of cotton yarn, 90,000 pounds of white and colored carpet warp, 80,000 pounds of candle-wick, and 150,000 pounds of batting. The proprietors, we also learn, are now putting in power-looms to weave one-half of their yarns into brown sheetings. This will give employment to a largely increased number of operatives, and to St. Louis the credit of having the first cotton-factory west of the Mississippi. It will not be long, we trust, before the necessity of importing cotton yarns from the Ohio River will altogether cease to exist."

The factory did a successful business until 1857, when it was totally destroyed by fire. At the time of this disaster the factory contained 4500 spindles, and consumed thirty-five bales of cotton per week. It was making daily 2500 yards of sheeting, 2400 pounds of yarn, 500 pounds of batting, 150 pounds of twine, 150 pounds of wicking, besides a large quantity of carpet warp and bagging. The period of

their jobbing trade until the latter became so large that they were compelled to dispose of the former, and sold to Messrs. Bredell & Baldwin. The demand by this time had greatly increased, and large quantities of the batting were sent to the cities and towns along the lake shore as far as Buffalo and New York. The death of Mr. Bredell closed their business. About one year after this the foreman of the factory commenced business on a very limited scale, and although he has since increased his works, still he cannot supply even the demand of the retail trade. There is now another factory to be started by Messrs. Essex & Block, which they hope will be able to supply not only the demand of our city, but 'to ship a large amount to the Northern and Southern markets.' This factory will be located on Green Street, between Seventh and Eighth, and within sixty days from this time the builders of their machinery, Messrs. Dowdall, Markham & Co., expect to put it in full operation."

labor was twelve hours a day for five days in the week, and nine hours on Saturday, all the year round. Employment was given to 150 hands.

After the fire the company was reorganized and incorporated as the "St. Louis Cotton-Factory," Mr. Meier holding the largest amount of stock, and being elected president. The works were rebuilt, and the factory under Adolphus Meier's able management continued to do a lucrative business.

In 1865 the St. Louis Cotton-Factory Company was reorganized under a new charter, and its manufacturing capacity increased. At this time Col. Robert Campbell and other leading citizens became largely interested in the enterprise.

In 1854, when Mr. Meier's factory was in successful operation, the total receipts of cotton in St. Louis was 913 bales. Now it is the greatest cotton market of the interior, and, what is equally to the purpose in support of its destiny to become the centre of a great cotton manufacture, it is the centre of a dry-goods trade and distribution now valued at over forty million dollars, and rapidly increasing. The capital in this business is over ten million dollars. The business and capital have all grown up since 1840, and more than half the sales made are of cotton fabrics.

George H. Morgan, secretary of the St. Louis Merchants' Exchange, who is one of the most intelligent and best-informed business experts in the United States, has given it as his opinion that St. Louis must continue to increase rapidly in importance as a cotton market. He gives as the reasons for his faith the summary of superior facilities and advantages possessed by the city, as compiled and presented by C. W. Simmons, secretary of the St. Louis Cotton Exchange :

"1. St. Louis is in a direct line from Arkansas and Texas to the East and Liverpool.

"2. As the country merchants control the cotton, they save exchange by shipping to where they buy.

"3. St. Louis is the best point from which the planters and merchants can draw their supplies.

"4. St. Louis is above the yellow fever line, and the trade can be conducted the year round.

"5. The cotton produced by the above States is of the best quality, thus making our market desirable for spinners and buyers.

"6. Our market, under its system of warehousing, can and does handle cotton cheaper than other markets.

"7. Our railroad facilities are better than those of any other cotton market.

"8. Our purchasers are the North, East, Liverpool, and home."

In the same way, the advantages and facilities of St. Louis as a centre for cotton manufacture might be summed up :

A. *Production.*

a. Control of the best quality of the staple by means

of cheap transportation on short interior lines by the most direct routes to the Southwest. This area, the cotton produced in it and the connection of St. Louis with it, are rapidly and steadily increasing every year.

b. The planters sell to the country merchants from whom they buy their supplies. As plantations become smaller, the sales of the country merchants will become larger and tend more and more to include the entire line of goods consumed by the planting class. It might pay the planter of one hundred to five hundred bales to go to the city and buy at wholesale; but the planter of five to fifty bales cannot do this. Hence the country merchant's trade is increasing in volume and importance.

c. To the country merchant of the Southwest St. Louis is the best and cheapest market. It is better stocked, its goods are cheapest, its transportation facilities most extensive, most convenient, and cheapest. The country merchant of the Southwest, therefore, will buy in St. Louis his corn, flour, provisions, dry-goods, clothing, fertilizers, groceries, hardware, agricultural implements, and the furniture, vehicles, jewelry, liquors, and luxuries which the planter needs and the country merchant supplies,—an enormous line of goods, all of which can be most cheaply paid for in live-stock and baled cotton. Thus St. Louis secures and is able to maintain control of unlimited supplies of the raw material of the cotton manufacture on the most favorable terms possible.

B. Conversion.

a. Manchester (England) and Fall River (Mass.), to compete with St. Louis in the cotton manufacture, must buy their raw cotton in St. Louis and carry it to their mills, a distance of fifteen hundred miles in one case, of four thousand miles in another. This is a freight advantage in favor of St. Louis which averages, under all circumstances, one-fourth of one cent per pound.

b. Fall River must pay for coal, the controlling motive-power in cotton manufacture, fifty per cent. more than it costs in St. Louis. In Manchester coal is not quite as cheap as in St. Louis, and while the price of fuel in the latter place tends to decrease as wider areas of coal are opened and the facilities for cheap transportation are increased, the tendencies of fuel in price in England are upward, in consequence of diminished supply and greater cost and difficulty of procuring it.

c. Fall River and Manchester equally must buy their breadstuffs and provisions in St. Louis,—that is to say, they must pay for breadstuffs and provisions a price which is equal to the St. Louis price plus the cost of transportation from St. Louis and their deliv-

ery in those cities. This is equal to an enhancement of twenty-five per cent. upon the price of food in St. Louis. But the total labor employed in cotton manufacture is twenty-five per cent. of the cost, and in England and this country the cost of food represents about seven-twelfths of the total cost of labor. Thus St. Louis, through its cheaper food, has an advantage in the cost of labor in cotton manufacture equal to fourteen and one-half per cent.

d. The sum of the advantages of St. Louis for cotton manufacture, therefore, growing out of its position as a trade centre, would be seventeen per cent. over England and New England.

e. These advantages are increasing steadily from natural causes, and to them must be added a similar line of advantages in respect to the raw materials for machinery, and the cheapness of rents, sites for factories, etc.

f. The advantage of new plants and machinery of latest and most improved make, when St. Louis goes into cotton manufacture, must not be overlooked. In old establishments usually one-half the capital is locked up in old, inconvenient buildings and machinery, heating apparatus and the like, which do not produce the best results, and are costly out of proportion to their value.

C. Exchange.

St. Louis could distribute more cheaply than any competing city the products of looms capable of converting into fabrics every bale of staple annually received by her merchants. This cotton-goods market is extending rapidly through new connections with the far West and with Mexico, and it would be still more largely enhanced by the facilities of St. Louis for outstripping competition in the extensive manufacture of cotton.

The drawbacks are want of capital, want of machinery, want of skilled labor, and the opposition, of course, of the jobbers, who sell the goods manufactured in other places. These deficiencies St. Louis must remove. With her natural and acquired advantages she can well afford to do so. In corroboration of the facts and conclusions adduced above, it is proper to add the following statistics and figures:¹

GROWTH OF THE ST. LOUIS COTTON-TRADE.

	No. of Bales.		Net per ct. of Crop.
	Gross.	Net.	
1866-67.....	19,338
1871-72.....	36,421	16,706	0.56
1873-74.....	103,741	79,418	1.90
1879-80.....	496,570	324,284	5.63
1880-81.....	398,839	301,353	4.56
1881-82.....	374,415	259,151	4.78

¹ From a paper by Charles W. Knapp on "St. Louis: Past, Present, and Future," read before the "Round Table Club," Oct. 14, 1882.

"This presents a picture of trade aggrandizement which should at once inspire confidence in the future and stimulate the merchants of St. Louis to try what the same energy and enterprise will accomplish in other fields. To have built up in half a dozen years from unimportant proportions a trade running yearly over twenty million dollars proves that it is often only necessary to dare in order to do. I ask your attention especially to the fact that the cotton trade of St. Louis showed signs of healthy growth during the year just closed, in despite of the great falling off in the volume of its receipts, as you will see that only in 1879-80 did it receive so large a percentage of the whole cotton crop. The significance of this fact you will find still more strikingly illustrated by the following:

PERCENTAGE OF COTTON CROP RECEIVED AT LEADING MARKETS, ESTIMATED ON GROSS RECEIPTS.

Per Cent. of Crops of	1881-82.	1880-81.	1879-80.
St. Louis.....	7.21	6.11	8.43
Memphis.....	6.24	7.13	7.12
New Orleans.....	21.91	24.37	26.13
Galveston.....	8.45	10.33	8.60
Mobile.....	4.88	5.95	6.23
Savannah.....	13.64	13.51	12.83
Charleston.....	9.61	10.19	8.59
Houston.....	7.80	10.60
Cincinnati.....	7.46	4.90	5.46

"This presents a comparison of gross receipts, of which alone could I find the statistics for comparison. St. Louis, Cincinnati, and Savannah are the only points which show receipts of a larger percentage of the crop than previous years, and of these Cincinnati, as heretofore stated, is only a point in transit and not a market. St. Louis, therefore, held its own in 1881-82 better than any other market in the country, and has every reason to count upon a large increase this year, if the crop realizes present anticipations."

In the same connection, Mr. Nimmo, in his recent report on the internal commerce of the United States, sums up the

"RECEIPTS OF COTTON AT ST. LOUIS, BY RIVER AND BY RAIL, DURING THE PAST FOURTEEN YEARS.

Cotton Year Ending August 31st.	By River.		By Rail.	Total.
	Bales.	Bales.		
1866.....	53,506	1,921	55,427	
1867.....	18,712	1,066	19,779	
1868.....	38,804	220	39,024	
1869.....	16,614	82	16,696	
1870.....	17,034	1,484	18,518	
1871.....	15,582	4,688	20,270	
1872.....	30,018	6,403	36,421	
1873.....	26,577	33,132	59,709	
1874.....	27,538	76,203	103,741	
1875.....	11,750	122,219	133,969	
1876.....	19,620	224,978	244,598	
1877.....	6,650	211,084	217,734	
1878.....	9,998	238,858	248,856	
1879.....	15,012	320,787	335,799	
1880.....	32,279	464,291	496,570	

"The receipts of cotton at St. Louis by river fell from 53,506 bales during the cotton year 1866 to 32,279 bales during the cotton year 1880, while the receipts by rail rose from 1,921 bales to 464,291 bales. The total receipts increased from 55,427 bales to 496,570 bales.

"The receipts of the cotton year ended Aug. 31, 1880, were principally by the rail lines west of the Mississippi River, the Iron Mountain Road alone bringing about 84 per cent. of the total receipts.

"The total receipts were as follows:

	Bales.
By Iron Mountain Railroad.....	417,238
San Francisco Railroad.....	21,669
Missouri, Kansas and Texas Railroad..	20,867
railroads east of Mississippi River.....	4,517
lower Mississippi River boats.....	32,279
Total.....	496,570"

And George H. Morgan, secretary of the St. Louis Merchants' Exchange, in the report on which Mr. Nimmo based his conclusions, replied as follows to some of the interrogatories propounded to him:

"Question 18. Please to state such facts as will indicate the growth of the cotton traffic of St. Louis, giving both receipts and shipments, and presenting tables showing the growth of the cotton traffic over the various routes during the last five or six years. In this connection please also to give the States and localities in which the cotton received by the different routes is produced.

"Answer. The business of the cotton year ending Aug. 31, 1880, has more than realized the expectations of the trade. The gross receipts amounted to 496,570 bales, placing St. Louis at the head of the interior cotton markets of the country. The prevalence of yellow fever at Memphis during the fall of 1879 no doubt turned to St. Louis some cotton that otherwise would not have come to this market, but the amount so diverted could not have exceeded at the utmost 25,000 bales. The increase was by the railroads from Arkansas, Texas, and the Indian Territory, which trade legitimately belongs to St. Louis, and will doubtless increase with the production in those States.

"The value of the cotton business to our city is equal to at least \$50,000,000 per annum. The value of the net receipts the past year, at \$55 per bale, would be \$17,835,620. It is safe to estimate that the greater portion—say three-fourths to seven-eighths—of the proceeds of the cotton sold here is expended in the purchase of goods and supplies. Add to this the trade that has naturally followed the channel opened by the cotton trade, and the amount named will not more than cover the amount of business that is the natural result of the diversion of cotton to this market. Of the gross receipts, 172,286 bales were on through bills of lading to Eastern and foreign markets, leaving 324,284 bales as the amount handled by our factors, against 218,716 bales the previous year. Of the shipments, 173,644 bales were exported direct to Europe, 7248 bales to Canada, 110,761 bales to the Atlantic seaboard cities, 432 bales to San Francisco, and 186,134 bales to interior manufacturing points. Of the receipts, the larger amount came from Arkansas, and the next from Texas, as will be seen by tables on following pages. As the business has increased the facilities for handling the same have been provided. The St. Louis Cotton Compress Company, the largest establishment of its kind in the world, has added to its former buildings, and has also erected a compress on the line of the Missouri Pacific Railroad. The capacity of the three companies is now as follows:

	Capacity per Day for Compressing.	
	Storage Capacity.	Bales.
St. Louis Cotton-Press Company.....	150,000	4000
Factors' and Brokers' Compress Company....	25,000	1000
Peper Cotton-Press.....	25,000	1500
Total.....	200,000	6500

The tables below, derived from the same source, about complete this exhibit:

The rate of freights on cotton from interior points in Texas to St. Louis is about the same as that to Galveston, and the transportation charges from interior points in Texas to Liverpool via St. Louis do not materially differ from those via Galveston to Liverpool, thus making St. Louis a strong competitor with Galveston for the cotton trade of interior Texas.

On the general subject of the mutual interaction of local advantages in production, conversion, and exchange, as affecting St. Louis and its competitors, C. H. Pope, an expert in transportation matters, observes, in regard to the territory south of the Ohio River and of the State boundary of Missouri, that

"at the opening of the era of railway transportation the commercial relations of Chicago with the territory considered were meagre and spasmodic. The city did not form a market for any of the products of the Southern soil; it did not possess organized railway facilities nor lines of non-competitive commodities, all of which, added to disadvantageous position, practically placed that city outside the commercial pale for the Southern Mississippi River basin.

"Her first traffic with the States of Tennessee, Mississippi, Alabama, and Louisiana, via the Illinois Central Railroad and connections, was rapidly improved and followed up, and trade relations were organized which, on some lines of merchandise, have remained permanent and prosperous. The influence of Chicago in the South at present is an important one. It is felt most largely along the line of the New Orleans, St. Louis and Chicago Railroad, and of the Mobile and Ohio Railroad. In fact, during the era of railway transportation, the line of New Orleans, St. Louis and Chicago Railroad has formed as nearly a dividing boundary for the commerce of the interior cities as it is possible to establish.

"To the west of this road the city of St. Louis, since the completion of its Southern trunk connections, controls more of the commerce of the country than either Cincinnati or Louisville, and in this territory Cincinnati, Louisville, and Chicago each enters as a competitor, the aggregate value of the commerce in all commodities controlled by each therein being almost equal, although the trade seeking each city varies largely with the commodities moved,—i.e. the aggregate trade of each city in particular commodities being widely different."

He adds that the trade specialties which Chicago advantageously offers to this territory are grain, hides, pork, and live-stock, besides a large list of manufactured goods, including clothing, implements and machinery, iron, etc. Those which St. Louis offers are furs, flour, grain, and manufactured articles.

J. D. Hayes, of Detroit, one of the experts best known in connection with trade and transportation, in a letter to Mr. Nimmo, dated April 7, 1881, remarks as follows upon the force of natural advantages in promoting manufactures:

"In reply to your valued favor of 23d ultimo, in regard to 'the development of manufacturing interests in the chief cities of the West, viz., Cincinnati, St. Louis, and Chicago,' I would say the manufacturing interests of those cities, as well as all other cities, towns, and villages, depend very much upon natural advantages, aided by circumstances, controlled by business energy, and capital to bring out and develop those natural advantages.

"Take St. Louis for example. For hundreds or thousands of years before the present race of people were known the Mississippi and Missouri Rivers formed their junction near the place where St. Louis now stands,—those rivers being navigable for so many hundred miles in each direction, draining a country rich in agricultural lands, as well as very abundantly supplied with iron, coal, and other minerals, together with the great variety of different kinds of valuable timber suitable for manufacturing, all of which could be brought to that point from the north by the natural flow of water, thence onward down to the Gulf of Mexico, to reach open and unobstructed ocean navigation all the year round to all parts of the world. This vast region of country along those rivers is capable of sustaining a population of three hundred millions of people, without having more inhabitants to the square mile than some parts of Europe. With such a country and such natural resources to and from, such a central point would not fail to attract the attention of the dullest mind to its future prospects long before the steamboats or the railroads had entered into competition in rates with the currents of the rivers in their onward course to the ocean. Therefore from the beginning to the present time, and for all coming time, railroads and steamboats must compete with the currents of those rivers for the traffic of St. Louis; therefore manufactories at that point enjoy benefits which are in some respects a protection as against interior towns or cities having to pay local or non-competing rates. The St. Louis rates affect the rates upon all productions far back into the country each side of that river, as far as to where the local rates into St. Louis and the through rate from St. Louis added together equal the east-bound rate by rail from the interior cities and towns.

"The public are educated to call this natural advantage 'discrimination in rates in favor of St. Louis,' which is true so far as the other places are concerned, but it is a 'discrimination' made by God himself in the formation of the world, therefore beyond the power of railroad managers to change. The manufacturer can with some degree of certainty put his money, energy, and material together at that point, looking to the future wants of the vast number of people that are now in the West and the millions upon millions more that will be there, and go forward with manufacturing enterprises without limit, feeling secure in the ability to compete with any other part of the world."

In different words and varying forms, all that has been said on this subject only serves to enforce and illustrate what was said long ago by the author of the "Wealth of Nations," Adam Smith, in that great work, the foundation, in fact, of all political economy, and in many respects the wisest and most healthy treatise upon that complicated science:

"The great commerce of every civilized society is that which is carried on between the inhabitants of the town and those of the country. It consists in the exchange of rude for manufactured produce, either immediately or by the intervention of money, or of some sort of paper which represents money. The country supplies the town with the means of subsistence and

the materials of manufacture. The town repays this supply by sending back a part of the manufactured produce to the inhabitants of the country. The town, in which there neither is nor can be any reproduction of substances, may very properly be said to gain its whole wealth and subsistence from the country. We must not, however, upon this account imagine that the gain of the town is the loss of the country. The gains of both are mutual and reciprocal, and the division of labor is, in this as in all other cases, advantageous to all the different persons employed in the various occupations into which it is sub-divided. The inhabitants of the country purchase from the inhabitants of the town a greater quantity of manufactured goods with the produce of a much smaller quantity of labor than they must have employed had they attempted to prepare them themselves. The town affords a market for the surplus produce of the country, or what is over and above the maintenance of the cultivators, and it is there that the inhabitants of the country exchange it for something else which is in demand among them. The greater the number and the revenue of the inhabitants of the town, the more extensive is the market which it affords to those of the country; and the more extensive that market, it is always the more advantageous to a greater number. The corn which grows within a mile of the town sells there for the same price with that which comes twenty miles' distance. But the price of the latter must generally not only pay the expense of raising it and bringing it to market, but also afford the ordinary profits of agriculture to the farmer. The proprietors and cultivators of the country, therefore, which lies in the neighborhood of the town gain in the price of what they sell, over and above the ordinary profits of agriculture, the whole value of the carriage of the like produce that is brought from more distant parts, and they save, besides, the whole value of this carriage in the price of what they buy."

And this rule applies not only to cotton, but to every other manufacture in which St. Louis has embarked already or will embark in the future, and the extent and profits of these manufactures of St. Louis will be in exact proportion to the extent of tributary country, its need for supplies, and the advantages of transportation and conversion possessed by St. Louis over other competing trade centres. The extent of these natural and acquired facilities constitutes what may be termed the *natural protection* of St. Louis, as distinguished from the artificial protection which may be derived through the tariff. The percentage of that natural protection cannot exactly be determined, since so many various factors enter into its composition. We have shown that it is at least seventeen per cent. in the case of cotton. In the case of flour and provisions for the cotton sections tributary to St. Louis it is probably fully as great.

COTTON COMPRESS COMPANIES.—What the elevators are to the handling of grain the compress companies are to the handling of cotton shipments, and in "terminal facilities" for the latter trade St. Louis is without an equal, one of the three establishments of the kind of which the city boasts being, as we have indicated, the largest, most complete, and most convenient of the kind in the world. There are three

compress companies in St. Louis, and a summary of their compressing facilities makes the following remarkable exhibit:

	Capital Stock.	Storage Capacity. Bales.	Capacity per Day for Compressing. Bales.
St. Louis.....	\$1,250,000	200,000	6000
Factors' and Brokers'.	150,000	25,000	1500
Peper.....	100,000	25,000	1000

REPORT OF COTTON COMPRESSED AT ST. LOUIS.

Year ending Aug. 31.	Receipts. Bales.	Shipments. Bales.	Stock. Bales.
1882.....	259,151	265,637	1739
1881.....	317,195	316,537	8225
1880.....	358,124	351,818	7467
1879.....	237,437	237,101	1161
1878.....	205,861	206,537	825

The Peper Cotton Compress was the first in St. Louis, being erected in 1871, at the old building corner of Twelfth and Market Streets. The press was of primitive character and capacity, but was used until 1878, when the company removed to its present spacious warehouse, bounded on the river-front by the Levee, and on its western length by the tracks of the St. Louis, Iron Mountain and Southern Railway. The warehouse is two hundred and fifty by three hundred feet, and two stories high. It contains two powerful hydraulic presses, with a maximum power of five million pounds pressure on the bale. The other appointments of the warehouse are also very complete. The officers of the company are Jerome Hill (of Hill, Fontaine & Co.), president; Christian Peper, vice-president; and E. D. Mcier, secretary and treasurer.

The St. Louis Compress Company was organized July 20, 1873, and has since so increased its business as to employ one million two hundred and fifty thousand dollars capital. The vast establishment covers a space of five entire blocks, with a total frontage of seventeen hundred and forty-eight feet, occupying fifteen acres of ground, and with its two stories occupying thirty acres of floor space. The company's warehouses are arranged in three divisions,—two on the Levee and Park Avenue, and a third (new) on the Missouri Pacific and San Francisco Railways in the West End. There are in the first two nine buildings with heavy brick walls and iron doors. A network of railway tracks surrounds the platforms, and the arrangements for loading and unloading direct from cars and boats are most complete.

Cotton is received and delivered by the company free of drayage. After a bale has been properly classed and marked up for shipment it is compressed, and taken from the delivering platforms by the Cotton Transportation Company, which company was organized for the express purpose of transporting cotton in through car-load lots, without breaking seals, to the initial lines in East St. Louis, and from thence

to the East and Europe. As the Compress Company insure all cotton in their hands, this organization of the Transportation Company in connection with them enables them to cover the cotton by one policy from the time they receive it until it is handed to the railroad companies in East St. Louis. The Transportation Company was organized and conducted under the able management of Col. J. W. Paramore, the first president of the Compress Company. As a greater security from fire, the buildings are divided into some twelve or fifteen compartments, and throughout the whole the arrangements for handling the cotton are of the most elaborate character. The floors are all on an inclined plane from the receiving platforms to the compresses, and thence to the delivery platforms, and all of these platforms are well roofed in.

The company has four powerful presses, so combining steam and hydraulic power that they compress a bale of cotton to a density of nine inches, enabling twenty-five thousand pounds to be readily loaded on an ordinary freight-car. In 1879-80 two hundred and seventy-five thousand bales were compressed here. The new warehouse comprises six hundred feet front by a depth of four hundred, with thirty-seven and one-half acres of ground, and most complete machinery and other appointments. The company employs from three hundred to eight hundred men, according to the season, and paid for labor since its organization, and up to September, 1880, three hundred and ninety-four thousand two hundred and four dollars. The original officers remained up to 1881, when President J. W. Paramore was obliged, on account of his great railway operations in Arkansas and Texas, to resign. The officers of the company then chosen and still remaining as such are William M. Senter, president; C. M. Donaldson, vice-president, secretary, and treasurer; F. W. Paramore, assistant secretary; Directors, William M. Senter, James L. Sloss, M. C. Humphrey, J. D. Goldman, J. N. Stegall, Thomas H. West, I. M. Wiener, George D. Fisher, R. B. Wright, C. M. Donaldson, William F. Obear.

The board for the Texarkana Cotton Compress Company, which is also a St. Louis enterprise, is composed as follows: F. M. Martin, C. M. Donaldson, R. B. Wright, J. H. Reifsnyder, A. C. Stewart, J. W. Phillips, M. C. Humphrey, J. D. Goldman, James L. Sloss, William M. Senter. The Texarkana Company is organized under the laws of the State of Missouri; the stockholders are mainly the same as in the St. Louis Cotton Compress Company; the chief office is at St. Louis; the branch office and general agent at Texarkana.

The Factors' and Brokers' Compress Company, located on Columbus and Lafayette Streets, and covering an entire block of ground, commenced business in November, 1874, with a capital stock of one hundred and fifty thousand dollars. The mechanical advantages are such as to insure speedy and economical handling of the staple, and the warehouses are extensive and conveniently arranged. The capacity has been so increased from year to year that the company can now handle with its two powerful presses fifty-five thousand bales during a cotton year. The officers are R. B. Whittemore, president; C. T. Mitchell, secretary; and Messrs. Oliver Garrison, H. M. Mandeville, Richard H. Allen, and John G. Wells, directors.

There are as yet only two cotton-mills in St. Louis, those of Bemis & Marriott and of Theo. G. Meier, and both are doing so large a business that the erection of other manufactories on a still more extensive scale is in contemplation. The requisite capital is already assured.

Hemp, Bagging, and Tow.—Hemp and tobacco are still great staples of Missouri and great materials for manufacture in St. Louis, but their importance relatively is not so transcendent as it used to be. Other products have outstripped them in the scale and give larger results. Hemp and tobacco will always be grown upon limestone land, because this, the only soil which will produce blue grass, is also the only one upon which those two products can be successfully cultivated and without exhausting the fertility of the soil. These products have been cultivated largely since the first settlements in Missouri. The French raised tobacco before St. Louis was founded, and it was an article of trade with the Indians in the days of Laeclde. The first Kentucky immigrants brought with them the cultivation of hemp, while the Canadian *habitans* of Cahokia grew and hackled flax for linen and tow-cloth from the days of Charlevoix down. Under the old colonial system, however, so active was the competition of tobacco that the cultivation of flax and hemp and the manufacture of linen and cordage had to be enforced by penalties and encouraged by bounties, yet much of the domestic wear was of tow and linen and linsey-woolsey until fulling-mills were established and the use of cotton goods became universal. In St. Louis, in 1821, there was no linen made except a little spun and woven for domestic use, and there was no rope nor bagging manufactured. The consumption of rope had been comparatively large, as there was a demand for it for cordelles, but it was all imported from New Orleans or from the Eastern cities. In 1810 the cul-

tivation of hemp sprang up largely in Kentucky on account of the blockade of the Baltic, and these Kentuckians and their children emigrating later to Missouri, carried the cultivation of hemp with them. But as in 1820 the total manufactures of Missouri only yielded one hundred and sixty thousand dollars, and all the capital invested was only forty-six thousand dollars, it is not to be supposed that the hemp crop had led to the establishment of a co-ordinated industry. Still there was the crop, and the manufacture would follow.

In 1842 the tariff laid a duty of 25 per cent. on bagging, 5 cents per square yard on gunny-cloth, 25 per cent. on flax and hemp bags, 25 per cent. on linen tick, and the same on burlaps, canvas of linen, 30 per cent. on hemp and jute carpet, $4\frac{1}{2}$ and 5 cents per pound on cordage of hemp and manilla, 25 per cent. on drillings and manufactures of flax, \$20 per ton on raw flax, 5 per cent. on flaxseed, \$40 per ton on raw hemp, with 20 per cent. on manufactures of hemp, 20 per cent. on hemp-seed, and the same on manilla, \$25 per ton on jute, 25 per cent. on jute butts, and 25 per cent. on linen fabrics. With this the cultivation of hemp and the manufacture of the raw hemp and flax may be said to have begun in Missouri. In the course of about ten years rapid progress was made. The commercial statistics of St. Louis for 1853 show a receipt of 63,450 bales of hemp, against 49,124 the previous year, valued at \$300,000, the price having risen to \$130 per ton in consequence of the Crimean war.

The cordage business was also prosperous, as the reports show. Receipts this year (1853) foot up 58,437 coils, against 41,674 in 1852, showing a difference of 16,763 coils. This difference, at the ruling market rates, gives the sum of \$17,000, and when to this is added the advance on the whole receipts over the prices of the preceding year, the cash increase on operations, sums up \$60,000. Sales during the year were unusually large. Many Southern orders previously sent to the Ohio River were filled at this point, the St. Louis market offering equal inducement as far as quality was concerned and superior claim to the consideration of buyers as regards cheaper transportation. Sales ranged from 6 to $6\frac{3}{4}$, the larger portion at $6\frac{1}{2}$ to $6\frac{1}{2}$; in 1852, $4\frac{3}{4}$ to $5\frac{1}{2}$ were the ruling rates. The heavy advance in hemp, of course, led to this result. As far as can be ascertained, the quantity manufactured in St. Louis amounted to from 14,000 to 15,000 coils; of this the Lowell Factory, in the northern part of the city, turned out 11,000, the greater part of which found sale in the St. Louis market. Missouri rope regained its standard during the season

for excellence of quality, and was eagerly sought by Southern buyers.

R. W. S. Allen, of Kentucky, and J. H. Alexander & Co., McClelland, Scruggs & Co., and Douglass & Bier, of St. Louis, purchased about this time of W. A. Richardson, of Louisville, the Perry & Slaughter patent for making bale-rope and hackling hemp. The right included the whole of Missouri and the western half of Illinois. Operations were commenced about the 1st of April, with machinery sufficient to turn out one hundred coils of rope and three tons hackled hemp per day. The annual consumption of hemp was from two to three thousand tons.

Hon. John Hogan, speaking of the hemp industry of this period, remarks,—

“It would almost be unpardonable if, in such notices of manufactures as I take, I were to omit all notice of the productions of one of our own great staples, hemp. There are in St. Louis many rope-works, carried forward on the old principle of operation; these aggregately do a pretty extensive business, and although they are important, yet they do not exactly come within my plan. There are here in successful operation two extensive steam-propelled hemp-works, and two more nearly ready for operation. The works of Mr. John L. Blaine are located above the shot-tower. They contain some twenty-five machines, which are soon to be increased. The building is a large stone and brick edifice, and the business is understood to be quite remunerative, although during the past year the price of the raw material has been relatively higher than the manufactured commodity. The Missouri Hemp Company, of which John T. Douglass is president, have their establishment located on Stoddard, just south of Chouteau Avenue. The buildings, all of brick, were erected purposely for this business, and are said to be fire-proof, certainly they are secure from any external hazard. The chief building is ninety by forty feet, three stories high, and contains thirty-two spinning-machines and four hackles, all made by Todd, McKay & Co., of Paterson, N. J. The machines are of the Perry & Slaughter patent, and the hackles are of the Arnold patent, besides cards, breaks, and picks, as usual. The engine-house, also of brick, is supplied with an engine of fifty horse-power, built by Gaty, McCune & Co., which propels all the machinery. The average consumption of hemp is seventy tons per week, and the product averages one hundred coils of rope and fifteen bales of hackled hemp per day.

“Johnsons, Bartley & Lytle are erecting on the corner of Decatur and Barry Streets, opposite the church of St. Vincent, another extensive rope manufactory. The principal building is to be one hundred and twenty by forty-four feet and four stories high, the engine and boiler house is to be ninety-six by twenty feet, the whole built of brick in the best manner. Mr. L. D. Baker, builder. As the buildings are not yet finished, there is of course no machinery erected, consequently I can give no description of it or its product; but I may say that the gentlemen who have it in hand are energetic business men, familiar with all the details of this species of manufacture, having lately been engaged in its prosecution in Louisville, Ky., and the machinery will be all new and of most approved character; and for the present they will confine themselves to making bale-rope and hackled hemp. There is another large establishment nearly ready for the machinery, which is situated on the corner of Austin and Twelfth Streets, got up by Mr. R. B. Bowler, lately a very extensive manufacturer of bagging and

rope in Cincinnati, also a good business man, and every way qualified to push forward the enterprise. Here the chief commodity made will be bagging and bale-rope, to the production of which the machinery is perfectly adapted. I have understood that a company of heavy capitalists are associated with Mr. Bowler, and they have obtained a charter from the Legislature under the name of the ‘St. Louis Rope and Bagging Company.’”

In 1860 these industries in hemp and flax had attained the following respectable proportions:

Articles.	No. of Estab.	Capital.	Hands.	Materials.	Products.
Bags.....	1	\$8,000	6	\$71,500	\$76,000
Tents.....	1	3,000	8	4,000	6,000
Rope and bagging..	14	474,130	464	1,029,100	1,189,018

The maximum was reached in 1855, which year also was that in which American ship-building culminated. Since the civil war the culture of hemp and flax in Missouri has not flourished. In 1870 there was manufactured in St. Louis 3,377,845 yards of bagging. In 1880 there were engaged in these manufactures: Bagging (flax, hemp, and jute), 3 establishments; capital, \$370,000; hands, 551; wages, \$150,216; materials, \$545,900; product, \$867,395. Awning and tents, 9 establishments; \$127,200 capital; 259 hands; \$54,850 wages; \$249,185 materials; \$388,940 products. Cordage and twine, 14 establishments; \$12,875 capital; 89 hands; \$16,423 wages; \$33,250 materials; \$67,664 products.

The Grain Trade.—The history of the grain trade of St. Louis embraces a succession of mutations, all tending to the enlargement and expansion of this interest, and exhibiting a remarkable extension in respect to tributary commercial relations. A few years ago it was insisted, as indeed it had been for forty years, that the local mills made the St. Louis market, but large as the milling interest is, that demand bears a relation of only about fifty per cent. to the actual grain supply. To illustrate: The receipts of wheat from all sources in 1881 were 15,275,931 bushels, while the milling consumption was 7,407,536, less than one-half. The difference between these amounts represents the shipments. As to corn, the great staple

of Illinois and Iowa tributaries, the receipts aggregated 24,049,983 bushels, while the milling demand was only 4,576,963, a trifle more than one-fourth of the exportation of this cereal. The proportion as to rye is still more marked.

It was when St. Louis ceased to be a market of mere consumption demand and attracted to this centre the crops of Central and Southern Illinois, Northern Iowa, and the great Northwest, the West,

South, and Southwest, and when she began to supply other cities and other countries,—it was when, in short, she became one of the distributing points for the world's breadstuffs that she came into prominence as a leading market. The growth of the speculative tendency doubtless aided St. Louis, and her call-boards, like those of Chicago, were a great advertisement, but the transactions in actual grain also grew with the increase of rail- and water-route facilities for the movement of crops. Chicago had the lakes and more trunk lines, but the genius of Capt. James B. Eads opened a highway to the sea, and St. Louis began shipping grain *via* the jetties direct to Liverpool. River transportation companies were formed, and many bottoms built to carry the outward-bound grain from St. Louis to deep water. Meantime more railroads extended their lines to St. Louis, and in shipping facilities were greatly increased in the interest of new tributary points. Thus St. Louis acquired the key to the situation, and invited the investment of large foreign capital in the grain-trade of the Mississippi valley. Moneyed men were swift to appreciate the advantages St. Louis offered in this regard, and Jay Gould, among others, hastened to devote several million dollars to the extension of railroads centering here, and to the advancement also of the water-route transportation companies.

SOURCES OF SUPPLY.—The following table exhibits the receipts in 1882 and the sources of the same. The shipments *via* New York, it will be observed, are trifling as compared with those by the St. Louis and Liverpool route *via* the jetties.

1873.....	219,108	159,463	111,016	19,006	45,836
1874.....	516,154	188,284	104,824	2,442	100,320
1875.....	772,866	412,598	89,078	26,589	117,815
1876.....	510,956	553,072	154,202	50,564	199,686
1877.....	413,495	290,845	31,470	35,027	93,309
1878.....	437,149	492,594	37,213	42,720	219,433
1879.....	1,232,258	1,379,826	187,122	55,804	165,689
1880.....	1,962,797	1,616,843	221,440	63,214	75,144
1881.....	877,202	958,076	162,466	91,941	161,822
1882.....	836,562	905,316	72,563	43,570	101,373

The season of 1880 was an exceptional one in respect to an immense crop, the largest by nearly thirty per cent. in the yield for many years.

EXPORTS BY TONS.—A comparative compilation by tons of direct shipments from St. Louis to foreign countries for 1875 and 1878-81 makes this exhibit:

	1881.	1880.	1879.	1878.	1875.
By river and jetties.....	389,587	453,681	176,511	154,060	6,897
By rail eastward.....	91,727	146,087	135,381	72,091	16,825
Total tons.....	481,314	599,768	312,412	226,151	23,682

The foreign shipments by river and the jetties on through bills of lading in 1881 aggregated 564,839 bushels, and to this must be added 12,861,124 bushels of grain *via* New Orleans, but not on through bills, making the grand aggregate of 13,425,963 bushels. The bulk grain exports from New Orleans and the foreign destination of the same are thus compiled:

To	Corn.	Wheat.	Rye.
	Bushels.	Bushels.	Bushels.
England.....	2,042,613	417,893
Germany.....	776,916
Belgium.....	1,256,364	558,210
France.....	1,970,472	2,608,644
Holland.....	216,447	215,517	22,423
Ireland.....	195,916	125,099
Denmark.....	835,991
Scotland.....	29,932
Cape Breton.....	261,110	578,494
Total.....	7,555,829	4,533,789	22,423
Total bushels, 1880....	9,596,956	5,901,137	23,000

A comparison of the shipments of grain in bulk by river and for export during the twelve years of 1870-81 makes this interesting exhibit:

Year.	Wheat.	Corn.	Rye.	Oats.	Totals.
	Bushels.	Bushels.	Bushels.	Bushels.	
1881.....	4,197,981	8,640,720	22,423	132,823	12,993,947
1880.....	5,913,272	9,804,392	45,000	15,762,664
1879.....	2,390,897	3,585,589	157,424	30,923	6,164,838
1878.....	1,876,639	2,857,056	609,041	108,867	5,451,603
1877.....	351,453	3,578,057	171,843	4,101,353
1876.....	37,142	1,737,238	1,774,379
1875.....	135,961	172,617	308,578
1874.....	365,252	1,047,794	10,000	1,423,046
1873.....	1,373,969	1,373,969
1872.....	1,711,039	1,711,039
1871.....	309,077	3,000	312,077
1870.....	66,000	66,000

Thus has the grain trade of St. Louis grown from the proportions of a purely local market to those pertaining to one of the chief commercial centres of the world, situated in the heart of the greatest grain-producing section of the American continent.

All indications point to an immense increase in the grain trade of St. Louis. The superior facilities for transportation offered by the jetties at the mouth of the Mississippi, and by the improvements which the large appropriation made in the River and Harbor Act of 1882 will secure in the navigation of the river, must insure not only greater safety but a considerable reduction in the cost of shipment.

The position of St. Louis as a grain mart is indicated in the following table of shipments of grain and flour during 1880:

	Bushels.
Chicago.....	154,377,115
Toledo.....	53,372,739
St. Louis.....	46,675,581
Milwaukee.....	29,691,524
Peoria.....	20,544,508
Detroit.....	10,366,491
Duluth.....	6,511,100
Total.....	321,539,058

From the paper, by Charles W. Knapp, on "St. Louis: Past, Present, and Future," read before the "Round Table," Oct. 14, 1882, it appears that St. Louis, in 1881,

"led Chicago as a wheat market last year, receiving one and one-fourth million bushels more than Chicago handled. Nor can the fact be altered by counting the gross receipts of Chicago, which show it a million and a half bushels ahead in 1881, for, after all, the true basis of comparison is by crop and not calendar years,—that is, from August 1st to July 31st. They know this at Chicago, the Board of Trade reports giving the receipts by crops for a number of years, and the gross receipts at Chicago from Aug. 1, 1881, to July 31, 1882, were only 13,116,580 bushels, or 3.45 per cent. of the whole crop, while St. Louis received 14,085,964 bushels, or 4.71 per cent. Is there any chance now to cavil at my statement that St. Louis was the greatest wheat market of the world last year? It got nearly a million bushels more than the gross receipts of Chicago, and at least 4,000,000 more than Chicago's net receipts, for in the first six months of the year in question a through movement of 2,000,000 bushels was included in Chicago's gross receipts, so it is no injustice to assume a total through movement of 3,000,000 bushels in the whole year. Chicago, therefore, got only about 71½ per cent. as much wheat as St. Louis, and, unless Minneapolis, which received 3,500,000 bushels more than St. Louis in 1881, is called a market, in despite of the fact that it receives for home consumption only, and shipped out but 500,000 bushels, the pre-eminence of St. Louis must rest undisputed.

"This enormous consumption at Minneapolis suggests, what more direct statistics confirm, that that city is the greatest flour manufacturing city of the country, yet St. Louis is a greater flour market. Counting in all the Minneapolis flour passing through Chicago, that city figures itself a greater market, but it has no just claim to the through movement, which it does not handle. Let it stand by its net receipts and manufacture, aggregating only 1,194,657 barrels, while the 1,718,429 barrels

John Jackson

manufactured in St. Louis and 261,264 barrels sold on its Exchange, but shipped direct from country mills without passing through St. Louis, in addition to 1,620,996 barrels received, make a total of 3,600,689 barrels. Minneapolis ranks second, with a manufacture of 2,890,474 and receipts of 262,500 barrels, yet it is half a million under the St. Louis figures."

ELEVATORS AND WAREHOUSES.—The immensity of the grain-trade of St. Louis requires unusually extensive and complete terminal facilities; hence it is that the chain of elevators and warehouses in St. Louis and suburbs provides most amply for the handling of grain in bulk. The river-front of nearly sixteen miles is dotted here and there on both sides with elevators, having all the modern appliances and apparatus for storing, weighing, cleaning, receiving, and delivering grain into barges, which are towed alongside by tow-boats belonging to the elevator companies. Double tracks and sidings from the Levee also run into these for loading and unloading cars, and the additional chain of elevators on the lines running out from the Union Depot supply ample terminal facilities to the Western trunk lines.

There were warehouses of primitive build and limited capacity and conveniences in St. Louis nearly half a century ago, but it was not until about the year 1860 that the necessity of changing the plan of handling grain consigned to St. Louis began to be strongly felt by the commission houses and millers, and it was proposed that sacks should be dispensed with and the grain transported in bulk. The great difference between high- and low-water level—some forty feet—presented a difficulty, but not an insurmountable obstacle. In 1860 several meetings were held by influential dealers in grain, at which, while no definite results or plans were arrived at, the conviction was generally expressed that bulk grain transportation must supplant the sack before St. Louis could successfully compete with Chicago as a grain market. The proposition of Messrs. Henry and Edgar Ames and Albert Pearce to construct an elevator was vetoed by the mayor after the ordinance empowering the construction of the elevator had passed the City Council, and it was not until 1864 that an elevator was erected. This was the present building, save the additions since erected, of the St. Louis Elevator Company, on the Levee, between Biddle and Ashley Streets.

The St. Louis Elevator Company, which now controls four elevators, when organized in 1864, was believed to be in advance of the then demands of trade. It did not prove profitable in its earlier management,

nor indeed until its control was obtained by the present officers,—John Jackson, president; and Capt. D. P. Slattery, secretary and general manager.

Only those who are aware of the almost incalculable impetus which the grain trade of St. Louis has received from the utilization of the river route to New Orleans for shipment to Europe and South America can appreciate the work that has been done by such far-seeing and ardent spirits as Eads and Jackson and their associates.

John Jackson was born in County Down, North Ireland, April 21, 1821, of Scotch-Irish parents. The father, a farmer, trained the boy to habits of in-

ST. LOUIS GRAIN ELEVATOR.

dustry, and gave him all the school privileges which the country then afforded. When nineteen years old young Jackson entered a wholesale grocery establishment at Belfast, and remained there twelve years. He then followed a younger brother's example and came to America, landing at New Orleans in 1852. For three years he was connected with the house of Dyas & Co., and then (in 1855) removed to St. Louis and established the branch house of McGill, Jackson & Co., of New Orleans, who dealt in salt, etc. The business was well managed, and Mr. Jackson made money. His energy, honesty, and ability attracted the attention of his fellow-merchants, and they sought

his advice and aid in matters involving the industrial development of the city.

Mr. Jackson early gave much thought to the opening and development of lines of traffic from St. Louis to outlying regions, and was a director in the Wabash system of railroads west of the Mississippi, reaching to Kansas City, Omaha, and the rich grain-fields of Iowa, etc. When it had been demonstrated that the grain trade of the Northwest was not henceforth to be completely monopolized by Chicago, and that shipments of grain to the Atlantic from the South and West could be made advantageously by way of St. Louis, he was an earnest and practical advocate of the introduction of improvements, such as elevators, steam-car transfers, etc., by which grain could be handled quickly and economically at St. Louis.

From the first he was an earnest advocate of the great bridge, and became prominently identified with its construction. In the many dark days of the enterprise, when the project seemed at a hopeless standstill, no man gave it more cheering or more energetic support.

When the bridge was finished, Mr. Jackson realized that the time had come to make a determined effort to improve the Mississippi River and establish its supremacy as the "water-way of the continent," and he became the president of the South Pass Jetty Company, and labored devotedly at the side of the heroic Eads in his audacious engineering feat at the mouth of the Mississippi.

Mr. Jackson gave liberally of his means to this vast work, which has taken its place as one of the great achievements of the nineteenth century, and he has now the satisfaction of knowing that the time and money of himself and his associates have been instrumental in solving the problem of cheap transportation for the West and Northwest. Their success entitles them to be classed as the preservers of the commerce of the Mississippi valley, and statistics justify their right to this proud title; for while during the past decade the shipments of grain from St. Louis have increased over one hundred per cent. and those by rail about fifty per cent., the shipments by way of river have increased within the same period five thousand per cent. (being only 312,077 bushels in 1871, and 15,762,664 bushels in 1880). In 1881 they were very nearly fifty per cent. of the whole grain shipments of the year.

While thus largely interested in questions affecting transportation, Mr. Jackson has necessarily been brought to face the important subject of the terminal handling and transfer of grain, and it is to a great extent due to his labors that the problem has been

solved so satisfactorily for St. Louis. He was one of the first subscribers to the St. Louis elevator, and the company of which he is president also controls the East St. Louis and Venice elevators, and occupies the St. Louis salt warehouse.

These immense establishments are connected by wires with each other, and although the East St. Louis and Venice elevators are on the Illinois side of the river, the entire business is transacted with the utmost promptness and regularity from the general office, where Mr. Jackson is the directing mind. The grain handled by these three elevators has in some years reached as high as sixty per cent. of all the grain received at St. Louis, and this system of elevators is justly regarded as a most important agent in giving a permanent and healthy stimulus to the grain trade of St. Louis.

Early in 1880 it became apparent that the existing barge lines in operation between St. Louis and New Orleans were inadequate for the rapid and economical transportation of grain, and Mr. Jackson united with other capitalists in the establishment of the St. Louis and New Orleans Transportation Company, with a fleet of five tow-boats and thirty-five barges. Subsequently a consolidation of this company and the Mississippi Valley Transportation Company was effected, and the result of the union, the St. Louis and Mississippi Valley Transportation Company, employs thirteen tow steamers and nearly one hundred barges, with capacity for four million nine hundred thousand bushels of bulk grain, and the ability to move to New Orleans monthly three million bushels of grain.

Mr. Jackson's efforts to build up the grain trade of St. Louis by furnishing suitable terminal facilities for the handling of grain, and by providing cheap transportation to Europe, have not lacked recognition on the part of his fellow business men. He has been vice-president of the Merchants' Exchange, and is one of the most influential and honored members of that body. In 1880, when the jetty system at the mouth of the Mississippi had proved its utility, and ships of deep draught were loading at New Orleans with St. Louis grain, a party of Mr. Jackson's friends (some of whom had been his associates in the South Pass Jetty Company) visited him at his elegant home in St. Louis, and presented him, as a testimonial of their appreciation of his public-spirited labors in behalf of St. Louis, a handsome and costly watch, which bore the inscription, "The stockholders of the South Pass Jetty Company to their esteemed president, John Jackson, in grateful remembrance of his fidelity to these interests in the darkest hours of the enterprise." The esteem in which Mr. Jackson is held by those who

Engd. A.H.P. 1872

Alb Larimore

have been closely associated with him in these great works is shared by the public generally, among whom his name is a tower of strength, and a synonym of that strong faith in St. Louis and that patient and progressive energy which have made her the queen of the Mississippi valley.

Since Mr. Jackson has been president of the St. Louis Elevator Company the original elevator has been enlarged to its present capacity of two million bushels of bulk grain and two hundred thousand sacks, and is a marvel of conveniences, having double capacity and room for forty cars at a time to discharge or receive, besides meeting the demands of the barges along its river-front. The other elevators controlled by this corporation are:

The East St. Louis elevator, recently enlarged and now having a capacity of one million bushels. Seven tracks run through the building, capable of accommodating forty-six cars at a time, and discharging or loading thirty-two.

The Venice (Ill.) elevator, with ample rail and water conveniences, and a capacity of six hundred thousand bushels.

The North St. Louis elevator, formerly a salt warehouse only, but now arranged for elevator purposes, with a capacity of seven hundred and fifty thousand bushels. Thus this corporation supplies an aggregate storage capacity of nearly five million bushels, and employs a capital of one million five hundred thousand dollars.

The Central Elevator Company, of which N. G. Larimore is president and J. W. Larimore secretary and treasurer, was organized in 1873, and has two capacious elevators, Central A and Central B, located respectively at Eleventh and Austin Streets and on the Levee and Chouteau Avenue. In 1879 that on the Levee was burned, but speedily re-erected with increased capacity and added conveniences. The company also owns the St. Louis Warehouse, on Fifth Street and Chouteau Avenue, which has a capacity of two hundred thousand bushels, and which, though one of the oldest, is one of the most complete in the city, and is used for "overflow" in bulk grain over the Missouri Pacific. The Missouri Pacific Elevator, just completed at Carondelet, has a capacity of one million five hundred thousand bushels, and is also managed by the Messrs. Larimore.

N. G. Larimore, president of the company, was born in Bourbon County, Ky., Aug. 29, 1835. His ancestors resided in Maryland and Virginia, and his grandparents were among the pioneers of Kentucky. He was reared in good circumstances. In 1844 his family settled on a farm in the northern part of St.

Louis County, Mo., and were well-known and influential people. He enjoyed good educational advantages, attending Wayman Institute and a college in the interior of Missouri. Soon after leaving college in 1855 he married Miss Susan Ashbrook, youngest daughter of Levi Ashbrook, Sr., a well-known pork-packer, and bought a farm near Bellefontaine, on which he resided until 1865, when he, with his brother, J. W. Larimore, G. G. Schoolfield, and D. H. Silver, built the warehouse on Fifth Street and Chouteau Avenue, which was completed just in time to hold the Southern Relief Fair, at which over fifty thousand dollars was realized and distributed to the sufferers from the ravages caused by the civil war. This building was afterwards converted into a warehouse for the handling of grain in special bins. Millers at that time were unwilling to buy grain by grade, but insisted on having each car-load stored by itself, and the Larimore Brothers undertook to accommodate them. These beginnings were comparatively modest, and they could hardly have foreseen the development and present magnitude of their business. They handled the first bulk grain that was received in St. Louis from the Missouri Pacific Railroad, and were among the earliest to appreciate the stimulus that might be given to the grain trade of the city by the elevator system. Accordingly in 1873 they organized a company and built "Central Elevator A." At that time this was a great stride forward, and the friends of the brothers declared it to be a "great business mistake," and predicted failure; but the foresight of the Larimores was abundantly verified, the elevator was crowded, and their business increased to such a volume that in 1876 they were obliged to build another elevator ("Elevator B"), on the river at the foot of Chouteau Avenue, with a capacity of two hundred thousand bushels. As previously stated, this elevator was destroyed by fire in 1879, but the brothers immediately rebuilt it with a capacity of nine hundred thousand bushels. The capacity of Elevator A was originally five hundred thousand bushels, but increasing business has compelled its enlargement to seven hundred thousand bushels. In addition the company has leased and is now running the Missouri Pacific elevator at Carondelet, built in 1882, with a capacity of one million five hundred thousand bushels. The total storage capacity of the elevators controlled by the Larimore Brothers is over three million bushels.

Mr. Larimore has been identified with many other important enterprises, and he and his brother were the largest individual subscribers to the St. Louis and New Orleans Transportation Company, by which was

triumphantly demonstrated the great economy of a water-route to the sea. The brothers are also largely interested in the Elk Valley Farming Company, which controls fifteen thousand acres of farming land in Dakota, on which a prosperous town of two thousand inhabitants, only a year old and named "Larimore," has sprung up. The brothers regard this as one of the most important and promising of their ventures.

Mr. Larimore was also president of the Iron Mountain Bank, and has been for four years an efficient member of the City Council. He is also a member of the St. Louis Club and of the St. Louis Legion of Honor. He has long been a member of the Centenary Methodist Episcopal Church.

J. W. Larimore, brother of N. G. Larimore, was born July 16, 1837, in Bourbon County, Ky., and removed to Missouri with the family in 1844. The time occupied in making this journey was two weeks, the household goods being brought in wagons and the family in a carriage; now the trip would require only ten or twelve hours. His father, W. L. Larimore, had purchased a large tract of land in St. Louis County. Being a man of unusual foresight, he predicted a bright future for himself and family, as he looked upon St. Louis as the coming metropolis of the Mississippi valley, although the population at that time was only about thirty-four thousand. He at once set about opening up his large and magnificent farm, which in 1864 took the premium offered by the St. Louis Agricultural and Mechanical Association for the most highly improved and best cultivated large farm, there being nearly one thousand acres, most of which was meadow land. This farm was bought at from ten dollars to twelve dollars per acre, and was sold by him in 1865 in small farms for from one hundred and twenty-five dollars to two hundred dollars per acre, and was known as "The Model Farm." It was on this farm that J. W. Larimore considers he received the most valuable part of his education, having had the management of it for seven years, although his father gave him all the advantages of the best schools in the city. In 1865, with his brother, he removed to St. Louis, and his subsequent prosperous career is embraced in the sketch of that of N. G. Larimore.

He was married Jan. 29, 1867, to Bettie R. Carlisle, of St. Louis, both being active members of the Centenary Methodist Church, and closely identified with the Methodist Orphans' Home, she being a manager and he secretary and a member of the board of trustees of that worthy and admirably managed institution. He is also one of the board of trustees of the Bethel Association, one of the most useful charities in the city. Here every Sunday are gathered

together from five hundred to one thousand of the poor and their children who are deprived of the privileges of a regular church by reason of the long distance from their homes to that portion of the city where most of the churches are. They are provided with competent teachers, and the faithful and zealous chaplain, Capt. Kitwood, preaches to them two or three times every week.

J. W. Larimore is also a stockholder and director in the Continental Bank, which is one of the most prosperous financial institutions in the city. He is also secretary and director of the Central Elevator Company, a stockholder and director of several other elevator companies, and vice-president of the Elk Valley Farming Company, on whose farm in Dakota were raised in 1882 some sixty thousand bushels No. 1 hard spring wheat.

Only those familiar with the effect which the introduction of the elevator system has had upon the grain trade of St. Louis can appreciate what such men as N. G. and J. W. Larimore have done for the city. Not many years ago the grain trade of the West and Northwest was handled by Chicago, but the Larimores and others of similar courage addressed themselves to the great problem of handling grain economically and expeditiously, the solution of which, in connection with the rapid development of the grain-growing region lying west and south of St. Louis, has amounted to almost a revolution in that line of business. The Larimores have contributed their full share to accomplishing this result, and it is thought that, owing to their intimate relations with the Gould Southwestern railroad system, they handle much the greater portion of the grain that comes to St. Louis.

J. W. Larimore has taken a great interest in the improvement of Pine Street, west of Grand Avenue, where he purchased several large blocks of ground, on which he has erected six large, fine stone-front houses, two of which are double and elegantly finished in hard wood. One of them is occupied by Mr. Larimore as his family residence. His enterprise has given quite an impetus to the improvement of that part of the city, and the value of adjacent property has advanced from twenty-five to fifty per cent. during the past year. Nor is this all: together with his brother, N. G. Larimore, he has recently (January, 1883) secured a quarter of the block at the southwest corner of Fourth and Olive Streets, and they intend shortly to erect thereon a series of buildings worthy of the location and a credit to the city.

The Advance Elevator Company (Messrs. McCormick) is admirably equipped at East St. Louis, and

J. W. Larimore

has two elevators, A and B, with a total capacity of 1,500,000 bushels.

The Union Elevator, East St. Louis, has been recently built on the line of the Chicago, Burlington and Quincy Railroad, and enjoys unusual terminal facilities and a capacity of 1,500,000 bushels, which is to be still further increased. The proprietors, Messrs. Greer Brothers, of St. Louis and Peoria, Ill., have also an elevator at the latter point.

The Union Depot Elevator D is also new, and is most admirably arranged and located. It has a capacity of 750,000 bushels, and John R. Lionberger, the proprietor, has also Union Depot Warehouse, with a capacity of 250,000 bushels.

Central Elevator C has a capacity of 800,000 bushels.

The McPheeters Warehouse Company, so organized last year, but in existence as a firm since 1877, has built one of the largest and most complete warehouses in the West. It has rail and water connections, and occupies a large river-front, from Nos. 1104 to 1115 inclusive, North Levee. The directors are W. L. Wickham, T. T. Turner, and T. S. McPheeters, Mr. Wickham being president and Mr. McPheeters secretary and manager. The capital is one hundred thousand dollars. Besides the new building, two hundred and sixty-four by one hundred and two feet with a capacity for eight hundred car-loads, the company has another warehouse on North Main Street.

A recapitulation of the storage capacity of elevators and the larger warehouses makes the following exhibit, which no other Western city can boast:

	Bushels.
St. Louis Elevator.....	2,000,000
Central Elevator A.....	700,000
Central Elevator B.....	900,000
Central Elevator C.....	800,000

Total.....	10,700,000
McPheeters Warehouse Company.....	500,000

Mills and Milling.—The inauguration of the flour-milling interest in what is now St. Louis antedates the Revolutionary war and the declaration of independence by nearly a decade. During the period of Spanish subsidies, on Aug. 11, 1766, Laeclde Liguist received a grant of land, "situate on *La Petite Rivière*," afterwards known as Chouteau Pond, on which he caused to be built "two mills for grist purposes," one of them run by water, and the other termed a horse-mill. How long these primitive establishments

existed is unknown, but up to about 1862 a very ancient looking lime-mill stood upon this old site, then fronting Chouteau Pond, which, since filled up, is now occupied by the Union Depot, railroad tracks, freight warehouses, and other evidences of commercial progress.

Precisely when merchant mills took the place of the rude structures of the last century is not disclosed by the early commercial records, and it seems uncertain whether the mill erected at the corner of Florida Street and the Levee in 1827 and afterwards operated by Edward Walsh was really the first of comparatively modern character. In 1836, Capt. Martin Thomas built a mill in the northern part of the city, which was burned on July 10, 1836, just after it had been put in complete order. Its re-erection was speedily followed by the building of numerous other flouring-mills, so that in 1847 fourteen were in active operation, the foundation being thus laid of the St. Louis flour market, since characterized by uniform excellence of brands and great business enterprise. Of these fourteen mills five remain, though greatly enlarged and improved. A majority of the others were destroyed by fire. The names and capacity of the mills of 1847 are thus recorded:

	Barrels a Day.		Barrels a Day.
Eagle.....	200	*Missouri.....	175

*Planters'.....	125	Camp Spring.....	125
Park.....	200	*Chouteau.....	100

Those marked thus * are no longer in existence.

In 1850 we find that there were twenty-two mills in operation in St. Louis, whose capacity for manufacturing flour was about two thousand eight hundred barrels, and whose actual consumption of wheat was not far short of twelve thousand bushels daily. The mills were as follows:

The Laclède Mill, the largest at that period, was erected in 1856, at the corner of Soulard and Decatur Streets, with four run of stone and a manufacturing capacity of three hundred barrels a day. Sears & Co., the owners, expended forty thousand dollars in its erection. While there have necessarily been a variety of changes with time, yet a majority of the millers of 1850 are still among the "jolly millers of St. Louis," and participated in the annual excursion of the craft in May, 1882.

The millers of 1849-50 took a prominent part in the organization of the "Merchants' Exchange," and the Millers' Exchange of that period is said to have been the pioneer corn exchange of this country. Prior to that time wheat came to the St. Louis market solely by river and in sacks, and samples were hawked about from mill to mill for sale. The outfit or furnishing of this exchange consisted of two pine counters, and twenty-four tin pans for flour samples. The Millers' Association had already been organized, with Gabriel Chouteau, John Walsh, Joseph Powell, C. L. Tucker, Dennis Marks, Dr. Tibbets, James Waugh, and T. A. Buckland as directors. The prominence then assumed by this interest in the direction of the commercial affairs of St. Louis has since been maintained in the election of five millers as presidents of the Merchants' Exchange, viz.: E. O. Stanard, in 1866; C. L. Tucker, 1867; George P. Plant, 1869; George Bain, 1878; Alexander H. Smith, in 1880.¹

Among the most aggressive and enterprising of these was George P. Plant. Mr. Plant was born in Lancaster (now Clinton), Mass., March 23, 1814, the eldest son and the third in a family of six sons and six daughters. His boyhood was one of thrift and labor, and he was brought up in a practical atmosphere, his father being a cotton manufacturer, with an excellent library of mechanical and scientific works, which the boy, directed by a gifted sister, carefully studied. From these books he contracted a desire for the calling of a civil engineer. Opportunities for studying the science were in those days very meagre, and with little but self-instruction, he launched at once into the school of practice, and was employed as a subordinate under Maj. Whistler, who was engaged in building a railroad between Springfield and Worcester, Mass.

The West was then beginning to attract the attention of the young and venturesome, and the projected construction of railroads and canals in Illinois seemed to young Plant to offer a promising field for the exer-

cise of his talents. Consequently in 1835 he went West, and after visiting an uncle who was living in Kentucky, located at Jacksonville, Ill., where he was employed as chief engineer in building the first railroad west of the Alleghenies.

This road was called the Northern Cross Railroad. The first rail was laid at Meredosia, May 9, 1838, and the first locomotive arrived by steamboat Sept. 6, 1838. It was put upon the track Nov. 8, 1838, for a trial-trip over the eight miles of the road that were finished. George P. Plant, the chief engineer, was master of ceremonies, and in the party were Governor Duncan, of Illinois, Murray McConnell, the State commissioner, James Dunlap and Thomas T. January, contractors, Charles Collins and Myron Leslie, of St. Louis, and Alexander Strother. There were then less than two thousand miles of railroad in the United States; but Mr. Plant, to whom belongs the unquestioned honor of having first harnessed the iron horse in the Mississippi valley, lived to see nearly seventy-five thousand miles of railroad in the country, and the valley gridironed with railroads, distributing the products of the Southwest through St. Louis in every direction, north, east, south, and west, with the city itself occupying a then undreamed-of prominence as the gateway to China and Japan.

At Jacksonville he met and married Matilda W. January, sister of D. A. and Thomas T. January, who soon removed to St. Louis and engaged in mercantile and other pursuits, in which they won an honorable name. In 1839, Mr. Plant followed them to St. Louis, and after a varied experience built the Franklin flour mills, on Franklin Avenue near Fifth Street, and founded the firm of George P. Plant & Co. Subsequently his brother Samuel became a partner, and when he died in 1866, Mr. Plant admitted his son George J. to membership in the firm, and still later George H. Plant, the son of Samuel Plant.

In 1859 his wife died, leaving two sons, and in 1863 he married Miss Martha G. Douthitt, a daughter of the late Robert H. Douthitt, of Pittsburgh, Pa., who still survives him.

While active and energetic in the prosecution of his own business, which he conducted with such success as to amass a large fortune, Mr. Plant was much interested in affairs about him, and among the many positions of trust which he held were the following: President of the Merchants' Exchange, president of the Millers' National Convention, president of the American Central Insurance Company, president of St. Luke's Hospital, etc.

Mr. Plant was of delicate constitution, but his strength of mind enabled him to do perhaps more

¹ A full account of the organization of the Millers' Exchange is given in connection with the Merchants' Exchange, with which it was afterwards incorporated.

TRADE, COMMERCE, AND MANUFACTURES.

work than many stronger men accomplished. In February, 1875, he was seized by a cold that rapidly developed into typhoid pneumonia, and on the morning of February 24th he breathed his last.

His death and funeral were the occasion of such a display of respect and esteem as are accorded to no common man. All the bodies with which he had been connected adopted resolutions expressing their regret at the decease of Mr. Plant in words of the most tender and touching eulogy. The press, not only of St. Louis but of distant cities, joined in paying tribute to one whose name throughout the land was a synonym of business integrity, and who had come to be recognized as one of the representative men of the Southwest. "It was," wrote a friend soon after his death, "his long career in St. Louis as a strict and honorable business man, a successful manufacturer, the establishing of a name national in its reputation, his fidelity in places of trust and honor, his disinterestedness as a citizen, his charity and benevolence, his ready ear to the misfortunes of others, his sound judgment and advice, ever ready for those who sought it, his known conservatism, yet progressiveness of thought and ideas, that gave him the eminence he attained in the community, made his loss so widely felt, and called forth from all sides such widespread testimonials of genuine regard and respect."

In addition to the twenty-four flour mills within the city limits, several of the St. Louis mills have like establishments in Illinois and other tributary points, and the aggregate capital invested in this interest is estimated at thirty-five million dollars. The daily manufacturing capacity exceeds twelve thousand barrels. Only since 1871, however, has the home product ex-

ceeded the receipts from other marts. Flour made from the wheat grown in the Mississippi valley has the keeping or self-preservative quality to such an extent that it is much in request in Southern latitudes, and St. Louis millers export largely to Rio and the West Indies. George Bain, president of the Atlantic Milling Company and of the National Millers' Association, was the pioneer in the export trade. Ten years ago he went to England with a consignment of flour in sacks equal to thirty thousand barrels, and found ready sale for the product. Since then St. Louis has become a distributing-point to the markets of the world, and St. Louis flour has won first premiums at the World's Expositions in Paris, Vienna, and Philadelphia. In 1879 there was exported to European nations and to South America an aggregate of six hundred and nineteen thousand one hundred and three barrels of flour of St. Louis manufacture.

The flour shipments on through bills of lading to foreign countries during 1881 makes this exhibit :

	Barrels.
To England.....	178,879

"Previous to 1880," says Secretary George H. Morgan, of the Merchants' Exchange, in his valuable report on the trade and commerce of St. Louis for 1882, "St. Louis manufactured a greater number of barrels of flour than any other city, but owing to the fact that within the past three years several of our largest flouring-mills have been destroyed by fire, our enterprising Northwestern neighbor, Minneapolis, has outstripped us in the manufacture of flour. But with the new mills built in the past two years, and those

now building and planned, St. Louis will soon regain its old pre-eminence as the largest manufacturer of flour in this country. The first section of the Atlantic Roller-Mill, with a capacity of thirteen hundred barrels per day, was completed in December, and further additions will doubtless be made during the coming year. J. B. Kehlor & Co. have commenced the erection of the Grand Pacific Mills, which, when fully completed, will have a daily capacity equal to, if not exceeding, that of any other mill in the world.

Messrs. Teideman & Co. are perfecting plans for the rebuilding of the Iron Mountain Mills, burned in August last. These mills, when completed, will increase the capacity of St. Louis mills to 17,500 barrels per day,—over 5,000,000 barrels per annum. Notwithstanding the fact that our manufacturing capacity has decreased, St. Louis can justly claim to be the largest flour market in the United States. While New York shows receipts of 5,883,709 barrels, it must be borne in mind that in this amount is included all the flour shipped directly from interior cities to Europe and South America, and in which the New York merchant, whether receiver or exporter, has no interest whatever; and while some of our Western competitors show nominally very large receipts, a large proportion of such receipts pay no tribute to the city through which they pass on their way to the seaboard for export or to the New England States for consumption, while of the 4,845,625 barrels handled the past year by St. Louis millers and dealers, there was not one per cent. that did not actually change hands here, being bought and sold in this market.

“The amount of flour manufactured during 1882 was 1,850,215 barrels, an increase over 1881 of 131,786 barrels. The receipts reached 2,003,424 barrels, the largest in the history of the trade. The shipments aggregated 3,305,765 barrels, a greater amount than ever before, of which the equivalent of 623,211 barrels was shipped in sacks direct to foreign ports, 970,462 barrels went to Eastern consumers, and 1,661,481 barrels were taken by the Southern States. In addition to the amount exported from St. Louis, 344,984 barrels were reported by St. Louis dealers from points other than St. Louis, being shipped direct from the country mills to save expense, but all of which was sold in this market.”

FLOUR MANUFACTURED during 1882 by mills outside of the city of St. Louis, but owned by citizens of St. Louis, members of the Merchants' Exchange.

1 Burned August, 1882.

The product for 1881 of those mills making a specialty of corn meal, rye flour, grits, hominy, and corn flour should be added to obtain a complete exhibit of the milling interest of St. Louis. It is as follows :

MILLERS.	Name of Mill.	Corn Meal Manufactured, 1881.	Hominy and Grits Manufactured, 1881.	Rye Flour Manufactured, 1881.
Engelke & Feiner.....	Southern.....	214,709	25,923
Wood Maude Milling Company.....	Pearl Hominy.....	245,495	36,098
Hezel Milling Company.....	East St. Louis.....	3,500
Humpert & Co.....	Lowell.....	7,000

Camp Spring Mill Company.....	Camp Spring.....	7,500
W. S. Taylor & Co.....	Globe.....	1,200
Total.....		905,704	122,021	12,001

These figures show a steady increase in this particular, averaging over forty per cent. a year. The exports of corn meal in 1881 aggregated 599,016 barrels, and 1228 car-loads of bran and ship stuffs in bulk were shipped, and 560,115 sacks of the same. The growth of the flour trade of St. Louis will be seen in the following table of the receipts and manufacture of flour for thirty-two years and the exports for eighteen years:

⁴ Completed November, 1882.

Bread, Crackers, etc.—"At the time of the transfer of the province of Louisiana to the United States," says Edwards ("Great West," p. 288), "there was but one baker in the town, by the name of Le Clerc, who baked for the garrison, and who lived on Main Street, between what is now known as Elm and Walnut." Dec. 5, 1812, Toussaint Benoit had a baker-shop on North Church Street, in Block 64. On the 11th of November, 1815, Christian Smith informed

"the citizens of St. Louis, and those who attend the St. Louis market, that he has opened a bake-shop in Decatur Street, opposite Edward Hempstead's office, where household breads, cakes, biscuits, crackers, etc., will always be ready for customers. Tomorrow evening the first batch will be drawn, and the citizens are invited to send and make trial. For the accommodation of his friends of the north end of St. Louis, he will keep bread for sale at the house of Mr. Wallace, the place lately occupied by Mr. Jourdan Labrose."

April 20, 1816, the *Missouri Gazette* published the following ordinance:

"AN ORDINANCE to establish the tariff and regulate the inspection of bread for the town of St. Louis.

"Be it ordained by the board of trustees of the aforesaid town, that hereafter no loaf of bread shall be vended in said town at a price greater than twelve and one-half cents, and in order to fix the weight of said loaf of bread, the bakers of bread shall hereafter be regulated by the following tariff:

Price of the 100 cwt.	Weight of the Loaf, of Flour, No. of Ounces.	Price of the 100 cwt.	Weight of the Loaf, of Flour, No. of Ounces.
\$2.00.....	76	\$5.50.....	28
2.50.....	61	6.00.....	25
3.00.....	51	6.50.....	24
3.50.....	41	7.00.....	23
4.00.....	36	7.50.....	22
4.50.....	34	8.05.....	21
5.00.....	30		

"Provided, however, That if the prices of flour should be different from the prices fixed in the above tariff, the weight of the loaf shall be regulated accordingly."

June 20, 1816, Abijah Hull & Co., bakers, were located on South Main Street, in block No. 6.

According to the census of 1880, the number of firms engaged in the bread and cracker business was 195, but in 1881 the number was estimated at 215, with a total business of \$2,000,000; hands employed, 500; wages paid, \$350,000.

One of the largest houses in the cracker trade is the Dozier-Weyl Cracker Company, of which the founder was Capt. James Dozier. Capt. Dozier was born in Nash County, N. C., Jan. 7, 1806, the son of Thomas Dozier, and descended from an old and well-known Virginia family. Of Capt. Dozier's boyhood little is recorded, but that he was of a stirring and adventurous spirit may be inferred from the fact that when but eighteen years old he migrated to the West, his only attendant being Peter, a negro boy, whom his father had given him. The journey, which was undertaken by land, was a toilsome one, there being no railroads then, and only a few primitive steamboats. He settled near Paris, Tenn., where, after a short season spent in farming, he commenced the mercantile business in a small way, and followed this pursuit several years with excellent success, having gained the confidence of all with whom he came in contact.

In 1826, Mr. Dozier married Miss Mary A. Dudgeon, the daughter of John Dudgeon, originally of Virginia, but later of near Lexington, Ky., where most of his family were born. In 1828, accompanied by his father-in-law and family and two other families of that neighborhood, he emigrated to Missouri, settling in the upper part of St. Louis County, near the Virginia settlement of the Tylers and Colemans, families whose descendants are among the leading people of that locality. Here Capt. Dozier and Mr. Dudgeon, his father-in-law, leased the old McAllister

tan-yard, and operated it with success for some years, when Capt. Dozier retired and resumed the mercantile business. He continued in this employment for a few years, and finally removed to the north side of the Missouri River, into St. Charles County, where he lived for many years. Here he laid the foundation of his subsequent fortune, conducting a flourishing business as a merchant and farmer, and became one of the leading men of that region. By frugality and industry he accumulated a large estate, consisting of lands, stock, etc., and in doing so was greatly aided by the most estimable of wives, of whom it was justly said that "she was a bee that brought a great deal of honey to that hive."

In 1844, Mr. Dozier engaged in the steamboat business, and owned and operated successively the "Warsaw," "Lake of the Woods," "St. Louis Oak," "Cora," "Mary Blane," and "Elvira" (a boat of much reputation in her day, and named for his second daughter). Later he or his sons owned the "Rowena," "Thomas E. Tutt," "Mollie Dozier," etc. There are doubtless many old steamboatmen yet living in whom the mention of the names of these vessels will awaken the most interesting recollections. Those were the palmy days of steamboating on the Missouri River, and the vessels owned by Capt. Dozier made his name widely known along that stream and its tributaries, and everywhere respected as the synonym of all that was honest and straightforward. He was a contemporary and acquaintance of Capts. Roe, Throckmorton, La Barge, Eaton, Kaiser, and others, most of whom he survived.

In 1854, Capt. Dozier retired from the river to his country home, where he built a fine residence near the river-bank. A more beautiful place or a better improved farm, or rather set of farms, could, perhaps, not have been found on the Missouri River than that of Capt. Dozier, at "Dozier's Landing." His house was ever open to his friends and neighbors, and for the twenty years he lived in St. Charles County was seldom without some visitors. His charities to the poor and orphans were of the most generous character, and his house at times was the home of many unfortunates. In his numerous benefactions he was wholly free from ostentation, and the world never knew of most of his deeds of benevolence. Capt. Dozier was an owner of slaves, but a kind and thoughtful master.

Immediately after the war he removed to St. Louis, and in 1867 formed a partnership with the long-established and well-known baker, Joseph Garneau, in the bakery business. In 1872 this firm was dissolved, and Capt. Dozier then founded the present large baking establishment of the Dozier-Weyl Cracker Company,

Jas. Dozier

LIBRARY
OF THE
UNIVERSITY OF ILLINOIS

than which perhaps no manufacturing establishment in America is better known, it being probably the largest cracker-factory in the world.

Capt. Dozier died July 15, 1878, after but a few hours' illness. For more than twenty years he had been a consistent member of the Methodist Episcopal Church South, and enjoyed the confidence and respect of the members of that communion, by whom his counsels were prized and his example is held in affectionate remembrance. As a citizen, he stood very high, yet his real worth was appreciated only by those who knew him intimately, for his nature was reserved, and while his friends embraced all with whom he was ever brought into business or social relations, comparatively few were privileged to thoroughly know and comprehend his character. As a business man, though reticent, he was quick to decide and equally quick to act, and his judgment was clear and seldom at fault. Consequently he left to his family a good heritage, the accumulation of a lifetime of economy and upright dealing, but he bequeathed also what they prize far more, the life record of a good citizen, a loving husband, and a wise and tender father.

Groceries.—In early times the grocery trade was included under the general designation of "dry-goods," but as far back as May 2, 1812, we find J. F. Laveille advertising a new store, his stock consisting of groceries, queensware, and other goods. In 1853 the importations of groceries embraced 50,774 hogsheads, 13,993 barrels, and 40,257 boxes and bags of sugar, 53,554 barrels and hogsheads of molasses, 868 barrels of syrup, and 104,467 bags of coffee. This was largely in advance of the previous year's imports, given as follows: Sugars, 35,283 hogsheads, 27,672 barrels and boxes, 31,745 bags; coffee, 96,240 sacks; molasses, 54,933 barrels and hogsheads.

In 1855 there were fifty-six houses engaged in the wholesale grocery trade, with annual sales amounting to \$22,783,505. Under the classification of groceries, dry-goods, boots and shoes there were five firms engaged, their annual sales aggregating \$710,675.

The total number of wholesale grocery firms in St. Louis in 1881 was fifty-two; wholesale and retail groceries, nine; dealers in fancy groceries, three,—making a total of sixty-four firms in the wholesale grocery business. The sales (exclusive of sugar, coffee, rice, etc.) are estimated at thirty millions of dollars per annum. During the same year (1881) there were one thousand and twenty-five retail groceries in St. Louis.

One of the largest grocery firms in the country, and

probably in the world, the Greeley-Burnham Grocer Company, is located in St. Louis. Its founder was Carlos S. Greeley (a sketch of whose active and beneficent career is printed elsewhere in this work in the history of the operations of the Western Sanitary Commission), who in 1838 established a wholesale grocery-house in St. Louis, the firm being composed at first of Messrs. Greeley & Sanborn, and afterwards of Greeley & Gale. Business was commenced on the Levee on a very moderate scale, and one of the peculiarities of its management was that, contrary to the usual practice of the time and place, the firm sold no liquor. The enterprise prospered, and the partnership of Greeley & Gale continued in successful operation until 1858, in which year C. B. Burnham was admitted to partnership, and the house took the name of C. B. Burnham & Co.

Daniel B. Gale, who was associated with Mr. Greeley in the establishment of the original firm, was born in Salisbury, N. H., March 30, 1816. When he was but six years old his father, a prosperous farmer, died, but his mother, a woman of rare qualities of mind and heart, cheerfully assumed the added responsibilities, and, watching over his childhood and youth with unceasing love, laid the foundations of a singularly fine and noble character. The lad worked on the farm until he was about fourteen years of age, and his early education was mostly received from the common country school, taught six months in the year; but he afterwards enjoyed for a time the advantages of the academy in his native town, and then, with the intention of becoming a lawyer, entered Meriden Academy, in Plainfield, N. H., to prepare for college. Like many another New England student, he taught a country school during the winter, and at the same time prosecuted his studies; but a change having come over his mind as to his life-work, he abandoned the idea of entering the legal profession, and became a clerk in the store of Samuel C. Bartlett, a prominent and wealthy merchant of Salisbury.

A friend who knew him well at that period writes, "He was rather impulsive, very affectionate in his nature, and more delicate in his constitution than his brothers, and on that account was perhaps rather more the favorite of his mother. He was always, even in boyhood, perfectly correct in his deportment, was reliable in all that he said or did, and was never guilty of any of those boyish tricks and vices so common with young men, and by some considered almost necessary follies of youth. There was a small public library in Salisbury, from which he procured books, and he early acquired the habit of filling up his leisure time in reading. This habit con-

tinued ever after, and made him a man of great general information."

Very soon after becoming of age, at the earnest solicitation of his brother, a lawyer in Peoria, Ill., who was anxious for him to settle at that point, he determined to try his fortune in the West, and having some money from his father's estate at his disposal, he purchased a stock of goods in Boston, shipped them by way of New Orleans to Peoria, and proceeded without delay *via* Pittsburgh to that town, where he intended to reside. But having chanced, in March, 1838, to meet at Peoria a native of his birthplace, Carlos S. Greeley, who was establishing himself in St. Louis, and who urged upon his young townsman the superior advantages which St. Louis as a business centre offered to a stirring young man, he visited St. Louis, where he found Mr. Greeley just opening business, and suggested the formation of a partnership, offering to put into the capital of the firm the two thousand dollars' worth of goods then on the way up the river. Mr. Greeley accepted the proposition, and the two, who were destined to be from this moment lifelong friends and associates, repaired to a room in the National Hotel, corner of Third and Market Streets, and there arranged the basis of partnership and the general principles on which the business should be conducted.

A noteworthy feature of their agreement was that it was wholly verbal. When one proposed to reduce it to writing, the other remarked that were it put on paper it would be no more binding, for if people would not keep a verbal contract, they would surely find some way to break a written one. And so, on the 28th of March, 1838, the firm of Greeley & Gale was organized, without any written articles of copartnership, and during the thirty-six years in which the principals were associated they never found it necessary to draw up any such articles, nor to commit to writing any agreement, either with each other or with those who were subsequently admitted to the firm.

The rapid rise and development of the firm has already been related. Of his associate in the years of toil that first ensued and of honorable and well-earned success that followed Mr. Greeley says, "Mr. Gale was a good, honest, working man, always ready to do his share of hard work,—and there was plenty of it for many long years. A more conscientious or correct man I never had the pleasure of knowing. I never knew him to fail in any capacity. He was in every respect a good man, a thorough Christian."

Mr. Gale was pre-eminently a man of business, and attended strictly to details. He did not allow his time or capital to be squandered in outside invest-

ments and speculations, which allure from their legitimate callings so many merchants only to result in financial disaster, but to all public enterprises which promised good to St. Louis he gave hearty and material support. For many years he was a director in several of the banks, and was a liberal subscriber to the stock of the Kansas and Pacific Railroad. In company with Messrs. Greeley, John D. Perry, Joseph O'Neil, and others, he rendered to that great enterprise important financial aid at a most critical period of its history. For several years, too, he was the faithful and incorruptible representative of the Seventh Ward in the City Council,—a service prompted not by love of applause or personal gain, for such motives were entirely foreign to his quiet and unselfish nature, but by a serious conviction of the duty he owed his fellow-citizens, whom he served in a strong and upright way, without compromise of their rights or loss of his own self-respect. Thus, though diligent in business, he found time and means to render substantial aid to the city of his residence and love, and his honorable, successful, and praiseworthy career as a merchant and citizen was truthfully eulogized on the occasion of his death by the Union Merchants' Exchange, of which he was a member, in these words: "A gentleman of universally modest deportment, yet widely known and beloved on account of the remarkable purity and benevolence of his character; a merchant of sterling integrity, about whose name the most pleasant memories will forever cluster."

Mr. Gale was a thoroughly benevolent man, and for years he was an efficient worker in that noble charity the Provident Association. He was also trustee and counselor in various charitable organizations, to the prosperity and usefulness of which his best energies were consecrated. He ever kept his heart fresh and warm by personal intercourse with the poor, listening patiently to tales of sorrow and want, and alleviating human suffering and wretchedness with all the means at his command. He gave freely to the cause of education, especially to the training of young men for the Christian ministry, and at his death, which occurred on the 23d of September, 1874, he left, among other liberal benefactions, a bequest of five thousand dollars to Shurtleff College, Upper Alton, Ill., and an equal sum to the Girls' Industrial Home in St. Louis. His modest nature shrank from publicity, and he literally did not let "his left hand know what his right hand" did.

On March 15, 1850, Mr. Gale was baptized by Rev. J. B. Jeter, D.D., into the fellowship of the Second Baptist Church of St. Louis. During those

Josiah Alkire

times which tried men's souls, when the church, like every other institution of society, was passing through the shock of civil war, he accepted the responsible office of treasurer, and discharged its duties with fidelity and skill. The records of the church show that from four hundred dollars to two thousand four hundred dollars of his private funds were annually employed to preserve the credit of the church. Few men could have done this in the delicate and quiet way in which all now know that he did it. Until he was stricken down by ill health his service in the church was characterized by the most considerate wisdom and great generosity. He was one of the principal advocates of moving the location of the church edifice from Sixth and Locust to Locust and Beaumont Streets, and one of the largest contributors to the building fund of the present beautiful structure. Even after sickness prevented active participation in church work, he still rendered important aid to the church by his judicious counsels and liberal gifts.

On the 3d of February, 1842, Mr. Gale was married to Miss Caroline E. Pettengill, a native of his birthplace, and an acquaintance of his youth and early manhood. From this union were born five children,—Charles, Theodore F., Ella R., Arthur H., and George. Charles and George died in early childhood, and Theodore F. at the age of twenty-one. Ella R. is the wife of Charles W. Barstow, of St. Louis.

Into his home Mr. Gale brought his best thoughts and most sacred affections. Here, as nowhere else, were manifested the purity and sweetness of his gentle and affectionate disposition, the fragrance of which still lingers in the hearts of those who knew him best and loved him most. The memorial organ placed by his wife in the choir gallery of the Second Baptist Church of St. Louis was a just tribute to his life and character, and a fitting expression of the affection in which his memory is held.

The firm of C. B. Burnham & Co. continued as such until 1876, when the title was changed to Greeley, Burnham & Co. In 1879 the firm was incorporated as the Greeley-Burnham Grocer Company, with C. S. Greeley, president; C. B. Burnham, vice-president; Dwight Tredway, secretary; C. B. Greeley, treasurer, and A. H. Gale, assistant secretary. These gentlemen still constitute the board of officers. The house has passed through many crises in the commercial affairs of the country, but its career has been one of great and uniform prosperity. It now occupies a large, convenient, and finely-equipped building at the corner of Christy Avenue and Second Street, and

transacts an immense business, with ramifications covering a wide extent of territory.

Another leading grocery firm is that of Alkire & Co. Josiah Alkire, the senior member, has been identified with the business for thirty years, having founded the house in 1852. Associated with him as members of the present firm are Frederick H. Beimes and William D. Scott. Mr. Alkire was born at Williamsport, Ohio, in 1818. The early years of his life were spent in farming in that State and in Illinois, whither he removed with his father's family in 1840. In 1852 he arrived in St. Louis and engaged in the grocery business, in which he has continued without interruption ever since. He began in a moderate way, but the business grew rapidly, and the house now occupies five floors, 160 by 70 feet each, of the building embracing Nos. 514, 516, 518, and 520 North Second Street, St. Louis. The firm stands well in commercial circles, and its career has been one of uniform and constantly increasing success.

Mr. Alkire is a modest and unassuming business man, and his prosperity is due to prudent and careful management. His judgment is clear and accurate, and he can probably point to as good an average success as any of his contemporaries. In business matters he is watchful without being parsimonious, for he believes that, frequently, liberal expenditures bring the most liberal results. Perhaps his most distinguishing characteristic is the thoroughness with which he applies himself to every detail of his business. Personally, he is easily approached, and to his employés is kind-hearted and considerate to a remarkable degree. Such a nature readily responds to the appeals of the distressed, and Mr. Alkire is liberal almost to a fault.

In 1864, Mr. Alkire was married to Lydia Tomlin. They have two sons living,—Francis Alkire, born Dec. 27, 1865, and George Alkire, born April 28, 1871. His tastes are domestic, and he has ample means to gratify them at his beautiful home on the West End Narrow-Gauge Railroad.

Among the men with whom Mr. Alkire has been closely connected in business was the late C. P. Shepard. He regards the partnership with Mr. Shepard as having been a most advantageous one for the house, and personally a most delightful one to himself, and he takes a sad pleasure now in paying this loving tribute to a good man's memory.

The firm of Brookmire & Ranken has long occupied a prominent position in the wholesale grocery trade of St. Louis. James H. Brookmire, the founder of the house, was born Jan. 8, 1837, in Hestonville, then one of the suburbs of Philadelphia, but now a portion of that city. He is of Irish lineage, the son

of a mechanic, from whom he inherited sturdy common sense and valuable mechanical gifts. The family were in moderate circumstances, and he enjoyed only the ordinary country school privileges of that period. His boyhood was passed uneventfully, and at the age of seventeen he found employment in a retail grocery in Philadelphia, an engagement which lasted about one year.

In February, 1855, he removed to St. Louis and took a position as shipping clerk in the wholesale grocery establishment of his uncles, S. & J. Hamill, then doing business on the Levee. The house was a leading one in its line of trade, and the engagement was an extremely beneficial one to young Brookmire. He served the establishment so faithfully that after successive promotions the young man, who landed in St. Louis with no capital but an indomitable will and faith in himself, was admitted in five years to an active partnership in the house, which then (in 1860) took the name of Joseph Hamill & Co. In 1868 the senior partner, Mr. Hamill, retired, and the firm-name then became Brookmire & Ranken, under which title it has continued to flourish until the present day. Of the career of this firm and of its present standing it is only necessary to remark that it is not only a leading house in its particular line, but may fairly be regarded as representative of the general trade of St. Louis in its stability and its capacity for expansion. The scene of its operations has been at the great distributing point for the mighty Mississippi valley, inviting operations on a large scale, and not only involving the use of large capital, but imperatively demanding the employment of decision, judgment, and nerve. The house has also had to pass through many stormy seasons of trade, when success depended upon close and accurate observation and clear and speedy judgment; but its uninterrupted progress through wars and panics and its present prosperity may be taken as conclusive evidence that its managers (at whose head has stood Mr. Brookmire for nearly fifteen years) possessed those necessary qualities in a marked degree.

The secrets of Mr. Brookmire's success have been thoroughness and system. Such were the qualities which led to his remarkably speedy promotion to a partnership, and they have proved to be the foundation stones of his subsequent fortune. Upon assuming the obligations of a partner, he aspired to be a leader among men of his particular line of business, not only in those routine matters which every grocer is supposed to master, but in those particulars which perhaps a majority neglect. In such matters as the chemistry of his trade, for instance, he is especially

well informed, and his knowledge has greatly contributed to the judicious and successful management of the firm's large business. His mechanical tastes are strong, and he figures as the inventor of several patents of special ingenuity and in general use among the trade, by whom Mr. Brookmire's inventive genius is properly appreciated.

Mr. Brookmire has often been solicited to serve the public in various official capacities, but has always declined, having no taste for the excitements of such a life, although deeply appreciating the honor his fellow-citizens sought to pay him. He is, however, a close observer of public affairs, and his influence as a citizen has ever been exerted on the side of economy and honesty in the management of the city, State, and national governments.

Outside of his own business, Mr. Brookmire has not cared greatly to interest himself; his reputation (by which he hopes hereafter to be best remembered) is that of one of the most successful grocers of St. Louis. Nevertheless his name is associated with some enterprises of considerable importance. He is also a valued member of several boards and societies, including the popular St. Louis Legion of Honor; and the possession of considerable real estate in various parts of the city still further identifies him with St. Louis. Without a particle of pretense or affectation, he is one of the best representatives of the self-contained and aggressive class of business men who have made St. Louis known and respected throughout the great Mississippi valley.

In January, 1867, Mr. Brookmire married Miss Anna Forbes, daughter of Dr. Isaiah Forbes, an old and well-known citizen.

One of the important branches of the grocery business is the sugar trade. In 1881 the receipts were 58,535 hogsheads, 128,393 barrels, 320 boxes, and 15,108 sacks. The receipts of coffee during 1881 amounted to 243,239 sacks, and the annual value of this trade is set down at over \$500,000. The pre-eminence of St. Louis as the largest interior coffee market in the world is still maintained. Her shipments of coffee are about twenty-five per cent. greater than those of Chicago, Cincinnati, or New Orleans. The receipts of butter during 1881 aggregated 8,247,401 pounds, and the receipts of cheese to 109,272 boxes, the total value of the trade being estimated at \$1,500,000. Several firms are engaged in the direct importation of tea, their business aggregating over \$500,000. The trade of St. Louis in oysters and fish is estimated at about the same amount, and the trade in fruits and nuts aggregated in 1881 the sum of \$800,000.

David Nicholson, one of the representative men in the grocery trade of St. Louis, was born in the village of Fowls Wester, in the county of Perth, Scotland, on Dec. 9, 1814. His parents were in only moderate circumstances, and he was reared in the sharp and rigorous school of comparative poverty. He received in early youth such education as the Scottish rural schools then afforded, but being fond of books and of ready intellect and more than ordinary aptness, he was a promising scholar. His parents

were of the most rigid integrity, and instilled early into his mind and being the principles of the strictest uprightness and honesty.

After his school-days his first employment was the toilsome service of a grocer's apprentice in the city of Glasgow. An apprenticeship in Scotland in those days meant thorough instruction in all the details of the trade to be learned, and when young Nicholson had served his time he had an all but perfect knowledge of the business as then conducted. Afterwards he went to the town of Oban, in the West Highlands of Scotland, and there entered the service of a merchant who had been attracted by his activity and energy thus early developed in the store at Glasgow.

While yet in his eighteenth year he came to America, landing at Montreal, and afterwards proceeded to Ottawa, but finding no employment in the business to which he had been disciplined and educated, he engaged as tutor to the children of the postmaster, where he remained until learning that his employer had withheld his letters, apparently for fear of losing his services as a teacher, he gave up his position. He then learned the trade of a carpenter, and worked as such at Hamilton and other Canadian towns, also at Erie, Pa., and Chicago, and in 1838 removed to St. Louis, where he continued to follow that occupation. Physically strong and mentally quick, he was noted above many of his fellow-craftsmen for rapid and superior workmanship. Some of the finest ornamental woodwork in St. Xavier's Church, St. Louis, was done by him, and he often referred to it with pride in later years.

In 1843 he relinquished the trade of a carpenter to

embark in the grocery business, and formed a partnership with William Strachan, who was at that time a wine merchant of St. Louis. The title of the firm was Strachan & Nicholson. Mr. Strachan became surety for the obligations incurred in establishing the business, but no cash capital was invested. Mr. Nicholson was the sole manager and director of the new interest thus created, which was originally established at Fourth and Market Streets. His thorough business training now asserted itself, and under his direction the business prospered and soon attained large proportions. After a number of removals in the passing years, necessitated by the steady growth of its trade, the house finally in 1870 settled in the present commodious building, Nos. 13 and 15 North Sixth Street, between Market and Chestnut Streets, a structure erected by Mr. Nicholson himself to meet the modern requirements of a continually increasing business. The house contains five floors, each fifty by one hundred and thirty-five feet, and at the present time employs a force of fifty assistants.

Mr. Nicholson's remarkable success as a merchant may be attributed to his unremitting diligence, and the conducting of all his business transactions, small and large, on the basis of strictly honorable principles, to his promptness in payments, and the handling of only the best goods. In all his thirty-seven years of commercial life no one having a just claim was ever turned away from his counting-house without receiving his due, and the name of David Nicholson was never commercially dishonored at home or abroad.

He had great contempt for the "sharp practices" common in the trade, and despised those who were guilty of them. He was original in his business methods, having little respect for the stereotyped ways of others, and did not follow them.

The establishment always occupied its own distinct position in the grocery system of St. Louis. It was, however, thoroughly progressive and aggressive; its growth was co-extensive with that of the city, and it ultimately came to be recognized throughout the country as a leading house. It was also well known abroad, for Mr. Nicholson was the first, and also the largest, importer of foreign groceries in this market, at times chartering vessels and loading them with cargoes solely for his own account, and dealt directly with the merchants and producers of almost every foreign clime. He did more than any other man in the St. Louis trade to educate the community to the importance of purchasing superior goods, and to induce the consumption of commodities hitherto unknown in this market.

From the time of his coming to St. Louis, Mr. Nicholson took a very active and practical interest in the development and growth of the city, and gradually, as his means permitted, became a large real estate owner, and left many enduring tokens of his enterprise scattered throughout the city. He erected the beautiful "Temple Building," at Fifth and Walnut Streets, and had he built nothing more this handsome structure would have been a convincing evidence of his superior taste and spirit. But few men in St. Louis ever built more largely or after a better style than he did. A man of commerce by education and practice, he was nevertheless a mechanic by nature. As a lifelong friend happily remarked, "the spirit of a builder lived in him," and the bent of his genius took form in many stately edifices. One of his most tasteful improvements was "Nicholson Place," laid out and adorned by him, and which he stipulated should be occupied only by dwellings of "elegant design and substantial character."

During the civil war David Nicholson was a staunch and unswerving Unionist, an outspoken adherent of the loyal cause, and prominent in the counsels of its friends. Through the darkest days of civil strife, from 1861 to 1865, he never doubted the final triumph of the lawfully constituted powers, that of the government of the United States. In a career noted for its activity and industry his charities were many, —his ever-open hand responded munificently to the generous impulses of his noble heart.

Mr. Nicholson possessed many traits which entitled him to be classed among the most remarkable business men of his time. He intensely loved his business, and his energy in the prosecution of it was almost unexampled. To this were added unswerving rectitude, intense hatred of dishonesty and dissimulation of every type, and an outspoken condemnation of wrong. There was also another side to his character less publicly known. In his nature, tender as that of woman, there was an element of poetry that always belongs to men of fervent feeling. Possessing a fine mind and an intimate knowledge of Bible history and teachings, and having read much historical and current literature of the highest order, he enjoyed the companionship of large and elevating thoughts, and in moments of relaxation was a most entertaining companion. In certain issues which at times sprang up, regarding his business, he was led into various newspaper controversies, and proved himself a racy master of the pen. In his early days he wrote numerous compositions in verse that were of a high order of merit, and during the civil war wrote several patriotic odes that were characterized by unusual poetic inspi-

ration and fervor. His love for the home of his boyhood and his native land, which he often visited, grew as his years were multiplied, and he never ceased to give evidence of his deep affection and warm friendship for his schoolmates and the companions of his early years. The scenes and surroundings of his youth, beautiful in nature and luxuriant in their adornment, were precious to him, and the thatched-roofed cottages of his birthplace were ever dear to his heart. A striking evidence of the tenderness of his nature was shown in the fact that, having learned that the roof of the cottage in which he was born needed rethatching, he promptly forwarded the money

while the community sorrowed over the loss of an upright and honored citizen.

BELCHERS SUGAR REFINING COMPANY.—One of the most prominent features of the manufacturing and mercantile interests of St. Louis is the Belcher Sugar Refinery. The business of which it is the outgrowth was established in 1840 by William H. Belcher and Samuel McLean, and in August of that year the firm of McLean & Belcher invited the attention of the trade to the fact that they “had on hand a stock of refined sugars and sugar-house molasses,—a pure article.” The refinery was originally located on Cedar Street, between Main and Second Streets.

THE BELCHER SUGAR REFINERY,
Southeast corner Main and Ashley Streets.

to have it done, and cared for its proper preservation ever afterwards.

He was frank and bluff in his manner, and courted no man's favor, but was also an humble, sincere, and faithful Christian, and the teachings of his pious home in Scotland inspired the activities of a long and honorable career. He was early schooled in the tenets of Presbyterianism, and for nearly forty years was an efficient, esteemed, and highly-respected member of the Second Church of St. Louis. He died on the 26th day of November, 1880, after a short illness, surrounded by his family, who mourned the departure of an affectionate, kind, and noble-hearted husband and father,

After it had been in operation a comparatively short time, Gay, Glasgow & Co., then importing island sugar, purchased Belcher's interest, and finally McLean's interest also. For nearly a year Edward J. Gay, one of the partners of the firm, gave his personal attention to the management of the refinery, and in 1843, William H. Belcher returned to St. Louis, and purchased from Gay, Glasgow & Co. the works in the old building, on which they held a lease. He gave his closest personal attention to the business, although it was then very small; secured the services of practical refiners, and was gradually gathering confidence, strength, and ability, when the “high water” of 1844

drowned out his establishment and caused him considerable loss.

In 1845 a site was purchased on the block between Main and Lewis and Bates and O'Fallon Streets, and the erection of new buildings was commenced. Although the building put up was of considerable extent, it was only the nucleus of the numerous buildings which afterwards constituted the immense establishment of the refining company. From this time the business, controlled by William H. Belcher and his brother Charles Belcher, received a new impetus and steadily increased in magnitude. Additional ground was purchased and new buildings were put up from year to year as the enlargement of operations rendered it necessary. For ten years the career of the establishment was steadily successful, and its operations rapidly assumed most important proportions. During the years 1854 and 1855 some rather extensive operations in Cuba resulted disastrously and heavy losses were incurred, and early in 1855 the business was transferred to a corporation now known as the Belchers' Sugar Refining Company, which was composed of the creditors of Belcher & Brother, the capital stock being fixed at one million dollars. The original incorporators were William H. Belcher, Rufus J. Lackland, George D. Humphreys, Charles W. Horn, Edward Walsh, Derick A. January, William M. Morrison, Edward Wyman, Joseph C. Cabot, Constance J. Peifers, Edward Y. Ware, and Charles Belcher. The charter, which was approved Jan. 25, 1855, fixes the capital stock at the amount above named, and authorizes its being increased to one million five hundred thousand dollars whenever the stockholders shall by vote so direct. Thus organized, and with energetic and experienced men at the head of affairs, the operations of the refinery were prosecuted successfully. In the general financial crash of 1857 the business suffered severely, there being a sudden drop in sugars of from four to five cents a pound. A loss of from four hundred thousand to five hundred thousand dollars was incurred, but the business went on without interruption. William H. Belcher remained at the head of the business until the close of 1859, when he removed to Chicago, where he died in 1866. He was succeeded by Charles Belcher, the junior partner of Belcher & Brother. Having weathered the storm of 1857, the career of the company since has been one of steady progress, and it has now reached a position of commercial influence national in point of view.

The premises occupied by the company consist of a number of buildings, covering nearly four of the squares in that part of the city, embracing the main structure of the refinery proper, bonded warehouses,

cooperage-shops, bone-black houses, and various other buildings occupied by other departments.

"The sugar refinery proper," says a description of the establishment written in 1868, "where the different processes of refining are carried on, has a front on Lewis Street, between Bates and O'Fallon Streets, of two hundred and forty feet, with a depth of one hundred and twenty-five feet, and is six stories in height. The first part of this building was erected in 1845, but it has been added to constantly until it reached its present proportions. It is built with great solidity, as a great weight has to be supported in the stories. The processes of refining require that the building in which they are carried on should be of considerable height, so as to admit of the sugar in solution being let down from story to story in the various stages, and to gain the advantage of the pressure of a column of liquid which is required in the course of refining. The portion of this building erected in 1845 stands on the southern half of the square; the central portion was erected in 1856, and that covering the northern portion of the square was built in 1852. The central part is principally devoted to the clarifying process, the filtering of the liquid sugar, storing or drying hard sugars. In the lower part of the southern portion of the building the packing is done, while the northern and the upper floors generally are devoted to various operations in the work of refining, purging sugars in the moulds, etc. Here also are the crushing- and powdering-mills, shaving-mills, and other appliances used in the preparing of the sugar in the different forms for the market. The vacuum-pans, where the refined solution is reduced again to the form of sugar by boiling, are situated in a small building south of the main structure, and fronting on O'Fallon Street. The basement is used principally as a fill-house, where the melted sugar is run into the moulds and allowed to stand until it is well settled preparatory to drawing. In the rear of the refinery, and occupying the balance of the square to Main Street, is a bonded warehouse and other buildings. On the east side of Lewis Street the bone-black house is situated, with a front of one hundred and seventy feet on Lewis Street and a depth of eighty feet. This was built in 1867. On the square between O'Fallon and Ashley Streets, and covering half of the entire square, with a front of two hundred and forty feet on Lewis Street, is a line of warehouses four stories in height, built in 1852 and 1854. In the rear is the mechanics' shop, occupying the central portion of the square, and running back to Main Street. On the square on the opposite side of Main Street is an extensive cooperage-shop, with a front on Second Street of one hundred and seventy-five feet, which was built in 1852. On the northeast corner of the same square is the water reservoir, built in 1867. The company have water- and gas-works of their own, and supply all that is needed throughout the refinery premises. The total value of real estate owned and occupied at present by the company is not far from half a million dollars, and the total frontage is about fourteen hundred feet. In some instances the buildings on different squares communicate by bridges across the streets, stretching from the upper stories, and the bone-black house is connected with the refinery by a tunnel under the street. In various places tramways are laid for the easy transportation of the trucks containing bone-black."

The company, which still occupies the building at the corner of Lewis and O'Fallon Streets, is now erecting a new refinery and incidental buildings on Main and Ashley Streets. The building will be the highest in the city, having thirteen stories, including a spacious basement. The foundation on which this

gigantic structure rests is built of cut stone, the walls having a thickness of forty four inches. The refinery has a frontage of one hundred and thirty-eight feet on Main Street, and the filtering-house, including wash-house and warehouse, has a frontage of two hundred and eighty feet on Ashley Street. The boiler-house, fronting on an alley, measures two hundred and eighty feet. The floors in the refinery are each supported by twenty-four oak posts, having an average thickness of twenty-two inches. In the filtering-house, each floor is supported by twenty-four cast-iron columns, which are connected with wrought-iron beams. The height of the refinery is one hundred and thirty-two feet; height of the filtering-house, one hundred and ten feet; height of the tower, one hundred and twenty-seven feet. The average height of the floors is eleven feet. The material used in the building is principally pressed brick above the foundation. In appearance it is plain and substantial. Richard Berger was the architect.

The present officers of the company are W. L. Scott, president, and A. D. Cunningham, secretary.

William H. Beleher, founder of Beleher's Sugar Refinery, was born in Connecticut in 1811. From fifteen to twenty years of age he was clerk in his father's store in a country town in Massachusetts. When not quite twenty he went to New York, entering as clerk in a wholesale grocery store. After a year or two he took up the business of selling books at auction, traveling through the country for that purpose, and selling in the largest towns. At the close of 1834 he went through the Southern States, and continued in the business until 1840, selling books in most of the Southern cities and in some of those in the West. In 1840, as already stated, he embarked with Samuel McLean in the business of sugar refining in St. Louis. The business connection was dissolved next year, Mr. Beleher leaving it; but in 1843 he bought the whole establishment, and the enterprise from that time went forward prosperously and expanded yearly. Mr. Beleher knew nothing of the business when first connected with it, but soon learned the old plan and system of sugar refining, and learned further that it was going out of date, and that new and improved methods must be adopted to secure success. These he introduced from time to time, and from a very small beginning built up a sugar refinery that when he left it was one of the largest in the country, as well as being one of the most important manufacturing establishments in St. Louis or the West. The principal part of the present buildings of the sugar refinery were erected by him. He purchased the site after suffering severely at his old loca-

tion from the flood of 1844, selecting a locality that was found water-proof that year. In 1859 he went to Chicago, and established a sugar refinery there with fair prospects of success, but the outbreak of the war ruined that enterprise, and the refinery was worked irregularly during the war with only partial success.

While in Chicago he introduced the culture of the sugar-beet into Illinois, and inaugurated other enterprises which promised more of benefit to the public than to himself. He died at Chicago in March, 1866, honored and esteemed by the mercantile community of that city for his rare business qualifications, his public spirit, and his personal character.

SPICES.—The sale of spices also forms an important factor in the grocery business of St. Louis. One of the largest firms engaged in this branch of the trade is that of William Schotten & Co. William Schotten, the founder of the house, was born in Neuess, near Düsseldorf, Germany, Sept. 26, 1819. His father was a man of limited means, and his boyhood passed without special incident. He received the usual parochial education, and was then employed by a prominent physician in his neighborhood, who had a very large practice. In this occupation young Schotten acquired a practical knowledge that could not be obtained in the schools. In 1847 he embarked for America, and repaired directly to St. Louis, having heard that a number of his countrymen had settled here. Soon after his arrival he established a spice-factory on Walnut Street, opposite the Cathedral. He began on a small scale, grinding his stock himself by hand, and then peddling it about town from a basket. He labored with remarkable energy and perseverance amid discouragements that would have appalled a less determined man. One by one, however, the obstacles yielded, and he finally secured a prosperous business, his goods not only obtaining a local reputation but being in demand in Chicago, Cincinnati, and other large cities in the West. Year by year the trade continued to expand until his death in September, 1874, when he left a comfortable fortune to his family, together with a large spice and coffee business. His sales aggregated yearly about two hundred thousand dollars, a very large amount for those days. As has been said, this result required hard and steady work and many sacrifices; but Mr. Schotten possessed in an uncommon degree the valuable German qualities of patience and perseverance. His genial disposition secured him hosts of friends, and added largely to his list of customers.

In addition to the spice trade, Mr. Schotten engaged in the milling business on North Market Street, opposite the old North Missouri Railroad depot. This

enterprise prospered for a time, but the mill was burned, and the insurance proving worthless, the investment was a total loss. Thenceforward he confined himself strictly to the business of manufacturing spices, etc., and handed over to his sons at his death the fine results of a quarter of a century of honest and diligent labor.

Mr. Schotten was twice married, and left three sons,—Hubertus by his first wife, and Julius J. and Henry E. by his second. Upon his arrival in St. Louis, Mr. Schotten attended a night school in order to gain a knowledge of English and other branches essential for a business man, and thoroughly appreciating the importance of a good education, gave his three boys the advantages of a college course. His sons seem to have inherited much of their father's aptitude for business, for in the eight years since his death their trade has doubled, and is constantly increasing.

In 1870, Mr. Schotten visited Europe, remaining abroad over a year. Much of the time was spent in gaining additional knowledge of his business, and he brought back improved machinery.

Outside of his business, Mr. Schotten did not seek prominence, being naturally very unpretentious. He once, however, accepted a directorship in the Iron Mountain Bank.

In politics he was inclined to be independent, and never sought an office. In religion he was a Catholic, and was, successively, a member of the Cathedral and St. Mary's parishes, and was a faithful and generous adherent of the church.

Salt used to be in the past, and probably will be in the future, a valuable mineral resource of Missouri. As early as Jan. 25, 1810, William Christy & Co. advertised that they wished to employ fifteen hands to work at salt-making on the Missouri, to whom they would give liberal wages. "Our boat," added the advertisement, "will depart from this place for the salt-works about the 1st of March." Jan. 4, 1812, McKnight & Brady announced that they had just received "a quantity of salt from the Missouri saline." At the present time the cost of transportation bears such an inconsiderable relation to the cost of establishing improved modern salt-works, with the elaborate machinery, royalties, rentals, etc., that it is cheaper for St. Louis to buy its salt than to manufacture it. In former times, when the costs of transportation were excessive, the salines of Missouri and the adjacent counties of Illinois were a source of revenue and a stimulus to trade.

The salt springs and salines of Missouri are most abundant in the central part of the State, yielding

excellent brine, especially in the counties of Cooper, Saline, Howard, and those adjoining them. They are adjacent to the Missouri, in a country full of cheap wood and coal, and the supply of saline is regarded by experts as inexhaustible.

Tobacco.—According to the early advertisements of industries in St. Louis, the manufacture of tobacco was begun about the year 1817. On November 29th of that year, Richards & Quarles advertised a "tobacco manufactory on the cross street nearly opposite the post-office, northeast corner of block No. 36," and in 1836, H. Richards informed the citizens of Missouri and Illinois Territories that he carried on the tobacco manufactory "on the cross street nearly opposite the copper and tin manufactory of R. Neal." From that day the trade in tobacco in St. Louis has steadily grown and expanded into its present enormous dimensions. The absence of data prevents the tracing of their growth; commercial statistics were not regarded as of any importance at that day, and for many years afterwards there existed no reliable record of commercial facts and conditions. In 1841 the *Republican* regarded tobacco as "another item of our trade which is swelling every year into much greater importance."

LIBRARY
OF THE
UNIVERSITY OF ILLINOIS.

"To show the importance of this item," added that journal, "we here incorporate a letter addressed to us by a house in the city who are extensively engaged in the trade, and the extent of their connection with it will be appreciated by the fact that they this year took out an open policy of insurance on tobacco to the amount of \$500,000. From the interest and attention they have devoted to the subject their statement may be relied upon as very near the actual amount:

"A. B. CHAMBERS, Esq.:

"DEAR SIR,—In answer to your inquiries in relation to the tobacco crop of Missouri, we reply that the shipments this season do not vary materially from 9000 hogsheads, of which number at least 8500 pass St. Louis. The relative quality and value will be found nearly as follows:

2000 hhd. strips, worth in Europe	\$175.....	\$350,000
2500 " 1sts, " New Orleans	120.....	300,000
2500 " 2ds, " " "	70.....	175,000
1500 " X, " " "	50.....	75,000
500 " ings and bull's eye, worth in New Orleans		
\$25		12,500
		\$912,500

"From the best estimate that can be formed of the growing crop, it will range from 12,000 to 15,000 hogsheads, but prices will not be equal to last year."

John W. Wimer and Hiram Shaw, in recommending the City Council of St. Louis to establish tobacco inspection, said,—

"The crop of Missouri tobacco in 1841, although the business of growing that staple is yet in its infancy, is estimated by gentlemen well versed in this matter at not less than twelve thousand hogsheads; the crop of 1842 is estimated at twenty thousand hogsheads, and should one-third only of this quantity be inspected here, the storage on the same, at seventy-five cents a

hogshead, the price fixed by an act of the Legislature, will amount to five thousand dollars, to say nothing of the quantity which will be brought from the other States and Territories. If viewed only in the light of revenue, with reason it might be urged upon the City Council to adopt this measure, but it presents itself in another form more enlarged and benevolent, that of benefiting the entire population of the great valley of the upper Mississippi, more particularly our own State. The planter, if we act wisely, will find here a market for his tobacco, can attend in person and dispose of it to his own satisfaction, and return home convinced that the citizens of St. Louis feel an interest in his welfare, and are willing to lend a helping hand in advancing not only her own prosperity, but that of the entire State, that she knows no difference between honorable and valuable customers on her frontier and her own immediate citizens."

The increasing crops of tobacco in Missouri and adjacent States induced the City Council to establish regulated inspections of tobacco, and Messrs. Wimer and Shaw, as a select committee of the City Council, reported an ordinance to that effect.¹

From 1853 to 1868, inclusive, the following were the receipts of tobacco at the warehouses of St. Louis:

	Hhds.		Hhds.
1853.....	9,926	1861.....	8,505
1854.....	9,485	1862.....	13,050
1855.....	6,632	1863.....	19,325
1856.....	6,829	1864.....	42,490
1857.....	5,646	1865.....	16,483
1858.....	6,721	1866.....	13,669
1859.....	9,006	1867.....	18,584
1860.....	11,956	1868.....	12,266

Since and including 1870 the receipts, shipments, and offerings have been:

RECEIPTS, SHIPMENTS, AND OFFERINGS, IN HOGSHEADS, DURING THE PAST THIRTEEN YEARS.

About 1850, Missouri possessed the largest tobacco manufacturing establishment in the West, the house of Swinney & Lewis, Lewis Brothers, Lewis Company, of Glasgow, afterwards of St. Louis. This house was founded in 1837 in Glasgow, and removed to St. Louis in 1847, the Glasgow branch being still maintained. In 1860 the house employed five hundred hands, manufactured between three and four million pounds of plug and fine-cut, and exported large quantities of leaf and strips to Great Britain and the Continent of Europe. Of its operatives, one hundred and twenty-five were negro slaves owned by the firm. This firm, before it closed operations to go into other occupations, sold tobacco in every State and Territory.

In the production of manufactured tobacco, St. Louis now ranks second among the cities of the United States, being surpassed only by Jersey City, and is also becoming quite a market for leaf tobacco. The

trade has increased of late years to about four million five hundred thousand dollars, and the capacity of all

¹ The old State tobacco warehouse, situated between Washington Avenue and Green and Fifth and Sixth Streets, was destroyed by fire on the 11th of August, 1873. The building was erected by the State for a tobacco warehouse in 1843, and after being used for that purpose for a few years was abandoned. It was closed for a long time, and about 1859 the State donated the use of the building to the city of St. Louis. While the old Lindell Hotel was in process of construction, the State ordered the sale of the ground and building, and they were purchased by Jamieson & Cotting, for the purpose of erecting an immense dry-goods house. This plan was afterwards abandoned, and the property was sold to John J. Roe, and belonged to his estate at the time of his death. It was afterwards purchased by John G. Copelin, Mr. Roe's son-in-law, for \$190,000. The building was estimated to be worth not more than \$4000. During the time it was in disuse for commercial purposes it was in great demand for parties, balls, drills, and large assemblages generally, its extensive floor-room rendering it at one time the most eligible place in the city for such purposes.

the factories together is over twenty million pounds a year. Some of these establishments have erected magnificent buildings and other improvements of this nature within the last two years. The revenue paid by St. Louis manufacturers and its excess over that paid in Chicago establishes the pre-eminence of the St. Louis market; indeed, the monthly tax of one St. Louis factory in excess of one hundred thousand dol-

Company, and Price & Austin Tobacco Company, together with a large number of individual firms.

The cigar trade has grown scarcely less in proportion, and the dealers in leaf tobacco express themselves as well satisfied with the ratio of increase in their branch of the trade.

The receipts of leaf in 1882 were seventeen thousand four hundred and fifty-five hogsheads, and the

LIGGETT & MYERS TOBACCO COMPANY,
Corner Thirteenth and St. Charles Streets.

lars (including the cigar duties) is frequently larger than that of all the Chicago dealers. St. Louis manufactured tobacco is found in every part of the United States, and the volume of product has steadily increased since the reduction of the government tax in 1879. Among the largest manufacturers of tobacco in St. Louis are the Liggett & Myers Tobacco Company, Catlin Tobacco Company, Dausman Tobacco

shipments seven thousand nine hundred and forty-six.

In St. Louis, as elsewhere, the manufacture of cigarettes has developed within a year or two, and the present season already shows a marked increase in this branch of the trade. Including this, the following tabular statement covers the local manufacture in all lines:

	1877.	1878.	1879.	1880.	1881.	1882.
Tobacco.....lbs.	5,448,522	5,954,747	8,642,688	12,846,169	17,139,087	17,121,199
Cigars.....M.	33,920	33,560	35,042	38,412	39,904	40,877
Cigarettes.....M.					1,982	453
Snuff.....lbs.	35,595	36,180	41,180	43,710	47,769	48,990

In 1880 the census return was, for the whole trade: Tobacco.—Establishments, 222; capital, \$1,419,125; hands, 2627; wages, \$668,926; material,

\$4,262,681; product, \$5,702,762; net profit, \$629,243, equal to 44 per cent., which will do very well This is divided up thus:

Cigars.—Establishments, 201; capital, \$272,925; hands, 825; wages, \$265,967; material, \$312,725; products, \$888,993.

Tobacco (chewing, smoking, snuff).—Establishments, 21; capital, \$1,146,200; hands, 1802; wages, \$402,959; material, \$3,950,956; products, \$4,813,769.

The leading Southern factories keep agencies and an extensive stock in St. Louis for sale and convenience of distribution, and the Havana and Key West cigar manufacturers have also large dealings here.

The following tables will show the extent of the business done in St. Louis during 1882 and for the nine years previous, though half of the period is counted by the fiscal year, the method of keeping the record previous to 1877.

YEAR.		Tobacco Manufactured and Sold.	Amount Tax Paid.
		<i>Pounds.</i>	
Fiscal,	1872.....	5,751,185	\$1,358,717.50
"	1873.....	5,441,872	1,094,600.03
"	1874.....	4,794,985	1,154,651.52

Calendar,	1877.....	5,484,431	1,319,036.16
"	1878.....	5,990,801	1,440,716.84
"	1879.....	8,670,466	1,477,899.00
"	1880.....	12,889,784	2,062,546.45
"	1881.....	17,234,869	2,751,307.00
"	1882.....	17,170,190	2,728,525.82
Total.....		85,839,684

The manufactures of 1882 can be classified as follows:

	Pounds.
Plug chewing tobacco.....	13,223,857½
Fine-cut.....	239,731½
Smoking.....	3,657,615½
Snuff.....	48,990½
Total.....	17,170,195½

Lead.—The earliest mineral of value to St. Louis in point of time, was lead. In fact, it may almost be said that St. Louis owes its existence to lead. The Hon. E. B. Washburne, of Illinois, ex-minister to France from the United States, in a letter to A. D. Hagen, Librarian of the Chicago Historical Society, dated Dec. 13, 1880, after speaking of the researches of M. Margry in the archives of the French Ministry of Marine, and his important and valuable contributions to the early history of the United States, in which he takes an enthusiastic interest, says,—

"I took the opportunity to talk with him touching the early discoveries of lead-mines in what is now Illinois and Missouri, and received a letter in reply, which I also inclose herewith. He was kind enough to send me a transcript of certain documents which are to be published by Congress, and which I have not yet seen. By these documents I am more convinced than ever that the Galena and Dubuque lead-mines were the earliest ever

discovered by the French explorers, either in Illinois, Iowa, or Missouri. The accounts of the discovery, about the year 1719, of the mine of M. de la Motte and the Maramec mines of Missouri are very interesting, but I cannot here refer to them particularly. What interested me very much is an extract from a letter written from Fort de Chartres on the 21st day of July, 1722, by one Le Gardeur de Lisle, which I copy herewith, and which is in relation to the discovery of minerals on the Illinois River:

"I have the honor to inform you, gentlemen, that I have been sent in command of a detachment of twelve soldiers to accompany M. Renaud to the Illinois River, where the Indians had found some lumps of copper, which they brought to M. de Boisbriant, and more particularly to a coal-mine, said to be very rich.

"When we reached the place of our destination, M. Renaud commenced the search for the copper-mine, but without success, no sign of that metal being visible anywhere. However, in looking for the coal-mine, which we had been told was near the spot we had examined before, we discovered a silver and copper mine, of which M. Renaud made an assay, and which upon the surface of the ground is much richer than M. de la Motte's.

"I have kept a little diary of that journey. I take the liberty of sending it to you; it will enable you to locate the spot where this mine is situated. It is a most beautiful site; the mine is easy to work and close to a magnificent country for settlers. I am delighted with my trip and with the success which has attended it, for the assay made by M. Renaud was upon ore found on the surface, and it has proved to be much better than that of M. de la Motte's mine."

"M. Le Guis gives an account of the manner in which these miners smelted their ore in 1743, and it is almost precisely the same method which was followed in the Galena up to within three or four years before I located there in 1840. There were then the remains of many old log furnaces throughout the mines. It was about in 1836, I think, that the log furnaces were supplanted by the Drummond blast furnace. The amount of waste or scoria by the old log method of smelting was very great. This waste was in a great measure avoided by the blast furnace, of which the inventor was Robert A. Drummond, of Jo Daviess County, the uncle of the Hon. Willis Drummond, of Iowa, late commissioner of the general land office at Washington.

The following is the description of the log furnace one hundred and thirty-seven years ago:

"They cut down two or three big trees and divide them in logs five feet long; then they dig a small basin in the ground and pile three or four of these logs on top of each other over this basin; then they cover it with the same wood, and put three more logs, shorter than the first, on top, and one at each end crossways. This makes a kind of a box, in which they put the mineral; then they pile as much wood as they can on top and around it. When this is done, they set fire to it from under; the logs burn up and partly melt the mineral. They are sometimes obliged to repeat the same operation three times in order to extract all the matter. This matter, falling into the basin, forms a lump, which they afterwards melt over again into bars weighing from sixty to eighty pounds, in order to facilitate the transportation to Kaskaskia. This is done with horses, who are quite vigorous in the country. One horse carries generally four or five of these bars. It is worthy of remark, gentlemen, that in spite of the bad system these men have to work, there has been taken out of the La Motte mine two thousand five hundred of these bars in 1741, two thousand two hundred and twenty-eight in 1742, and these men work only four or five months in the year at most."

Capt. Pittman, writing, in 1770, of Ste. Genevieve, says, "A lead-mine about fifteen leagues distant supplies the whole country with shot." Many curious facts in regard to these Potosi lead-mines are to be found incorporated in different parts of this work, and we do not need to reproduce them in the present chapter.

Lead soon became, next to peltries, the most important and valuable export of the country, and, like pelts, it served in lieu of a currency. It was not, however, until St. Louis began to control the commerce of the surrounding regions that much lead came there. Before that it was nearly all shipped from Ste. Genevieve. John Arthur, in 1811, offering to sell a large line of cheap goods, gives notice that he will take in pay furs, hides, whiskey, country-made sugar, and beeswax, but says nothing about lead. However, it was offered for sale by William Clark, then Indian agent, afterwards Governor, in the following miscellaneous assortment :

"For sale by William Clark, the following articles, viz. : 113 pounds beaver, 103 otter-skins, 327 raccoon-skins, 6 pechon, 20 muskrats and minks, 25 gray squirrels, 10 painted buffalo-skins, dressed, 53 plain buffalo-skins, dressed, 436 deer-skins, 24 dressed deer-skins, 1276 pounds lead, 400 pounds gunpowder, 70 pounds nails, 130 beaver traps, 1 box of glass, 10 x 12, 2 horse-pistols, 1 fusee, 2 rifles, 70 pounds tobacco in carrots, 14 hanks of worsted, assorted, 80 shawls, 4 pieces Irish linen, 2000 yards calico."

Among the largest dealers in this sort of merchandise in the fur-trading days of St. Louis, was Joseph A. Sire, one of the associates of Chouteau & Sarpy's fur company.

Joseph A. Sire was born at La Rochelle, France, Feb. 19, 1799, and left home when fifteen years of age to seek his fortune in the New World. His father, a teacher of languages, had died, and his mother, a woman of fine intelligence, encouraged him in his determination to emigrate to America, in the belief that the chances of success were greater there than in her own country, then distracted by the daring schemes and restless ambition of Napoleon Bonaparte. At this time Europe was one vast camp, still heaving from the struggle between Napoleon and the allied powers to determine whether that great adventurer's ambitious dream of the solidarity of nations should be realized. Mr. Sire's mother, in view of the unsettled condition of the country, overcame the natural impulses which prompted her to keep her son at her side, and urged upon him the advisability of seeking a distant and more promising field of usefulness. Mr. Sire, who fully appreciated her wisdom and maternal courage, always maintained for her the deepest filial reverence and love, and contributed most generously

of his fortune as long as she lived to minister to her comfort and happiness.

The voyage to America might well have dismayed one much older than the adventurous lad, for in those days the facilities of travel did not exist which now enable one to make the circuit of the world in less time and with far less trouble and danger than were then required to perform the journey between St. Louis and New York. No steamships traversed the ocean with almost the regularity of ferry-boats; the sailing-vessel was the only means of transportation, and even the sailing-vessel had not acquired the swiftness and regularity of movement attained by modern ships. Often beating about for days in view of a haven, awaiting a favorable wind, and frequently driven out to sea by an off-shore storm, it seldom performed a voyage of any length without encountering many hardships and delays. On land the methods of locomotion were similarly cumbrous and unreliable. The canal-boat, with its crowded, ill-ventilated "between-decks," and the stage-coach were practically the only resources of the traveler. Young Sire, however, endured the hardships of this novel experience with that courage and fortitude which continued to characterize him throughout his career,—a career undimmed up to the hour of his death by a single dishonorable act.

Arrived at Philadelphia, he sought the advice and assistance of Vital M. Gareschè, then in business in that city as one of the firm of Gareschè & Rasazies, but who subsequently removed with his family to St. Louis, where he became an influential member of the City Council and president of the Board of Public Schools. Mr. Gareschè's parents had been residents of La Rochelle, and he extended a cordial welcome to the young Frenchman, who brought letters of introduction to him, and gave him employment. His industry, integrity, and thorough reliability soon created a most favorable impression, and he continued to enjoy the confidence of the firm of which Mr. Gareschè was the senior partner until, in 1826, he determined to go West. Upon his arrival in St. Louis, whither he directed his steps, he was promptly admitted to the houses of the best families of Creoles, to whom he was commended by valued correspondents, and obtained a situation as clerk with Sylvestre Labadie.

St. Louis at that time was but little changed from what it was when seen by Washington Irving,—“a motley population, composed of the original colonists, the keen traders of the Atlantic, backwoodsmen of Kentucky and Tennessee, the Indians and the half-breeds, together with a singular aquatic race that had grown up from the navigators of the river, the boat-

men of the Mississippi, who possessed habits, manners, almost a language peculiarly their own and strongly technical." Such a community, with the dissipation ever incidental to frontier life, offered strong temptations to a young man, an entire stranger, devoid of means and deprived of the associations of home and kindred, yet the energy and pure character of Mr. Sire bore him safely through the ordeal. To quote the words of one who met him just after his arrival, he was then about twenty-five, stout in form, florid in complexion, of commanding but not extraordinary stature, very affable in his manner, and earnest and energetic in his ways. Mr. Labadie, his employer, was a Creole gentleman who had married a Miss Gratiot, and he and his wife by their own worth, as well as relationship to the Chouteaus, the Prattes, the Papins, the Bertholds, and the Soulards, ranked among the very first people of St. Louis. Mr. Labadie was the owner of a grist-mill, to which was attached the first saw-mill ever established west of the Mississippi River. It was located on the bluff near the foot of Ashley Street, rude and simple though serviceable in its machinery, its motive-power being an elevated circular tread-plane worked by oxen.

There was no metal connected with the machinery, just as the "*Vide Poche*" carts, now unknown, but then the only vehicle, had not a particle of metal, even for the harness of the ponies by which they were drawn. Mr. Sire became clerk of this establishment, but by his amiability and excellent deportment ingratiated himself in the favor of his employers, and in the following year married the only child of Mr. and Mrs. Labadie, a lady of sweet disposition and cultivated and engaging manners. The union was a happy one while it lasted, but of short duration, for within two years his wife and their only child died.

Having become associated in the fur trade with Pierre Chouteau and John B. Sarpy, owners of the American Fur Company, with whom he was connected by his marriage, he took charge of their annual expedition to the upper country, as the region in the vicinity of the head-waters of the Missouri was then denominated,—a wild, unbroken waste, the home of fierce and warlike tribes, the counterpart of which is still to be found in the dark and bloody ground of portions of Texas and New Mexico, where the Apaches wage a desperate but futile struggle against the advance of civilization. The company erected at different points throughout this district stockade forts for protection against the ruthless warriors of the plains. The expedition would always leave in the spring, with a cargo of trinkets, blankets, tobacco, guns, and ammunition, and would remain at the forts, bar-

tering with the Indians, until the opening of navigation in the following year enabled them to descend with their boats to St. Louis to dispose of their product and to replenish their stock. The navigation of the Missouri, with its swift, turbid current, its snags, and its shifting channels, was fraught with danger, aside from the fact that the voyagers were necessarily always on the alert against the wily Indians.

Within the fort peril also lurked, and sleepless vigilance was maintained lest some hostile band should invade its precincts and murder every white man. These forts were oases in the trackless wilderness, far more isolated than those of the general government at the present day. The latter are united by telegraph, have regular mails, and are always within supporting distance of each other, but the trading-post had no other communication with the outer world than by the *courrier du bois*, who traveled from one fort to the other, or perhaps was sent to the settlement thousands of miles away with dispatches. These *courriers* were white men who had lived so long among the Indians that, like them, they had acquired their skill in guiding themselves through trackless wildernesses by night by the light of the stars, and by day by the bark of trees. Six years of Mr. Sire's life were passed in these distant forts, yet on his return to St. Louis, so little had he been spoiled by his contact with barbarism; that he was welcomed in the most exclusive circles. After this Mr. Sire settled down in the office of the company at St. Louis, to guide and organize the expeditions he had formerly commanded, an occupation in which he was still engaged at the time of his death, July 15, 1854. His business-like and methodical habits, fortified by his personal experience, proved of great importance and value to his associates, and contributed materially to the development of their business. All three have now passed away, each leaving a fortune honestly earned, which is the best evidence of their thrift and foresight.

In 1852, Mr. Sire was married for the second time, the lady of his choice being Mrs. Rebecca W. Chouteau, widow of one who belonged to a family honored then, as now, not only as of historic interest in respect to St. Louis, but of great public importance, having ever shown itself ready to embark capital in enterprises which were likely to promote the development of St. Louis. Mrs. Sire is still living, a woman of marked characteristics, beloved, not for herself alone, but also for her feminine virtues of true sympathy and charity.

Although a consistent and earnest Democrat, Mr. Sire had no taste for politics nor any aspirations for public office. He was frequently requested to become

a candidate, but invariably declined. He was a man of warm and affectionate temperament, generous yet prudent, unobtrusive in dress and manners, a public-spirited citizen, and an ardent and loyal friend. A notable illustration of the latter fact was afforded in the devoted affection he ever entertained for his first employer, Mr. Gareschè, who also possessed great kindness of heart. Between the two there always existed an attachment which time could not diminish nor absence impair, and when Mr. Gareschè, with his family, reached St. Louis in 1839 the intimacy was renewed. Upon the death of Mr. Gareschè, April 4, 1844, Mr. Sire became the protector of his children, and one to whom they never appealed in vain. Generous in his instincts, constant in his friendships, honorable in all his transactions, genial in his intercourse with his fellow-men, the friendless boy-adventurer died the wealthy merchant and lamented citizen, leaving behind him a record without stain or blemish.

In 1854 the statistics of the lead product were as follows:

STATISTICS OF THE LEAD TRADE OF THE UPPER MISSISSIPPI.

Year.	Pigs Produced.	Equal to Pounds.	Price 1000 Pounds Mineral.	Price 100 Pounds Lead.	Value at Galena.
1842.....	447,909	31,353,630	\$12.85	\$2.24	\$702,321.31
1843.....	559,261	39,148,270	12.60	2.34	916,069.51
1844.....	624,672	43,727,040	16.88	2.80	1,224,357.12

Shipped via the lakes.....	23,471	1,642,970	90,363.35
Total.....	425,814	29,806,980	\$1,639,383.90

The receipts at St. Louis aggregated 441,889 pigs in 1854, against 409,314 in 1853. Of this 5315 came from the Missouri, and the balance from the upper and lower Mississippi. The Galena table gives the quantity shipped per river at 402,343; deduct from this the Missouri receipts, and the balance, it is fair to suppose, came from the lower mines, say 34,231 pigs. A pig of lead has the average weight of eighty pounds.

Hon. John Hogan, in one of his lucid pamphlets about the past, present, and future of St. Louis, always in his thoughts, had the following in regard to the city's lead business:

"Some sixteen months ago one establishment commenced the making of lead pipe and sheet-lead here. They, like all similar untried experiments, had to feel their way along. The machinery was costly; workmen at first difficult to be obtained; the field of sale preoccupied by those longer engaged, more experienced, possessed of ample capital.

"But these young men possessed the energy, the probity, felt the field was vast, and were content with small profits on large sales.

"They pushed their battle to the gate, and now what is the result?—they supply with these articles the entire valley of the Mississippi. South they include the trade of New Orleans; east, all the region to Pittsburgh; north, the whole region of the upper lakes. Within the last twelve months they have manufactured of lead pipe alone over two million pounds. This has been shipped in immense casks and on large reels to supply the demands of the great West and South; while of sheet-lead they have made one million two hundred and fifty thousand pounds in the same period, besides bar-lead.

"Now, these articles were not included in our exports of 1851, before presented, for the works were not in existence then, and these figures are now given to show that St. Louis is a suitable place for manufactures, and also what may be done by industry and intelligence.

"In the said government returns no mention is made of shot, although that article was then manufactured here, but, like everything else, has grown considerably in that period.

"There is but one 'shot-tower' here, but it is fully qualified to supply the vast extent of country dependent on us, or which our skill or ability may bring within the reach of our operations. The region supplied from here with shot embraces nearly all the valley of the Mississippi.

"I deem the operations of this concern to be important, and was anxious to furnish in this place some indication of its extent, which I am enabled to do by the kind courtesy of Capt. Simonds, one of the enterprising proprietors.

"I take an aggregate statement, furnished me by him, of its business during the five months commencing January 1st and ending June 1, 1854, as made up from their books, viz.:

Total amount of shot of all sizes manufactured and sold during said five months,	79,775 bags, or.....	1,994,375 pounds.
Bar-lead for same period, 1714 kegs, or.....		428,460 "
Total shot and lead in five months.....		2,422,835 "

"During that period of five months the works were run but one hundred and four days, thus the amount of pig-lead consumed each day averages twenty-three thousand two hundred and forty pounds."

The manufacture of shot near St. Louis dates back to 1809, when it was announced in the *Missouri Gazette* of March 1st that "at Herculanum a shot manufactory is now erecting by an active and enterprising citizen of our Territory; the situation is peculiarly adapted for the purpose, having a natural tower, or rather stupendous rock, forming a precipice of about one hundred and sixty feet, having the lead-mines in the neighborhood, and one of the finest harbors for vessels. We presume the proprietor will be enabled to supply the Atlantic States on such terms as will defeat competition." The proprietor referred to was J. Macklot, who on the 16th of November, 1809, "commenced casting shot equal to the best

English patent." In 1810, also at Herculaneum, "a new and flourishing little town on the Joachim, about thirty miles from this (St. Louis) place," Mr. Austen erected a shot-tower, and then Herculaneum "boasted of two towers capable of supplying the Union with shot of all sizes."¹

The shot-tower of Ferdinand Kennett was opened in February, 1847. The tower was built by Messrs. Kayser & Carlisle, and was thirty-one feet in diameter at the base, seventeen feet at the top, and one hundred and seventy-five feet high. Previous to the erection of this tower, Mr. Kennett had been engaged in the same business, having a tower on Elm Street, which tumbled down, wounding several persons. In 1858, Mr. Kennett's shot-tower passed into the hands of an incorporated company, since which time it has been regarded as a most successful enterprise. During the war the shot-tower company suffered severely in a pecuniary sense, much of its work being declared contraband.

The tower is one hundred and eighty-six feet in height, twenty-one feet above the tallest steeple in the city. At the base it is thirty-one feet in diameter, at the pinnacle seventeen feet. It is built of hard burnt brick, cemented, and is regarded as thoroughly substantial in every particular. The wall at the base is four feet through; at the summit of the tower it is twenty-two inches.

In 1850 the capital invested was forty thousand dollars, employing ten hands, with an annual product of six thousand dollars.

RECEIPTS AND EXPORTS OF LEAD, IN PIGS OF 80 POUNDS EACH.

1873.....	356,037	216,040

¹ The manufacture and sale of powder were also established in St. Louis at an early date. On the 15th of October, 1814, William Sullivan published the following advertisement:

"Owners of powder, take notice that I, the subscriber, have rented the powder magazine from its proprietor, and that from the date of the present advertisement I will charge twenty-five cents per month for storage on every keg, provided it does not contain more than one hundred pounds, and on every keg or barrel that contains more than one hundred pounds to pay at the rate of one dollar per hundred."

Maj. James Barry commenced the manufacture of powder in the neighborhood of St. Louis in 1823 (*Republican*, March 5, 1823), and in 1833 "Maj. Philips' Eagle Powder-Mills had just been put in operation" (*Republican*, July 9, 1833).

The latter mills were soon after destroyed by an explosion.

Of the receipts during 1881, 300,000 pigs (equal to 24,000,000 pounds) were received for conversion and manufacture. In the conversion of lead to carbonate the metal of Missouri is peculiarly easy and profitable to work, yielding one hundred pounds of ceruse for every hundred pounds of metal, besides a proportion of red lead and litharge made from the refuse. This manufacture, moreover, produces linseed-oil, cotton-seed- and castor-oil, and oil-cake for exportation and fattening stock, and it encourages the manufacture of vitriol. Thus one industry, by utilizing a product which is among the donations of nature to St. Louis, provides employment for capital and labor in a dozen other industries which grow out of or are allied to it. The control of almost inexhaustible supplies of cheap lead by St. Louis makes it one of the leading manufacturing centres in the country for paints.

White Lead and Oils.—The manufacture of white lead, and of its kindred interest paints, and oils is most extensively carried on in St. Louis. The materials required by this large trade are collected almost entirely within the State of Missouri, while the adjoining States also afford a large supply, enabling its indefinite extension. The manufacture of white lead (carbonate of lead) was inaugurated in St. Louis in the year 1837 by Drs. Hoffman and Reed in a very primitive manner. From a very small beginning, say one hundred tons per annum, the manufacture of that pigment has kept pace with the growth of the city and surrounding country, until it now ranks as one among the important branches of its manufacturing industries. The annual production and consumption of white lead throughout the entire country is computed to be from sixty-five to seventy thousand tons. Of this amount there is manufactured west of the Allegheny Mountains say forty thousand tons, of which St. Louis manufacturers produce at least forty per cent., thus giving to St. Louis a larger production of that article than any other city in the Union. There are at present in successful operation in St. Louis four of the best appointed and equipped factories in the country, with a capacity sufficient to supply the white-lead demand of the entire Mississippi valley for many years to come.

The Collier White Lead and Oil Company is one of the largest to be found anywhere in the United States. It was founded by Dr. Reed, and went into operation in the year 1837. It is located on the north side of Clark Avenue, beginning at Ninth Street on the east and extending nearly to Eleventh Street. In 1842 it passed into the hands of H. T. Blow and Joseph Charless. It has three separate departments,—the factory, the cooper shop, and the corroding stacks. All of these are on a large scale and provided with every facility for manufacturing cheaply and extensively. In 1850 the present company became proprietors, under the presidency of Henry T. Blow. The annual productions are four thousand tons of white lead ground in oil, two hundred thousand pounds of red lead, two hundred thousand pounds of litharge, one hundred thousand gallons of linseed-oil, and one hundred thousand gallons of castor-oil.

It is not too much to say that among the men whose sagacity grasped and whose energy fulfilled the conditions of the prosperity of St. Louis, none occupied a higher rank or contributed by his individual success more largely to the general welfare than the eminent and honored merchant, George Collier, after whom the Collier White-Lead Works are named.

George Collier, younger son of Peter and Catherine Collier, was born on the 17th of March, 1796, on his father's homestead in Worcester County, Md. His father, who died while he was yet a child, besides carrying on with success the farm upon which he resided, was largely engaged in the Atlantic coasting trade, and at his death, which occurred before 1810, left what was in those days a handsome property to his family. His mother was a woman of great force of character, revered as well as loved by all who knew her. After her husband's death she continued to reside at the homestead in Maryland until both her sons, John and George, arrived at manhood, giving to each of them the best education for mercantile pursuits which that part of the country at that time afforded, and for this purpose sending them to Mr. Wylie's academy in Philadelphia, then of the highest repute.

About the year 1816, John Collier, who had just arrived at manhood, came to Missouri, then still a Territory, and settled at first in St. Charles, where he began business as a merchant. His success was such that before long he opened a branch house in St. Louis, which within a few years became the principal establishment. During this time George Collier was completing his education in Philadelphia, where he formed friendships subsequently of great service to him in his business career.

About the year 1818, having completed his education, George Collier joined his brother in Missouri and engaged with him in business, before long becoming his partner. According to the custom of those times, their business was of a general nature, including an assortment of the staple articles most in demand among those who traded with St. Louis. It was at first carried on at retail, but soon expanded into a wholesale business, and extended rapidly throughout the settled portions of Missouri and Illinois.

In 1821 the partnership was dissolved by the death of the elder brother, who had already made his mark as a business man of ability and energy, as well as of high personal character. The younger continued the business alone for several years.

About the year 1825, his business continuing to increase, Mr. Collier took into partnership with him Peter Powell, like himself a native of Maryland, and who had been for several years in his employ. The firm of Collier & Powell, thus formed, continued to carry on a general merchandise business until the year 1830, when Mr. Collier retired from the firm, having acquired what was for those days a considerable fortune.

From this time he entered upon pursuits characteristic at once of his energy and his far-sighted views as a business man. Realizing that the river trade of St. Louis, north, south, east, and west, was to be the secret of her prosperity, he began to invest his means largely in the building of steamboats. But a few years had passed since the first steamer came up from New Orleans to St. Louis (1817), making the weary voyage in twenty-seven days, but demonstrating by the fact of making it that the days of the "broad-horn," the flat-boat, and the keel-boat were at an end. Pittsburgh had become the navy-yard of Western commerce, at which then and for years afterwards the greatest facilities for such work existed.

It has been said that the faculty of judging men and selecting fit agents for important enterprises is characteristic of high ability. The method pursued by Mr. Collier in entering upon this new field demonstrated his possession of that faculty. It was his habit, year after year, to select men already experienced in the river navigation and to send them to Pittsburgh to make contracts for the building of steamers which they were to command, and in which he often gave them an interest. Instructing them as to the character and purposes of the vessel, he furnished them with credits sufficient to meet whatever cost might be incurred, and stationed them at Pittsburgh in active superintendence of the work while it progressed, thus securing the most watchful personal

supervision and assistance from men at once competent for their duties and whose interests coincided with his own. In this way during the twelve or fourteen years following he became largely interested in steamboats, constantly building new ones of size and capacity suited to the trade either of the upper or the lower Mississippi or the Missouri Rivers, according to their destination. It was one of his maxims to hold no property which brought no return; and in respect of steamboats it was observed that he rarely held one longer than was necessary to establish its character in the trade, selling those which did not prove profitable in order to cut off further loss, while those which earned a good name he often sold when at their highest repute, thus realizing their highest value and escaping further risks. The limits of this sketch forbid more than a cursory mention of this part of his mercantile history. Suffice it to say that during the years in question he was the owner of a large number of steamers plying on all the waters communicating with St. Louis, and most of which had been built under his directions, often having afloat at one time eight or ten large vessels. The men to whose fidelity, ability, and skill he intrusted the management of these large interests rarely disappointed him. Sharing with him the profits of these ventures, some of them thus laid the foundations of their own success. Such men were Sullivan Blood, afterwards president of the Boatmen's Savings Institution, long a highly-respected citizen of St. Louis; John Simonds, afterwards of the banking-house of Lucas & Simonds; and N. J. Eaton, who, after resigning a commission in the United States army, had come to St. Louis, and whose executive ability was early recognized by Mr. Collier, more than one of whose boats he commanded. To these names, long and well known in St. Louis, might be added others, notably that of Rufus J. Lackland, afterwards one of its most prominent and successful merchants, now (1883) president of the Boatmen's Savings-Bank and the St. Louis Gas-Light Company, and who is himself authority for the statement that to his early acquaintance and connection with Mr. Collier, and to the assistance rendered him, unsought, by the latter in his early business life, his subsequent success is largely due.

An important element in these enterprises was the high reputation for probity, as well as for large resources and exemplary business habits, which Mr. Collier had established not only in St. Louis, but throughout all parts of the country where the business men of that city were known. It was proverbial that his credit was practically unlimited, and

that whoever he sent to Pittsburgh with authority and credit for building a steamboat, or northward to purchase lead, or to New Orleans for the purchase of return cargoes of groceries on his boat, or to Philadelphia, then the financial centre of the United States, was sufficiently backed by George Collier's name.

It goes without saying that the navigation of the Western rivers was attended in those early days with not less, perhaps with greater risks and dangers than now. But so constant was the good fortune, and so high the reputation of his steamers, that George Collier's "luck" became proverbial. Nor is it any disparagement to others to claim for him the first rank among those whose far-sighted energy and bold and successful management built up the vast river trade of St. Louis, along whose Levee, before 1860, often lay at one time a fleet of nearly two hundred magnificent steamers, busily loading and unloading side by side the rich and varied products of every zone.

During these years, however, the steamboat interest was by no means the only one which engaged his attention. The rich deposits of lead at and near Galena, Ill., as well as those to the southward in Missouri, were at that time the great source of supply for that metal. Partly as an independent investment, and partly by way of utilizing his steamboat property, Mr. Collier engaged largely in the purchase and shipment of lead, especially from the north, forming for that purpose a business connection with the house of Thomas Fassit in Philadelphia, in which direction, as well as *via* New Orleans, great quantities of lead were shipped. Besides purchasing lead from others, he became a large owner in the Galena mines, and the metal from those regions at that time was the chief source of supply, not only for the white-lead factories in Pennsylvania and other Eastern States, but was also shipped in large quantities to France and other parts of Europe. This traffic in lead, since distributed over regions farther west, formed for many years, as we have seen, an important part of the trade of St. Louis, and to its development no man in that city contributed more actively or more sagaciously than George Collier.

Operations so large as these, and requiring the constant use of so much capital and credit, naturally suggested to his active mind the combination with them of a banking business. About 1835-36 he formed a partnership with William G. Pettus, whose wife was the sister of Mr. Collier's first wife. For several years thereafter the firm of Collier & Pettus conducted a large business in the way of banking and exchange, deriving an independent source of profit

from the dealings in Eastern exchange resulting from the shipments of lead, already mentioned, as well as from large collections which rapidly flowed into their hands from Mr. Collier's Eastern acquaintances, who sold to the merchants of St. Louis their general supplies.

In still another direction the interests already mentioned were utilized. Some of the steamers wholly or in part owned by Mr. Collier were in the Southern river trade, and were constantly engaged in carrying to New Orleans lead shipped by him and his associates, as well as other staple articles, including flour, in the manufacture of which at St. Charles he was early interested. The proceeds of such cargoes were invested under his direction in profitable return cargoes of heavy groceries, sugar, coffee, salt, and molasses, for which New Orleans was up to the outbreak of the civil war the principal point of supply to St. Louis and thence to the far West and Northwest.

In 1840 the banking firm of Collier & Pettus was dissolved by Mr. Collier's retirement therefrom, though Mr. Pettus for some time longer continued the business. In 1842 Mr. Collier formed the firm of Collier & Morrison, taking into partnership his brother-in-law, the late William M. Morrison, then a young man, for whom this introduction to business life also proved the first step in a highly successful mercantile career. The business of this firm was chiefly commission, but they also dealt largely in lead, for which during so many years St. Louis was the great *entrepôt* of the West.

In 1840, Mr. Collier, whose health was never robust and had become delicate, determined to withdraw from active business, and gradually sold out all his interest in steamboats. In 1847 he retired from the firm of Collier & Morrison, which was succeeded by William M. Morrison & Co., the new partners being Rufus J. Lackland and Alfred Chadwick, whose office during the remainder of his life Mr. Collier made his headquarters, and to whose very successful career his advice and assistance largely contributed. From this time he gradually withdrew from business cares other than the management of his valuable landed estate and other investments in the city of St. Louis.

It is possible in the brief space at command only to allude to other features of a business life whose thirty years of activity included and so largely influenced the early commercial history and subsequent growth of his adopted city.

His calm and sagacious judgment, united with singularly clear and quick perceptions, both as to men and as to the contingencies of business, peculiarly

qualified him for financial success, and for many years before his death Mr. Collier was by common consent regarded as the highest financial authority in St. Louis, and was often consulted as such by those in whose affairs he was not personally interested. For several years prior to its failure in 1837 he was one of the directors in the Branch Bank of the United States at St. Louis. In February, 1837, the Bank of the State of Missouri was chartered, in which the State was a large stockholder, appointing a majority of the directors. In December, 1840, Mr. Collier was elected one of the directors who represented the private stockholders, and continued to fill that position for six years, having been twice re-elected, but declined a third re-election in 1846.

By an act approved Jan. 12, 1831, was incorporated the first insurance company in St. Louis, under the name of the Missouri Insurance Company, the name of George Collier heading the list of incorporators, and for many years of its successful career he was one of its most important members. It was characteristic, however, both of his self-reliance and his customary good fortune—if the result of wise and watchful management is to be called good fortune—that he rarely insured his own property at all, though he not unfrequently underwrote risks for others as a private person.

As already stated, the shipment of lead from St. Louis southward and eastward was a very important part of its early commerce. Part of the lead thus shipped was for many years returned to the West in the shape of white lead from Eastern factories, but between 1837 and 1850 the manufacture of white lead and of oil from the castor-bean was established in St. Louis. The well-known firm of Charless & Blow were among the pioneers of this industry. In 1850 their factory was destroyed by fire, and the heavy loss thus sustained threatened the business with ruin. But it was re-established by the incorporation, in September, 1851, of the Collier White Lead and Oil Company, to the capital of which Mr. Collier was the largest single contributor, the active management remaining in the hands of the Hon. Henry T. Blow. The prosperous career of this important industry has more than verified the anticipations of those who, like Mr. Collier, believed that the future prosperity of St. Louis would depend largely upon her manufactures.

In 1845 was held at Memphis the first Inter-State River and Harbor Convention, an assemblage made famous by the presidency of John C. Calhoun. It was Mr. Calhoun himself who—in reference to the question of constitutional power on the part of the Federal government to make such improvements—

there first applied to the great rivers of the West a designation which instantly became famous, that of "inland seas." It was more than a picturesque phrase: it was an argument in a word, it was the solution of a grave constitutional question. At this convention the commercial interests of St. Louis were represented by a delegation of twenty-five of her most prominent citizens, of whom George Collier was one.

He was also a member of the first board of directors of the Missouri Pacific Railroad, having been one of those who first met for the purpose of organizing and procuring its incorporation.

In February, 1851, the Mercantile Library Hall Association of St. Louis was incorporated by special act for the express purpose of erecting, and soon after did erect, for the use of the St. Louis Mercantile Library Association, the large building at the southwest corner of Fifth and Locust Streets, still occupied by the latter. In this public enterprise Mr. Collier took great interest, not only subscribing liberally, but giving still more important advice and assistance in planning and prosecuting the work.

He was for many years a trustee of the Second Presbyterian Church, of which the Rev. Dr. William A. Potts was the eminent and beloved pastor.

It is not within the purpose of this sketch, even did its limits permit, to dwell upon the personal qualities which not only commanded the highest respect and confidence of his associates and of the community at large, but won the tender affection of those who knew him best. Always gentle and courteous in manner and of few words, his demeanor even under trying circumstances was singularly calm and self-possessed, while his conduct indicated great promptness and decision of character. His accurate judgment of men has already been mentioned. To this was united a cordial and sympathetic interest in young men who proved themselves worthy of confidence, which in many instances, long held in grateful remembrance, showed itself by timely and generous aid in money and credit. No trait of his was recalled more warmly by those from whom these reminiscences have been obtained than the frequent and liberal assistance afforded by him, often unsought, to those whose character was his only security.

Mr. Collier's political affiliations were always with the Whig party. If he had ever indulged any aspirations for public life, the uniform and overwhelming preponderance in Missouri of the Democratic party would have rendered them hopeless. He was always averse, however, to notoriety of any sort, and uniformly declined or avoided even the temptation to leave the quiet walks of private life.

Early in 1852 his health, which had long been delicate, began to fail steadily, and a lingering illness terminated in his death at his house in St. Louis on the 18th of July, 1852, at the comparatively early age of fifty-six.

Mr. Collier was twice married. His first wife, Miss Françoise E. Morrison, whom he married on Jan. 1, 1826, at St. Charles, Mo., died Aug. 30, 1835, leaving a daughter and an infant son. In 1838 he married Miss Sarah A. Bell, eldest daughter of the late William Bell, of Pittsburgh, Pa., who still survives him. Of this marriage five sons and one daughter survived him. Both daughters are still living in St. Louis. The elder in 1857 became the wife of Henry Hitchcock, a leading member of the St. Louis bar. The younger in 1866 married Ethan A. Hitchcock, then a partner in the American house of Olyphant & Co. in China, where he continued to reside till his retirement from that firm in 1872. Since 1875 he has resided in St. Louis, holding high positions of business trust.

Five sons of Mr. Collier attained manhood, only two of whom now survive. One of these, William B. Collier, is a resident of California. The other, Maurice Dwight Collier, was admitted to the bar in St. Louis in 1869, and has since pursued his profession with diligence and promise of success. During part of this time he was a diligent and influential member of the City Council, and in 1876 was elected a member of the board of freeholders, thirteen in number, who framed the present city charter of St. Louis.

The works of the St. Louis Lead and Oil Company were erected in the spring of 1865, and are located on North Second Street at the corner of Cass Avenue. In addition to the manufacture of white lead, the company gives a large share of attention to producing litharge, red lead, linseed-oil, castor-oil, and cotton-seed oil. The works consume annually the enormous amount of one thousand tons of pig-lead, in addition to fifty thousand bushels of castor-beans, one hundred thousand bushels of flaxseed, and forty-five thousand bushels of cotton-seed. The works of the company alone cost nearly two hundred thousand dollars, and have a frontage of nearly six hundred feet on Second Street. They have eighteen stacks, holding each five thousand pots and forty thousand pounds of metal. As many as eighty-five men are given employment at these works, to whom the company pay about sixty thousand dollars annually.

The Southern White Lead and Color Company erected its works in the fall of 1865. They are situated at the corner of Main and Lombard Streets. The company devotes its attention almost wholly to the

production of white lead, and its brands, like those of all other St. Louis works, have already gained an enviable reputation, especially throughout the Southern and Southwestern States. Its lot has a frontage of two hundred and fifteen feet on Main Street and one hundred feet on Lombard Street. The works have twenty stacks of a capacity of five thousand pots each, ten pounds of lead to a pot. The consumption of pig-lead is twelve hundred tons yearly, the supply being obtained from Missouri, Iowa, Wisconsin, and also Germany. The product of the Granby mines in Missouri is as highly esteemed as that of any other State in this country or of Europe, but good metal is not always to be had in large enough quantities at home, and hence the company is compelled to go abroad.

Iron.—"Here is the centre of the world's trade, here is the future metropolis of the world's empire, in the favored child of the mighty valley of the Mississippi, *the City of the Iron Crown.*"¹ This declaration ceases to be hyperbole when St. Louis is regarded as the centre of that iron region "where they have enough ore (iron) to run one hundred furnaces for one thousand years." With Iron Mountain, Pilot Knob, Shepherd Mountain, Simmons' Mountain, and thousands of other deposits to glut the forges of the future, St. Louis cannot fail to become the grandest iron work-shop in the world. "Concentrated in a limited area, surrounded on all sides by the grandest agricultural district of the globe, with unlimited supplies of coal, with timber and water-power unsurpassed upon the continent, with a genial climate and healthy homes for the operatives, and their food cheaply produced almost at their doors, with the world for a market, and transportation facilities for reaching its most distant point, it is not difficult to see a prosperous future for a section so happily situated and so richly endowed," and even exaggeration seems impossible in forecasting the future prospects of a city which is the centre and the commercial and manufacturing metropolis of a country so favored with natural advantages.

As early as September, 1814, D. Stewart, on Main Street, adjoining the store of T. Hunt & Co. and opposite the dwelling of William C. Carr, "manufactured all kinds of cut nails, brads, sprigs," and sold them at the following prices: 6*d.*, 7*d.*, 8*d.*, 10*d.*, 12*d.*, and 20*d.* at twenty cents per pound; 4*d.* at twenty-five cents per pound. He sold the best quantity of bar-iron at fourteen cents per pound, or twelve and a half cents by the ton. The establishment of iron

foundries in St. Louis, it is believed, antedates the mining of the ores, and may be regarded as having been begun in 1817, when Lewis Newell landed in the then thriving village and commenced the business of blacksmithing, giving special attention to the making of edge tools. His fame soon spread abroad as a great axe-maker. At this time St. Louis was an important centre of the fur trade of the West; the demand for wolf-traps, beaver-traps, and squaw-axes was very considerable, and Newell soon made a specialty of the manufacture of these implements, the production of a good quality of which brought him at once wealth and a wider fame. About that time, too, the old French cart began to be superseded by the Yankee wagon, all the cast-iron hub-boxes for which had to be brought from Pittsburgh, as indeed all other iron castings. Then it was that the idea of founding first entered the brain of the first St. Louis founder. Newell saw that if he could make the hub-boxes he could make a wagon out and out, thus saving a heavy expense in their manufacture and adding greater facility to their production, an improvement much to be desired by the farmers and settlers around St. Louis. Newell racked his brain for a plan to overcome the inconvenience of having to import wagon-boxes. He was not a practical iron founder, but his genius and indomitable courage made up for the want. Having completed a pattern, he went to work with a common blacksmith's forge to make wagon-boxes, and melted his iron and moulded them with perfect success. This was the first melting of iron west of the Mississippi River. For four years Newell proceeded with this slow process to turn out boxes for the wagons he made.

In October, 1828, Samuel Gaty arrived in St. Louis, in company with John A. Morton, Jr., and a young Welshman named Richards. When they arrived in St. Louis there was no foundry in the city. There was, however, a frame building which parties from Cincinnati had erected with the intention of starting a foundry, but not being able to work the coal, had abandoned the project. In this building, near Second and Cherry Streets, Gaty and his friends started a small foundry; but the partnership (for which Gaty furnished the cash capital) was not fortunate, and in a few months Gaty and Morton were induced to sell out to Col. Martin Thomas, who subsequently leased the works to Peter McQueen, of New York. Gaty was out of work for a while, for McQueen had a poor idea of Western mechanics, and preferred (as he said) skilled men from the East, yet on two occasions Gaty showed his aptness and skill in a remarkable way. McQueen was asked to make a new

¹ Address by Charles P. Johnson, of St. Louis, before the State Immigration Convention, April 13, 1880.

shaft for the steamer "Jubilee." He said his men could make the pattern and mould one, but, having been used only to a eupola, could not well melt the iron in an air-furnace. Gaty, however, undertook the job of melting the iron, and got a fine casting. But it was then found that there was not a geared lathe in the city to turn the shaft with. Gaty was again appealed to, and with two cog-wheels he very soon rigged up sufficient power to turn the shaft by hand.

In the spring of 1830, Scott & Rule, then the largest merchants in St. Louis, and also among the largest property-holders, proposed building a foundry for Lewis Newell, they to hold the concern in their name, Newell having failed in business and being at the time insolvent. After completing his agreement with Scott & Rule, Newell wrote to Samuel Gaty, who had gone to Louisville, Ky., to return to St. Louis and enter into business with him. Gaty accepted, and in November, 1830, came back to St. Louis, and superintended the building of the foundry, the money for which was furnished by Scott & Rule. A site for the foundry was selected on the west side of Main Street, between Cherry and Morgan, and during the winter Gaty prepared the foundation for the intended building, and in the spring he, with his own hands, dug up the fire-clay for the bricks for the furnace, moulded them himself, and built the furnace, which was finished in the spring of 1831. On July 4th he took the first heat, and the first castings were for Capt. John C. Swon, of the steamer "Carrollton," and were of excellent quality. Gaty & Newell worked the furnace for a while with great success, but it was destined to a short life, for in the winter of 1831-32, Scott & Rule became involved, and made an assignment to James Woods, of Pittsburgh. This swept everything from Gaty & Newell. But young Gaty, undismayed by misfortune, and with a determination that could not fail of any reasonable undertaking, rented the foundry from Woods and went to work; and from that time fortune smiled on him, as it always does on brave, industrious men who are determined to succeed. Newell had an interest in the concern. The business prospered and the foundry was increased in capacity, making all kinds of engines and machinery.

In 1832, Felix Coonce became a partner in the foundry, and the firm was known as Gaty, Coonce & Co. In 1833, Newell sold his interest to Capt. Beltzhoover, and in 1840, Beltzhoover sold again to A. H. Glasby. In 1841, Coonce sold his interest to John S. McCune, who came from Pike County, Mo., where he had just sold out a mill and country store, which he bought with money the proceeds of the sale

of a vein of lead ore that he had recently struck at Galena. The firm was then styled Gaty, McCune & Co.

In 1849, Gerard B. Allen was admitted to the firm, which then became Gaty, McCune & Co. Later, James Collins, William H. Stone, and Amos Howe were admitted, and this firm continued until July, 1862, when it dissolved, and Gaty and McCune retired from the foundry business.

In all these changes Mr. Gaty, although surrounded by very capable men, was at the head of the establishment and was its controlling mind. He started with a little air-furnace of four tons' capacity, and presided over the development of a business which in a few years grew to enormous proportions, the foundry being in its day one of the most extensive manufacturing establishments of its class in the whole valley of the Mississippi, and occupying a whole square, bounded by Main, Second, Cherry, and Morgan Streets. Much of this block of land Mr. Gaty still owns, and it is covered with large and costly buildings.

After the retirement of Mr. Gaty in 1862, James Collins, who had been connected with the establishment since 1833, with the exception of a brief retirement in 1860, became one of the principal proprietors and manager of the works.

Mr. Collins had been employed in the capacity of foreman and superintendent until 1853, when he bought the remaining interest of Mr. Glasby, and the success that attended this foundry is in no small measure the result of Mr. Collins' unwearying labors in its superintendence.

James Collins was so thoroughly identified with the iron interests of St. Louis that a brief sketch of his career will not be out of place. He was born in Canada West in the year 1818, and at nine years of age was left an orphan, without friends, means, or education. He was apprenticed to the firm of Sheldon & Dutcher, iron founders, of Toronto, where he soon mastered the business of founding and engine-building. At the age of sixteen he came to the United States, and soon after started a small foundry in Buffalo for Judge Williamson, and superintended it for about four months, when he was taken with the Western fever, came to St. Louis in 1833, and commenced work for Gaty, Coonce & Co. in their foundry, with which firm he was identified for twenty-eight years, in 1853 (as stated) becoming a part owner. Under this partnership the foundry was run until 1860, when Mr. Collins retired, and in July, 1862, the copartnership of the firm expired by limitation, when its affairs were wound up and the fixtures

and machinery sold, Mr. Collins becoming one of the chief purchasers, eventually putting the machinery, patterns, etc., into the Broadway Foundry, with which he afterwards became connected.

In 1837, Hudson E. Bridge arrived in St. Louis, and in company with Messrs. Hale and Samuel S. Rayburn began the manufacture of plows. Mr. Hale dying soon after, the business was continued by Bridge & Rayburn, and the department of stoves and hollow-ware was added. In a short time French Rayburn, a younger brother of Samuel S. Rayburn, came to St. Louis and was admitted into partnership with Bridge & Rayburn, which caused a marked increase in their business.

French Rayburn was born in Montgomery County, Va., Jan. 5, 1815. His ancestors, who were of Scottish origin, settled in the north of Ireland several centuries ago. His grandfather on the paternal side emigrated from Ireland and settled in Virginia in the latter part of the seventeenth century. James Rayburn, the father of French Rayburn, was a prominent citizen of Montgomery County. He was for many years judge of Probate Court, was sheriff of the county, and held other positions of public trust. He died in December, 1814, some two or three weeks before the birth of his son French. His wife, Nancy Watterson (*née* Shanklin), at the time of her second marriage was mother by her first husband of one child, William S. Watterson, who was the father of Harvey M. Watterson, who represented Tennessee for many years in the lower house of Congress, and the grandfather of the brilliant Henry Watterson, of the *Louisville Courier-Journal*. She died in the month of July, 1835, venerable in years and the mother of twelve children, only one of whom, the youngest, French Rayburn, is still living. Mr. Rayburn acquired the best education the times afforded in the excellent schools of Bedford County, Tenn. His business life began at Nashville, Tenn., under the care and direction of his brother Samuel, who was of the firm of Mitchell & Rayburn, and after the dissolution of that firm, and when he was seventeen years of age, Robert and James Woods (who were near relatives), of the firm of James Woods & Co., took him into their house, and manifested a father's interest in him. They were engaged in the banking business at Nashville, and also owned and operated the extensive Cumberland Iron-Works, under the firm-name of Joseph Woods & Co. In 1833 they opened an iron house in St. Louis for the sale of the products of their iron-works, and placed Samuel S. Rayburn, an elder brother of French Rayburn, in charge. French, however, won their esteem and con-

fidence to such an extent that in 1834 they sent him to St. Louis and associated him with his brother in the management of the iron house.

Samuel S. Rayburn was one of the most prominent and successful business men of St. Louis. He was a director for many years, vice-president, and during the absence of its president, John B. Smith, in Europe acting president of the famous old State Bank of Missouri, of which Robert A. Barnes was afterwards president. He founded the house of Bridge, Rayburn & Co. (associating with him Hudson E. Bridge and Titus Hale), for the manufacturing of stoves, etc. He died in Bedford County, Tenn., in 1849. His daughter Victoria, an only child, was reared and educated by Mr. and Mrs. French Rayburn, and was married to Lieut. George R. Bissell, a son of the late Capt. Lewis Bissell, of St. Louis, who now resides in Oakland, Cal.

French Rayburn married in May, 1841, Catherine, eldest daughter of Samuel and Margaret (*née* Beltzhoover) Stacker. Samuel Stacker was born in Pennsylvania, near Philadelphia, and was of German parentage. He removed to Pittsburgh, where he married Miss Margaret Beltzhoover, whose parents, also of German extraction, belonged to one of the prominent families of Pennsylvania. He built the first bridge over the Cumberland River at Nashville, and afterwards, in connection with his brother John, erected and operated the Lafayette Furnace, on the Cumberland River, in which business he amassed a fortune. He and his brother sold their furnace property in 1834, and purchased of Joseph Woods & Co. an interest in the Cumberland Iron-Works, near Fort Donelson, the firm becoming Woods, Stacker & Co. Samuel Stacker had entire charge of the rolling-mill and furnaces, and by his practical and careful management brought the works to a higher state of efficiency and prosperity than they had ever attained before.

He died Dec. 28, 1859, at the close of a successful and honorable life, and lies buried beside his wife at old Lafayette Furnace, Tenn.

In 1842, Mr. Rayburn retired from the management of the iron house in St. Louis, and in the following year moved to the farm where he now resides, which he had purchased in 1842. He has resided continuously on this farm, with the exception of two years (from 1845 to 1847), during which he built the Stacker Company Furnace, on the Cumberland River, Tennessee, and manufactured pig-iron.

Mr. Rayburn had four children,—Samuel S., born Dec. 14, 1842; Cora Rebecca, born Dec. 10, 1844; Mary Elsie, born Oct. 30, 1854; and Catherine French, born Aug. 17, 1860. Cora died Dec. 30, 1859, at

French Rayburn

UNIVERSITY OF ILLINOIS.

the age of fifteen, and Mary Elsie Jan. 7, 1869, aged fourteen. Their loss, just as they were budding into beautiful womanhood, was a severe blow to their parents. Mrs. Rayburn died April 26, 1881, after a lingering illness of over a year, and is buried in the family lot in Bellefontaine Cemetery. Her character was both strong and gentle, and her retired disposition made her home life remarkable for wifely and motherly virtues. In society she exhibited the culture of a refined lady and the virtues of a Christian woman.

Mr. Rayburn has always been a pronounced Democrat, but never a politician, only once consenting to hold elective office, when, in 1858, he served as a member of the Missouri Legislature, which was notable for its frequent adjournments and extra sessions, during the incumbency of Governor Robert Stewart. He held the position of chairman of two committees,—Banks and Corporations and Committee on Accounts. During the war he was elected a director of the State Bank, which position he declined.

For twenty-five years he has been a member of the Southern Methodist Church of Bellefontaine, holding many positions of trust, and contributing liberally towards its maintenance.

He is sixty-eight years of age, and a fine representative of the pioneers to whose honor and keeping was confided the destiny of St. Louis City and County.

In 1837 all manufactures of iron were brought from the Ohio River. Hudson E. Bridge, however, conceived that the cost might be lessened by having the plates manufactured on the Tennessee River and put together in his own shop, and this was the first innovation. But this did not satisfy him. With only the experience in iron manufacture acquired in Springfield, he determined to make the plates in St. Louis, and in 1838 a little foundry was established in connection with his store. Old stove dealers warned the young man, then only twenty-eight years of age, of his folly in endeavoring to compete with the older manufactures of Cincinnati, and of the failure that must inevitably follow. But Mr. Bridge soon found that by careful economy the cost of manufacture was less than the cost of bringing from the East. At this time he was his own foreman and salesman by day, and his own book-keeper at night, and though of very humble pretensions in comparison with the establishment of to-day, the foundation was thus laid of the Empire Stove-Works, which was destined to become one of the largest and best-known manufacturing enterprises of the Mississippi valley.

In the year 1842, Mr. Bridge associated with him

his younger brother, Harrison Bridge, and the firm of Bridge & Brother was established. His brother's death in 1850 left him again alone for several years. In 1857, John H. Beach, who had been for several years connected with the house, was admitted as an associate, and the firm of Bridge, Beach & Co. has continued to the present time.

The foundry of Hudson E. and Harrison Bridge was located in the northern part of the city, but in 1847 it was removed to the corner of Main and Almond Streets.

About the time of the establishment of the stove-works of Hudson E. Bridge, Philip Kingsland removed to St. Louis, and in 1844 built the Phœnix Foundry and Machine-Shop at the corner of Second and Cherry Streets, for the manufacture of cooking-, coal-, and parlor-stoves, tin-plate, etc. From this small beginning has grown one of the largest manufacturing establishments in the United States.

Philip Kingsland, now the head of the great Kingsland & Ferguson Manufacturing Company, was born at Pittsburgh, Pa., March 31, 1809. His father was a well-known manufacturer in the iron business, and conducted the largest establishment there. Philip was sent to the village school, for Pittsburgh then was not much more than a village, and at the age of fifteen the boy's education, such as it was, was completed. His father then placed him in his shop, where he learned the business, beginning at the very bottom. Mr. Kingsland says he was "put through" the trade without being shown any favor as the son of the proprietor, but, on the contrary, was treated with the utmost strictness. The discipline, if harsh, was very useful, and so well did the boy profit by it that at eighteen he had the whole charge of the shop, embracing the supervision of over one hundred and fifty men. Although a mere stripling, he managed affairs so well that he was continued as superintendent for several years. Meanwhile he had visited St. Louis two or three times, and finally, in 1835, no longer able to resist his pioneer spirit, he removed to St. Louis and built a large iron foundry and machine-shop on Broadway, which he managed for several years. The first firm was Kingsland, Lithner & Cuddy, but this partnership was of brief duration, Mr. Cuddy withdrawing and Kingsland & Lithner continuing for perhaps twenty years. Their business grew to immense proportions, and became one of the most prominent and important industries of St. Louis. At last Kingsland & Lithner sold their establishment, good will, etc., and soon after the works burned down.

Mr. Kingsland next engaged in the manufacture of agricultural implements at the corner of Second and

Cherry Streets. The firm was Kingslands & Ferguson, the partners being himself, his brother George (now dead), and David K. Ferguson. Here, too, signal prosperity rewarded his efforts.

Mr. Kingsland finally withdrew from the active management of these works, and removed to Carondelet in 1869, where he organized the Kingsland Iron-Works, being president of the company, and built the two blast furnaces which now comprise a part of the famous Vulcan Steel-Works. These were put into successful operation, but a change of management occurring, Mr. Kingsland returned to St. Louis in 1871 or 1872, and resumed his place as a member of the firm of Kingsland & Ferguson. He subsequently effected a reorganization of the concern under the title of the Kingsland & Ferguson Manufacturing Company, under which name the establishment is still known, its present officers being Philip Kingsland, president; D. K. Ferguson, vice-president; Elliot Douglas, secretary; L. D. Kingsland (a nephew of Mr. Kingsland), treasurer.

Nearly fifty years have elapsed since Philip Kingsland arrived in St. Louis and established himself in business, and they have proved to be years of steady and astonishing success. It is gratifying to be able to state that Mr. Kingsland's prosperity is the result of watchful devotion to business, and of honest and straightforward dealings. Half a century spent in a career in which there is no flaw or stain is something certainly to be proud of, and Mr. Kingsland may not only enjoy the abundant fruits of a business wisely planned and honestly conducted, but may be happy in the consciousness that his integrity has earned him a high place in the regard of the community. He is now at the head of one of the largest manufactories in the West. It occupies nearly a whole block in North St. Louis, embraces expensive buildings, complete and costly machinery, immense stocks, etc., and requires the use of vast capital and the employment of hundreds of hands,—a monument of no ordinary character to the energy, ability, and skill of its founder.

In 1846, John T. Dowdall started the Washington Foundry, on Second Street, between Morgan and Green. The firm was at one time styled Dowdall, Carr & Co., and afterwards Dowdall, Page & Co.

In 1846, Palm & Robinson started the pipe foundry on Souldard and Second Streets, and in 1852, it is said, constructed the first locomotive ever made in the West, but, unfortunately for St. Louis, William Palm was too honest to compete with the foundries of the East, and the construction of locomotives was not encouraged here. It is conceded though that Mr. Palm built a good, serviceable locomotive.

In 1846 the Garrison Brothers started the Eagle Foundry, on Main Street, between Carr and Biddle, conducted it several years, and sold it to Renfrew & Crozier. Mr. Renfrew died in 1861, and the establishment passed into the hands of the surviving partner, Alexander Crozier.

The extensive works of Buck & Wright were established in 1849, but did not commence manufacturing until April or May, 1850, when they began to operate with thirty-five men, moulders, laborers, etc., included. Their operations were then confined to a small establishment, but they gradually increased their facilities and capacities, by the extension and enlargement of the area of their works, until they covered an entire block and gave employment to one hundred and thirty men, comprising sixty-six moulders and sixty-four other mechanics and laborers. To this firm, it is said, belongs the credit of inventing and making glass doors to their Buck cook-stoves, of which they also claim to be the inventors. It was the leading cook-stove manufactured at their establishment, and attained a wide-spread popularity. They also made twenty-nine other kinds of cook-stoves, the leading wood-stove being the "Brilliant," of which alone they made fifteen different varieties, and of the "Peerless" nine different varieties. Their leading coal cook-stove was the "Paragon," of which they manufactured thirteen different varieties, and of other stoves they made twenty-five different varieties.

In 1849, Giles F. Filley started the Excelsior Stove-Works. A writer, speaking of the works in 1869, says,—

"These works, now ranking among the first in the country, were commenced in the early part of the year 1849, and the manufacture of stoves commenced in September of that year. For four years the business was confined to a small establishment, and necessarily compelled to meet many perplexing difficulties; but in 1853 the increase of the business was so great that an addition and extension of the shops became necessary, and a moulding-room, eighty by one hundred and twenty, and a four-story warehouse were erected, much to the surprise of many people, who thought it a rash and foolish venture, arguing that it was impossible to make stove manufacturing a successful or profitable business in St. Louis. But time and experience, the great arbiters of all earthly affairs, have clearly demonstrated the fact that it was not a rash venture, but a most successful financial enterprise, and one which has done as much to develop the practical importance of St. Louis as a manufacturing point as any other enterprise ever undertaken. And now, instead of being confined to narrow quarters, it extends over an area of 37,000 square feet, gives employment to 255 operatives in its various departments, and involves a weekly cash outlay of \$4916, or, reckoning a month at four and one-third weeks, \$21,303 a month, or \$255,636 annually, and is perhaps among the largest, if not itself the largest, in the United States. It now melts from 27 to 30 tons of iron per day, or a weekly aggregate of 175 tons. But just here it will be proper to remark that only about two-thirds of the iron melted is turned out in

Philip Kingsland

LIBRARY
OF THE
UNIVERSITY OF ILLINOIS.

perfect castings. The other third results in scraps or 'grates,' to use moulders' parlance, and is remelted and recast from day to day. It is estimated that since starting in September, 1849, up to Nov. 1, 1869, it has consumed a little over 50,000 tons of iron. From the time the foundry commenced operations in 1849 to Jan. 1, 1850, there were made 644 stoves of all kinds. In 1852, the first year of the run of the Charter Oak stove, its leading cooking-stove, their manufactures amounted to 12,680, of which 2619 were Charter Oaks, and as the popularity of these stoves increased so increased their manufacture of them, and the whole may be summed up in the following tabular statement to the present time. It will be noticed, however, that in 1857, when there was a financial panic, and during the war, there was a slight falling off in this as in all other kinds of manufactures:

Year.	Total.	Charter Oaks.
1849.....	644
1850.....	5,977
1851.....	10,906
1852.....	12,608	2,619
1853.....	14,850	4,785
1854.....	18,441	6,643
1855.....	25,305	11,141

Total production.....	416,917	149,560

"During the years 1864-66, while the government law imposing a tax of three dollars per ton on melted iron remained in force, the Excelsior Manufactory paid a yearly average of the one-twenty-second part of all revenue derived from that source, as follows:

" In 1864.....	1.17½ parts.
In 1865.....	1.18 "
In 1866.....	1.28 "

"Until the present year nearly all the iron used at the Excelsior Works was brought from points outside of the State;—Ohio, Pennsylvania, and Tennessee,—but the establishment of furnaces in our own State and city has worked a very desirable change, as it tends to keep all the outlays for iron, except for the Scotch pig, at home among our own people. This outlay for iron was no inconsiderable item, as last year the works of which we write paid out over eighty thousand dollars to the iron manufacturers of Ohio alone, to say nothing of the amount paid to the manufacturers in other localities. This year they have not purchased or used a single ton of American iron produced outside of Missouri, and after giving it a fair test, pronounced it superior to any other iron ever used for stove manufacturing purposes. The only foreign purchases are of Scotch iron, which, as heretofore remarked, is of a softer, more fluid nature, and when mixed with the Missouri iron, which is very strong and, to use a foundryman's words, 'does not run sharp enough to bring out the nice designs and ornaments,' obtains the quality desired.

"The stoves manufactured at the Excelsior Works find a market in Missouri, Kansas, Nebraska, and other adjoining

States, in Louisiana, Mississippi, and Texas, New Mexico, Colorado, Montana, Utah, and wherever else St. Louis commerce extends.

"From the 1st of January to the 30th of November of the present year their sales of stoves and the necessary materials to put on the fixtures reached within a small fraction of \$1,250,000, while it is supposed that in the five stove foundries in operation in St. Louis there is invested no less than \$1,500,000.

"The power that drives the machinery to carry on the manufacturing department of the Excelsior Works is supplied by an engine of eighty-five horse-power, with sixteen and a half inch cylinder of four-foot stroke. The machinery which it propels may be enumerated as follows: Two cylinder-blowers, one burr millstone, one sand-mill, three coal-mills, seven drills, one iron-turning lathe, one wood-turning lathe, three circular saws, one planing-machine, ten cleaning mills, seven emery-wheels, two hoisting-machines, and four grindstones. Besides this it furnishes the power for moving the iron cars used for hauling coal and iron up to the cupola. There are two furnaces, the blast for which is carried from the cylinder-blower, one of them an eighteen-inch pipe three hundred feet long, and the other one a sixteen and a half inch pipe two hundred and forty feet long.

"We have stated that the Excelsior Stove-Works give employment to two hundred and fifty-five persons, and on further inquiry we learn that these two hundred and fifty-five employes are classified and paid an average of weekly wages as follows:

Class.	No.	Wages.	Total to Each Class.
Draughtsman.....	1	\$24.00	\$24.00
Pattern-makers.....	3	18.00	54.00
Flask-makers.....	4	18.00	72.00
Iron pattern fitters.....	4	17.00	68.00
Moulders.....	112	22.00	2464.00
Mounters.....	38	15.00	570.00
Cleaners.....	18	14.00	252.00
Blacksmiths.....	4	15.00	60.00
Engineers.....	1	22.00	22.00
Laborers, teamsters, etc.....	54	14.00	756.00
Clerks.....	13	30.00	390.00
Superintendents.....	3	60.00	180.00
Total.....	255		
Total weekly expense for labor.....			\$4916.00"

The start of Giles F. Filley was made in rather a small way, the employes numbering twenty-five moulders and about twenty men in other departments. These works have been extended and enlarged from time to time until they now (1883) employ two hundred and thirty moulders and about three hundred and twenty men in other departments, five hundred and fifty in all at the works proper, which cover two large blocks in North St. Louis. In 1865 the works were incorporated into what is known as the "Excelsior Manufacturing Company," and the business now includes the furnishing of tinner's supplies as well as the making of stoves, and the whole number of employes is about six hundred and fifty.

The Missouri Stove-Works were established in 1865, but did not fairly commence business until January, 1866. During the four years succeeding their manufactures made the following exhibit:

1866.....	2,380	1868.....	6,400
1867.....	3,850	1869.....	7,500
Total.....			20,130

or 5032 annually. The Missouri Stove Foundry is now located on Second Street, northeast corner of Palm.

The Western Stove Manufacturing Company was organized and a charter obtained in 1868, and manufacturing operations commenced in October of that year. The stock was owned and the labor principally performed by mechanics and laborers. It combined the manufacture of iron railings and castings for agricultural implements with that of stoves. The works are still in successful operation.

In this sketch of the St. Louis stove manufacturing interest and its extent we have dealt altogether with the leading establishments, but from them sufficient information has been obtained to show the importance and magnitude of the business as well as its influence upon the commercial interests and population of the city. The amount of capital invested in this one branch of trade exceeds \$1,650,000. In 1882 there were nine establishments engaged in this branch of manufacture, employing 1555 hands, whose products were valued at \$2,695,000.

The first bar of iron made out of pig-metal in Missouri was made on Cedar Creek (Washington County) in May, 1825, and the first blooms were made in 1832. Though ore was abundant and easily smelted, the great expense of transportation in a new and thinly-settled country soon induced the abandonment of the enterprise; and Dr. Litton states that "the next blast furnace was probably erected in 1828, by Mr. Massey, in Crawford, which has been in successful operation up to the present time."¹

In 1850, Messrs. James Harrison & Co. purchased from Capt. James Bissell a large tract of land in the northern section of the city, a short distance above Bremen, and began the erection of an extensive rolling-mill and nail-factory. The building was about two hundred and thirty-four feet long and one hundred and thirty feet wide.

James Harrison, one of the pioneers in the development of the iron trade of St. Louis, was born in Bourbon County, Ky., in October, 1803, and was the son of John Harrison, a farmer of that region. John Harrison's family came to this country from the north of Ireland at an early day, and his wife was of English lineage. Mr. and Mrs. Harrison had ten children, James being the second of several sons, all of whom became wealthy. Capt. William M. Harrison is now one of the most successful merchants and bankers of Texas.

James Harrison spent his early years on a farm,

and enjoyed such moderate school advantages as his section afforded. In 1822 he removed to Missouri and settled in Fayette, Howard Co., where for several years he engaged successfully in mercantile pursuits with James Glasgow. He early showed uncommon aptitude for business. Among his successful ventures of this period was the shipping of stock to St. Louis, and several times he went with a flat-boat of stock from St. Louis to New Orleans. In 1830 he married Maria Louisa, daughter of Joel Prewitt, of Howard County, Mo., and sister of Mrs. William N. Switzer and Dr. Prewitt, of St. Louis. This excellent lady died in St. Louis in 1847.

During 1831 and 1832 he visited Chihuahua, Mexico, for trading purposes, and led a busy and stirring life, not unfringed with personal danger. On one occasion his party was pursued, and eleven out of the thirteen were caught and scalped.

From 1833 to 1840 he was a merchant in Arkansas, and conducted business in several towns simultaneously, meeting with the most flattering success. He was still in partnership with Mr. Glasgow, under the style of Glasgow & Harrison.

In 1840 he removed to St. Louis, which city he henceforth made his home. He had "prospected" over a large portion of Missouri, and the immense mineral wealth of the State was earlier and better known to him than to most others. His knowledge on this subject convinced him that the development of these treasures would inure immensely to the advantage of St. Louis, and would prove a source of fortune to the individuals who engaged therein. He therefore formed connections with men of great wealth and business capacity, and began active operations in this new field. In 1845 he became a partner in the firm of Chouteau, Harrison & Vallé, a house which eventually took the very highest rank in the business circles of the West, and contributed largely not only to establish the iron interests of St. Louis, but also to enhance the general reputation of its entire manufacturing and mercantile community.

The immense wealth of the Iron Mountain had for generations excited the cupidity of men, but it was reserved for Mr. Harrison to develop its treasures. In 1843 he became a third-owner of the Iron Mountain property, and in 1845 organized the "Iron Mountain Company," consisting of James Harrison, Pierre Chouteau, Jr., and F. Vallé, of St. Louis; C. C. Zeigler and John Scott, of Ste. Genevieve; F. Pratt, of Fredericktown; and August Belmont, S. Ward, and Charles Mersch, of New York. The development of this industry was attended by numerous and costly experiments, but eventually the unwearied faith and

¹ Franz Mayer was the first to cast bells in St. Louis, in 1851.

Jos Harrison

LIBRARY
OF THE
UNIVERSITY OF ILLINOIS.

energy of Mr. Harrison and his associates overcame every obstacle, and their business has grown until they have come to be reckoned among the largest producers of iron in the world.

James Harrison was a staunch defender of home interests, and gave a ready ear to every enterprise that promised to be of public utility. He was an earnest friend of railroads, and not long after the formation of the company to work the Iron Mountain property inspired the organization of the Iron Mountain Railroad Company, and was one of its directing minds for several years. He was a director in the Missouri Pacific, and when that road was bought from the State he was one of the principal parties who negotiated the seven-million-dollar loan.

In all these large transactions there never attached the slightest suspicion to Mr. Harrison's name, and such was the confidence placed in his honor and judgment that he readily secured the co-operation of the most eminent men of the city in his undertakings. On the other hand, he was always ready to assist others in their meritorious projects. He possessed a rare knowledge of men, as was evinced by the conspicuous success of most of those whom he chose as partners, friends, associates, and even employés,—men of great talent and unsullied honesty, who became noted in his enterprises for largeness of views, fertility of resources, and persevering energy.

Mr. Harrison toiled not for wealth alone, but also for the great and noble object of assisting to build up the city and State. He was a man of large heart and generous impulses, and the welfare of his employés engaged much of his time and attention. He caused to be built a handsome church for his tenants at Iron Mountain, and established schools for their benefit. An open-handed citizen, he figured in various charitable and other undertakings for the public good, such as the organization of the Bellefontaine Cemetery Association, etc., and seemed to realize fully that he was responsible to God and society for a good use of his riches.

In person Mr. Harrison was tall and stately, and his manner was grave and dignified, never tolerating a rude familiarity, but courteously inviting to known friends or those who had legitimate claims upon his attention. His habits were remarkably temperate, and enabled him to labor with unflagging industry under burdens which would have broken others completely down. The most conspicuous trait of his character was a "marvelous serenity under misfortune and absence of elation in periods of special prosperity."

Mr. Harrison died on the 3d of August, 1870,

after but two or three days' illness. His sudden decease shocked the community, and was mourned as a public affliction. He did not die before his time, and had lived to see many of his predictions regarding St. Louis more than fulfilled. He saw his favorite city double her population within the last decade of his life, while the increase was thirtyfold during his citizenship. As an observant man, he must have been conscious that some share of this wonderful progress was due to his labors.

Well has it been said of him, "The imperishable evidences of his labors and enterprises are stamped in unmistakable characters upon works more enduring than bronze or marble, and the ability with which he grappled the great commercial and manufacturing problems of his adopted State adds a lustre to a name that Missourians will always be proud to honor."

Edwin H., son of James Harrison, was born in 1836 in the town of Washington, Hempstead County, Ark., where his father was then conducting one of several mercantile establishments located at widely separated points in that State. In 1840, as we have seen, James Harrison sold out his Arkansas enterprises and removed to St. Louis with his family, of which Edwin, the subject of this sketch, was the first born.

In 1846, Edwin was sent to Ste. Genevieve, Mo., to a French school, in order that he might be better prepared for the training that was to follow. The next year, at the suggestion of Father De Smet, he was sent to the Jesuit College of Notre Dame de la Paix, at Namur, Belgium, where he remained until 1851, acquiring a good education and as thorough a knowledge of French as could be obtained by daily and uninterrupted practice.

Upon returning to St. Louis in 1851, young Harrison spent a part of the two succeeding years at Wyman's school, and in 1853 entered the Lawrence Scientific School, a department of Harvard University, Cambridge, Mass. Here for the first two years he made a specialty of mechanics and engineering, in which branches he graduated in 1855. Meanwhile he had attended the lectures of Professor Asa Gray on botany, and of the great Agassiz on zoology and geology. To use his own expression, he was "infatuated" with Agassiz, and after obtaining his diploma as engineer he went into Agassiz's laboratory as a special student, remaining for one and a half years. Of his intercourse with that wonderful man he never speaks except with emotion. One of his summer vacations was spent with Agassiz about Eastport, Me., and Grand Menan Island, studying the beauties and unraveling the mysteries of marine animal nature.

One of the interesting reminiscences of his student life with Agassiz may not improperly be given here. It was in the summer of 1855 or 1856, while spending his vacation at the private laboratory which was attached to Agassiz's summer residence at Nahant, that one day, after dinner, the professor appeared in the laboratory, holding a letter in his hand which he had just received, and exhibiting evidence of some pleasurable excitement in his countenance. The letter was an autograph note from Louis Napoleon, which, beginning with "You are a Frenchman," tendered him the chair of paleontology in the Jardin des Plantes, the highest scientific position in the gift of France; also a seat in the French Senate. It was a pardonable pride which lit up his countenance, but he did not hesitate a moment to reject such extraordinary honors, and his reply was immediately transmitted to the emperor. He declined the offer in such terms as were due to so distinguished a patron of science, and begged to assure the emperor that while it was true his ancestors were Frenchmen, he was a native of Switzerland, and still remained a citizen of that republic, and that he had come to America to spend the remainder of his days, pursuant to a resolution immutably decided on years before.

During some months in 1859, Mr. Harrison was engaged under the State geologist, Professor Swallow, in the geological survey of Missouri, and in 1871 he was appointed by Governor B. Gratz Brown a member of the board of managers of the Missouri Geological Survey, and continued to be reappointed and to hold the office until the end of the survey, under the incumbency of Governor Hardin.

From 1860 to 1862, Mr. Harrison lived in New Mexico as a Santa Fé merchant. Since 1865 he has been the president of various manufacturing and mining companies and other institutions, including the Iron Mountain Company, Laeclde Rolling-Mills (Chouteau, Harrison & Vallé Iron Company), St. Louis Smelting and Refining Company, the Manufacturers' and Miners' Association, Mercantile Library Association, St. Luke's Hospital Association, Missouri Historical Society, and others. He is also a director and actively interested in the Carbondale Coal and Coke Company and its associated lines of railroad in Southern Illinois, in the Harrison Wire-Works, the St. Louis Fair Association, and the Hope and Granite Mining Companies, whose valuable mines are located in Montana.

In 1867, before the founding of the city of Leadville, he, in the interest of the St. Louis Smelting and Refining Company, visited the famous California Gulch (on which the city is now located), and de-

termined to erect smelting-works there. This conclusion becoming known produced a rush of fortune-hunters, who located around the site he had selected for the furnaces, and before the Harrison Reduction-Works (whose erection he superintended in person) were completed, which was during the summer of that year, a population of several thousand adventurous souls had concentrated and named the town Leadville, because of the extensive discoveries of lead-bearing silver ores made in the neighborhood.

Mr. Harrison was made a Freemason in Montezuma Lodge, Santa Fé, in 1861. He is now a member of the Benevolent Order of Elks, and of the St. Louis Legion of Honor. He has been a member of the American Association for the Advancement of Science, and of the St. Louis Academy of Sciences for twenty-five years, and is also a member of the American Association of Mining Engineers, and other societies of that character, and various clubs.

Having enjoyed educational advantages of large extent and variety, it is proper to add that Mr. Harrison has proved one of the most intelligent and public-spirited citizens of St. Louis. Most of his enterprises have involved the employment of large bodies of men, and have embraced the solution of some interesting problems of transportation, particularly during the early days of Leadville. In this direction he has done much to advance the interests of this city, and has assisted others in doing much. Philanthropic and educational enterprises have found him a sympathetic and generous patron. For some years he has been a director of Washington University; and in 1878-79, his attention having been called to the desirability of incorporating the manual feature in education, he is said to have built and given to the university the building now occupied by the "Manual Training-School," and has been intrusted with the chairmanship of the board of managers of the school.

Mr. Harrison was married Nov. 13, 1873, to Miss Laura E. Sterne, of Glasgow, Mo. Two children, James and Louise, make up the family.

Mr. Harrison is a gentleman of tall physique and affable manners, and of a benevolent and enterprising disposition. He is unassuming and undemonstrative in his daily life, and is a modest recipient of the honors bestowed upon him so freely by his fellow-citizens. In social life he is esteemed by a very large circle of friends, who have learned to appreciate and esteem the sterling qualities which have caused him not only to be loved at his own fireside, but also admired and respected among his business associates as one of the most worthy citizens of St. Louis.

The *Republican* of Feb. 19, 1845, announced that

Edmund Harrison

LIBRARY
OF THE
UNIVERSITY OF ILLINOIS.

"the company who now own this important mass of iron ore (Iron Mountain) have commenced operations in the erection of furnaces, and will in the course of the present year be fully under way," and on the 30th of October, 1846, the same paper added that "the first shipment of pig-iron from the Iron Mountain Company's works in this State, about four and a half tons, was received here Wednesday per steamer 'Mendota.' It was taken by Messrs. Gaty, McCune & Glasby, at whose foundry its quality will be tested. The works now in progress will, when fully completed, as we are informed, run from sixteen to twenty tons of pig-iron per day, and the supply of ore is inexhaustible."

On the 14th of the following November it was stated that "on Wednesday some pig-iron from the Iron Mountain in this State was for the second time tested, and that very thoroughly, at the foundry of Messrs. Kingsland & Lithner, of this city. It was found to be very malleable and easily filed, and was pronounced equal in all respects to the best Tennessee iron."

In 1853 the total consumption of coal was put down at two million eight hundred and thirty-seven thousand eight hundred and eighteen bushels,—one hundred and thirteen thousand five hundred tons,—of which only twelve thousand tons was used in the iron manufacture. But Mr. Hogan, writing at this time, was strenuously urging his fellow-citizens to press forward the iron industry and make the profit out of it which other communities were reaping the benefit of with resources not near so great.

"No country in the world," he showed, "of the same extent has so abundant and accessible supply of iron as Missouri. . . ."

"I say that our State and city should have the most extensive iron manufactures in the United States, and as evidence thereof it is only necessary to instance some of the vast formations of this metal in our State. And first of these formations I notice the Iron Mountain, situated in St. Francis County, about eighty miles south of St. Louis. This is one of the most wonderful metalliferous formations in the world, and, with the other vast bodies in its immediate vicinity, is worthy of the investigation of all lovers of science, all students of nature. The ore of the Iron Mountain covers an area of some five hundred acres, and is in the centre of a possession of twenty thousand arpens belonging to the same parties. It rises to a height of some two hundred and sixty feet above the general level of the country, and is estimated to contain above the surface over two hundred million tons of ore. Here is an object for laborers that is capable of supplying the demands even of English furnaces for generations without going below the general surface of the country. The ore is found in lumps from the size of pebbles of a few ounces to those of two or three hundred pounds in weight, and is gathered from the surface from base to summit to the extent of thousands of tons without any difficulty. The ore of this mountain, and, indeed, of those contiguous, is known as the *specular oxide*, and usually yields some sixty-eight to seventy per cent. of pure iron, and it is so free from injurious substances

as to present no obstacle to working it directly into blooms. The metal is so excellent that much of it, and also that from the Pilot Knob, is now used by the manufacturers on the Ohio for mixing with the ores found there, and is especially esteemed for making nails. There are now in operation at the mountain two blast furnaces, producing from one hundred to one hundred and twenty tons per month; a third one is building, and will soon be working, estimated to be capable of making sixty to seventy tons per week, which, when all completed, will produce from seven thousand to seven thousand five hundred tons of metal annually.

"These furnaces, as also the mountain and its complement of timber land, belong to Messrs. Chouteau, Harrison & Vallé, the owners also of the extensive rolling-mill in the upper part of the city. They do not contemplate the erection of any more furnaces at the mountain, but they expect to have in the southern part of the city both furnaces and forges on the completion of the Iron Mountain Railroad, and will bring up the ore, where they can have an abundant supply of coal with which to manufacture it. The amount of ore above the surface would seem to preclude the necessity of looking any deeper, nor, indeed, except as a matter of geological investigation, will it probably ever be necessary; yet the enterprising proprietors have been making some experiments in order to test the nature of the foundation on which their superstructure stands. And as the public may have some curiosity on this subject, and with a view of exemplifying the greatness of our mineral wealth, I have obtained the result of the borings made by their order alongside the base of the mountain. The shaft has already been sunk to the depth of one hundred and forty-four feet. In that distance they have fifteen feet of clay and ore, thirty feet of white sandstone, thirty-three feet of blue porphyry, and fifty-three feet of *pure iron ore*, in which they are still at work. How much thicker this vein is, of course, can only be known in the progressive investigation, but this is sufficient; the balance of the distance is composed of narrow layers of rock and gravel. Thus we see partly what is below the surface to the depth of only *one hundred and forty-four feet*; and this bed of iron ore would itself be immensely valuable, even if there was none above.

"Next to the 'Iron Mountain,' and only some six or eight miles farther from St. Louis, is another very remarkable formation known as the 'Pilot Knob,' which is also of iron. The Knob covers about the same area as the Mountain, but is more elevated; it is conical, and rises some seven hundred feet above the general surface, and is visible for many miles in every direction.

"The Pilot Knob is the property of Mr. Lewis V. Bogy and others, incorporated as the 'Madison Iron-Mining Company.' They own some twenty-five thousand acres of land, including the Knob, the Shepherd Mountain, and some eight other valuable iron deposits, all in the same vicinity in Madison County, some eighty-five or ninety miles south of St. Louis, on the line of the Iron Mountain Railroad.

"These several deposits, although in the immediate vicinity of each other, materially differ in their characteristics, and produce iron adapted to various purposes, and each of them dissimilar in some particulars from the metal at the Iron Mountain, so that very good quality of iron may be easily produced in Missouri by such admixtures as may be found desirable.

"The Madison Company have now at work four steam-engines; one of these is used to operate a saw-mill, the others are connected with the iron-works. They have now in operation one blast furnace, and are building another on a more extended scale. When this is completed they will make some twenty tons of metal per day. They have also a forge working eight fires, and making blooms direct from the ore, about twenty-five

tons per week, and also making some bar-iron. The ore is quarried out of the side of the hill some three hundred feet above the surface, and now presents the remarkable appearance of an iron wall, some fifty feet high by about two hundred feet long, and the ore of same richness rises as high as the top, and doubtless sinks deep beneath the foundation of the Knob."

Professor Swallow, State geologist of Missouri, says of the iron-fields of this State that

"if Missouri will work up her iron and coal she may become as powerful and rich as England. She has more territory and better soil, more and better iron, and quite as much coal.

"People who work iron partake of its strong and hardy nature. They move the world and shape its destinies. The region tributary to St. Louis has far more of the very best varieties of iron ore than can be found available for any other locality in the known world, and the facilities for working these vast deposits are unsurpassed. The country is well watered, timber is abundant, and all is surrounded by inexhaustible coal-beds. These facts alone will make St. Louis the great *iron mart* of the country."

In commenting upon the various ores and oxides of this metal accessible to Missouri, he says of the *specular oxide of iron* that it is one of the most abundant and valuable ores in the State. Iron Mountain is the largest mass observed. It is two hundred feet high and covers an area of five hundred acres, and is made up almost entirely of this ore in its purest form. The quantity above the surface of the valley is estimated at two hundred million tons. But this is only a fraction of the ore here, as it descends to unknown depths, and every foot of the descent will yield some three million tons. Veins of this ore cut the porphyry at the shut-in, the location of the first iron furnace erected in this region. Fine beds of this ore were also found at the Buford ore-bed at the Big Bogy Mountains, at Russell Mountain, at the James Iron-Works, and other localities in Phelps County, and in sections two, three, ten, and eleven of township thirty-five, range four, west in Dent County, on the Southwest Pacific Railroad, and in several other localities in that county. There are several important deposits in Crawford, Phelps, and Pulaski Counties.

The *silicious specular oxide* exists in vast quantity and very pure in Pilot Knob, interstratified with slates and porphyry. The Shepherd Mountain abounds in *magnetic* and *specular oxide*. Pilot Knob and Iron Mountain, it is estimated, could furnish a million tons of manufactured iron per annum for two hundred years, all suitable for casting, for Catalan blooms, and Bessemer steel.

Bog-iron abounds in the swamps of Southeast Missouri.

Hematite ores are generally distributed over the southern part of the State, enough to supply many generations.

Spathic ore, very pure, is found in numerous large beds among the tertiary deposits.

Adjoining States possess large iron deposits immediately available for the industries of St. Louis.

But the most extensive iron-bed yet observed is on the Missouri River, cropping out in the bluffs on both banks of the river for a distance of more than twenty-five miles. These beds are on the river, and many million tons could be mined and put on boats for less than one dollar per ton, and the expense of carrying to St. Louis down stream would be very small.

Other localities might be mentioned, but we have shown the position of enough of the various varieties of iron ore to supply any possible demand of any possible manufacturing city for the next thousand years, and all is so located as to be tributary to St. Louis.

"The simple fact that such quantities of iron ore do exist," says Professor Swallow, "so near, and in places so accessible, will compel this young and vigorous city to become the *iron mart*. The iron furnaces at Iron Mountain, Pilot Knob, Irondale, Moselle Works, James Works, St. Louis, and Carondelet, fifteen in all, with a capacity of one hundred and thirty thousand tons, and two rolling-mills with a capacity of forty thousand tons, and the numerous foundries and machine-shops, are the growth of a few years, a mere beginning of the great work of utilizing our iron ores. These will increase in a rapid ratio until a hundred furnaces pour forth the molten metal, a score of mills roll it into rails and bars and plates, and a hundred foundries mould it into the ten thousand shapes and forms demanded by human industry. Then shall we see the millennium of iron men, and our people be prepared to appreciate the value of our iron-beds."

This was written in 1870, since which date the prediction has in part been realized.

One of the most active and energetic spirits in the development of the Iron Mountain property was the late distinguished merchant and valued citizen Jules Vallé. Mr. Vallé was the grandson of Col. Jean Baptiste Vallé, Sr., the last Spanish and French commandant of the port of Ste. Genevieve, in Upper Louisiana, and was the son of John B. Vallé, Jr., of the firm of Menard & Vallé, the oldest house in the Mississippi valley. He was born in Ste. Genevieve, Mo., Jan. 15, 1819, and graduated in 1840 or 1841 at the Catholic Theological Seminary called the "Barrens," located near Perryville, Mo. Shortly afterwards he was, despite his youth, appointed superintendent of Vallé's mines, in St. François County, Mo., which position he filled about two years. He then became associated with his uncle, Felix Janis, in the dry-goods business at Ste. Genevieve, the firm bearing the name of Janis & Vallé, successors to the old house of Menard & Vallé. On the 17th of January, 1843, he

was married to Miss Isabella Sargent, of Ste. Genevieve. In 1852, having become one of the owners of the Iron Mountain Company, he removed to St. Louis to take the position of secretary of the company, and shortly afterwards was elected vice-president. He was also a partner in the firm of Chouteau, Harrison & Vallé, and at the death of James Harrison in 1870 became president of the Iron Mountain and Chouteau, Harrison & Vallé Companies. He also originated the scheme for the organization of what became the Vulean Steel-Works, in Carondelet. When he became connected with the Iron Mountain Company the annual product was only three thousand tons of iron, and when he died it was three hundred and fifty thousand tons. As one of the pioneers in developing the mineral resources of the Iron Mountain region, he performed inestimable services to Southeastern Missouri, and his labors naturally tended to the immediate advantage of St. Louis, in whose prosperity he took a deep interest, as was shown on numerous occasions when her interests seemed at stake. He was a director in the Mechanics' Bank and the St. Louis Mutual Insurance Company.

Mr. Vallé was a gentleman of generous impulses and social disposition. He died March 3, 1872, leaving a wife and seven children.

In 1856, Henry Cobb¹ estimated the yearly products of the iron manufactures of St. Louis as averaging \$5,000,000, and stated that there were thirty iron-works in St. Louis; that the five oldest works, viz.: Mississippi Foundry of Gaty, McCune & Co., Broadway Foundry of Kingsland & Cuddy, Eagle Foundry of Clark, Renfrew & Co., Empire Stove-Works of Bridge & Brother, and Excelsior Stove-Works of Giles F. Filley, together employed 870 men, and paid for wages \$450,000; that the value of their products was \$1,900,000, and that the thirty iron-works of St. Louis employed 2266 men, and paid wages amounting to \$1,000,000.

Notwithstanding the vast coal and iron deposits contiguous to the city of St. Louis, the development of the iron interest is of comparatively recent date. The great difficulty that impeded the iron furnace business was in the character of the coal. The history of the Carondelet Furnace will illustrate the embarrassments and disappointments which attended the smelting business. This furnace was erected in 1864, near the first station in Carondelet. When finished it was leased in November, 1864, to A. M. Brown, of Pennsylvania, who ran it for three months, using a coal got out at Dry Hill, St. Louis Co. The iron

produced was poor and meagre in quantity; the enterprise did not pay and was abandoned, and the furnace lay idle till some time in 1866, when it was leased by J. H. McKernan, of Indianapolis, who commenced running it with a coal taken up at a place called Brazil, in Indiana. It was operated for six months with indifferent success by McKernan, and in January, 1867, Mr. Lilly, of Pennsylvania, bought an interest, and the furnace was kept going by them till July, 1868. Then Lilly sold out to T. A. McNair and William Speer, who took hold of it with an energy that showed a determination to work out the problem of its capacity to make iron. McNair caused several changes to be made in the furnace, which, although Mr. McNair was not what would be termed "an iron man," turned out to be very valuable improvements to the furnace, increasing its yield and the quality of the iron produced.

The year 1868, when Mr. McNair took charge of the furnace, was the year in which the Board of Trade of St. Louis aided in developing the Illinois coal from near Springfield, in Sangamon County, to Big Muddy, in Jackson County, by furnishing nine thousand dollars to secure an experiment in the manufacture of iron at the furnace in Carondelet, "which experiment has resulted in complete success and given a new impulse to the iron business of Missouri, and has already directed additional hundreds of thousands of dollars to the investment in furnaces and iron-works in Jefferson and St. Louis Counties."²

Prior to the experiments on Big Muddy coal the mining of iron had reached important figures.

Up to 1850 the total production of pig-metal in the State was estimated to have been nearly 40,000 tons, and the amount of iron mined about 100,000 tons. From 1850 to 1860 the amount of pig-metal is estimated to have been 110,000 tons, and the amount of ore mined to have been about 310,000 tons. From 1860, and including 1869, the amount of pig-metal made was about 210,000 tons, and the amount of ore mined 615,000 tons (more than double the amount of the previous decade), of which about 300,000 tons were shipped out of the State, principally to the Ohio River, the yield and strength of fibre rendering it desirable to mix with the ores "raised" in Pennsylvania. In two years of the last decade—1870-71—the amount of pig-metal produced was about 150,000 tons, or only 60,000 tons less than in the whole of the previous decade, and the amount of ore mined about 550,000 tons (only 75,000 tons less than the entire product of the preceding ten years), of which about

¹ Western Journal and Civilian, vol. xv. p. 202.

² Industrial Interests of Missouri, by Henry Cobb, 1870.

290,000 tons were shipped outside of the State, the shipments including lots to Indiana and Tennessee, as well as to the Ohio River, one small consignment having even gone to Scotland.

Considerable additions were made in 1869-70 to the iron-works in South St. Louis, and the Lewis Iron-Works were completed, as well as the South St. Louis Works. The different establishments in operation in 1870, with their capacities, were:

The Kingsland Works, 2 furnaces; capacity, 68 tons per day.

The Lewis Iron Company, 2 furnaces; capacity, 68 tons per day.

The South St. Louis Company, 2 furnaces; capacity, 68 tons per day.

The Carondelet Iron Company, 1 furnace; capacity, 16 tons per day.

The amount of metal produced was about twenty-eight thousand tons, of which one-half was sold in St. Louis, and the balance taken at Chicago, Evansville, and other points.

Establishments embraced under the head of machine-shops and foundries are not only numerous but do a large business, and the operations of 1882 were on the whole quite successful. The manufacture of heavy machinery is increasing greatly, and the work turned out here is as fine and satisfactory as that of any city in the country. Most of the powerful snag-machines now being made use of by the United States government in removing obstructions from Western rivers were built in this city, as well as the vessels on which they are operated. The heavy cotton-compressing machinery used here and all through the South is the product of St. Louis shops, as well as cotton-seed oil and hydraulic presses. Much of the machinery of the Crystal Plate-Glass Company's works was made in St. Louis. The finest engines, and in fact every variety of iron products, are turned out. All of the leading shops also operate foundries of their own. As yet the manufacture of mining machinery is in its infancy at this point, and, in view of the fact that St. Louis is so well situated for supplying the camps, there is a good opening here for capitalists who may wish to invest money in mining-machinery works. Immense quantities of this machinery are sold here, but the dealers buy elsewhere. The number of machine-shops and foundries in St. Louis in 1882 was 27; number of hands employed, 2067; capital invested, \$994,000; value of product, \$3,855,000.

About 1849, Joseph W. Branch purchased the St. Louis Saw-Works from the firm of Messrs. Childs, Pratt & Co., by whom that branch of saw manufacturing had been recently introduced in St. Louis, and

in 1853 he finally settled in the city, where he has lived continuously for a period of thirty years. His firm was originally organized under the style of Branch, Crookes & Frost, but on Mr. Frost's retirement in 1857 the business remained in the hands of Mr. Branch and his brother-in-law, Joseph Crookes, under the firm-name of Branch, Crookes & Co. This latter name it has continued to bear, notwithstanding the fact that Mr. Branch in 1872 purchased the interest of Mr. Crookes, and has been sole proprietor ever since that time. From the moderate beginning which prudence required to be made, the special industry in which Mr. Branch engaged has been steadily developed until it has attained to very large proportions, and the acknowledged excellence of its manufactures has won for the firm an enviable reputation throughout the country.

Joseph W. Branch was born in that portion of Yorkshire, England, described in the first chapter of "Ivanhoe." His birthplace, Rotherham (to use the language of Sir Walter Scott), lies "in that pleasant district of Merry England which is watered by the River Don, where existed in ancient times a large forest, covering the greater part of the beautiful hills and valleys which lie between Sheffield and the pleasant town of Doncaster. The remains of this extensive wood are still to be seen at the noble seats of Wentworth, of Wharnccliffe Park, and around Rotherham. Here haunted of yore the fabulous Dragon of Wantley; here were fought many of the most desperate battles during the civil wars of the Roses; and here also flourished in ancient times those bands of gallant outlaws whose deeds have been rendered so popular in English song."

Born of the purest stock of the old Saxon Franks, Mr. Branch inherited the qualities of his race in singular distinctness, as the spirit of adventure in his earlier years, and the energy, tenacity, and indomitable steadiness of his maturer life have proved; but the best successes which he has achieved are partly due to a circumstance which seemed at first to be a great misfortune. In his early childhood he gave no promise of the robust physical development which he subsequently reached; indeed, he was so delicate in health that he was deprived of the privileges of school education, and thus it happened that an accomplished mother was his only teacher. From her he learned the elements of a thorough English education, and the abundant legends and ballad stories of the North country in which they lived. From her also he learned the infinitely more important lessons of honor, veracity, fidelity, and simple but practical religion by which his life has been directed.

Joseph W. Branch

Mr. Branch's father had established a manufactory in Rotherham, and the delicate child naturally became interested in mechanical pursuits. While yet a mere lad he was permitted to enter the counting-house of the Globe Works, at Sheffield, rather as an experiment than with any serious expectation of his learning the business; but from that time he began to outgrow the feebleness of his childhood, and speedily exhibited so uncommon a capacity for affairs that when he was only seventeen years of age he was in actual charge of several departments of the large and intricate business of the Globe Works. In 1844, when he was only eighteen, he received a striking proof of the confidence of his employers. They had a large trade with America, which they had conducted through their American correspondents, until the volume of their business in this country had required them to establish a branch house and a factory in New York City. These were already in existence, but they were not working satisfactorily, and young Branch was sent to take charge of them. Unfortunately, however, he found them in the hands of men who were greatly his seniors, and who were not disposed to carry out the views of so young a chief, and after two years, failing to secure the co-operation to which he was entitled, the lad resigned his position.

Then began the adventurous part of Mr. Branch's life. By advice of his father, he spent several years in traveling through various parts of the United States, and in 1848 made quite a remarkable journey through Mexico, which might readily furnish material for a writer of romance. That country was in a fearfully disturbed condition when Mr. Branch, who was then only twenty-two years of age, undertook to explore it. He organized a company of sixteen resolute men, and with this small force, well mounted and well armed, rode from Vera Cruz to Mazatlan, on the Pacific; thence he went to San Francisco, and spent the greater part of 1849 in that city and in occasional visits to the mines which had been opened in California. Returning to the East in 1849, Mr. Branch engaged in business in St. Louis, as heretofore stated.

In view of his own success in business and his standing in the community, it was impossible that Mr. Branch should escape a multiplicity of duties, in which his labor and influence were needed by his friends and fellow-citizens. Hence, besides the important positions of president of the Illinois and St. Louis Railroad and of the Madison County Ferry Company, and vice-president of the Mechanics' Bank, which he now occupies, he has been called upon to hold many trusts, and to fill many positions of the greatest importance and responsibility. Nothing,

however, has been permitted to interfere with his devotion to the interests of the innumerable benevolent institutions and enterprises to which he has given his aid, with hand, purse, and influence, to an extent which is hardly credible. Nothing which had any claim to his support as a man or citizen has been refused the best service he could render it. As president of the St. George's Society, he has lent timely aid to hundreds of poor emigrants; to the various orders of the Masonic fraternity he has rendered yeoman's service; to St. Luke's Hospital he has been munificent in gifts and earnest in every form of support, and in the co-operative societies which have for their object the relief of the widows and orphans of their members he has worked with all the enthusiasm and tireless energy of his nature.

At a time when the society known as the Knights of Honor was comparatively weak in the State of Missouri, Mr. Branch threw himself into it with results that were at once apparent. He was for two years called to preside over it as its chief officer in the State of Missouri, and its progress while under his administration was such as to astonish its most sanguine adherents. In the St. Louis Legion of Honor, which is an order of similar plan and purpose to the Knights of Honor, he holds an influential position; and in all the charities of St. George's Church, of which he is the senior warden, Mr. Branch is looked to as a hearty sympathizer, an earnest worker, and a munificent contributor. It is an open secret that when the new and beautiful edifice of St. George's had been advertised some years ago for sale by the sheriff to pay a heavy debt of the parish, amounting to some sixty thousand dollars, more than half the sum required was contributed by two individuals, one of whom was Edwin Harrison, and the other was Mr. Branch. Grace Church is also under obligations to him for gifts amounting to thousands of dollars. In his religious views Mr. Branch is an Episcopalian of the old-fashioned High Church sort, with a strong leaning towards the Broad Church school. His religion, however, is of a practical rather than a theoretical kind. As the senior warden of his parish, he is the valued adviser of his rector, in the council of the diocese he exerts a great influence, and in every diocesan enterprise he is one of those to whom his bishop looks for strong and wise co-operation.

In his political views Mr. Branch's position is thoroughly independent. During the civil war he felt it to be his duty to give an unequivocal and undivided support to the Union cause, but he could never bring himself to regard the Southern people in the light of enemies. In the miseries which the war

occasioned his "charity recognized no uniform," and when the flag of the Confederacy was furled, one of his first thoughts was to send relief to suffering districts of the conquered South. Owing to his course in this respect, in a border State and in a more than semi-Southern city, Mr. Branch's pronounced Unionism never caused the least breach between him and his Southern neighbors. Since the war he has been repeatedly urged by representative men of both political parties to permit them to nominate him for high public office, but to these solicitations he has steadily refused to listen. He is content, and has good reason to be content, with the private station which he has made for himself, and in which, while still in the full vigor of manhood, he enjoys the comforts of an ample fortune and the blessings which attend a well-regulated life.

It would hardly be right to close this sketch, for which the materials have been gathered from many sources, without referring to Mr. Branch's exceptionally happy domestic life. It was in 1857 that he contracted a marriage, from which the element of romance was not absent, with Annie Clark, second daughter of Matthew Clark, of Cusworth, Yorkshire, England. Mr. Clark was a gentleman farmer of ancient family, farming his own land as well as land rented from one of his neighbors. His estate was not far from Rotherham, where Mr. Branch was born, and was quite near to "the pleasant town of Doncaster," where some of Mr. Branch's relatives resided. An attachment, of which the young people were hardly conscious at the time, for Miss Clark was then a very young girl at school, was followed several years later by a correspondence, which at length led to their marriage. Mr. Branch's most partial friends consider it no derogation from his merits to say that the noblest and most generous features of his honorable life have had their inspiration at the fireside of a happy home. In her own sphere Mrs. Branch is as well known for her charities and personal service to good works of all sorts as her husband is in his. Their family consists of three sons and four daughters. Their oldest son, Joseph Clark Branch, has reached his majority, and is actively engaged in the business of his father's firm.

According to the census of 1870, the mining industry of St. Louis County showed the following statistics:

	Hands.	Capital.	Wages.	Material.	Products.
Iron, forged.....	401	\$1,007,143	\$330,000	\$826,750	\$1,455,000
" anchors and chains	20	20,000	21,000	25,750	60,000
" nails and spikes....	47	142,857	30,000	237,250	294,000
" railing, wrought....	28	37,000	18,600	28,710	79,500
" pigs.....	734	880,000	700,000	813,000	1,945,000
" castings.....	146	95,000	120,300	445,620	659,050
" stoves, etc.....	1564	2,762,500	1,174,194	1,416,775	2,937,950

In 1880, St. Louis *City* received 1,800,000 tons of coal, four and one-half times as much as the *county* consumed in 1870; the receipts of iron ore were 173,307 tons; of pig-iron, 116,240 tons. The number of establishments in the iron industry was 41; number of hands, 4444; capital, \$8,733,500; wages, \$1,751,107; material, \$4,744,630; product, \$8,101,915. The future value of this industry may be inferred from the following facts: St. Louis has as much *capital* in the iron manufacture as Philadelphia, thirty-three per cent. more than Chicago, and double as much as Cleveland, while the *profits* at all three of these cities were nearly double those at St. Louis, showing that the latter city is chiefly working to expand and develop a great industry and not to realize an immediate large profit upon it. Ex-Mayor Overstolz, in his address before the State Immigration Convention in April, 1880, thus spoke of the growth and the prospect of this industry,—

"That the inexhaustible deposits of iron ore in the State of Missouri, and the abundance of our coal supply should have led to extensive furnaces, rolling-mills, foundries, and iron- and steel-works of all kinds in the city of St. Louis is not surprising. An immense industry has been developed within a period of ten or fifteen years, and notwithstanding the general depression of the iron trade during the last few years, it is to-day one of our most important departments of manufacture. The iron business includes so many branches, viz.: the manufacture of pig-iron and its conversion into bar-iron, to steel, to castings, and the making of articles of iron, such as engines, machinery, stoves, etc., all made from the original pig-iron or bars, that it is difficult, in the absence of official statistics, to calculate the amount invested in the industry. The result of inquiries instituted by myself into the operation of the trade seems to show that the amount of capital at present invested in the business in this city is nearly \$8,700,000, and the value of production, in view of the recent advance in prices, about \$11,745,000. This includes boiler-making, furnaces, rolling-mills, machine-shops, mill machinery, nuts and bolts, wire and wire-goods, etc., and I have no doubt the aggregate stated is below the real volume of the trade. The present revival in iron manufacture and profitable prices will soon greatly increase the business in this city, owing to our favorable situation for supplying all parts of the city and our boundless supplies of ore and coal. This one industry in itself possesses wonderful possibilities of development and of increasing our municipal wealth, because it is one that must expand with the increasing population and settlement of the country. It is a business that rests upon the basis of a great staple article of human use, one that is absolutely necessary in every step of commercial progress, and this unquestioned truth renders its extension in this city a matter of certainty. Within a distance of less than one hundred miles, and connected by railroads, exists abundance of the best kind of ore; on all sides of us and within a radius of thirty miles are immeasurable coal deposits, and these facts, in connection with the capital and the manufacturing and shipping facilities by river and rail available here, make it evident that the future extension of the trade must be felt most immediately and powerfully at St. Louis."

The charcoal-iron furnaces in 1874 were as follows:

Furnaces.	Capital.	Capacity. Tons.
Pilot Knob.....	\$1,000,000	12,000
Iron Mountain.....	1,000,000	12,000
Irondule.....	300,000	7,000
Maramee.....	300,000	6,000
Scotia.....	250,000	7,000
Moselle.....	250,000	6,000
Gasconade.....
Total.....	\$3,100,000	50,000

STOVE-COAL AND COKE FURNACES.

	Capital.	Capacity. Tons.
Vulcan.....	\$250,000	25,000
Missouri.....	250,000	25,000
South St. Louis.....	250,000	25,000
Carondelet.....	150,000	8,000
	\$900,000	110,000

ROLLING-MILLS.

	Capital.	Capacity. Tons.
Laclede.....	\$500,000	10,000
Vulcan.....	200,000	40,000
	\$700,000	50,000

The annual value of the products of these works was about \$7,300,000.

According to the reports made to the Merchants' Exchange, the receipts of pig-iron at St. Louis from all sources during 1882 amounted to 105,432 tons. From the most reliable information obtainable the production of pig-iron in the furnaces of the city during the year, and not included in the above, was 114,930 tons, or a total of 220,362 tons. The shipments for the year were 53,951 tons, leaving about 166,411 tons for local consumption, supposing the stocks on hand at the close of 1881 and 1882 were equal. The following statement shows the consumption of pig-iron in the different iron-melting establishments in the city last year, the information having been obtained from the several proprietors:

	Tons.
Six stove-works.....	13,300
Three agricultural implement works.....	4,200
One steel rail works.....	84,000
Three car-wheel works.....	13,000
Four rolling-mills.....	18,300
One gas- and water-pipe works.....	12,000
Six machinery building foundries.....	10,350
Four architectural iron works.....	1,875
Eight miscellaneous works.....	6,800
Total, thirty-six establishments.....	163,825

The blast furnaces which are operated by St. Louis capital are not all located in the city, but as the business is all or chiefly done here, and so much of the product comes to this market, they can, by rights, be classed as St. Louis enterprises. There are eight stacks of coke- and coal-blast furnaces in Missouri, and four stacks of charcoal furnaces. Of the former, all are located in this city and Carondelet, and there are two stacks of the Meier Furnace near East Caron-

delet, in Illinois, immediately opposite the city. The St. Louis Ore- and Steel-Works at Carondelet are mammoth concerns, and in the same suburban town are located the works of the South St. Louis Iron Company. The Missouri Furnaces, the South St. Louis Furnaces, and the Meier Furnaces are all operated by the Missouri Furnace Company. The Midland Furnace, in Crawford County; the Nova Scotia Furnace, in Dent County; the Pilot Knob Furnace, in Iron County; and the Sligo Furnace, in Dent County, are all operated by St. Louis companies. They all produce Bessemer pig, the most of which is converted into steel in St. Louis.

To recapitulate: Bituminous coal or coke furnaces, ten stacks; annual capacity, 224,000 net tons. Charcoal furnaces, four stacks; annual capacity, 57,500 net tons. Total number of furnaces, fourteen stacks; total annual capacity, 281,500 net tons. Total product for 1882: coke-iron, 114,930 tons; charcoal-iron, 45,123 tons.

Number of furnaces.....	14
Number of hands employed.....	1,400
Capital invested.....	\$1,775,000
Value of product (average \$25 per ton)	\$4,001,325

There are six rolling-mills and steel-works in St. Louis. The Vulcan was built in 1872 as an iron-mill, but was changed to steel-works in 1876. During 1882 the Vulcan consumed 100,000 tons of pig-iron, producing 90,000 tons of steel rails. The other works include the Granite Iron-Rolling Mills, the Laclede Rolling-Mills, the Helmbacher Forge and Rolling-Mills, the St. Louis Steam Forge and Iron-Works, and the St. Louis Bolt- and Iron-Works. In addition to these, the Harrison Steel Company are erecting mammoth steel-works at Harrison, Ill., which will be included in the industries of St. Louis as the capital is supplied. From the best estimates the number of hands employed by the seven mills last year was 3475; capital invested, \$5,825,000; value of product, \$10,730,000.

The following statistics show the development of the iron and kindred trades from 1877 to 1881, inclusive:

Owing to the great diversity of iron manufactures it is impossible to give the exact figures of this vast industry in St. Louis, but a general idea of its magnitude may be obtained from the statement that in the manufacture of iron and steel castings, bolts, nuts, washers, rivets, and wrought railing thirty-seven firms are engaged, which have a capital invested, in buildings, grounds, machinery, etc., of over \$8,000,000, and provide employment for 4370 persons. The business transacted annually amounts in value to \$8,424,000, and the wages to \$1,900,251. Besides the above, four firms are engaged in the manufacture of architectural and ornamental iron-work, employing forty-four hands, and transacting a business of over \$80,000 per annum, and there are a number of firms engaged in the sale of iron and steel products, whose transactions are estimated at over \$6,000,000 per annum.

Few people in St. Louis have an adequate idea of the magnitude of the railroad interests which have centred at this point within the past twenty years, and of the immensity of those kindred interests which depend upon the development of this kind of transportation. When a new road is built, everybody knows that it must be ironed with rails from some mill, but few are aware that a vast amount of other material besides iron or steel rails enters into the construction of a railroad, or that when built it takes a great variety of costly things to fit up the engines, equip its cars, and keep them running; yet such is the case, and now the business of furnishing railway supplies is one of the leading ones of the country. It follows that, as St. Louis is a great railway centre, the business here is very great; and yet many readers of this work will no doubt be surprised to learn that one of the largest concerns of this kind in the world is located here, that of M. M. Buck & Co.

Myron M. Buck, the founder of this colossal establishment, was born in Manchester, N. Y. He came

of a well-known and influential family. His grandfather was one of the pioneers in that region, being a member of the “Holland Land Purchase,” a company which bought the whole of Western New York, a section aptly denominated the “Garden of the State,” where their descendants still live, enjoying in wealth and elegant comfort the results of the labors of their far-seeing and sagacious ancestors. The grandfather settled at Canandaigua Lake, and here his son succeeded him, and became owner of a cotton- and woolen-mill, which he managed successfully, and here M. M. Buck was born and reared. In the practical atmosphere of a mill-owner's life he gained, it may be supposed, the practical bias which has distinguished his career and has made it so successful.

Young Buck received a common-school education, but the school privileges of that period were very meagre, and he soon exhausted them. At the age of eighteen he left his father's house to make a living for himself. After visiting several towns in Western New York, and paying a visit to Toronto and other Canadian places, he drifted to New York City, where he was employed in a manufacturing establishment, but soon determined to go into business for himself, and in pursuance of that object went West. He spent three years in Chicago, and in 1858 removed to St. Louis, where he opened a modest establishment for the manufacture of car trimmings, etc. He labored amid many and great disadvantages, such as want of capital and influential friends, but, undismayed, he plodded steadily along, honestly and faithfully giving his business his personal attention, and pushing it in every quarter, until he soon obtained a recognized footing, and was enabled to establish a depot for the sale of all kinds of railway supplies. This was the pioneer establishment of the kind in the Mississippi valley, and only the second one in the West. It has not only been the first in point of time, but it has been foremost, also, in the magnitude, variety, and boldness of its operations, and it is stated that it is the largest house but one in this field in the country.

The headquarters of the railway supply house of M. M. Buck & Co. are at 209 and 211 North Third Street, St. Louis, where it occupies two six-story buildings, each embracing an area of thirty-five by one hundred and fifty-six feet. It uses, also, two other large buildings for manufacturing and storage purposes. In the manufacture and handling of goods about two hundred hands are employed, and it supplies most of the leading Eastern houses with articles of its own make, while, on the other hand, it is the

UNIVERSITY OF ILLINOIS.

sole Western representative of some of the most extensive manufacturing establishments in this country. More than one hundred railways are its constant customers, and its operations cover literally the whole western hemisphere, from Canada to South America.

Mr. Buck attributes this marvelous success solely to his close and careful attention to business, which has been of a character and magnitude to engross his time, and he has declined numerous solicitations to engage in other enterprises and to permit the use of his name as a candidate. But in matters affecting the progress and prosperity of St. Louis he has always been wide awake and public-spirited, and has ever been found one of the most generous supporters of worthy public enterprises. In church affairs and in social circles, as among his business associates, he enjoys the esteem of all who know him, and is regarded as one of the representative men of St. Louis.

The number of establishments engaged in the business of furnishing railroad supplies in St. Louis in 1882 was 11; number of hands employed, 1560; capital invested, \$981,000; value of products, \$1,925,000.

The trade in stoves, tinware, and house-furnishing goods has long given St. Louis especial prominence throughout the Western and Southern States. In 1881 there were nine firms engaged in the wholesale trade, with a business aggregating five million five hundred thousand dollars per annum, and ninety-five firms engaged in the retail trade.

The saws produced in St. Louis have a very high reputation; in fact, there are none enjoying a higher one. Most of the mammoth saw-mills in the Wisconsin pineries and other portions of the Northwest are provided with St. Louis saws, and the same may be said of the South and Southwest; and it is claimed that St. Louis would not stand at the head of cities possessing the largest number of saw-mills, as she does, if it were not for the excellence of the cutting tools used. There are few wood-working establishments west of the Mississippi River that do not use St. Louis made saws. In connection with the manufacture of saws these establishments also make all of the machinery, both iron- and wood-work, for saw-mills, and complete outfits are furnished, including boilers, engines, etc., ready to put the saws at work cutting lumber. There are but two establishments in the city that manufacture saws, but there are several that manufacture saw-mill outfits. The number of establishments last year was five; number of hands employed, 175; capital invested, \$350,000; value of product, \$500,000.

There are half a dozen or more concerns in the city which make boilers exclusively, and the business of 1882 was much better than it was even during the previous year. The excellence of the work done in the boiler-works of St. Louis has established a good trade, and employment is given to nearly five hundred hands at good wages. There is no part of the Western country where St. Louis boilers are not in use, and there is no river or navigable stream in the West where the steamboats are not driven by power generated in St. Louis made boilers. These boilers are also used in thousands of industrial establishments in all parts of the country, in breweries, mills, coal-mines, sugar refineries, factories, etc. The year's operations showed that there were eight boiler-factories running; number of hands employed, 435; capital invested, \$140,000; value of product, \$565,000.

There are seven establishments in the city engaged in the manufacture of agricultural implements, giving employment to four hundred and seventy-five hands last year, and producing articles that are well known all over the country, besides reflecting the greatest credit on the manufacturers. St. Louis manufactures more agricultural implements than Pittsburgh, Cincinnati, or Cleveland, and owing to the vast territory to be supplied in future from this market and the splendid facilities afforded here, this industry is destined to become a great one. The number of establishments operated in 1882 was five; capital invested, \$420,000; value of product, \$700,000.

The volume of business done in those establishments in St. Louis making a specialty of manufacturing architectural and ornamental iron-work has been gratifyingly large, though, considering the possibilities of the trade, it would seem that it ought to have been larger. The erection of more than five million dollars' worth of buildings in the city during 1882 of itself should have called for very large quantities of architectural and ornamental iron-work, and there is a large extent of country tributary to St. Louis, to which other large quantities might have been supplied. Number of establishments in the city last year, seven; number of hands employed, 315; capital invested, \$250,000; value of product, \$435,000.

Hardware.—There is no line of business in St. Louis in which more enterprise is displayed than in the hardware trade. The men engaged in it are energetic and possessed of ample capital, and as a result their business extends east as far as Ohio, north as far as Minnesota, west as far as the Pacific coast, and south as far as the Gulf of Mexico. No class of business men have done so much, perhaps, in exploring new territory and in widening the

field of St. Louis trade. It would astonish one to look into the order-books of some of the St. Louis hardware establishments. He would see that St. Louis supplies hardware to over one-half the territory embraced in the United States and Territories, and that her houses send goods to Indiana, Illinois, Kentucky, Tennessee, Iowa, Michigan, Wisconsin, Minnesota, Kansas, Arkansas, Dakota, Wyoming, Oregon, Utah, Indian Territory, Texas, Mississippi, Louisiana, Alabama, New Mexico, Arizona, Nevada, California, Oregon, and Washington Territory. There is a single

been a wonderful increase in the last few years. While the mineral trade does not as yet amount to as much as the other two mentioned, it is most important and is rapidly increasing.

The agricultural region, the cotton region, and the mining region contiguous to St. Louis are each capable of supporting a great city, so that with them all St. Louis is secure. If the cotton fails the grain may not, but if both fail the mineral remains. It is hardly possible, however, that any misfortune will ever occur to deprive St. Louis of the benefits of more

SIMMONS HARDWARE COMPANY.

Corner of Washington Avenue and Ninth Street.

house in St. Louis that sells half the sporting goods sold in Oregon, and about all that is sold in Nevada. With such a wide territory and so diversified, it is not surprising that the hardware trade of St. Louis should be in a most prosperous condition.

St. Louis trade, in general, is not dependent upon any single section of country, and there are tributary to St. Louis a vast agricultural region, a vast cotton region, and a vast mineral region. Attention has already been called to the grain trade and the cotton trade, and it has been shown that in both there has

than one of these sources of trade at a time. There is no line of business that derives greater or more substantial advantages from this happy combination of resources than the hardware trade. It supplies the agriculturist, the cotton-planter, and the miner, and hence it may be set down as a practical certainty that the enterprising hardware men of St. Louis will be amply rewarded in the future. With the above facts in view it is not surprising that St. Louis should be the best hardware market in the United States. It is not meant by this that it is the largest, for New

York and Boston are not to be ignored, but St. Louis is a better market to purchase in than New York or Boston. The St. Louis houses carry more varied stocks than they do in either of the above cities, and hence the jobbing trade is better represented. It is more difficult for a dealer to obtain a stock of hardware in New York than in St. Louis, for the reason that the New York houses confine themselves largely to special lines of goods, while the houses in St. Louis carry full lines of all the varieties of goods that come under the head of hardware. It is no uncommon thing for a merchant from Texas to go to New York to lay in a stock and come back to St. Louis to purchase his hardware, nor is it unusual for a merchant from Kansas or Nebraska to go to Chicago to get a stock of goods and send to St. Louis for his hardware. There is at least one house in St. Louis that has received numbers of orders of that kind. But this is not only the most convenient hardware market in the United States, it is also the cheapest. Six houses in St. Louis do an immense business and have an abundance of capital, and a single establishment sells more nails¹ than any other two houses in America. This is because it has the capital with which to make cash purchases. For the amount of business done, the hardware men of St. Louis use more capital than any other class.

There has been but one failure in the hardware trade of St. Louis in a quarter of a century, and that was long before the war. Some of the larger establishments occupy an astonishing area of store-room; indeed, two of the principal houses alone utilize over four acres of flooring each, in display of their wares. Including importers, jobbers, two manufacturers, dealers in the heavier class of goods only, and the numerous retailers, there are upwards of sixty houses engaged in the various branches of the hardware trade in St. Louis, although there may have been small dealers in this line prior to that time. Henry Shaw, of Shaw's Garden fame, is believed to have been the first dealer in this ware exclusively. His establishment on Main Street, fifty years ago, had for rivals only general stores incidentally carrying some hardware. The trade has now so increased as to justify the carrying of stocks valued at fifteen million dollars. Fourteen establishments employed, in 1882, 1140 hands; capital invested, \$550,000; value of product, \$1,296,000.

One of the earliest hardware merchants of St. Louis was James C. Sutton. Mr. Sutton removed to St.

Louis in 1819 from New Jersey, having followed the tide of Western emigration which set in towards Missouri about that period, and settling in Missouri, was identified for many years with its pioneer history and progress. Mr. Sutton, soon after his arrival, erected a blacksmith-shop on the northwest corner of Second and Spruce Streets, and, in company with his brother Joseph, carried on the business many years. The old frame shop has long since disappeared, and the site was occupied in recent years by Haase's grocery, No. 323 Second Street.

There was at that time not much competition existing in the business, there being one other smith's shop on the corner of Main and Olive, carried on by Charles Basroe. The city was then bounded on the west by Third Street, all beyond being fields and ponds. It was not until about 1824 that, through the persistent efforts of the Suttons, iron tires on wagons came into general use, and not until ten years later that carts, which before had not a particle of iron about the whole framework, were ironed, and partook of other improvements in their make-up. Plows, which up to this period were made of the roots of trees, also changed their form by the substitution of iron points and shares.

Mr. Sutton introduced a greatly-improved plow, which became widely known as the "Sutton Plow," and which was used for many years by farmers in breaking up prairie and bottom lands. Of course this plow, which was an immense improvement on the wooden machines in previous use, has long since been superseded by others of improved patents. Mr. Sutton's shop, about the year 1820, occupied a location nearly in the business centre of the city. On Main Street, east side, about the third house north from Spruce Street, there was still standing in 1877 the old two-story frame building occupied in 1820 by Mr. Sutton as his dwelling-house. The front was once painted white and the sides red, but the white had disappeared, and a few blotches of the red remained. In 1835 he moved out to the "League Square" on the Manchester road, where he set up his blacksmith-shop, and bought a farm from Mr. Gratiot, which under his management became one of the finest in the county.

Mr. Sutton married Ann Wells, whose parents lived in the Gravois settlement, and survived her about two years. He died July 19, 1877, leaving five sons and four daughters.

The Simmons Hardware Company, which is one of the most extensive corporations of its kind in the West, was established by E. C. Simmons, who has long been a prominent member of the hardware trade

¹ Sept. 3, 1814, D. Stewart advertised his cut- and wrought-nail factory in Block 4.

of St. Louis. Edward Campbell Simmons was born in Frederick County, Md., Sept. 21, 1839, and in 1845, when Edward was seven years of age, his father removed from Maryland, where he had pursued the occupation of a merchant, to St. Louis. In 1856 young Simmons entered the hardware establishment of Child, Pratt & Co. in a minor capacity, at a salary of twelve dollars and fifty cents per month. After remaining with the firm for three years he obtained a position as clerk in the house of Wilson, Leavering & Waters, at a salary of fifty dollars per month. Three years later he was admitted to the firm as junior partner, and at the end of six months, Mr. Leavering having died, the name of the firm was changed to Waters, Simmons & Co. It continued thus through nine years of great prosperity until Jan. 1, 1872, when Mr. Waters retired, and Mr. Simmons associated with him J. W. Morton, and the firm became E. C. Simmons & Co. Two years later a corporation was formed under the name and style of the Simmons Hardware Company, which purchased the interests of Simmons & Co., and has since conducted the business with signal energy and success. As president of the company, Mr. Simmons is still the controlling mind of the vast concern, and to the liberality, promptness, sagacity, and untiring energy of his business methods is chiefly due the uninterrupted prosperity which it has enjoyed. In 1866 Mr. Simmons was married to Miss Carrie Welsh.

Augustus F. Shapleigh, founder and head of the great hardware house of the A. F. Shapleigh & Cantwell Hardware Company, was born in Portsmouth, N. H., Jan. 9, 1810, of a family who trace their lineage to English stock that settled in Maine in 1663-65, and who during the early history of the country held many important trusts under the British crown. Mr. Shapleigh's father was a well-known seafaring man of that region, the owner and captain of the ship "Granville," who was lost, together with the vessel and a valuable cargo, off Rye Beach. This disaster left his wife and five children in much reduced circumstances financially, but the noble spirit and energy of Mrs. Shapleigh enabled her to raise her children comfortably and give them such education as was common in those days.

When a mere lad of fourteen years of age, Augustus entered a hardware store in the town of Portsmouth, N. H., and worked there about one year, from daylight until dark, for fifty dollars a year, and boarded himself.

The associations of Portsmouth, situated so near the ocean, were largely connected with the sea, and most of the young men at some time or other natur-

ally desired to embark in a sailor's life. Young Shapleigh was not an exception to the rule, and leaving the hardware store, he shipped as a light hand before the mast, and made several European voyages, which consumed three years of his time. Then, at the earnest solicitation of his mother and sisters, he was induced to leave the sea and re-enter the store in which he first served.

An important clerkship having been offered him by the old and well-established hardware house of Rogers Brothers & Co., in Philadelphia, he concluded to accept it, and remained with that firm many years, obtaining therein a junior partner's interest and a promising start in business. Desiring to enlarge their operations, the firm determined to open a branch establishment in the West, and St. Louis was selected for the venture. Mr. Shapleigh was sent there to superintend it, and arriving in 1843, opened the hardware establishment under the firm-name of Rogers, Shapleigh & Co. Eventually Mr. Rogers, who was the capitalist of the concern, died, and Mr. Shapleigh formed a connection with Thomas D. Day, under the firm-name of Shapleigh, Day & Co. This partnership continued for sixteen years, or until 1863, when Mr. Day retired, and the house was known as A. F. Shapleigh & Co., which continued until July, 1880, when the concern was changed and incorporated under the name of the A. F. Shapleigh & Cantwell Hardware Company, the owners and officers therein being A. F. Shapleigh, president; John Cantwell, vice-president; Francis Shapleigh, second vice-president; and Alfred Lee, secretary and treasurer.

The history of the house has been one of steady and continuous growth, a result due mainly to the personal labors of Mr. Shapleigh himself. From a small and modest start in 1843, it now occupies arched and connected floors from Nos. 414 to 422 North Main Street, extending from Main to Commercial Street, seven stories high, and heavily stocked with merchandise pertaining to their business, such as cutlery, guns, building material, chains, anvils, mining machinery, etc.

It is well to note here the wonderful progress made in the manufacture of hardware on this side of the Atlantic during the past forty years. When Mr. Shapleigh first commenced business in St. Louis, ninety per cent. of the stock was imported from England and Germany *via* New Orleans. At the present time exactly the reverse is the case: ninety per cent. of all general hardware sold is manufactured in our own country, and a large amount of heavy iron and other goods is made in St. Louis of a superior quality and at less cost than from other sources.

A. Shapleigh

Mr. Shapleigh has never held political office, being a man of business, and regarding his business as worthy of his entire attention. Still he has figured somewhat prominently in other enterprises besides his own, having been a director for many years in some of the leading banking and insurance companies of the city, in which capacity his judgment has been highly prized, and his name has lent additional strength to the companies in which he is interested.

In 1838, while at Philadelphia, Mr. Shapleigh married Miss Elizabeth Ann Umstead; eight children were the fruit of this marriage, six of whom are living, five sons and one daughter (now Mrs. J. W. Boyd). The sons are all thriving young men of character and good business capacity, and John is a promising physician of St. Louis.

Mr. Shapleigh was brought up amid Unitarian influences, but is not a member of any church. He, however, gives liberally to religious enterprises, and regards churches as the bond that holds society together. Every enterprise calculated to advance the interests of the city has received his hearty support.

Personally, Mr. Shapleigh is a quiet and unassuming man, being content to pursue his business without ostentation, and leaving others to plunge into the mad vortex of speculation. Now, toward the close of a career that is remarkable for its uniform success, he derives a just pride from the fact that his prosperity has been won by close attention and strict adherence to sound principles of business. His house has passed through years of war and panics, and yet his establishment has pursued the even tenor of its way, unshaken by any of those agitations. Mr. Shapleigh makes the honorable boast that during all this period he never asked an extension, and never let a just bill be presented a second time for payment. It is gratifying to note that such punctilious regard for their obligations has brought Mr. Shapleigh and his associates an ample reward, and that their house is generally recognized as being one of the most substantial in the Mississippi valley.

Another leading hardware merchant in St. Louis is George A. Rubelmann. He was born in Tuttingen, Würtemberg, Feb. 27, 1841. In 1847 the family came to America, settling at Muscatine, Iowa. In 1854 the family was dispersed, and George A., who was next to the youngest of the children, was taken by his father to St. Louis with a view of putting him in a hardware store. The boy, it appears, had cherished a desire to engage in that business ever since he was ten years old, and his subsequent success fully justified his predilection.

His father placed him in a small hardware store

kept by William Siever, at what is now 1907 Broadway. His salary the first year was four dollars a month and board. Mr. Siever was not successful, and in 1857 the store was turned over to Adolphus Meier & Co., who were the largest creditors. Rubelmann, although but a boy of seventeen, was solicited by Meier & Co. to take charge of the store; and at the same time he received the offer from a hardware house at Leavenworth, Kan., of a situation at one thousand dollars a year. He consummated a bargain with Meier & Co., and managed the store until 1860, when, with his brother John G., he purchased the business for six thousand five hundred dollars, giving notes for the entire amount. In those days sales were universally made on six months' time, and the brothers followed the general custom; but the war came on, and on July 1, 1861, the young firm found nearly all their accounts worthless, their balance-sheet showing fifteen hundred dollars on the wrong side. They had but three creditors, from each of whom they procured time on their liabilities. Thenceforward they managed so well as to be able, Jan. 1, 1863, to pay all claims up to that date, including December's bills.

Subsequently they devoted their attention specially to cabinet hardware, and after a hard struggle built up a large and flourishing business.

In 1875, George A. Rubelmann sold out to John G. Rubelmann and opened a small store at 627 North Sixth Street; but business developed so rapidly that in 1877 he doubled the size of the store, and in 1879 the increase of trade compelled him to remove to a large three-story building at 821 North Sixth Street. These quarters also soon proved inadequate, and he began the erection of a large four-story store at 907 and 909 North Sixth Street.

The boy who at seventeen years of age was placed in charge of a store and who could command a salary of one thousand dollars a year is now at the head of one of the largest establishments in his line of trade in the West, and at the age of forty-one, in the prime of a careful and well-ordered life, enjoys a handsome and growing competence. Mr. Rubelmann, who started in life with none of the advantage of station and little of the teaching of the schools, is literally the architect of his own fortunes. His education was mainly acquired by study after the day's work was done. On March 14, 1865, he married Miss Sarah A. Guthrie, an estimable young lady of St. Louis.

In 1879, Mr. Rubelmann was instrumental in inducing the furniture manufacturers of St. Louis to organize for mutual protection, and the St. Louis Furniture Exchange was established. He was not a furni-

ture man himself, but dealt in furniture hardware, and the readiness with which the furniture men acted upon his suggestions to form a union demonstrates his influence among his business associates and the respect entertained for his judgment.

Mr. Rubelmann's life has been that of a quiet, modest citizen, thoroughly devoted to business, and enjoying the utmost respect and esteem of all who have come to know him intimately.

Blacksmithing.—There were three blacksmiths in St. Louis at the time of the transfer from the Spanish to the United States authorities,—“Delosier, who resided in Main Street, near Morgan; Rencontre, who lived in Main, near Carr; and Valois, who resided in Main, near Elm, and did the work for the government.”¹ In February, 1811, James Baird had a blacksmith-shop in J. B. Becquet's old shop on South Main Street, Block 36, but removed, November 30th, to John Coon's old house on Third Street, Block 80. On Nov. 6, 1812, George Casner removed his blacksmith-shop to “the large shop lately occupied by Beard,” and on Nov. 12, 1814, James Barlow advertised his blacksmith-shop as located in Beard's large shop on Third Street. In December, 1819, George Casner's new livery-stable and blacksmith-shop were located on the east side of Sixth Street, adjoining Mount's carriage-shop.

The number of blacksmithing establishments in St. Louis in 1881 was 168, giving employment to 400 hands, who received wages amounting to \$200,000. The capital employed was \$250,000, and the business transacted annually amounted to \$700,000.

Manufactures of Fire-Brick, Glassware, Pottery, China, etc.—The soils of Missouri supply nearly all the mineral constituents of the various pigments. Zinc is produced in great quantities, tin likewise, and there is an abundance, far beyond any probable demand, of ochres, barytes, uranium, manganese, cobalt, red chalk, china clay, and *terra di siena*. The sulphuret of zinc is abundant in Southwest Missouri, cobalt exists in quantity at Mine la Motte and other places, peroxide of manganese in Ste. Genevieve, large beds of purple shales in the coal measures, making an admirable cheap pigment for outside work, beds of red and yellow ochre exist on the Missouri River, sulphate of baryta is found in large quantities in a very pure white form, and with the ferruginous clays forms the best possible ground for mixture with lead and zinc in the composition of shaded pigments which are at once both cheap and durable. The manufacture of paints in St. Louis, by the tenth census, employs 13 estab-

lishments and 608 hands, and a capital of \$1,688,350. The wages paid amount to \$250,532, and the value of material used is \$2,196,480.

Fire-clay rivaling the best deposits of Europe is found within four miles of the St. Louis court-house. The bed is fifteen feet thick, and very extensive. An analysis shows the following elements :

Silica.....	53.94
Alumina, with some peroxide of iron.....	33.73
Lime.....	1.17
Magnesia.....	a trace
Water.....	10.94
Total.....	99.78

Fire-brick made of this clay is capable of resisting very high temperatures. The excellence of the material recommends it for retorts, alembics, crucibles, and furnaces. The kilns of this manufacture ought to be far more numerous.

Formerly fire-rock was brought from remote States for the bloomeries at Iron-ton. This fire-rock, imported at a very heavy expense, seldom lasted more than five months. But a few years ago a geological examination discovered a superior quality in the immediate vicinity of Iron-ton. This fire-rock is very refractory, and often resists the heat of the furnaces for seventeen months.

Adepts consider the plastic clay which is found at Commeree fully equal to that of Devonshire. It is as fine and almost as white as flour. The best potter's clay and kaolin exist in quantities that preclude the idea of exhaustion. All that Missouri needs to become famous for its crockery and queensware is skillful labor from the potteries of Europe. The materials and capital for the manufacture of earthenware and porcelain are abundant; art alone is requisite.

Near Ste. Genevieve there is a bank of saccharoidal sand which is twenty feet in height and miles in extent. The mass is inexhaustible. Two analyses give the following result :

Silica.....	98.81	99.02
Lime.....	0.92	0.98

The sand is very friable and nearly as white as snow. It is not oxidized or discolored by heat, and the glass made from it is clear and unstained. One firm in St. Louis has annually exported more than three thousand five hundred tons of this sand to the glass manufactories of Wheeling, Steubenville, and Pittsburgh.

A large portion of the silica used in the glass-factories of Pittsburgh is carried from Missouri. Instead of incurring the expense of two transportations and paying to distant establishments the cost of production, local factories ought to meet all the domestic wants and supply the markets of the West.

LIBRARY
OF THE
UNIVERSITY OF ILLINOIS.

In evidence that the industries built upon such natural products are not neglected or misunderstood in St. Louis, the tenth census returns among the city's manufactures :

Bricks.—Establishments, 45 ; capital, \$727,250 ; hands, 1235 ; wages, \$307,581 ; materials, \$196,588 ; products, \$700,942.

Glass.—Establishments, 5 ; capital, \$280,000 ; hands, 615 ; wages, \$261,098 ; materials, \$238,996 ; products, \$597,277.

Lime.—Establishments, 4 ; capital, \$64,500 ; hands, 49 ; wages, \$13,800 ; materials, \$32,925 ; products, \$63,200.

Marble- and Stone-Work.—Establishments, 56 ; capital, \$237,825 ; hands, 725 ; wages, \$237,207 ; materials, 245,707 ; products, \$707,721.

Stone and Earthenware.—Establishments, 5 ; capital, \$34,500 ; hands, 58 ; wages, \$16,090 ; materials, \$19,985 ; products, \$46,430.

GLASS-WORKS.—The mineral resources for manufacturing possessed by St. Louis have long had their superiority recognized and admitted. They only waited for transportation and capital to develop them. The iron-beds of Pilot Knob and Iron Mountain, for instance, have been familiar to every school-boy who studied his geography for the past two generations, and some of the other valuable products have been known in similar ways quite as long.

In 1854, Hon. John Hogan, in his excellent and suggestive "Thoughts about St. Louis," insisted that the city must become a centre for the manufacture of glass, for the reason that it possessed every product and material necessary to that manufacture in its cheapest and purest form. In his own words,—

"The purest and whitest sand, for the manufacture of flint glass, is found in inexhaustible quantities but a short distance from the city, on the Mississippi River, both above and below. Here is the best lead market, both for the mines of Illinois and Missouri, and by the extension of our railroads to the West and South this latter supply is to be immensely increased, while pot and pearl ash can be obtained either from the Ohio, the lakes, or the upper Mississippi, from the asheries of Iowa and Wisconsin. These are the principal elements of the manufacture of glass, but there is still one most important matter in the expense of the establishment, viz., the pots in which the metal is melted, and which, as they are subjected to a most intense and long-continued heat, require to be made of the very best, of a peculiar clay, which the best establishments have to obtain from Europe. But it would almost seem as if nature intended St. Louis for her great *glass-work shop*: not only is the sand here, and the lead and the ashes easily obtained, but she has underlaid a section of St. Louis County with the very best clay of which to make the pots, equal, I am assured, to the very best European clay, and generally superior to any heretofore found in the United States, for this purpose.

"Like many other valuable discoveries, this was accidentally made in digging a well on the farm of Charles Semple, Esq.,

on the Natural Bridge plank-road, some four miles from St. Louis. And while it is so accessible to our city, it is also inexhaustible. Messrs. Scully & Co. have already subjected it to the severest tests ; they have had pots made of it which have been in use constantly for the last six months, and they have proved themselves by the trial ; they are found to be as durable as those made of the best imported clay. The single article of coal is the only thing in which the upper Ohio has any advantage of us, but this is being rapidly overcome ; our railroads penetrating, as they all do, vast coal-beds will soon equalize this, and furnish ample supplies at fair rates for carrying on our numerous manufactories."

In fact, Mr. Hogan, in this last sentence, refers to one of the very few instances in which St. Louis did not know or failed to appreciate her own resources and their extent.

As early as 1846, James B. Eads, of bridge and jetty fame, Mr. Nelson, of the Union Iron-Works at Carondelet, and Col. Case, formerly of the Broadway line of omnibuses, associated themselves together for the purpose of establishing a glass manufactory in St. Louis. The enterprise at that time, as all other new enterprises always are, was looked upon with a good deal of doubt and misgiving as to its success, it being regarded more in the light of an experimental adventure than of a promising enterprise. In this instance the unfavorable anticipations were realized ; the expenses and outlays attending the enterprise were much greater than its projectors anticipated, and Messrs. Nelson and Case soon withdrew from the firm, leaving Mr. Eads to manage its affairs. With an energy and spirit undaunted by the discouragements that presented themselves, Mr. Eads prosecuted the business until he involved himself in a heavy pecuniary responsibility, and was compelled to abandon the undertaking. Subsequently, however, by enterprise in other directions, he liquidated every dollar of the indebtedness he had incurred in attempting to establish and develop this branch of manufacturing in St. Louis. The enterprise was known as the flint-glass works. On the failure of Mr. Eads, the works passed into the hands of Messrs. Hale and Seil, who transformed them into green-glass works, and by that firm they were conducted for some years. After passing through different hands and different stages of litigation, it being supposed that Col. Case had some claim upon the works, an arrangement was made by which James Holmes and Dr. Taylor, in 1853 or 1854, succeeded to Case's interest, and re-started them as flint-glass works. This firm was attended by the same bad fortune as its predecessors, and finally sold them to Dr. George W. Scully. Dr. Scully was possessed of large means and good credit, and sunk in the enterprise about eighty-five thousand dollars cash, and made debts to the ex-

tent of over one hundred thousand dollars. On his failure the enterprise was continued by his principal creditors, under the name of the St. Louis Glass Company. Bonested & Co. ran the works as green-glass and flint-glass works up to 1860 and 1861, when they leased the establishment to Joseph Bagot and J. K. Cummings, who conducted it altogether as flint-glass works.

The ground on which the works were built had never been owned by any of the different firms, but was leased of the Chambers, Christy, and Wright estates, but in 1864, Messrs. Bagot and Cummings bought the ground and works at partition sale by the sheriff. The back rents and taxes on the works and ground not having been paid up for several years, the whole concern was involved in debt. They then bought all the movable property from the parties interested, and became sole owners in fee-simple of the entire establishment.

From this time better fortune attended the enterprise, and Messrs. Bagot and Cummings continued together in the prosecution of the business until the death of Mr. Bagot in May, 1868. Mr. Cummings then gave bond in the Probate Court in the sum of forty thousand dollars, and as surviving partner of the firm of Bagot & Cummings has continued the business successfully on his individual responsibility up to the present time. This, in brief, is a history of the glass manufactory now conducted and known as the St. Louis Glass-Works, at the corner of Broadway and Monroe Streets, and to John K. Cummings is due the honor of having established the first successful glass manufactory in St. Louis.

Mr. Cummings was born in Coleraine, County Londonderry, Ireland, and was raised in Belfast. His mother died when he was thirteen, and his father a year later. The boy had received the rudiments of an education in the schools of the neighborhood, but when left an orphan was obliged to provide for himself, and led a varying and rather precarious life. He was apprenticed to a tailor, but soon gave that up; worked in Edinburgh, Scotland, in a soda-water factory; acted as clerk in a grocery store; and worked in a wall-paper factory and in a ginger-ale factory in Belfast, but remained in none of these occupations long, or with any particular encouragement. His career was that of thousands of homeless and friendless boys. There seems to have been nobody to recognize his capabilities, or to offer him the cheering hand and give him the helpful word.

In 1854 he emigrated to America, landing at New Orleans and passing up the river to St. Louis. He first obtained a situation in one of the packing-houses

of the Ameses, and remained there about a year. He then secured a situation in the factory of the St. Louis Glass-Works, and remained there many years, entering as an apprentice to the glass-cutting trade, which he soon left to learn the glass-mould making trade. His employer, however, thought it best to transfer him from the "bench" to positions of greater responsibility, showing the estimation in which he was held, and allowing him to obtain a thorough knowledge of the business, such as could hardly have been acquired in any other way.

When, on the breaking out of the war, President Lincoln made the first call for troops, Mr. Cummings enlisted as a private soldier. He had served in the "Sarsfield Guards," and had marched to the Kansas border on the Southwestern expedition under Gen. Frost, when he thought his State was threatened, but had soon resigned on realizing that it was the Union of the States which was threatened by the South. He joined the Fifth Regiment United States Reserve Corps as a private, but the colonel (Stifel) soon appointed him adjutant and instructor, or drill-master. This command participated in the early military operations along the Missouri River, joining Gen. Lyon immediately after the battle of Boonville, assisted in the construction of the works about Lexington, patrolled the river, and had several engagements with the enemy. Subsequently Mr. Cummings was appointed lieutenant-colonel of the Twentieth Enrolled Missouri Militia by Governor Gamble.

Notwithstanding the history of glass-making in St. Louis had been that of an unbroken line of disastrous failures, as has been shown, Mr. Cummings, ever since his first experience in the business, although merely a subordinate, entertained a firm belief that the industry could be made to pay, and in 1861 formed a partnership with Joseph Bagot, leased the St. Louis Glass-Works from the receiver (afterwards buying them at sheriff's sale), and resumed business at the old place, where a few years previously the friendless boy had worked his way up from his position of an apprentice.

Mr. Bagot was a practical man from the East. He had managed the works some years before, and was experienced and careful. He took charge of the manufacturing department, and in addition to the customary duties of the position made the vats with his own hands. Mr. Cummings managed the books and financial part of the business, attended to buying and selling, and spent no inconsiderable part of his time going about town and drumming up trade. Such energy as he and Bagot exhibited could not fail of its reward; and while they had great difficulties to sur-

Western Railroad Company of St. Louis.

Yours truly
J. F. Cummings

LIBRARY
OF THE
UNIVERSITY OF ILLINOIS.

mount, it soon became apparent that they had mastered the secret and were on the road to success. The business grew apace, and when Mr. Bagot died in 1868 the value of the establishment was rated at thirty-five thousand dollars, and it was one of the recognized institutions of the city. The joint capital of the two upon starting was less than two thousand dollars.

Mr. Cummings then became sole proprietor, and as such has since remained in charge of the works, which have grown from the scanty two thousand dollars' capital of 1861 to a capital of one hundred thousand dollars in 1882, with yearly sales of from seventy-five thousand dollars to one hundred and twenty thousand dollars, and employing one hundred and twenty hands, with a pay-roll of forty thousand dollars annually.

To John K. Cummings, therefore, unquestionably belongs the honor of having demonstrated the fact that the manufacture of glass could be made profitable in St. Louis. It was he who showed that the raw material found near St. Louis in limitless quantities was second to none in the world, and put upon a sure footing an industry that perhaps above any other demands skillful and careful management.

Mr. Cummings is a man of liberal and unselfish views, and there has been no jealous hoarding of his secret. His experiences in his business have been at the disposal of any who chose to avail themselves of them, and he has cheerfully offered advice and given pecuniary assistance to others who have been desirous of starting new works. So, also, he has been a foremost advocate of every measure that has promised to benefit St. Louis, and has been a liberal supporter even when the financial results were not promising. Among the numerous enterprises which he has assisted are the Illinois and St. Louis Railroad and Coal Company, Cahokia Ferry Company, Grain Association, St. Louis French Window-Glass Company, Merchants' Exchange, Butchers' and Drovers' Bank, etc. For many years he has been a leading member of the Citizens' Committee, whose efforts in behalf of municipal and legislative reform have resulted in so much permanent good to St. Louis.

Mr. Cummings' excellent business qualities, sound judgment, and exceptional skill have won the respect of all who have come in contact with him, but he also possesses engaging personal qualities that have obtained for him the affection of all who know him intimately. He is especially beloved by his employes, and is an open-handed dispenser of charity. In private life he is the quiet and unassuming gentleman.

About 1850, Messrs. Henry T. Blow, Barksdale,

and others commenced in St. Louis the manufacture of window-glass. Their works were erected on the Barksdale grounds, due west of the arsenal, and adjoining the Concordia Park, and in them was made the best window-glass ever manufactured in the United States. The works, however, were short-lived, and the public-spirited citizens who started them soon lost all their investments. Their failure was in part owing to the incompetency of the workmen they had of necessity to bring from the glass-works of Pittsburgh, Pa., and other glass-manufacturing points. About the year 1854-55 these works were leased by James Wallace and associates and converted into flint-glass works. They afterwards formed a joint-stock company under the name of the Missouri Glass Company, the stock being mostly held by such public-spirited citizens as James H. Lucas, Col. John O'Fallon, Archibald Gamble, and Edward Bredell, who was all the time president of the company. Edward Dailey was secretary, and James W. Wallace factory superintendent and manager. This company carried on an extensive but unprofitable business, and, about 1859-60, suspended operations entirely. The company, for a part of the time, manufactured green glassware as well as flint. After this suspension the works remained idle up to 1863, when they were leased by James W. Wallace & Brother. Shortly afterward a gentleman named Cate, with some capital, succeeded to the business, and associated with him a gentleman named Lasalle, from some one of the numerous glass-works in the New England States, and the firm became Cate, Lasalle & Co. In a short time Mr. Cate sold his interest to a man named Barry, and the firm became Barry, Lasalle & Co., who continued the business until their means were exhausted and they were compelled to suspend operations. They were public-spirited, energetic men, but had to yield to the apparent fatality that attended all the glass-works attempted in the city, and in about 1865 or 1866 the works were sold to the St. Louis Plow Manufacturing Company, composed of Messrs. Barnum, Markham, and others, who dismantled the works, selling part of the material to Messrs. Bagot & Cummings, but the greater bulk to Messrs. Ford & Co., who were starting glass-works at New Albany, Ind., and to which place it was removed, occupying nearly an entire steamboat with its bulk.

The Western Glass-Works were started as a green-glass bottle manufactory, on the corner of Einmet and Columbus Streets, in South St. Louis, and were commenced in 1855 or 1856, by Messrs. Lewis and Hareum, and other practical glass-blowers from

Pittsburgh. After the establishment had been continued a short time under the management of Harcum & Co., Felix Bobe and Emil Marks joined the firm, and subsequently Justus Snyder. These parties met with the same poor success that attended all their predecessors, and the works were sold to J. B. Goodhue, who carried them on with some degree of success until he took them down and removed them to the hill north of Yaeger's Garden. Shortly afterwards he failed, and leased them to a party of glass-blowers from Pittsburgh, and the works soon after burned down. Mr. Goodhue for some time had a small concern on the ground, in which he tried to demonstrate the feasibility of a new style of glass furnace, on which he had obtained letters patent. There was also another small establishment started by William Gillender, once a manager for Dr. G. W. Scully, of the St. Louis Works. This establishment was located in an old saw-mill at the foot of Jefferson Street, but meeting with poor success, it was dismantled and torn down a short time after its erection. Still another establishment was commenced at the corner of Chambers and Main Streets, by Messrs. Pickup, Collins & Walter, practical glass-makers, in 1865 or 1866. A limited degree of success attended this firm for a few months, when they sold out to Messrs. Bagot & Cummings, who removed the works to the establishment conducted by them.

The Mississippi Glass Company, of which George D. Humphreys is the principal proprietor, has works on Angelica Street near Second. The chief products are green glassware, such as pickle-jars, fruit-jars, sauce-bottles, etc., the demand for which is very large in the city. The company have enlarged the works to enable them to meet the demands for the wares which are produced. There are about one hundred and twenty persons employed in the establishment. The sand used comes from Franklin, and the soda ash is imported from England. The lead used is obtained in St. Louis. This company does not attempt to make clear glassware. The demand for the products of the factory is very large. It was established about 1872.

The Union Glass Manufactory, Nicholas Schaeffer president, located on the corner of Anna and De Kalb Streets, is a French establishment; that is to say, the superintendent, foreman, and workmen are all French, and the products of the factory are equal in every respect to the best French wares. The window glass manufactured at this establishment is equal to that made anywhere. This company is doing a large business, receiving orders from distant places. The works have only been in operation about ten years,

and have been successful from the beginning. Employment is afforded for several hundred persons in consequence of the creation of these works, and some hundreds of thousands of dollars are annually added to the wealth of the city.

The most important enterprise of the kind in the West, perhaps in America, is the Crystal City Plate-Glass Works at Platin Rock, about thirty miles south of St. Louis. This is an enterprise of great magnitude, requiring an outlay of several hundred thousand dollars to complete the works alone. They were finished in 1875, by their then principal owner, Eben Ward, of Detroit, Mich. Experiments made with the sand of Platin show that it has all the requisite qualities for a plate-glass element, and all the materials necessary except soda are obtainable in St. Louis. The Crystal City Works have attracted the attention of glass-makers not only in this country but in Europe also.

FIRE-BRICK AND POTTERY.—Tradition places the discovery of fire-clay at a period far antedating the incorporation of St. Louis, and the existence of vast beds of fire-clay, underlying almost the entire city and surrounding country, has always been popularly believed. The first record we have of the manufacture of pottery in St. Louis is dated April 20, 1816. At this time George W. Ferguson gave notice through the columns of the *Missouri Gazette* "that he has commenced the manufacture of earthenware in St. Louis," and "pledges himself that it shall be as durable as any brought on here, and sold on more moderate terms." He also informed the public that he kept on hand "a large assortment of vessels of every description," which he sold "by wholesale or retail."

We have no means of ascertaining whether this new enterprise succeeded at this early period in St. Louis, but in the next year, on August 23d, "Christian Smith, near Mr. Neal's tin and copper manufactory, on the street leading from Matthew Kerr's store to Shope's tavern, informed the citizens of St. Louis and surrounding counties that he had on hand, and would always "be supplied from his kiln, the best milk-pots, dishes, crocks," etc.

The successful manufacture of fire-brick and pottery in St. Louis is perhaps due to the French community that, thirty-five years ago and more, peopled Cheltenham, now a thriving suburban manufacturing settlement. The discovery and development of these fire-clay mines were reserved, however, for the period immediately prior to the civil war.

After the cessation of strife the interest rapidly developed until now there are six very large establishments in the suburbs, with extensive commercial

connections, and the manufacturers and dealers number twelve, representing large capital and a considerable export demand. Drain and other tiling, gas retorts, blast-furnace and cupola linings, fire-brick, Bessemer tuyères, and other articles form the chief manufacturing product of these establishments, one of which also supplies the glass manufactories extensively with "washed clay," or purified clay. Indeed, St. Louis supplies America with this through a Pittsburgh house.

In the spring of 1873, however, the fact that a peculiar character of fire-clay could be so burned as to be utilized for street pavements was discovered by George Sattler, the owner of some mining property on the Columbia Bottom road, ten miles north of the bridge, but still within the city limits. For some years his assertion was ridiculed, but ultimately, encouraged by President Flad, of the Board of Public Improvements, Professors Smith and Potter, of Washington University, William Glasgow, Jr., and other experts, some experiments were made under official authority, and pavements of this material were laid where street traffic was heaviest. This has resulted in the establishment of a company by a hundred leading capitalists, and the whole extent of the mine—sixty-three acres of river bluffs—is to be utilized in the production of this new pavement material, which after long use shows wear scarcely more than granite, and is much cheaper. The development of this new industry upon so extensive a scale will add largely to the fire-clay interest of St. Louis.

The larger working potteries of St. Louis number six in all, and their ware is everywhere accorded the character of artistic form and substantial manufacture. This interest, too, has very largely developed from its comparatively insignificant beginning as such in 1834. At that time moulds and vessels were of very primitive design, and workmanship scarcely rivaling in finish the efforts of the mound-builders. Indeed, some of the discoveries of work of this character attributed to this early race excel in form and finish the samples represented as the product of the manufacturers of half a century ago. The export of St. Louis manufactured pottery is constantly on the increase.

CHINA, QUEENSWARE, ETC. — There are over twenty houses in St. Louis engaged in the wholesale china, glass, and queensware trade, and the total sales in 1881 amounted to two million seven hundred and ninety thousand dollars. The importations of china during the same year aggregated in value two hundred thousand dollars. Among the most active and enterprising men in this line of business in St. Louis is Henry

Westermann. Mr. Westermann was born near the historic town of Minden, Prussia, July 2, 1832. His family was in very moderate circumstances, and in 1839 his father came to America to better his condition, and settled in St. Louis. In 1842 his family followed him, and Henry attended the school of the Lutheran Church, and later Munday's Academy, an institute of some repute in those days. When he had acquired sufficient knowledge of English and his age permitted, he worked during the daytime and spent

the evenings in study. The needs of the family rendered it desirable that he should labor at an early age, and about 1845 he was employed to set up type in the St. Louis Type Foundry, then operated by Ladew & Co., at Locust and Second Streets, continuing, however, to attend school whenever opportunity permitted. He was next employed at Barnum's Hotel, located at Third and Vine Streets, which was then the largest hotel in the city. Barnum & Moreland were the proprietors, and among those connected with the establishment was the well-known Josiah Fogg. Young Westermann worked here in several capacities for a year or two, and was finally made assistant bar-keeper.

In 1849 he obtained a position in the crockery establishment of R. H. Miller & Co., on Main Street near Pine, beginning as a store-boy and working his

way up to the position of salesman. He was apt at learning the business, and being a German, was very useful in the firm's dealings with customers of that nationality.

Having saved a little money he, at the age of twenty or twenty-one, established a retail grocery store on Biddle Street, between Ninth and Tenth, but soon returned to the crockery business, and was employed for a few years by the firm of Heinecke & Estell. Then, in February, 1855, he opened for himself a retail queensware and china store on Franklin Avenue near Sixth Street. In the latter part of that year a fire, originating in a neighboring building, destroyed his establishment, and in January, 1856, he resumed the same business on Franklin Avenue near Fourth Street, where he prospered to such an extent that he was enabled to establish an additional store on Broadway. In 1857 he admitted E. F. W. Meier as a partner, who assumed charge of the Broadway store, while Mr. Westermann managed the Franklin Avenue concern. In the following year (1858) the Broadway store was removed to Main Street, where the firm of Westermann & Meier transacted business for twenty-three years. The Franklin Avenue store was eventually sold, and the firm concentrated their energies on the Main Street establishment, and built up a business probably second to none in their line in St. Louis. Meanwhile the firm had become interested in a branch establishment at 500 North Main Street, and when, in July, 1880, the partnership was dissolved, Mr. Westermann retained the latter business, and continued to manage it under the style of Henry Westermann & Co. until Jan. 1, 1883, when he removed to the large and commodious building at 608 Washington Avenue, opposite the Lindell Hotel, the whole of which he occupies. The firm is a heavy importer of earthenware, china and glassware, etc., most of its invoices coming by way of New Orleans up the great river route, and its trade extends to the West, Northwest, South, and Southwest. It is now the oldest wholesale china, glass, and queensware house in St. Louis, and has maintained its leading position through several panics, owing, no doubt, to the eminent conservatism and integrity of its founder, Henry Westermann.

On the 8th of January, 1857, Mr. Westermann married Caroline Augusta Wenkel, a German lady of St. Louis, who has proved herself a useful assistant in the domestic sphere. Several children have blessed the union, of whom William H. and Alfred Oscar are associated with their father in business, for which they have displayed a special aptitude. From childhood Mr. Westermann has been a member of the

Lutheran Church, and for many years has been trustee of the church of that denomination at Sixteenth and Morgan Streets. He also served as treasurer of the congregation while the present edifice was being built. Mr. Westermann is a member of no secret or other societies, regarding home and church as sufficient to satisfy the reasonable aspirations of any man. In every relation of life he is the unobtrusive and esteemed citizen, and enjoys the unbounded respect of all who know him.

BRICK- AND TILE-WORKS.—The first bricklayer who regularly followed his vocation in St. Louis is said to have been John Lee. Pierre Berthold, Sr., says Edwards' "Great West,"¹ "saw him in Marietta, in Ohio, and persuaded him to accompany him to St. Louis and carry on his business. Lee consented, and the first brick house that was erected was of the brick he manufactured. The house was built on Main Street, between Chestnut and Market Streets, and was built for Berthold & Chouteau. There have been many disputes concerning who owned the first brick house in St. Louis, and as we have given much attention to the matter, we are prepared to give authentic information. Christian Wilt owned the second, Judge Carr the third, Manuel Lisa the fourth, and John Smith the fifth. Mr. John Lee, the first bricklayer who came to St. Louis, for some years had a monopoly in his business. He raised a large family, and some of his grandchildren have intermarried with some of the princely merchants of St. Louis." On the 12th of October, 1811, Samuel Bridge advertised that he would "sell very low a quantity of brick, viz., at three dollars per thousand as they came to hand, or six dollars if picked," which might be seen "at the margin of the creek at the south end of the town." For further particulars persons were referred to Mr. Charless, who was authorized to sell. April 17, 1818, John Dobbs and Samuel I. Carman announced that they had entered into partnership in the bricklaying business, and were "ready to make contracts for the building of houses in a workmanlike manner and of the best material that St. Louis affords." On the 4th of September of this year the *Missouri Gazette*, speaking of the building operations in the town, remarked,—

"A gentleman informs us that before the winter sets in there will be near 3,000,000 of brick laid in this town since the 1st of April last, and he believes, from a general acquaintance with the citizens, that double that quantity would be laid this season if materials and workmen could be obtained on moderate

¹ Pages 593-94.

terms. Common laborers are much wanted; none can be had for less than \$1.50 per day for the season through. A few laborers from the eastward have been enabled to secure to themselves 160 acres of land each by their labor this season."¹

In 1830 "numerous brick-yards had been established in the lower part of the city, and brick buildings had become the fashion of the day."² In 1881 the business had grown to such proportions that forty-five establishments were engaged in the manufacture of fire-brick, building brick, and tile, giving employment to over one thousand men and boys, and transacting a business of over seven hundred thousand dollars.

Coal.—With the exception of Pittsburgh, there is no large city in the country which has better facilities for procuring cheap coal than St. Louis. The coal measures of Missouri and Illinois, from which the city draws part of her supply, are extensive and peculiarly rich.³

Those of Missouri outcrop from the mouth of the Des Moines to the Indian Territory, while those of Illinois underlie nearly the whole State. From these sources as well as from Pittsburgh comes the immense quantity of coal annually consumed in the city.⁴

In the early days of the city's history the inhabitants of St. Louis did not know or failed to appreciate their own resources and their extent. The coal-fields accessible to the city were underestimated and disguised. For many years it was thought that their products were not suited to the manufacture of iron, and metal, and coal also, were brought from Pittsburgh and Johnstown, and iron from Lake Michigan, to supply the foundries and forges of the city. All this has been changed. Not that the extent and value

of the coal and iron deposits were not known, but their cheapness and adaptability to one another were not understood, and thus there was a retardation of development. The value of the coal convenient to St. Louis and the extent of the deposits have been greatly enhanced during the past few years by further explorations. In 1855, Professor Swallow estimated the good available coal of Missouri at 134,000,000,000 tons. He now finds his estimate very far within the mark. Professor Hitchcock, in 1870-71, estimated the coal measures of Missouri at 27,000 square miles, Kansas 17,000 square miles, Arkansas 12,000 square miles, 2000 feet thick, twenty beds from six inches to six feet in thickness. The Illinois basin has 51,700 square miles, from 600 to 2500 feet thick, ten beds, aggregate thickness thirty-five feet. The Indian Territory basin is 13,600 square miles, and the Texas basin 104,600 square miles.

The coal-mines of Missouri are usually easily worked, and require no deep shafts or expensive machinery for hoisting or drainage. They underlie the greater portion of the finest agricultural sections, not only of the State, but of as productive a region as is on the continent. Coal of good quality can be purchased at the mines so cheaply that even where farmers have timber in abundance near at hand they prefer to burn coal rather than cut and haul wood a short distance. The coal area covers considerably more than one-half of the State, and active and systematic mining has opened the beds in more than a thousand places along the railroads and near the towns. There need never be any fear of a scarcity of fuel in Missouri, and the condition of the farmer here may in this respect be considered blessed far above that of those located in many portions of the Northwest and farther West, where buffalo chips, cornstalks, and twisted hay are all they can afford to temper the cold of more rigorous winters than are ever experienced near St. Louis.

According to the census of 1870, the following were the statistics of the coal industry of St. Louis at that time: 9 establishments; 1183 hands; \$1,790,000 capital; \$904,000 wages; \$302,180 materials; 444,642 tons of products, valued at \$1,473,000, equal to \$3.31 per ton. The receipts of coal in 1881 aggregated 44,720,175 bushels, and of coke 12,860,700 bushels.

Drugs and Chemicals.—The establishment of the drug business as distinct from the practice of medicine dates back to an early period in the history of St. Louis. Originally the only "apothecary-shop" known to the frontier settlements was the saddle-bags of the traveling practitioner, but in January, 1812,

¹ In November, 1817, the wages paid and the cost of living were set down as follows:

"Bricklayers, masons, and carpenters, per day, \$3.00; making common shoes (each), everything found, \$1.00; all other mechanical labor in proportion; white laborers \$1.50 per day; negro laborers from \$18 to \$25 per month; female slaves hire out at from \$5 to \$15 per month; house-rent from \$10 to \$100 per month; beef from 4 to 8 cents per pound; pork, same; veal from 8 to 10 cents per pound; mutton, same; butter 25 to 37½ cents per pound; fowls 25 cents per piece; flour \$10 per barrel; corn meal \$1 per bushel; Orleans clayed sugar from 33 to 37½ cents per pound; loaf sugar 62½ cents per pound; coffee 50 cents per pound; all the necessaries of life in the same proportion."

² Edwards' Great West, p. 340.

³ On the 27th of September, 1817, Charles Busron advertised that he would "give twenty-five cents per bushel for as much as one thousand bushels of stone coal."

⁴ In 1846 a joint-stock company, with a capital of ten thousand dollars, was started in St. Louis for increasing the supply of coal.

Farrar & Charless conducted a drug-store "adjoining the printing-office," and on the 18th of the month announced that they would have "a fresh supply in the spring."¹

Prior to this Dr. B. G. Farrar's card had appeared in the *Gazette* (May 24, 1809), announcing that he might be found at Robidoux's house on Second Street, and in the same issue of the paper it was stated that Dr. Saugrain had the first vaccine matter used in St. Louis. On the 10th of May, 1812, Farrar & Charless gave notice that they had dissolved partnership, Mr. Charless continuing alone at the old stand, and on the 18th of July following it was announced that Dr. B. Farrar had established a drug store below Major Christy's tavern, next to Daugin's silversmith-shop. During the same month (July 26th) appeared the professional card of Dr. R. Simpson, whose office was located on Second Street, "adjoining Manuel Lisa." Dr. Simpson also engaged in the drug business, and about this time there is frequent mention of "Simpson's store." Oct. 1, 1812, Drs. Farrar and Walker associated themselves in the practice of medicine and established a drug store, which on the 10th of April, 1813, was removed to Mrs. Chouteau's house, "opposite Lisa's new brick." September 11th of the same year Dr. Simpson removed his drug store to the former stand of Farrar & Walker, Block 5, and Sept. 16, 1815, Farrar & Walker "removed their medicine-shop to Main Street, opposite R. Paul's," Block 30.

On the 1st of October, 1815, it was announced that Simpson & Quarles had formed a copartnership for conducting the drug and medicine business "in Simpson's old stand," and on the 4th of January that they had removed to Block 36. June 19, 1818, notice was given that Dr. A. Nelson had purchased the drug business of Simpson & Quarles, and Feb. 10, 1819, that Nelson & Hoffman had established a drug store "in Simpson's new brick, opposite the

post-office." At the same time (February 10th) Tuttle & Teller were conducting the drug and medicine business at the "new brick" at the lower end of Main Street, below the Collet double-brick." April 7, 1819, the removal was announced of Renshaw & Hoffman to "next door north, lately Dent & Rearick, large warehouse in rear," and on the 21st of the same month the removal of the drug and medicine store of Nelson & Hoffman to the "late stand of Renshaw & Hoffman."

The pioneer house in the wholesale drug trade was that of Joseph Charless & Son, which afterwards became Charless & Blow. Their business expanded to large proportions, and in course of time a number of firms established themselves in the trade, which is now one of the most important industries in St. Louis. In 1881 there were fifteen firms engaged in the manufacture of drugs and chemicals, with a capital of \$969,000 invested, giving employment to three hundred hands, to whom they paid annually \$124,000 in wages, and transacting a business of \$1,200,000. During the same year there were seven wholesale druggists in St. Louis, and their combined sales aggregated nearly \$7,000,000. There were also two hundred and eight retail druggists, whose sales amounted to between \$9,000,000 and \$10,000,000.

One of the best-known firms engaged in the wholesale drug business west of the Mississippi is that of Richardson & Co., the senior member of which is James Richardson, a sketch of whom will be found elsewhere in this work in the history of the Public School Library.

Of the druggists of St. Louis, none is more widely or more favorably known than Jacob Spencer Merrell. Mr. Merrell was born at Westmoreland, Oneida Co., N. Y., Feb. 5, 1827. His father, Jacob Merrell, was a direct descendant of the Jacob Merrell who came from England to New England with the original Hartford colony. His mother (the father's second wife), Sylvia Spencer, was also of English extraction, and was a descendant of an early New England family.

Being the eldest son, Jacob S. was required from his earliest recollection to assist on the farm during the summer, but in winter was sent to the district school. In early boyhood he manifested the habits of industry and economy that have since characterized his life, and have given him a front rank among the merchants and manufacturers of the West.

In the spring of 1842, when but fifteen years old, young Merrell concluded that a farm of one hundred acres, with a large family to share its products, did not afford a sufficiently promising field for his labors, yet he freely recognized the claims of his father upon

¹ "Patent medicines" would seem to have formed an important part of the druggist's stock even at that day, for on the 31st of August, 1808, we find the following curious advertisement in the *Missouri Gazette*:

"Aaron Elliot & Son offer for sale at Ste. Genevieve a number of patent medicines, among which are Church's Cough Drops, Turlington's Balsam of Life, Bateman's Drops, British Oil, Steer's Opodeldce, Hill's Balsam of Honey, Godfrey's Cordial, essence of peppermint, Lee's New London Bilious Pills, by the gross or less quantity, Anderson's Pills, Hooper's Female Pills, Liquid True Blue, Maccaboy and Cephalick snuff, chemical fire-boxes, one of the best inventions in the world for travelers; also stationery, blank books of various sizes, children's spelling-books, common writing and letter paper, Dutch quills, sealing-wax, wafers, a few steel spring truffles, thumb lancets, spring lancets, gum lancets, green goggles, etc."

Jacob S. Merrell

him, and not wishing to deprive him of services that legally and properly belonged to him, he "bought his time" of his father for one hundred and fifty dollars, and the clothes he then had for thirty dollars more. Of this amount he paid sixty dollars in cash, the fruits of his own economy and industry.

His first employment after consummating this arrangement was driving upon the Erie Canal, his wages being nine dollars per month. When the canal closed in the fall, he returned home and worked for his board during the winter, enjoying for the last time the only school advantages he ever received.

In the following April he obtained employment in a country store at Oneida Lake, but in July his employer failed, and he again returned home and worked for his father during haying and harvesting, after which he started with ten dollars in his pocket, worked his passage on the Erie Canal to Buffalo, and from thence took deck passage to Toledo, where, having failed to obtain employment that had been promised him, he engaged to cut cordwood in the oak forests at a point where for many years past the Toledo High School has been located.

During the following spring he went to Lexington, Ky., where he was employed by his uncle in the grocery business, at ten dollars per month. This occupation, however, did not satisfy his restless energies, and in the following January he hired a horse and went into the mountains of Kentucky to buy furs. For several months he traversed the head-waters of the Kentucky, Cumberland, and Licking Rivers. In May, while in Cincinnati, whither he had gone to market his furs, he noticed an advertisement of a little drug-mill on "Western Row" for sale or for rent. He purchased the establishment, chiefly on credit, and at the age of eighteen commenced his business career.

In spite of many difficulties the enterprise prospered under his vigorous and judicious management, and five years later, as we learn from a volume entitled "Sketches and Statistics of Cincinnati," he employed ten hands, had a thirty horse-power engine, and manufactured thirty thousand dollars' worth of goods yearly, with a business rapidly growing and certain ultimately of becoming one of extensive operations.

In 1848, Mr. Merrell returned to his native place, and on the 20th of September was married to Kate Jeannette Kellogg, daughter of Deacon Warren Kellogg, of Westmoreland. The success which has ever attended Mr. Merrell must in no small degree be attributed to the assistance of his faithful wife.

Early in 1853, Mr. Merrell concluded that St. Louis

offered a more promising field for his business than Cincinnati, and having purchased property on St. Charles Street, between Fifth and Sixth Streets, he sold his Cincinnati business, and on the same day established himself in St. Louis.

The progress of his business has been uninterrupted to the present day, except in 1857, when by a disastrous fire he lost twenty-eight thousand dollars, his insurance being only four thousand dollars. Though the oldest wholesale druggist in St. Louis, he has never failed in business and has never compromised with his creditors. Upon the occasion of the loss by fire, some friendly creditors urged him to make a settlement at fifty cents on the dollar, but he steadfastly refused, preferring to make the attempt to pay in full, in which he succeeded.

The employment of his spare time in reading, added to a quick perception, a retentive memory, and carefully-acquired habits of practical thought, have enabled Mr. Merrell to greatly remedy the want of early education, and have secured him a fund of knowledge such as few business men possess. He is not only a merchant, but is a pharmacist, a chemist, and a physician, and his knowledge of these sciences has enabled him to devise many new remedies previously unknown, but now deemed almost indispensable by the medical profession. His knowledge of medicine has induced many to seek his advice, and for many years he has had quite an extensive office practice among friends and others, many of whom had failed to obtain relief from regular practitioners. To multitudes of such he has rendered gratuitous service.

Dr. Merrell is the president and one of the founders of the American Medical College, in St. Louis.

Though an active member of the Whig and Republican parties, he has always refused remunerative offices until the spring of 1881, when he was induced to accept the nomination for treasurer of the city of St. Louis, and was elected for a term of four years by a handsome majority.

During the war his active and outspoken devotion to the Union raised about him bitter enemies and steadfast friends, but, unheeding praise or blame, he quietly pursued the course he had marked out for himself and labored zealously in the work of recruiting soldiers for the front.

Dr. Merrell has always taken an active part in religious matters, and ever since his arrival in St. Louis has been a member of the First Congregational Church (Rev. Dr. Post's), and for ten years past the president of its board of trustees.

As the owner of a number of farms in the "American Bottom," he has done much to improve that sec-

tion, and particularly by putting in operation the drainage laws of Illinois. He is a director in the St. Louis Stoneware Company.

Dr. Merrell is emphatically a "self-made man," whose success has been won by steadfastness of purpose, honorable dealing, untiring industry, and careful economy. Beneath an exterior which a casual observer might deem cold and unsympathetic is a warm and cordial nature. His sympathies are manifested by deeds rather than words, and he gives freely to every deserving charity, public and private.

The farmer lad who "bought his time" of his father and began life as a canal-boy is now a prominent citizen of St. Louis, rich and respected by all. Such a career speaks volumes for Dr. Merrell's strength of character, sound judgment, and indomitable energy and industry.

Within the comparatively brief period of fifteen years has been achieved one of the most noteworthy successes, from a business point of view, which even the aggressive and enterprising mercantile world of St. Louis can exhibit, in the establishment of the wholesale drug firm of Meyer Brothers & Co. Christian F. G. Meyer, the head of the house, was born at Haldern, Westphalia, Dec. 9, 1830. His family was in moderate circumstances, being engaged in sheep-raising and bee-culture. His father died when he was four years old, and his mother when he was sixteen. After the latter occurrence he emigrated with his brother, J. F. W. Meyer (six years his senior), to America, the objective-point being Fort Wayne, Ind., near which place a relative resided. They sailed from Bremen in September, 1847, and the ocean trip consumed seven weeks. From New Orleans, where they landed, to Fort Wayne was a long and tedious journey, being performed by steamboat, canal-boat, and on foot, and it was not until February, 1848, that the Meyers reached Fort Wayne.

Young Meyer, realizing that a knowledge of English was essential to success in this country, attended a private school for the purpose of learning the language, but his means being limited he was obliged to leave school and make his own way in the world. During the same year (1848) he entered Reed's drug store at Fort Wayne as an apprentice. His progress was rapid, and by close attention to his duties during the day, and by employing his nights in studies pertaining to the business, he soon won the confidence of his employer. In the following year the cholera was prevalent, and owing either to the sickness of the proprietor and clerks or their absence from town, he was left in sole charge of the store for several weeks, and in this arduous crisis acquitted himself with great

skill and credit. In August, 1852, having saved four hundred or five hundred dollars, he, in company with an acquaintance, opened a retail drug store in the same place. The venture proved very successful.

What Mr. Meyer is accustomed to call the most fortunate event of his life occurred in July, 1854,—his marriage with Miss Frances F. Schmidt, a lady who some years previous had come to this country from Alsace, then a French province. To this alliance Mr. Meyer attributes a great share of his success in life, she having proved a helpmeet for him in every sense of the word. Their domestic relations have been of the happiest character, and their union has been blessed with nine children,—seven boys and two girls,—of whom eight are living.

Meanwhile the business at Fort Wayne continued to prosper, and with increasing success and confidence Mr. Meyer became imbued with the desire to conduct operations on a larger scale. Accordingly he visited St. Louis in May, 1865, and made arrangements to establish a wholesale business. In September he purchased the stock of J. Mathews & Sons, then in business at the corner of Second and Locust Streets. The stock amounted to about seventy thousand dollars, but although considered quite large in those days, when nearly everything was about one hundred per cent. more costly than at present, it would now be comparatively small.

The rapid shrinkage in values which set in after the war subjected all who were then in business to a severe ordeal, and many succumbed, but by assiduous labor and extraordinarily good management the firm was enabled to weather the storm, and its present standing is a proud monument to Mr. Meyer's early labors.

Mr. Meyer is a prominent member of the German Lutheran Church, and at present is one of the trustees of the Concordia Theological Seminary (Lutheran), on Jefferson Avenue, as also of the congregation where he worships.

While necessarily devoting the greater portion of his time to his extensive business, he has yet been able to indulge to some extent a taste for literature. At Fort Wayne, besides attending to his drug business, he for some time owned and edited a paper, and since then has written more or less for the press. He has also traveled much in this country and abroad, principally on account of his health, which on several occasions has been impaired by overwork.

Although Mr. Meyer's associations outside of his business have been chiefly with Germans, he speaks the English language with the ease and fluency of his mother-tongue. He has also acquired a fair knowledge of French.

C. F. G. Meyer

LIBRARY
OF THE
UNIVERSITY OF ILLINOIS

Mr. Meyer has been uniformly successful in business. The building he first occupied, at the corner of Second and Locust Streets, soon proved too contracted for his rapidly increasing trade, and accordingly in January, 1867, the house removed to the building Nos. 6 and 8 North Second Street, occupying the four floors and the cellar. A few years later additional space was demanded, and Nos. 10 and 12 were added, and about four years since the cry for "more room" forced them to occupy the adjoining structure, Nos. 14 and 16. This gave them the entire building, one hundred and eight feet front by one hundred and fifty feet deep, four stories high, in addition to the cellars, in all nearly two acres of floor space. They also have an extensive store in Kansas City, the largest drug establishment west of St. Louis, while they still maintain the one in Fort Wayne, which is in reality the parent house. C. F. G. Meyer is the controlling mind in the firm, which, perhaps, conducts the largest jobbing drug business in the world, the annual sales amounting to millions of dollars.

Oils.—In 1843, Dr. Hoffman exhibited in St. Louis a sample of steam-refined lard-oil, manufactured at his establishment on Market Street, corner of Thirtieth, which was "as pure and clear as the best sperm, and burns as brightly." The oil was manufactured from "inferior qualities of lard," and furnished to purchasers "at very low prices." The chandlers and lard-oil factories in St. Louis numbered in 1850 ten factories, with invested capital of ninety-nine thousand three hundred dollars, employing two hundred and twenty-six hands, and producing annually four hundred and ninety-eight thousand nine hundred and fifty dollars.

In 1857 the Patent Press Oil-Works, Latourette, Wyman & Grant, proprietors, were erected for the manufacture of oil from flaxseed, castor-beans, and cotton-seed. The great scarcity of the two former led the proprietors to turn their attention to cotton-seed, upon which they had experimented successfully. Though originally designed for the exclusive manufacture of linsced- and castor-oil, these works were early employed in making cotton-seed oil, which was found so far profitable as to induce the proprietors to push their efforts in that direction. The proprietors were among the first parties in the world who succeeded in making oil from cotton-seed so as to make it pay. After experimenting with thirty thousand bushels of the seed, they found so fine a margin in it as to induce them to extend their operations.

The oil was shipped to New Orleans, to the East, and Europe, and the cake was found to be highly valuable as food for cattle.

In 1877 the business of manufacturing cotton-seed oil was further extended by the opening of "The Future City Oil-Works," J. J. Powers, proprietor, at 607 South Levee, where buildings occupying the whole block had been secured, and power, presses, and sieves, with cleaning apparatus, erected. The capital invested (one hundred thousand dollars) has been increased, and the yearly value of the products amounts to more than three hundred thousand dollars, the factory employing one hundred and fifty hands, and manufacturing five thousand barrels of oil and five thousand tons of cake. A ready market is found in Europe, where the oil is manipulated into salad- and olive-oil.

The receipts of petroleum at St. Louis during the years from 1877 to 1881 were:

Years.	Receipts.
1881.....	{ 106,023 barrels. 1,400 tanks.
1880.....	{ 68,928 barrels. 1,320 tanks.
1879.....	{ 62,707 barrels. 897 tanks.
1878.....	{ 61,651 barrels. 842 tanks.
1877.....	{ 109,053 barrels.

Lard-oil was made by three firms in 1881, who employed twenty-five hands, whose wages were thirteen thousand one hundred dollars annually. They transacted a yearly business of five hundred and fifty thousand dollars, and the capital invested was ninety-six thousand two hundred dollars.

Dry-Goods.—The dry-goods trade of St. Louis has gradually expanded from the humble transactions of 1808 until at this writing the city offers a market to buyers surpassed by none in the country for variety, extent, and cheapness.¹

On the 23d of July, 1808, the following announcement was made in the *Missouri Gazette* :

¹ "It must not be understood by the reader that a merchant at that time approximated at all in his business relations to the merchant of to-day. A place occupying but a few feet square would contain all of their goods; and, indeed, during the period of the first growth of St. Louis a merchant kept all of his goods in a chest or box, which was opened whenever a purchaser would appear. Sugar, coffee, gunpowder, blankets, paint, spices, salt, knives, hatchets, guns, kitchen-ware, hunting-shirts, and every variety of coarse dry-goods were stored together.

"Owing to the tediousness of navigation, the prices demanded for all articles of importation were enormous. Sugar and coffee were each two dollars per pound, and everything else in proportion. Tea was almost unknown until the advent of the United States government. Articles now regarded as indispensable to human existence, and occupying a low position in the scale of human comfort, were then esteemed the greatest luxuries, and so expensive as to be enjoyed only on state occasions, and then with parsimony."—*Edwards' Great West*, p. 289.

"I will sell to the highest bidder for cash, on Tuesday, the 3d of August next, at ten o'clock A.M., at the house of Mrs. Labadie, in the town of St. Louis, an invoice of goods amounting to between seven and eight hundred dollars, viz.: Best Cognac brandy, that has been more than three years in cedar at this town; dry-goods, consisting of cloths, strouds, chintzes, calicoes, muslins, Irish linen; saddlery, chewing tobacco, etc., and a large quantity of well-assorted castings and hardware.

"As the sole object of the sale is to raise the aforesaid sum of money, the goods must be sold, fetch what they will; therefore great bargains will be given.

"JERE. CONNOR, Auctioneer."

Wilkinson & Price were transacting business August 2d at Papin's old store. September 14th, St. Louis furnishes the first big advertisement to the *Gazette*, viz.: "Hunt & Hankinson have received, in addition to their former stock, and are now opening a general assortment of merchandise, which they will sell at the most reduced prices for cash, viz.: Tin and hardware, medicines, stationery, saddlery of all kinds, wrought nails, cut do. of all sizes, men's hats, women's do., wool do., boots and shoes, ladies sprig'd kid and morocco shoes, plain do., Jefferson do., children's do., Lisbon wine, claret do., Cognac brandy, Imperial tea, Young Hyson do., Hyson skin do., loaf sugar, lump do., Muscovado do., coffee, chocolate, mustard, box raisins, best Spanish cigars, dry-goods," etc.

Jacob Philipson announced in the *Gazette* of Nov. 9, 1808, that he was "opening at his new store, opposite post-office, a seasonable supply of dry-goods and a general assortment of groceries, among which are blankets, shoes, madder, and turkey red, linseed-oil, tanners' do., fresh teas, coffee, chocolate, and sugar, shad, mackerel, a few German and English Bibles, Testaments, hymn-books, etc., all of which he intends selling for cash at reasonable prices."

As indicated by the advertisements given above, the dry-goods store of the olden time was a variety-shop, such, for instance, as that of "Z. Mussina, just arrived from Philadelphia via Pittsburgh, with a large assortment of dry-goods, groceries, queensware, ironmongery, tin-ware, paints," which he offered "for sale at the old stand of Madame Labadie (lately occupied by A. C. Dunn) and opposite to Mr. Jacob Philipson." About this time also H. Austin & Co., of Ste. Genevieve, have a displayed advertisement. They offer to sell "brown, drab, and mixed broadcloths at from \$2 to \$6 per yard; 1000 yards of calicoes from 50 to 75 cents per yard; cotton laces from \$1.25 to \$2.50; best green coffee at 62½ cents per pound; loaf and lump sugar at 50 cents per pound. Goods purchased in New York for cash, and will be sold as low as any in the Territory for cash, or lead at \$6 per 100 pounds, delivered at Ste. Genevieve or Herculaneum."

The following advertisements indicate the character of the trade and give the names of the merchants who conducted it during this year (1809):

April 26.—"Falconer & Comegys have just received and offer for sale at reasonable prices, at St. Louis and Ste. Genevieve, merchandise suitable for the approaching season."

May 24.—"For sale, 300 yards fine country linen, 1400 yards tow linen, 1500 pounds nails, 2000 gallons old whiskey, also a quantity of white rope. The above-mentioned articles will be sold by the quantity for cash, as low as first cost and carriage from Lexington, Ky., to this place. Those who wish to purchase will please call at the house formerly occupied by Mr. P. Leduc, opposite Alexander McNair's. GEORGE DALE."

July 26.—"The subscriber has opened in the store formerly occupied by Messrs. Hunt & Hankinson an assortment of dry-goods, groceries, and hardware, which he is determined to sell at reasonable terms. MATTHEW KERR."

September 13.—"Merchant tailor. Bernard Lalende, lately arrived from Bordeaux, takes the liberty to inform the public that he intends to follow the tailoring business in all its branches. He also takes this method of informing the ladies and gentlemen that he will sell at his shop cloth and other stuff, handkerchiefs, thread, wine, coffee, and Imperial tea, also an assortment of the best fiddle-strings."

September 13.—"P. Berthold and Paul, lately arrived from Baltimore and Philadelphia, offer for sale a very elegant assortment of dry-goods and groceries at very moderate prices for cash. They keep their store at Mr. Valois', Main Street."

December 21.—Bernard Pratte and John P. Cabanné announced that they had fresh goods on hand at "Pratte's old corner, Main and Market Streets."

December 26.—"William Shannon is now opening at the house of Francis Benoit a complete assortment of goods suitable to the present and approaching season."

During this year (June 7th) the dissolution of the firm of Hunt & Hankinson (Wilson P. Hunt and John Hankinson) was announced, and Henry M. Shreve & Co. (Fergus Moorehead) advertised a stock of goods next to Robidoux's residence, Block 6. On the 27th of September, Jacob Philipson announced the removal of his store to next above Gratiot's; and Falconer & Comegys advertised their store "in Labadie's store-house."

In 1810 the *Gazette* contained the following announcements:

January 11th.—"Just received an assortment of dry-goods and groceries, for sale at reasonable terms, also a keel-boat seventy feet in length. SAMUEL PERRY."

February 20th.—"F. Menard has the honor of informing the public that he is now opening, at the house of Mr. Pierre Chouteau, the following articles, which he will sell at wholesale or retail on very low terms: Sugar per one hundred pounds, \$20; coffee per one hundred pounds, \$40; Marsilles soap, dry-goods, Russia sheeting, brown linen, blankets, French brandy, rum, claret, etc."

April 19th.—"George Pescau, just from Philadelphia, with fresh goods, opened in the house of the late Mr. Robidoux."

April 23d.—"H. M. Shreve and Fergus Moorhead's store in Robidoux's log store, in block No. 6."

April 26th.—"Thomas Hickey, tailor and ladies' habit-maker, has commenced business on the Public Square, nearly opposite Col. Chouteau's."

April 26th.—"H. M. Shreve & Co. have brought from Philadelphia and opened at St. Louis a complete and general assortment of dry-goods, groceries, hardware, china, and queensware, iron, steel, castings, and stationery, at the most reduced

prices. They have opened at Ste. Genevieve an assortment of the above-mentioned goods, which shall be sold at reduced profit."

April 26th.—"Wood & Dunn have just arrived from Philadelphia, and have opened in St. Louis a general assortment of dry-goods suitable to the season, also groceries, queens and hardware, etc. They have also opened in Ste. Genevieve an assortment of dry-goods, groceries, hardware, etc."

May 10th.—"J. G. Comegys & Co. just returned from Philadelphia with a large stock of fresh goods, opposite Charles Gratiot."

July 12th.—"Patriek Lee, auctioneer, broker, and commission merchant, informs the public that his store near the post-office is well provided with dry-goods and groceries, which he will sell at a moderate price. He has commenced the business of a broker and auctioneer in the town of St. Louis, and will execute with the greatest punctuality the orders of such persons as may address themselves to him in that line."

September 20th.—"Horace Austin is opening at the old stand of Messrs. Falconer & Comegys a handsome assortment of dry-goods."

About this time the terms of sale were harter and exchange rather than cash. When "a heap of whiskey and peach brandy" were offered by Frederick Yeiger (1811) for "heef hides," with the remark, "no credit, as he can't write," it is not surprising that "Joseph Bouju, clock- and watch-maker, silversmith and jeweler," should offer for sale "cherry hounce, ratifia de Grenoble, whiskey, a gig and harness, with his keelboat and apparatus."

On Jan. 12, 1811, Jacob Philipson offered his goods "low to close out."

February 14th, Moses Scott advertised his store, "next above Baird's shop," and on May 22d McKnight & Brady informed the public that they had on hand a large stock of fresh goods opposite the residence of Gen. William Clark (Papin's old store).

Christian Wilt, from Philadelphia, advertised his goods July 25th, in Mussina's stand, and Depestre, De Mun & Co. announced September 11th that they were just from Philadelphia and Baltimore with an assortment of new goods.

In May, 1812, it was announced that McNair, Thompson & Co. had just opened a handsome assortment of merchandise from Philadelphia and Pittsburgh in Madame Rohidoux's house (Block 5), and that J. F. Laveille, just from New Orleans, had opened a new store in Madame Chouteau's house (Block 33). On the 6th of June the dissolution of the firm of Berthold & Paul was announced, and on the 17th of September the closing out of the business of Depestre & De Mun. On October 10th it was stated that Smith, Von Phul & Co., of Lexington, Ky., had dissolved, and that Smith & Von Phul would continue; and on November 6th that Veuve Pescay and Michael Tesson had dissolved the partnership existing since February, 1811, and that M. Tesson would continue alone.

During 1813 the following advertisements among others appeared:

January 9th.—"To the Ladies. Shawls, fine muslins, honnets, laces, etc., for sale at a moderate price. M. TESSON."

June 19th.—"Berthold & Chouteau have on sale a general assortment of dry-goods, groceries, hardware and crockery, etc."

November 13th.—"McKnight & Brady have just received from Baltimore an additional supply of woollens; will be sold for cash at their store on Main Street, opposite Governor Clark's."

On the 31st of December, 1814, McKnight & Brady gave notice that they had sold their stock and desired their accounts settled up.

Peter Lindell & Co. announced Nov. 26, 1814, that they would close their business on the 1st of January, 1815.

About the close of the war of 1812, say in 1816, there was quite an influx of men of business and capital to St. Louis. Some who, doubtless, during the war had studied its advantages decided that it was equally adapted for trade in peace, and the close of the war having given a great impetus to settlement in Illinois and Missouri, all these new settlements, as well as the old ones, began to look more and more to St. Louis as their place of obtaining supplies. Among those who came here at or about that time as merchants or engaging in mercantile pursuits were Col. John O'Fallon, Peter and Jesse Lindell, and Henry Von Phul. Others came after them, among them George Collier and James Clemens, Jr. Among the other merchants of St. Louis about this time were Thomas and John Cromwell, Charles W. Hunter, Isaac Bennett, Theodore Hunt, James Kennerly, Smith & Spicer, Thomas Hanly, René Paul & Co. ("new goods from Philadelphia and Baltimore in his new store-house," Block 4), John B. Herpin & Son ("new store from Philadelphia in Patrick Lee's former stand," Block 37), Stephen R. Wiggins, Patrick M. Dillon (at the house of Maj. P. Chouteau, Main Street, Block 28), John Little, Porter, Glasgow & Nivin, Maddock & Duval, and Charles Wahrendorff, who advertised German goods at Perkins & Drip's store, opposite the post-office. One of the leading business men and influential citizens of St. Louis about this time was Thomas Forsyth, who was a prominent figure in the early history of Illinois and Missouri. His father, William Forsyth, was a native of Aberdeen, Scotland, who came to America in 1757. After a short stay in Philadelphia he went to Canada, and was wounded in the battle of Quebec, where both Wolfe and Montcalm fell. He married in Canada and settled in Detroit (then a British town), where, Dec. 5, 1771, Thomas Forsyth was born. The boy received a plain but practical education, which qualified him for both the public and private business in which he afterwards engaged.

In 1793, Thomas Forsyth left Detroit, in company with his half-brother, John Kenzie, the founder of Chicago, and for several years engaged in trade with the Illinois Indians. In one of his Eastern trips he met and married a lady named De Maillot, of Hagerstown, Md., and in 1809 settled at Peoria, Ill. During the subsequent Indian troubles he exercised a great influence over the savages, especially the Pottawatomies, years of dealing with them having given him a perfect knowledge of their language and disposition.

To the Governors of both Missouri and Illinois he repeatedly conveyed intimations of threatened hostilities, and while he could not always avert war, he was able to do much to mitigate its horrors.

In recognition of his services he was appointed Indian agent at Peoria, with full power to act in case of an emergency, but the appointment was kept secret lest he should lose his influence over the tribes. After the massacre at the site of Chicago, in August, 1812, Mr. Forsyth, at the risk of his life, went directly to the Indians and secured the ransom of some of their captives. This was a most dangerous service, for had the Indians been aware of the fact that he was a government agent, he would no doubt have been burnt at the stake. It required the utmost sagacity and the greatest tact and skill to conduct these negotiations so as to retain the confidence of suspicious Indians; but his uniform kindness towards them and, above all, his unvarying candor and truthfulness in dealing with them gave him great influence and caused them to trust him implicitly. More than once his life was imperiled by the machinations of enemies who sought to compass his death at the hands of the savages, but his tact and good fortune always enabled him to escape.

Mr. Forsyth acted as agent for the Illinois Indians during the war, and when peace was declared he was intrusted with a still more responsible duty,—that of agent for the Sac and Fox Indians. He made treaties with these nations, which were always ratified by the government, and was charged with the distribution of large sums of money and great amounts of merchandise, which duty he performed with the strictest honesty and with marked ability. He retained this agency for many years, and it is thought that had he continued to hold the office the Black Hawk war would not have occurred.

He finally removed to St. Louis, and resided in the little village for several years, at the same time performing the duties of Indian agent and visiting Peoria as often as was necessary. He bought eight hundred acres of land owned by Jean Marie Papin (the progenitor of the Papin family), and forming a large part of what is now Forest Park, where he resided for the rest of his life, dying in 1832.

Nature bestowed upon Thomas Forsyth a sound and well-balanced mind in a sound and athletic body. He was a gifted talker and a most pleasant and entertaining companion. Benevolence and kindness of heart were his predominant traits. He occupied a prominent position in the community, as was due to one who had performed important public services. His private life was amiable and blameless, and he

died universally esteemed and regretted. He left four children,—John, who died at the age of twenty-one, while studying medicine with Dr. Farrar; Thomas, who was a rover, and died away from home; Mary, who married a French gentleman named Bouis and died within a year thereafter; and Robert, who was born in 1808 and died Nov. 1, 1872.

Robert Forsyth was a farmer, leading a quiet life of ease on his estate in St. Louis County, and was a respected citizen. He married Miss Anna M. Culver, of Pensacola, Fla., and left three children, all of whom are yet living,—William Forsyth, a resident of Kirkwood, near St. Louis; Mary, who married Dr. G. H. Morrill, and lives in St. Louis; and Laura, who married E. M. Tesson.

On Oct. 18, 1817, it was announced that Berthold & Chouteau's partnership had expired, and that A. P. Chouteau, De Mun, and John B. Sarpy would open there. November 29th it was stated that "Thomas Estes' one hundred thousand dollar" stock of goods had just been opened "in the store lately occupied by R. Collet, lower end." December 6th notice was given of "Gabriel and René Paul's large stock opening in R. Paul's stone house, North Main Street." Sanguinet & Bright advertised their store, December 13th, on Block 6, nearly opposite the post-office, and Bernard Pratte gave notice, December 13th, of his removal to his new brick house between Clemens' and Smith's stores. About this time Thomas McGuire & Co. transacted business "opposite Governor Clark's, lately M. Scott."

On the 23d of January, 1818, James Brand announced "a new stock from Philadelphia in the house formerly Sergt. Hall's printing-office;" on the 30th it was stated that "Thomas Estes has removed to the house formerly Peebles' tavern and since S. R. Wiggins' store;" February 13th, L. W. Boggs and Thomas Hanly gave notice that they had dissolved partnership, Boggs having purchased Hanly's interest. March 12th, Renshaw & Hoffman gave notice that they were just from Baltimore, "with all new goods, at the store formerly Collet & Daily's;" May 1st, J. Macklot & Co. advertised their goods in the store "lately M. Scott's, opposite the Indian office;" June 12th, Thomas P. Williams & Co., in the store recently occupied by Perkins & Drips; July 1st, Renshaw & Hoffman "removed to the centre frame store of the three recently put up by F. Dent, on Smith's lot, opposite Von Phul & Co., 'Sign of the Plow;'" July 24th, James Ciemens & Co., third door above the market on Main Street (Smith's store); July 31st, Samuel R. Ober, large stock new goods next below Collet & Daily, Block 37; August 19th, William Prout & Son,

ROBERT FORSYTH

"new goods just opened in Clark's old Indian office, opposite Porter, Glasgow & Nivin;" September 4th, Edward Tracy, just from New York, with new goods at the store of Dent & Rearick; September 4th, Jonathan Guest "has just opened his new goods in Maj. Douglass' new brick house," Elm Street; September 11th, Charles Wahrendorff & Co. "removed to next below the new banking-house, opposite to James Clemens';" September 25th, Jonathan Guest removed to Pratte's warehouse, at the lower corner of Market Street; December 1st, Thomas Hanly removed "to his new brick on the river;" December 4th, René and Gabriel Paul dissolved partnership, R. Paul retiring; December 11th, Gabriel Paul advertised an "auction and commission house, in R. Paul's stone house."

About 1819 business began to be classified, and there were separate dealers in groceries, in dry-goods, in hardware, although many houses still continued to deal in mixed merchandise; but Scott & Rule (Capt. Scott and William K. Rule) established a house in St. Louis almost exclusively for the sale of groceries, chiefly brought from New Orleans. Then there were Shackford & Ranney, then Gay & Estes, doing each a large business in the grocery line; James Clemens, John Smith, the Powels, Warburton, and several others almost exclusively dealers in dry-goods. On the 15th of January of this year James and George H. Kennerly advertised their business as being conducted in Clark's brick house, Block 10; January 22d, Dent & Rearick, Main Street, opposite H. Von Phul & Co., Block 33; February 3d, Chouteau & Sarpy removed to the store between Moses Scott and the old Indian council-house; February 10th, Christian and Andrew Wilt's new firm was advertised, and on the same day G. Paul's auction-room, "in his new brick house, opposite the theatre, Main Street," Block 11; April 7th, Renshaw & Hoffman "have removed next door north, lately Dent & Rearick, large warehouse in the rear;" April 28th, Charles W. Hunter "has removed from M. Kerr's old stand diagonally opposite his former place;" June 2d, Michael and Francis Tesson, copartnership; June 9th, partnership of Thomas Collet and Michael Daily dissolved, and a copartnership formed between Michael Daily and Madame Pescay; June 23d, Joseph Wiggins "removed to No. 2 in Chouteau's new brick row, nearly opposite Bank of Missouri;" June 30th, Julius de Mun, "new stock in M. Lisa's new house, opposite the *Enquirer* office;" July 24th, David W. Tuttle removed to No. 3 in Chouteau's new brick row, nearly opposite the Bank of Missouri; August 4th, James Timon & Son, new store next above Riddick's auction-house, late

Low & Trask; August 11th, David E. Cuyler "has a lot of goods for sale in Mr. Dillon's new brick store, opposite the Farmers' and Mechanics' Hotel;" December 8th, Theodore Papin and Joseph Amoreaux "have purchased the stock of Macklot & Co., and will continue the business in Gratiot's stone store;" December 23d, Charles Billon removed to his new establishment, North Main, at the corner opposite the old Gratiot residence; December 29th, Thomas Estes removed to No. 2 of Col. A. Chouteau's new brick row, South Main Street.

In 1820 the following firms advertised: January 5th, Castillo & Gilhuly, store in Moses Scott's former stand, South Main Street; January 19th, Joseph Hertzog, from Philadelphia, "will continue the business of C. & A. Wilt at the same place;" January 26th, William H. Savage; March 8th, Gilhuly & Cummins' store, in McKnight & Brady's brick house, north of the corner store; March 29th, Hastings & Simpson's store, South Main Street, in Collet's brick building; Samuel R. Ober, next below Hastings & Simpson; April 8th, Joseph and Francis Robidoux removed their store from old stand to Papin's brick house, Block 32; April 10th, "Charles Wahrendorff & Co. have dissolved;" April 19th, John Shackford & Co., third in Chouteau's brick row; May 3d, the new firm of Tracy & Wahrendorff formed "in old stand;" May 30th, Nathaniel D. Payne's new store, North Main Street, in Auguste P. Chouteau's new brick house; August 9th, George Burchmore, new goods; August 17th, Paul & Ingram, from Philadelphia, dry-goods, etc., in No. 1 in Auguste Chouteau's new brick row, Block 7; August 23d, Giles and John Samuel, merchants, in R. Paul's stone corner house, North Main Street.

From this mixed beginning the dry-goods trade of St. Louis sprang, just as the present magnificent city rose from the humble abodes which preceded the palaces and warehouses that now attract the admiration of every visitor.

The well-known wholesale and retail dry-goods house of William Barr & Co. was established in 1849, the original location being at the corner of Third and Market Streets; but after a few months the establishment was removed to the corner of Fourth and Olive Streets, where it remained until 1857. In that year the firm removed to a building which was afterwards enlarged until it occupied the entire block bounded by Third, Fourth, Vine, and St. Charles Streets. The present quarters of the firm, which is known as the William Barr Dry-Goods Company, and composed of William Barr, Charles H. Berking, and Joseph Franklin, are a handsome and imposing

structure located on Sixth Street, extending from Olive to Locust.

The failure of the Illinois banks in 1842, the low price of produce, and the stagnation of business in the West contributed to bring on a crisis in St. Louis. Many business men found themselves, after years of toil, left without a dollar; and the most fortunate were content if, by the sacrifice of all their past profits in trade, they could preserve their credit, and be prepared to commence business anew when the storm passed over. It required some two years to relieve the country of its embarrassments, to restore

taken place in various firms, some lost their books by the great fire of 1849, and others again declined giving any statement, although assured that it should be strictly confidential."

The statements of the business of six dry-goods houses were obtained, which sum up as follows:

Sales in 1845.....	\$1,119,057.20
" 1853.....	4,074,782.01
Increase in eight years.....	\$2,955,724.81

There were over twenty wholesale dry-goods houses, besides those situated near the North Market and o

confidence and give a healthy tone to trade, especially in a city like St. Louis, where men had to rely mainly upon their own capital, being limited to one bank, with a capital of only six hundred thousand dollars.

From 1845 business maintained a steady and healthy growth, and "we have endeavored," says a local journal, "to gather some statistics illustrative of this fact. We have found difficulty in attaining our object, which was to give the business of the same houses in 1845 and 1853. Some of our business men have died, others have retired, changes have

Carondelet Avenue, nearly the same number, that transacted a large jobbing and retail business.

The above statement embraced two of the largest houses, and it also embraced two that were considered among the small houses in amount of business.

Another long-established firm in the dry-goods trade is that of Samuel C. Davis & Co., whose name is one of the business landmarks of St. Louis. The founder of the house, Samuel C. Davis, first came to St. Louis from Brookline, Mass., and began business in a little store at Market and Commercial Streets, then the business centre of the town. His partner was

J. R. Stanford. In addition to the dry-goods business the firm conducted a flourishing trade in boots and shoes and groceries. Mr. Stanford finally retired, and John Tilden and Eben Richards were admitted into partnership. In 1849 the house escaped the great fire, and in 1857 the business was removed to Nos. 8 and 10 North Main Street. In 1867, Mr. Tilden and Mr. Richards retired, and the house was then composed of Samuel C. Davis, Andrew W. Sproule, and John T. Davis, who still remain the partners in the firm. In 1872 the grocery department, and in 1873 the shoe department, both of which had been removed to No. 12 Main Street,

the reception and delivery of goods. The basement extends under the sidewalk of the streets, and is lighted by thick glass set in iron-work overhead. The building is amply provided with conveniences for the prompt and speedy handling of goods, and the establishment is altogether one of the most complete, as it is one of the most extensive, in the West.

About 1850 the leading dry-goods house of St. Louis was that of Rutherford & Day. Franklin O. Day, the junior member of the firm, and afterwards one of the most prominent merchants of the city, was born in Burlington, Vt., Oct. 31, 1816, both of his parents being natives of that State. His ancestor,

SAMUEL C. DAVIS & COMPANY,
Washington Avenue and Fifth Street.

were sold, and the house thenceforward restricted itself to the dry-goods trade. In August, 1871, was commenced the erection of the present magnificent building at the northwest corner of Fifth Street and Washington Avenue, which was completed and occupied in March, 1873. This structure, which is in the Italian style of architecture, and of spacious and imposing appearance, has a frontal of one hundred and seventy-five feet on Fifth Street by one hundred and twenty-five feet on Washington Avenue, and contains, including the basement, six floors. In the rear of the immense building there is a broad, paved area, left open to insure sufficient light and to facilitate

Robert Day, came to America from England with his wife, Mary, in 1634. It is a family tradition that the Days originally came from Wales, the name having been Dee, but in time it came to be written Daye or Day, to agree with the pronunciation.

Mr. Day received a common-school education, but at a very early age evinced a desire to obtain a knowledge of business in order that he might earn his own livelihood, and when a mere boy was employed in his father's dry-goods house. At the age of seventeen he left home and went to New York, where he obtained a situation in the same business. Two years later (when nineteen) his father's sudden death called

him home, and being the eldest son he settled his father's estate, and proved himself already to possess excellent business qualifications.

At the age of twenty-two he formed a partnership for the sale of dry-goods at Northfield, Vt. The business does not appear to have been a very large or paying one, for in three years he abandoned it and removed to St. Louis with only two hundred dollars. It is believed that this money was the fruit of his own industry and thrift, for he appears to have always taken care of himself after leaving home, and there is no record of his having received anything from his father's estate.

Upon arriving at St. Louis (in 1842 or 1843) he was employed by T. S. Rutherford in the wholesale dry-goods business, and so distinguished himself for efficiency that about January, 1845, he was admitted as a partner by Mr. Rutherford, the firm being T. S. Rutherford & Co. Four years later a second partnership was formed under the title of Rutherford & Day. Mr. Rutherford, who is still living (1882), continues to speak in the highest terms of the qualities shown by Mr. Day thus early in his business career.

During the latter years of his partnership with Mr. Rutherford the California excitement prevailed throughout the West, and St. Louis was the starting-point of numerous expeditions overland. A favorite speculation which brought fortunes to many was the shipping of live-stock across the plains to the Western El Dorado. After dissolving his partnership with Mr. Rutherford, Mr. Day engaged in a venture of this kind, accompanying a herd to California in 1853, but was too late to reap the expected profits, although the scheme was far from being a failure. His partner in the speculation was Mortimer Kennett, and the wearisome overland journey consumed six months.

In 1854, Mr. Day returned to St. Louis, and in the following year established himself in the wholesale liquor business with Charles Derby, the firm being Derby & Day. This enterprise, like everything undertaken by Mr. Day, prospered, and from quite a moderate beginning grew to be one of the largest interests of the kind in the city, its name being a synonym for careful, judicious management and honorable dealing. Mr. Day continued in this business until his death, Feb. 16, 1882. For some years he had been in declining health, but up to within a week of his death was able to visit the office and keep himself informed as to the general condition of affairs.

The leading characteristics of Mr. Day's business life were the exercise of unusual tact and foresight and the avoidance of all hazardous enterprises. As a result of his steady application to business he amassed

a fortune, at one time very large, consisting of valuable real estate in various portions of the city. Its value afterwards shrank somewhat, but he still left his family an estate estimated at perhaps half a million. He was a public-spirited property-owner, and but a short time before his death erected several very handsome five-story buildings on Locust Street, near the Equitable building, corner of Sixth Street.

On the 2d of October, 1849, Mr. Day married Lavinia M. Aull, who was born in Lexington, Mo. At his death he left a wife and four children, three sons and a daughter, the latter married to J. R. Truesdale, formerly of Pittsburgh, Pa., and now a leading business man of St. Louis. Of the sons, Frank P. Day and Lawrence W. Day were associated with their father in the establishment, and have practically succeeded to the management, in which capacity they have shown the possession of excellent business qualifications.

Mr. Day was associated in many important public enterprises, such as the St. Louis Bridge, the Merchants' Exchange, etc., and was a director in the Merchants' National Bank, the Franklin Savings-Bank, and the Boatmen's Insurance Company.

In one respect Mr. Day will long be held in grateful remembrance by all lovers of the beautiful. He was a man of fine taste, and was among the first in St. Louis to exhibit the desire to collect works of art. Among the famous pictures which he owned from time to time was "Paying the Rent," by Erskine Nicol, which took the second prize at the Paris Exposition of 1867. Mr. Day paid ten thousand dollars for this picture, and subsequently sold it to William H. Vanderbilt, whose gallery it adorns. Mr. Day also extended hearty encouragement to the establishment of art societies, etc.

Mr. Day was not a member of any church, but attended the Holy Communion (Episcopal), to which members of his family belonged. He was one of the most liberal contributors in the parish, and had a high appreciation of the worth of religion in matters of every-day life.

Among the business men of St. Louis who have been prominent within the past thirty or forty years few achieved a more substantial and meritorious success than did Mr. Day, and among those who have passed away none were more generally or deeply regretted than he. Many have lived and died who made a much more pretentious figure, but none possessed in richer store the essentials of true manhood, as exemplified both in business and in private life. Franklin O. Day and the class to which he belonged were worthy successors to the remarkable men who founded

St. Louis and set upon it the seal and signature of future greatness.

One of Mr. Day's most active and successful contemporaries in building up the dry-goods trade of St. Louis was Daniel W. Bell. Mr. Bell was born Feb. 27, 1831, at Salisbury, Md., and was the oldest son of Henry Bell, for many years a leading wholesale merchant of Lexington, Ky. Daniel W. Bell received his business training in the wholesale and retail store of his father in Lexington, and his scholastic education was obtained at Transylvania University. He began as salesman, but developing great commercial ability, he was after a few years admitted as a partner. He had a thorough knowledge of the trade, and was favorably known for his industry and integrity.

In 1857, Henry Bell & Son opened a wholesale dry-goods house in St. Louis, the management of the business being intrusted entirely to D. W. Bell, under whose personal supervision the house grew to be one of the most important west of the Alleghenies. At the beginning of the war it was merged into that of Henry Bell & Son, and continued until 1875, when Henry Bell withdrew from the business, which was carried on by D. W. Bell, who died Sept. 4, 1877.

Another house which has contributed immensely to the development of the dry-goods trade of St. Louis is that of Scruggs, Vandervoort & Barney, the members being Richard M. Scruggs, Charles E. Barney, Gustavus A. Scruggs, and William L. Vandervoort. The firm has long been one of the commercial institutions of the city, and occupies a fine warehouse, 421 to 425 North Fourth Street.

Richard M. Scruggs was born in Bedford County, Va., Feb. 10, 1822, of a well-known and prominent family. The only educational advantages he enjoyed were obtained at the "old field school," taught, as was common in those days, for a few months in the year by the most competent person living in the neighborhood. At the age of fifteen he entered a dry-goods store at Lynchburg, Va., where he remained for eight years. He was repeatedly promoted until he became the confidential clerk and book-keeper of the concern, which was the leading one of its class in the place. One of the partners having sold his interest, Mr. Scruggs accompanied him to Richmond, Va., where he held the same confidential position in his establishment for two years. He then started out to seek a new field in the South. He intended to settle at New Orleans, but passing through Huntsville, Ala., the beauty of the place and the attractions of its society induced him to remain there, and he entered the branch office of a large New Orleans cotton house as confidential clerk.

In May, 1849, he visited St. Louis, where he determined to settle, and in March, 1850, became a resident of the city, engaging in the retail dry-goods business in the firm of McClelland, Scruggs & Co. From modest beginnings the business grew rapidly, and the firm ultimately became one of the leading houses of its class in St. Louis. In 1860, Mr. Scruggs withdrew from the establishment, which passed into the hands of W. L. Vandervoort & Co., and in 1861 he assisted in organizing the wholesale dry-goods firm of McClelland, Pye & Co. In 1862, however, the derangements occasioned by the war rendered the discontinuance of the enterprise advisable. In 1865 he re-entered the retail business, the firm being Vandervoort, McClelland & Co. In 1868, Mr. McClelland retired, and the present firm of Scruggs, Vandervoort & Barney was organized, Mr. Barney having been a valued employé of the establishment since 1860, and for several years junior partner in the company.

The career of the house of Scruggs, Vandervoort & Barney has been characterized by an uninterrupted and generally increasing prosperity, and it may justly be ranked with the most prominent concerns of the kind in the country. As head of the firm, and as manager to a certain extent, Mr. Scruggs may be held (without detracting from the credit due to his efficient partners) to have prominently contributed to this result. His characteristics as a business man are unswerving integrity, careful attention to the financial details of the establishment, keen perceptive faculties, a ready and sound judgment, and a hearty enthusiasm in all he undertakes. His energy and aggressiveness have made him a popular and useful citizen, and his services are constantly in demand to push forward works of a public nature. Personally, he is sympathetic to a high degree, and gives freely but systematically and judiciously. Not only his means but his time have been largely given for the public benefit. For many years he has been a director in the Mercantile Library, and in 1870-71 was president of that corporation. He has long been a member of the board of commissioners to administer the Mullanphy Emigrant Relief Fund, and was unanimously elected president, serving from July, 1879, to October, 1881. For many years also he has been connected with the Missouri School for the Blind, and for two years has been, and is still, president of the board of directors. He has been often solicited to accept offices of a political nature, but shuns publicity and has invariably declined.

For several years Mr. Scruggs has been a member of St. John's Methodist Episcopal Church (South).

Beginning his church experience somewhat late in life, he quickly developed a remarkable fitness for religious work, and became a leader in all the church enterprises, religious as well as material. For seven years he has been superintendent of the church Sunday-school, and in this capacity has been remarkably successful. For about four years he has also been superintendent of the afternoon Sunday-school of the Page Avenue Methodist Episcopal Church. He is a trustee and steward in St. John's Church, and as a

of the representative houses of the Mississippi valley. J. H. Wear associated with him John W. Hickman, under the firm-name of Wear & Hickman, in the wholesale fancy dry-goods business in 1863. The original location was at the corner of Main and Chestnut Streets, where they remained until 1865, when they removed to 319 North Main Street. In 1867, Mr. Hickman withdrew, and the firm-name was changed to J. H. Wear & Co. His quarters having become too circumscribed for the business,

J. H. WEAR, BOOGHER & CO., DRY-GOODS,
Sixth and St. Charles Streets.

member of the official board has sought to infuse into church management as much of business-like principles and methods as possible. His counsels in church matters are always large-hearted and generous, and he infuses as much life and spirit into his religious undertakings as he does into his secular concerns. Though zealous in the cause of Methodism, Mr. Seruggs is free from narrow sectarianism, and gladly extends a hand to those of other denominations as co-workers in religious effort.

The firm of J. H. Wear, Boogher & Co. is one

Mr. Wear removed in the spring of 1871 to No. 508 North Main Street. Another removal soon became necessary, and on the 1st of January, 1875, the firm occupied the six-story building at the corner of Fifth Street and Washington Avenue. The present quarters are at the southwest corner of Sixth and St. Charles Streets. The firm is composed of J. H. Wear and Jesse L. and John P. Boogher.

One of the earliest dry-goods merchants of St. Louis was Wayman Crow. Mr. Crow removed to St. Louis from Kentucky in 1835, and opened a dry-

goods jobbing-house under the firm-name of Crow & Tevis, his associate, Terhune Tevis, residing in Philadelphia. Then all, or nearly all, the business was confined to the Levee (Water Street then) and Main Street, and the new firm located themselves temporarily at the corner of Water and Oak Streets) (the latter now known as Cherry), removing in the next spring to the stone house at the corner of Main and Olive Streets, which had been the residence of Col. René Paul. Of all the merchants engaged in business at the time the firm of Crow & Tevis began operations, none now remain actively engaged in trade. At that date the lines of communication between St. Louis and the East were by river to New Orleans, and thence by sea and by river to Pittsburgh, and thence by wagons to Philadelphia. Sixty days was then quick time between New York and St. Louis, and purchases of goods for the spring sales of March and April were made in the preceding September; those for the fall sales were made in June and July, and the arrivals of boats from New Orleans and Pittsburgh with the season's stock of goods for the different merchants of the town formed marked events. The communication with the interior was even less convenient, and sales were made always upon six months' time, with an indefinite period for collection. Commencing thus with a business of less than one hundred thousand dollars, Mr. Crow has remained at the head of the firm, increasing its business to millions of dollars per annum, and passing through all the financial revulsions that have marked the history of the West, in some of which as high as thirty per cent. interest was paid for the use of money that was even then obtainable only upon pledges of personal property, and not once did his house suspend or fail to meet all obligations promptly at the date of maturity. In 1837 the firm removed to a three-story brick house on the west side of Main Street, at the corner of Locust, belonging to Gen. Ashley, and in 1839 or 1840 to the O'Fallon block, nearly opposite that location. In this last building the firm continued in business until burned out by the fire of 1849, changing its style from Crow & Tevis to that of Crow, Tevis & McCreery, and afterwards, upon the retirement of Mr. Tevis, to that of Crow, McCreery & Barksdale. Up to this time the house had met and successfully passed through two panics, and when their stock of goods was destroyed by the "great fire," the members of the firm instead of faltering, as others of their associates did, were only spurred to greater enterprise. In the fall of 1849, Mr. Crow built a fine four-story brick warehouse at No. 216 Main Street, to which the business was removed.

Shortly after that date Mr. Barksdale retired to engage in the banking business, and the firm-name was changed to that of Crow, McCreery & Co. P. R. McCreery died in November, 1861, and George D. Appleton retired in the succeeding year. The members of the firm then were Wayman Crow, Wm. H. Hargadine, Hugh McKittrick, David D. Walker, and Francis Ely.

In 1871 the firm removed to the new Chouteau buildings, 523 North Main Street (near Washington Avenue), and occupied a handsome warehouse twenty-eight feet front by one hundred and forty feet deep, employing four stories for the storage of goods. The building was provided with all the modern appliances for transacting business with facility, including two elevators, one for the passage of customers from floor to floor, and the other for raising and lowering goods.

A newspaper, in its notice of the removal, remarked at the time, "The contrast between the small building on Water and Oak Streets, where the firm first began business, and the palatial house now occupied by them is scarcely less than that between the St. Louis of 1835 and the St. Louis of 1871, and not more marked than the changes that have been made in the mode and extent of business, the character of and terms upon which sales are made, and the facilities for handling and time of transit of goods from the foreign and domestic looms to the warehouse here and their distribution to interior merchants. The sales of one hundred thousand dollars per annum have increased to two million dollars, while credits have shrunk from six months to thirty and sixty days, with collections as prompt now as they then were dilatory. The country merchants visited the city once in six months, and the business of the year was crowded into two periods of thirty days each, and dullness intervened for four or five months, while now each day brings its quota of purchasers, and upon any day in the winter as much business is done, relatively to the trade of the year, as was then transacted in the three months of December, January, and February. Then the population of the Mississippi valley was confined to a narrow belt skirting the river and its tributaries, and the whistle of the locomotive was an unknown sound. Now, with increased population in all the great States of the valley, and with new regions daily being opened up to our commerce, Mr. Crow seems in his energy and enterprise to emulate his youth and still strive to place St. Louis in the front rank of commercial cities."

The present firm, under the style of Crow, Hargadine & Co., is composed of Wayman Crow, William

A. Hargadine, Hugh McKittrick, and Edward J. Glasgow, Jr. The warehouse, a handsome and imposing structure, is situated at the southeast corner of Eighth Street and Washington Avenue.

The great firm of Dodd, Brown & Co. was established in January, 1866, by Samuel M. Dodd and James G. Brown, who located on the corner of Main and Locust Streets, in a four-story building twenty-five feet by one hundred and twenty feet, and filled it with what was then considered a very large stock. Their sales during the first year aggregated one million two hundred and fifty thousand dollars, giving

who commenced the dry-goods business at No. 418 Franklin Avenue, with a cash capital of two thousand three hundred dollars. From this small beginning they have gradually built up one of the largest dry-goods houses in the country, and having made no less than six large additions to the original building, now occupy an imposing structure at the southeast corner of Fifth Street and Franklin Avenue.

In addition to the above there are a large number of flourishing dry-goods firms in St. Louis, and the trade is of vast proportions. The amount of capital employed in the business was estimated by Joseph

DODD, BROWN & CO.,
Corner Fifth and St. Charles Streets.

them a front rank in the trade. The firm continued business at the original store until 1869, when it removed to 217 North Main Street. In 1871 it erected the present warehouse at the northeast corner of Fifth and St. Charles Streets. It is an immense building, five stories in height with a basement, covering about sixty thousand square feet, and provided with all the conveniences necessary to facilitate the vast business of the firm. The house as at present constituted is composed of Samuel M. and Marcus D. Dodd, James G. Brown, and Hamilton Daughaday.

The firm of D. Crawford & Co. was established in 1866 by Dugald Crawford and Alexander Russell,

Franklin, of the William Barr Dry-Goods Company, in 1880, at \$10,000,000, and the amount of business annually at \$35,000,000. From 1870 to 1880 the trade had doubled in the aggregate.

In 1881 twelve exclusively wholesale and importing houses were engaged in the trade, besides seven dry-goods commission houses and one wholesale and retail house, making a total of twenty houses engaged in wholesaling dry-goods. The business transacted during the year amounted in value to over \$28,000,000. In addition to the wholesale houses there were 207 retail establishments in St. Louis.

Closely allied with the dry-goods trade are the

wholesale fancy goods and notions and the wholesale millinery and straw goods trades. In the fancy goods and notions trade twenty-four wholesale houses were engaged in 1881, their business annually amounting to about \$8,000,000. The number of wholesale and retail houses engaged in the same trade, in addition to the twenty-four houses referred to, was 183. In the wholesale millinery and straw goods business eleven large concerns were engaged, with a business amounting to more than three million dollars per annum, besides which there were eighty-eight millinery firms.

The extensive carpet and curtain house of John Kennard & Sons, long eminent in enterprise and business standing, is the oldest house in the special line of goods dealt in in the whole West, and the largest house in its trade west of New York. It has occupied the same locality for twenty-seven years, during which time its business connections and volume of trade have steadily and continually increased, and its reputation for taste and judgment, like its commercial standing and mercantile repute, has never ceased to rise higher and higher.

The founder of this house, John Kennard, even before he came to St. Louis, had made himself known both in the East and the West as one of the most energetic and enterprising men of business of his day. His knowledge of goods and of the trade was remarkably extensive; his reputation in the East as a buyer was only excelled by his standing in the West as a salesman and judge of the market. He had the closest and most intimate familiarity with the processes of manufacture and the tendencies and drift of custom; one glance at a fabric enabled him to discover at once how and of what it was made, and what were its prospects to please the taste or satisfy the notions of customers.

John Kennard was a Marylander by birth, and descended of ancient and honorable stock, English in ancestry, on both the male and female sides of the house. His father, John Kennard, was the grandson of the Kennard (John also) who immigrated from England in the early part of the eighteenth century. John Kennard of the existing firm is the *fifth* John Kennard, son of John, the fifth in direct line from the settler in "Old Kent." John Kennard the first patented an estate of considerable proportions in Kent County, Md., the property being about Worton. Some of his descendants still hold land in that neighborhood and about Rock Hall. John the second, unlike several other of his father's children, who settled elsewhere in the peninsula of Maryland and Delaware (one went to Philadelphia, another to South Carolina

and made a fortune), remained at the paternal homestead, his by right of birth as the oldest born, and here his son, John the third, was born March 28, 1778. John, the third, when he grew up left the home place and settled in Talbot County, where, Jan. 15, 1807, he married Mary Spencer. John Kennard the third was a man of remarkable and stately presence, and his manners had something of the *grand air*. He lived in different parts of Maryland and the West, dying eventually in Lexington, Ky., on Jan. 8, 1840. His wife, Mary Spencer, who survived to the age of eighty-seven years, a hale and hearty nonagenarian, was a daughter of Hon. Perry Spencer, one of the most considerable men of his day and section, a ship-builder of prominence when the ship-yards of the Chesapeake were famous all over the world, a leading politician and representative, and three times in immediate succession (1800-8) elector for his State on the Presidential ticket. His homestead, "Spencer Hall," on Miles River, had been continuously in the family from the arrival of the founder of the family, James Spencer, in 1670.

John Kennard the fourth, the subject of this sketch, son of John the third and Mary Spencer, was born in the town of Easton, Talbot Co., Md., Aug. 14, 1809. His parents had other children,—Perry S. Kennard, of St. Louis; Robert O., of Vicksburg; Mary, married to Dr. Newman, of St. Louis; and Elizabeth, wife of Whittington King, of Lexington, Ky.

A few years after the birth of John Kennard fourth his parents removed to Baltimore and took up their residence in that city. Mr. Kennard, Sr., had nearly impoverished himself by undertaking the guardianship of his father's minor children and acting the part of a father to them, and he was consequently not able to give his son John any great educational advantages. Indeed, he received but little schooling, and it was only by giving the same assiduous attention to books, reading, and study which he applied to business that the young man was able to repair the defects of so meagre an academic training as had been at his command. He was still only a lad when he entered the wholesale dry-goods house of Thomas Mummey (afterwards Mummey & Meredith, Mummey, Meredith & Spencer, and Meredith & Spencer), one of the largest establishments in Baltimore, and having control especially of an extensive Western and Southern trade.

Here Mr. Kennard was able to learn the rudiments of commerce and merchandise under exceptionally favorable auspices, and he made such good use of his opportunities that he speedily became known as one of the best young business men in the city, and in a

few years had such confidence in his own energy and capacity as to go into business for himself. In 1832 the Asiatic cholera desolated Baltimore, and in a few days Mr. Mumme, his wife, his brother and his wife were all borne to the grave, none of them surviving more than a few hours' illness. It was in this first encounter with the dreaded pestilence in its most fatal form (for then no one knew anything about the disease and its treatment) that Mr. Kennard acquired that familiar knowledge of nursing in epidemics and of the way to combat diseases of the kind which he afterwards put to such exemplary and heroic use during the visits of the cholera plague to Lexington and St. Louis. In the former city his services in these seasons of affliction will not soon be forgotten, though most of the generation in which they were rendered has already passed away. In 1833, Wednesday evening, August 21st, by Rev. Eli Henkle, pastor of St. John's Methodist Protestant Church, Baltimore, Mr. Kennard was married to Rebecca Owings Mumme, daughter of his former employer, lately deceased.

Mrs. Kennard's family was good old Maryland stock all round. There are no better people in ancient Baltimore County than those who bear the names of Cockey, Deye, and Owings. Thomas Mumme's grandfather was Joshua, son of Richard Owings, an extensive owner of mill-seats; his grandmother was Mary Cockey, daughter of John and Eliza Cockey. The names of Cockey, Deye, Owings, and their kinsfolk the Gists are familiar enough all through the West, where they were pioneers; but before that they were pioneers also in Maryland. Joshua Owings was one of the members of the first vestry of the first Episcopal Church in Maryland west of Baltimore, and in his house (it is still standing, though greatly altered) the first Methodist converts in Maryland assembled, and Asbury preached his first sermons. Mary Cockey (Owings) was born Dec. 10, 1716, and died Feb. 6, 1768, the mother of ten children. One of these children, Marcella, born July 5, 1748, married Thomas Worthington, and lived to be ninety-six years old. Another, Rebecca, born Jan. 27, 1751, was married to Samuel Mumme, and died Dec. 24, 1806.

Samuel Mumme (it has been conjectured that the name was originally Munnings, but it is undoubtedly the same name now so familiar in Washington County, Md., as Mumma, and the original of which, *Mumme*, meaning "masker," "nummer," is of very frequent occurrence in and around Bremen) was one of three brothers who came when very young from Germany and settled in Baltimore County,—tradesmen, with no fortune but their craft and their indus-

try. The other two brothers were John and Christopher. John married Margaretta Beam, one of a milling family, and Christopher, after doing service in the army of Washington during the Revolution, went West and settled in Kentucky.

Samuel Mumme and Rebecca, his wife, were the parents of six children, of whom Thomas, the eldest, was born Oct. 26, 1774, in Baltimore County. He had but scant schooling, but was a well-read man before he died. He came to Baltimore very early to seek his fortune, his estate at that time consisting chiefly of a new suit of clothes and seven or eight silver dollars, the products of the sale of the skins of rabbits caught in his traps during the winter. Ten years later he was in business for himself, and pushing his way toward that fortune with a most untiring energy. His associates on Market Street habitually called him *par excellence* "the minuteman." On July 13, 1797, Thomas Mumme was married to Catharine Fishburne, of Frederick County, Md., born May 14, 1778, the daughter of Philip Fishburne and Elizabeth, his wife. Philip Fishburne was English by birth, a man of studious turn, with a bent for astronomy. He had been educated in Germany with the intention of becoming a clergyman. This plan had been abandoned and emigration to America substituted for it; but the studious man still retained his piety and his fondness for the venerable old tomes, vellum-bound quartos, and pig-skin folios which were in his library. He was a member of the Committee of Safety in Frederick County during the Revolutionary war, and was greatly esteemed.

Thomas and Catharine Mumme had thirteen children, of whom Rebecca, the wife of John Kennard, was the eighth. "Sister" Mumme, as all her contemporaries used to call her, was in every way a most beautiful character, lovely in her person, flawless in her soul, and brilliant of mind,—a woman whom all looked up to, and to whom leadership was natural. Sister Mumme's house was the resort of the whole Methodist Conference; Sister Mumme's "class" and prayer-meeting and missionary society were the most esteemed of all their kind in the community. The "sainted woman" was what the Catholic ladies and priests who encountered her in her errands of charity and of consolation used to call her. Sister Mumme had energy to match her zeal and decision to balance the sweet serenity of her character. She led the secession in 1829 out of which the Methodist Protestant Church grew, and once, when her husband's business became involved through indorsing for others, she went into business herself, and not only supported

John Kennard

UNIVERSITY OF ILLINOIS.

the family, but always had a thousand dollars or so to lend her husband to take up a note maturing at an ill time. As for Thomas Mummey, the minute-man, it is enough to say that he was worthy to be husband of this Sister Catharine, the sainted woman. He lost two or three fortunes by the default of those whom he helped in business, yet when he died in 1832 each of his children got a clean little fortune out of his estate. He was a man of affairs, helpful and public-spirited; was a defender of Baltimore at the battle of North Point, member of the City Council, director in the State Penitentiary, and prominent in fire companies, insurance companies, and banks.

Not long after his marriage with Rebecca Mummey, John Kennard went to the West in search of a business location. He had determined to cross the Alleghenies into the West and plant himself at some place where he might grow up with the country. He landed at St. Louis the day of the dedication of the Cathedral, and visited Cincinnati and other places, but without coming to a decision. After an experiment with Madison, Ind., Mr. Kennard at length established himself in the "Athens of the West," Lexington, Ky., the heart and pride of the Blue Grass region. Here John and his father went into the dry-goods business, but the old gentleman only lived to 1840, and his son established other business connections. It was a bad time for business in the West, after the terrible panic, collapse, and depression of 1837, when that section, the centre of the gigantic land speculations, suffered most, because all values were locked up in land, and sunk together in the common vortex of one universal depreciation. Mr. Kennard had a young and growing family, and there were a good many people besides, more or less helpless themselves, whom it was the instinctive need of his heart, rather than the demand of reason or practical judgment, to help on and prop up somehow, though he made himself their staff. But he had the energy, the vitality, the industry of a dozen men. Nothing could keep such a man down. He could not fetter himself so tightly that his own forces were unable to break the bonds. And he had much to give away, because he was so simple in his habits, knowing nothing beyond the pale of his church, his family, and his business. Not many years before his death he told the writer of this that he could not recollect that in all his life he had spent five dollars altogether upon himself. A more unselfish man never lived, nor a better and more devoted husband and father, nor a more consistent, humble-minded Christian, nor a better man of business.

In business Mr. Kennard conjoined to a consummate tact and a delicate and perfectly educated taste

a fiery energy in action, the closest scrutiny and supervision in management, and a knowledge and intimate familiarity with all the details which could not be surpassed. He knew every part of every department himself, and looked after it himself. His quickness and dispatch were almost marvelous, and in every case they rested upon a perfect and thorough acquaintance with his subject in all its bearings.

After Mr. Kennard had established himself at last in the carpet trade in Lexington, had taken his sons in with him, and thoroughly grasped the business and all its possibilities, he found that the field in Lexington was too small for such a trade as he sought for J. Kennard & Sons. The town was rich, but it was old, conservative, off the line of travel. The maximum of sales was easy to reach, but it was not easy for one to get above and beyond that; in fact, it could not be transcended. Mr. Kennard made up his mind. He wanted to build up a large business, which, put in the hands of his sons, trained in his methods and brought up under his eye, might be expanded by them to indefinitely great proportions. He removed to St. Louis, established himself there, on Fourth Street, in the carpet and curtain trade in 1857, and that is the beginning of the present house.

With such a foundation the house might be expected to prosper, and so it did from the very first. Mr. Kennard was always successful in St. Louis; he made money rapidly from the start, and might have accumulated largely. But he had set out in life with the determination never to be worth more than fifty thousand dollars, and when his earnings rose above that self-imposed limit he quietly gave the surplus away.

Mr. Kennard died Nov. 18, 1872, aged sixty-three years, the cause of his death being typhoid pneumonia. A shaft marks the place of his interment in Bellefontaine Cemetery. His widow survives him. Mr. and Mrs. Kennard were the parents of eight children. Of these, three are living,—Mary Rebecca, John, and Samuel M., comprising the existing firm of J. Kennard & Sons.

The house and the business are a hundredfold larger in every way than the J. Kennard & Sons of Lexington in 1857, yet it is conducted upon identically the same principles, and owes its success, its prosperity, and its capacity for safe and unchecked expansion to the fact that it has retained the methods and the groundwork of the elder John Kennard. His insight, tact, discrimination, good taste, prompt methods, close scrutiny, square and upright dealings, and safe and sound financiering are part of the capital and the stock in trade of the house to-day. It is not only

as a reminiscence, but as a symbol also that the firm and the sign remain to-day as originally constituted, John Kennard & Sons. He is still, in spirit, influence, and example, the head of the house he established.

The late William Henry Haggerty was at one time among the largest retail dry-goods merchants of the city. Mr. Haggerty was born in County Cork, Ireland, Sept. 6, 1829, of parents who were widely known and highly respected. His mother having been left a widow and thrown upon her own resources, engaged in mercantile business, in which she achieved remarkable success. Her sons inherited her talents for trade, and when William Henry left Ireland for America, being then but eighteen years old, he found employment in a large dry-goods house, successfully conducted by three brothers, in New Orleans.

Young Haggerty spent some five years in that business and then removed to St. Louis, having just two dollars and fifteen cents in his pocket when he landed. He went to the house of Murdoch & Dickson (yet well remembered), explained his condition and the plan he had formed to go into business, showed the two dollars and fifteen cents, and asked for a little credit. Murdoch scrutinized the young man, and remarking that he "seemed like a nice, honest Irishman," granted the request, and young Haggerty started out with a lot of whips which he peddled about town. He soon returned and paid the little indebtedness, a matter of but two or three dollars. From this transaction there resulted a friendship that lasted until Mr. Murdoch's death, many years later.

Having saved money enough to buy a horse and wagon, his next venture was to purchase a stock of tea, which he sold by the pound to the French cottagers on the Gravois road and other parts of the town far from retail stores. In this also he succeeded, and soon realized a sum sufficient to justify the thought of marriage and of engaging regularly in business.

In 1854 he returned to New Orleans, and was married to Anna M. Boylan, daughter of Commodore Boylan, who was interested in a steamship line from New Orleans to Liverpool.

During the same year he embarked in the retail dry-goods trade, and prospered to such an extent that he ventured to open a more pretentious business in what was then known as the "red store," on Seventh Street, opposite the Centre Market, between Spruce and Poplar Streets. Many of the oldest families in the city were his customers, and he made money rapidly. He was ever on the alert for advantageous bargains, and made a practice of frequenting auction sales of fire and bankrupt stocks, and while he bought boldly, his judgment was seldom at fault, and he soon came

to be regarded as one of the best business men in the city in that particular line.

In 1862 he disposed of his retail business and engaged in the wholesale jobbing trade on Main Street. Then for some years he conducted a wholesale auction house, and finally once more engaged in the jobbing business. In January, 1880, he admitted his son Thomas J. as partner, and placed the business in his charge. He next became a member of the auction firm of Haggerty & Dewes, and finally, having been incapacitated for work by an accident, he merged his jobbing business into a stock company under the corporate name of Haggerty & Son Auction Goods Company, in which shape the business was being conducted when he died, March 11, 1882, leaving a handsome fortune to his widow and a family of nine children.

Mr. Haggerty was a zealous member of the Catholic Church, and for sixteen years of St. John's parish. His life was marked by many deeds of unostentatious charity, and he was deeply interested in all the benevolent enterprises of the church, especially those involving the care of orphans. He was also a member of the St. Vincent de Paul Society, and was one of the five charter members of the Knights of St. Patrick. In all these relations he shunned publicity, but his advice was always sought, and generally proved judicious.

When a boy Mr. Haggerty enjoyed but scanty school privileges, and it is said that, realizing his deficiencies, he used to spend his evenings, after the day's hard work was over, in the store at New Orleans, under the direction of one of the older brothers, in learning to write, "cipher," and keep books. From this point onward his success was steady and uniform, and in his particular line of business he deserves to be classed among the representative men of St. Louis.

Silk.—The *Morus multicaulis* fever reached Missouri in 1838-39, and forthwith spread like a prairie on fire. "The theory was a beautiful one: one acre planted in mulberry-trees would feed worms sufficient to produce thousands of dollars of silk,—wealth could not be garnered sooner from a Potosi mine."¹ In the *Republican* of March 7, 1839, "the stockholders in the Missouri Silk Company" were advised that,—

"The undersigned, being the persons named in the act incorporating the Missouri Silk Company to call a meeting of the members of said association for the acceptance of and organization under said act, do hereby give notice that a meeting will be held on Monday evening, March 18, 1839, at 7 P.M.

"William C. Anderson, John J. Anderson, Andrew J. Davis, Charles P. Billon, Joseph Settinius, N. Paschall, H. Perrin."

The visions of home-made silk, however, were rapidly dissipated, and the Missouri Silk Company quietly accepted the inevitable and "closed its little being without light."

Clothing, Hats, Caps, and Furs.—The manufacture and sale of ready-made clothing is one of the leading industries of St. Louis,¹ the business also embracing hosiery, gloves, handkerchiefs, neck-wear, etc. Sixteen firms were engaged in the wholesale clothing trade in 1881, the business aggregating four million dollars. The number of wholesale and retail firms was seventy-six. In the wholesale hat, cap, and fur trade seven firms, besides thirty-eight retail firms, were engaged, the business aggregating two million five hundred thousand dollars.

F. W. HUMPHREY & CO.,
Northeast corner Fifth and Pine Streets.

One of the prominent clothing firms is that of F. W. Humphrey & Co. (F. W. Humphrey and Henry S.

¹ Aug. 17, 1808, was published in the *Missouri Gazette* the advertisement of William Harris, hatter. August 24th, Calvin Burns, tailor, announced that he wanted two or three journey-

Ferguson), who occupy a building at the northeast corner of Fifth and Pine Streets.

Edward Martin, one of the leading manufacturers of clothing and prominent business men of St. Louis, was born June 9, 1830, in Parish Fintona, County Tyrone, Ireland, where his father and uncle owned freehold estates and were considered wealthy. Edward was employed upon his father's farm until 1852, when, desiring to better his condition, he relinquished his claim as oldest son to the paternal estate and came to the United States, settling in Cincinnati, where he found employment in the dry-goods house of James & John Slevin. In this occupation he succeeded finely, exhibiting superior business qualifications. His habits of economy enabled him to save some money, and in 1858 he was prepared to establish himself in business. He engaged in the manufacture and sale of clothing by wholesale, and soon built up a large and substantial business, and the house, although not claimed to be the largest in Cincinnati, was recognized as one of the most flourishing there. It employed at one time three hundred hands, and its yearly sales were not far from half a million dollars. Its trade was largely with the West and South, and desiring to be nearer the actual field of its operations, Mr. Martin, in 1867, established a branch house in St. Louis, and placed it in charge of his two brothers, Claude and John Martin. In 1873, Mr. Martin consolidated the two houses and removed to St. Louis, where he has since resided.

Under the name and style of Edward Martin & Co., his clothing establishment is known to the trade as well as to the general public as one of the solid institutions of the city. Its yearly transactions amount to hundreds of thousands of dollars, and it employs a large number of hands. If it is not in the very front rank of houses in its special line of trade, it is through no lack of ability on the part of Mr. Martin; but he is accustomed to say that he is making money fast enough and does not want to burden himself with the care of a large business. As a clothing manufacturer, Mr. Martin has been uniformly successful. He has never met with any mishaps, and has always been able to pay his obligations as they matured. The same

men. Sept. 6, 1809, Bernard Lalande, merchant tailor from Bordeaux, advertised the latest Paris and London fashions. In July, 1817, Doun & McDaniel, tailors, were practicing their trade "on Main Street, opposite R. Paul." March 6, 1818, J. H. Boyer, "tailor from Europe," notified the public that he might be found at P. Chouteau's. Feb. 3, 1819, Joseph White & Co., hatters, had a store "below Hull's grocery." April 8, 1820, McKenna & Co., tailors from New York, announced that they had established themselves "in Mrs. Vincent's new frame, next to her residence, Main Street."

reason that has induced him to keep his business within moderate limits has prevented him from going outside to indulge in speculation. His only venture, therefore, outside of his business has been a little "deal" in real estate, and he owns a few pieces of valuable property in some of the choicest business quarters of St. Louis. Mr. Martin, in other words, is a quiet, observant business man, and his career shows that signal success may be won from small beginnings, simply by careful, close, and honest dealings, a thrifty attention to details, and an avoidance of speculation.

The Provision Trade.—No interest in St. Louis has developed more largely in recent years than the provision trade in all its branches. The live-stock interest, taken as a whole, places St. Louis in the second rank of all American cities, and this satisfactory showing is largely contributed to by the packers and other dealers, whose business since 1861 has been dignified as a special interest.

As early as 1832 there appears to have been meat-packing, purely for local consumption, in St. Louis, but of course in a small way, scarcely larger in extent, perhaps, than the more primitive practice of a decade earlier of drying meat in the sun.

The number of hogs packed in St. Louis in 1843-44 was above 16,000 head; 1844-45, 13,000 head; 1845-46, 31,000 head; and 1846-47, to January 6th, 20,053 head.

In 1861 the local product first began to assume proportions capable of comparison with the importations, and for a few years thereafter the demand for supplies to fill the calls of the commissary department of the United States army greatly enhanced the value of the product and improved the trade.

" " " 1880-81.....	884,159
" " " 1879-80.....	927,793
" " " 1878-79.....	771,261

It is, of course, understood that the packing season includes less than a calendar year.

There are thirty-five packing firms in St. Louis, some of them very extensive and of national reputation in the trade for their large product and the excellence of their wares. St. Louis cured hams of favorite brands and canned beef of the St. Louis Beef-Canning Company has an extensive foreign as well as American reputation. Indeed, the export trade in this line has in recent years grown to mammoth proportions.

The provision trade of St. Louis in all its ramifications probably represents, including buildings, public and private, a capital of \$12,000,000, and an annual product in excess of that amount in value. It is therefore a very large interest, both in its home and foreign character.

The sources of supply during 1880 and 1881 were:

The growing popularity of American side-meat and hams in Europe largely accounts for this change in method of foreign shipments to the bulk form, and a similar change of form is proportionately true of beef, for while only 9000 barrels and tierces were shipped, the enormous quantity of 4,037,164 pounds of canned beef was sent abroad from this market in 1881.

Charles W. Knapp, in his able paper on "St. Louis: Past, Present, and Future," read before the "Round Table" as late as Oct. 14, 1882, presents the following review of her produce, provision, and live-stock trades :

"We can see as a general fact that a large majority of the 8050 purely mercantile concerns in St. Louis conduct some species of retail or merchandise jobbing business, but there is no sort of statistical information respecting these departments of trade; so we can only survey intelligently the operations of the limited class who conduct the produce, provision, and live-stock trades, of which the exchanges compile full and interesting reports. These are, however, not alone the direct sources of great wealth, but largely the mainspring of all other trade, and it is the first striking evidence of the commercial importance of St. Louis that the value of the produce, provisions, and live-stock handled here is exceeded in no other city in the world except Chicago. I estimate the value of the commodities of this kind which St. Louis handled in 1881, including lumber, as \$200,000,000, while the secretary of the Chicago Board of Trade puts down \$300,000,000 for that city, and the superintendent of the Cincinnati Chamber of Commerce \$130,000,000 for that city. Exhibit No. 7 will show you the receipts of all important products of the farm, forest, and mine at both Chicago and St. Louis.

"I direct your attention especially to the difference between the gross and net receipts of Chicago, for in the usual statements of Chicago's trade the gross receipts are given in utter disregard of the fact that they include everything that passes through Chicago, as well as what stops at that city and is handled there, although Chicago has no more interest in this through movement than any ordinary railway station on the lines of transit. Its Board of Trade reports give the through movement of grain, so it is feasible to make out the net receipts,

as I have done, but of everything else the gross receipts alone are attainable, although thirty-four per cent. of the gross receipts of grain being through movement, the proportion in other lines must also be considerable. At St. Louis, on the other hand, there is practically no through movement, except of cotton, so that if the net receipts of that commodity be made the basis of calculation, the fair method of comparison with Chicago is with the net figures of that city as far as obtainable. Now look at the exhibit and you will see that in the produce trade, at least, St. Louis makes no mean showing beside Chicago.

"It has, doubtless, not struck you, however, that St. Louis led Chicago in 1881 as a produce market, but if you will figure on the value of the receipts at each city,—I mean the produce actually handled,—you will find that the aggregate value of what came to St. Louis exceeded what was handled at Chicago nearly three and a half million dollars. Exhibit No. 8 will make this plain to you and recall one of the most important results St. Louis owes to its natural advantages of situation, that it is eligibly located for handling largely the products of both the Northern and Southern States, so that its receipts of cotton and tobacco more than overbalance the greater receipts of grain at Chicago.

Retail Butchers.—Necessarily in a city of the size of St. Louis the home consumption of meats is large and the dealers numerous. The butchers number nearly eight hundred, and there are fifteen market-houses, the largest being the Union, on the block between Fifth, Sixth, Christy Avenue, and Morgan Streets.

One of the earliest butchers in St. Louis was Benjamin Estill, who on the 17th of September, 1814, published the following advertisement:

"The subscriber respectfully informs the citizens of St. Louis that he will commence the butchering business on Monday next. With deference he requests the heads of families and masters of shops to meet him on that morning at market-house and partake of his first essay, as a free will offered at the commencement of his business.

"The farmers who make St. Louis a market for their beef are invited to call on the subscriber at the Sign of the Cross-Keys, at the south end of St. Louis, and make positive contracts for their cattle, as the subscriber wishes to destroy the prevailing idea of advantages being taken of them in bringing their beef to this market. Those who will favor him with their custom shall always have their money on the delivery of their beef.

"BENJAMIN ESTILL."

Public markets are, however, less popular than formerly, and most of the butchers have their own shops, a majority belonging to the Meat Shopmen's

Association, organized in 1879 to protect the dealers against excessive license fees. In this they have succeeded, after much litigation carried to the court of last resort in the State.

A Butchers' Association, however, was formed as early as 1859.

"The butchers of St. Louis to the number of about eighty," says a contemporary account, "held a meeting yesterday afternoon [Aug. 25, 1859], at Washington Hall, for the purpose of forming an association 'for the more effectual protection of their interests.' If we understand the case clearly, the association is designed to make arrangements by which the butchers will be able themselves to render the tallow and tan the hides which they now sell to the dealers in those articles.

"On motion, Capt. James C. Denny was called to the chair, and C. L. Kraft appointed secretary. The following preamble and resolutions were offered and unanimously adopted:

"WHEREAS, The butchers of St. Louis, for their mutual benefit, the further advancement of their own interests, and to put a stop to unfair oppression, have seen fit to form themselves into an association;

"Resolved, That we form ourselves into an association to be known as the Butchers' Rendering Association of St. Louis.

"Resolved, That a finance committee be appointed, whose duty it shall be to wait upon the butchers and collect whatever installments shall be adjudged necessary.

"Resolved, That a committee of ways and means be appointed to ascertain the most practical way of commencing operations.

"The following financial committee was then appointed: Andrew Hochmuth, Hampton Woodruff, George Hughes, Daniel Frewoyd, Robert Dickey, Edward Heitzberg, Vincent & Block, Eckert Gotschamer, John Krutse, J. Stuart, Christ. Zimmer, George Schrader, N. Christian, T. McNamara, Charles Zoller, F. Hague, John Shall, Capt. Denny.

On motion, a building committee of six was appointed as follows: William Mulhall, Thomas Kidney, James Cooney, H. Springer, J. McNamara, Sebastian Winters."¹

¹ In 1861 there was considerable dissatisfaction among the butchers of St. Louis owing to the existence of unlicensed shops for the sale of meat, and on the 26th of December a mass-meeting of the butchers was held at the Wedge House to take action in the premises.

"On motion of James Denny, W. Hohenschild was called to the chair, and William Grant appointed secretary. The following preamble and resolutions were unanimously adopted:

"WHEREAS, the butchers of St. Louis, lessees of stalls in the different public markets of the city, are heavily taxed by the city for said stalls to carry on a legitimate business; and whereas, unlicensed meat-shops for the sale of fresh meat, contrary to law, are in full operation and being opened in different parts of the city, directly interfering with our business in the markets; and whereas, it is an undeniable fact that the butchers in the different markets do more than any other class of men to alleviate the wants of the poor of the city and the different institutions for the support of the needy and oppressed; and whereas, the municipal authorities are opposed to such shops being opened or allowed; therefore,

"Resolved, That we would respectfully request the Board of Public Commissioners, in consideration of the above facts, to order the chief of police to cause all such persons selling fresh meats contrary to law to be arrested and punished accordingly.

"Resolved, That a committee of three from each market be

Cattle Trade, Live-Stock Yards, etc.—The geographical as well as commercial position of St. Louis makes her the natural receiving and distributing point for cattle, sheep, and hogs from Texas, Arkansas, Illinois, Iowa, Colorado, Nebraska, and Kansas. About 1848 the packing of beef and pork had already grown to be an important industry, and as many as thirteen establishments were engaged in the business in St. Louis and vicinity. From the 1st of November, 1848, to Jan. 31, 1849, the number of beeves packed by the firms of William Risley & Son, G. & C. Bayha, John Sigerson, Joseph J. Bates, and Henry Ames & Co. was 2148. In 1870 the Texas cattle trade began to seek a market in St. Louis, the receipts of cattle for that year showing a gain of 77,857 head, mostly credited to Texan cattle. In 1871 the receipts of Texan cattle amounted to 87,210 head. The total receipts and shipments of cattle at St. Louis during the seven years from 1865 to 1871 were :

Year.	Receipts.	Shipments.
1871.....	199,427	129,827

1867.....	62,974	19,022
1866.....	64,647	15,194
1865.....	52,133	8,680

Prior to 1873, the natural advantages offered by St. Louis for this trade not being availed of, Chicago

appointed to confer with the butchers of their respective markets, composed of the following gentlemen :

“Christian Volz, Francis Mulhall, and John J. Puller, from Museum Market.

“Mr. Benson and Mr. Meisinger, from Gamble Market.

“Henry Springer, Wm. Mulhall, and Thomas O’Connor, from North Market.

“Hampton Woodruff, Augustus Berkley, Henry Weisel, and Mr. President, from Centre Market.

“Mr. Block, Augustus Meisebach, Henry Karmann, and George Lamhrech, from South Market.

“Matthew O’Connor, Conrad Schnurr, and John Reeder, from City Market.

“Charles Schuchmann, Abraham Mack, and Timothy Clancy, from Carr Market.

“Eckhart Gottschammer and Philip Schuchmann, from Biddle Market.

“John Schole and John Keller, from Sturgeon Market.

“Robert Dickey, William Grant, and John Burnett, from Lucas Market.

“August Geeser and Wm. Reifeis, from Soulard Market.

“William Murphy and Henry Pfeiffer, from Washington Market.”

derived nearly all the benefit of the cattle trade of these States. It was in that year that a few Eastern gentlemen who thoroughly realized the great possibilities of the situation formed the St. Louis National Stock-Yards Company and established the St. Louis National Stock-Yards. This was no ordinary venture; the amount of money required was very large, and the opposition from the interest of other cities that would be antagonized had to be met with sufficient power to overcome it. All this was accomplished, and to-day St. Louis possesses the largest and most complete and perfect live-stock yards in the United States. At the same time the city secured an interest that distributes many millions of dollars every year among her manufacturers and merchants.

The original stockholders of the National Company were Wm. H. Vanderbilt, Horace F. Clark, Augustus Schell, James H. Banker, A. Boody, A. B. Baylis, Samuel F. Barger, Allerton, Dutcher & Moore, T. C. Eastman, Alexander M. White, Isaac H. Knox, John L. Macaulay, John B. Bowman, and Levi Parsons, of the Land Grant and Trust Company. Most of the stockholders were New York capitalists. The terminal facilities thus acquired for handling cattle consigned to the St. Louis market are extensive, and include all the appliances of yardage, tracks, exchanges, pens, hotel accommodation for stockmen, and other conveniences now demanded by this rapidly growing interest.

The tract of land of which the stock-yards proper form a part was purchased by the St. Louis National Stock-Yards Company on the 1st of March, 1871, from John B. Bowman and J. L. Griswold, of East St. Louis. This tract, containing four hundred acres, is situated on both sides of the Cahokia Creek, about one mile north of the city of East St. Louis, in St. Clair County, Ill. On the east the track of the St. Louis, Vandalia and Terre Haute Railway affords communication, while the tract is bisected near its western limits by the track of the Toledo, Wabash and Western Railway. Between these two roads there is a connecting link which passes through the paved and improved yards, thus giving superior advantages for the reception and shipment of stock. An addition to the original purchase was made subsequently by a negotiation with E. Matthews for a tract of two hundred and fifty-two acres. The price paid for the first four hundred acres purchased was \$145,000. The purchase from Mr. Matthews cost the company \$50,000. The National Stock-Yards Company is therefore the owner of six hundred and fifty-two acres of land, for which it paid \$195,000.

The original capital of the incorporated company

was one million dollars, but the charter confers the special privilege of increasing the capital stock as circumstances may demand.

This important enterprise was originated by the great New York and Chicago stock firm of Allerton, Dutcher & Moore, who are entitled to the credit of having successfully enlisted the attention of moneyed men and brought about a combination of some of the greatest capitalists of the nation to carry forward the great work. That these yards were located in Illinois instead of Missouri is due solely to the fact that the company found it impossible to purchase at any reasonable price a suitable tract of sufficient extent equally convenient to business on the Missouri side. Though situated in Illinois, the National Stock-Yards are essentially a St. Louis institution. The ground having been secured, work was at once commenced. A. M. Allerton, a gentleman of tact and energy, gave his personal attention to the work. About one hundred and fifty acres of the four-hundred-acre tract were surveyed, and the work of grading commenced. This was a vast undertaking, as mounds were to be leveled down and ponds filled up, but an immense amount of work was performed in a very short time. The whole ground was bisected by sewers placed six feet below the surface. Water-pipes were laid, and regular streets or avenues were laid out. All this was done before the work of constructing sheds, barns, and inclosures was commenced. But this work once completed a large force of men was at once employed in building above ground. Vast quantities of lumber were used in this work. The posts are all of red-cedar; the fencing, roofs, etc., are of yellow-pine. The offices, hotel, and exchange hall are lighted by gas manufactured at the company's own works, and two powerful engines supply the yards with an abundance of water.

The ground was platted, with avenues running north and south, east and west, crossing at right angles. Those running from the south are three hundred and ninety-two feet apart. The first one, called Avenue A, is one hundred and ninety-six feet from the east line of the yard. Avenue F is one hundred and ninety-six feet from the south line. The avenues are divided into yards or sheds for cattle. The original plan calls for two hundred and eighty-nine yards. These yards accommodate fifteen thousand horned cattle, and outside space with good arrangements for feeding and shelter is furnished for twenty thousand more. The yards and avenues are paved with the Belgian pavement.

On the west side of the yard, and near to the northwest corner, the eye rests upon an immense

frame structure, painted white, which is eleven hundred and twenty-two feet long and one hundred feet wide. Extending directly through the middle of the building, for its entire length, is a broad passageway, on either side of which are located the hog-pens, seventy in number, with a total capacity of holding twenty thousand hogs.

In the centre of the immense yard for herding stock are situated the offices of the company. The building is in the centre of a square, which has been laid off with avenues extending towards the cardinal points of the compass. The structure is of brick, two stories, besides the basement, with sleeping accommodations for clerks, watchmen, and laborers.

The chief attraction in the neighborhood of the St. Louis National Stock-Yards is the Allerton House, a five-story brick structure, containing over one hundred and thirty chambers, besides a dining-hall, billiard-room, wide halls, a large office, and parlors and sitting-rooms. The architectural appearance of the building is very imposing, and it is supplied with water and gas throughout, heated by steam, and furnished with all the comfortable appendages of a first-class hotel. Thomas Walsh was the architect, and Milburn & Sons contractors. The cost of the building was about one hundred and twenty-five thousand dollars. The structure is one hundred and fifty feet front, and extends back two hundred and forty-eight feet. A portion of the back extension is only three stories high.

The yards were formally opened on the 20th of November, 1873, on which occasion addresses were delivered by Hon. S. M. Kase, Hon. E. O. Stanard, Mayor Bowman, of East St. Louis, N. M. Bell, of St. Louis, Hon. John Hincheliffe, Hon. L. H. Hite, and Judge William G. Case.

The National Yards are located about a mile beyond East St. Louis, in a district known in early times as "the Great American Bottom," and have a world-wide reputation for their completeness. Railway magnates have fostered the interest, and Jay Gould has become a large stockholder in the National Company.

The Union Stock-Yards at Bremen are wholly a St. Louis enterprise, and utilize about fifty acres in terminal facilities for the handling of cattle, hogs, and sheep. The Venice and Madison County Ferry chiefly transports this stock over the river from Venice, and the delay of passing through East St. Louis is thereby avoided. A capital of three hundred and fifty thousand dollars is employed by this establishment.

The St. Louis Union Stock-Yard Company was

organized in March, 1874, and grounds, consisting of twenty-three and a half acres, were purchased in April for one hundred thousand dollars. No time was lost in pushing on the work, as the exchange was commenced in May, and the yards and pens in June. There are 127 hog-pens, capable of containing 25,000 hogs, and 65 cattle-pens, able to accommodate 2000 head of cattle.

There are also a number of private stock-yards in the suburbs on both sides of the river, but the bulk of the import and export trade necessarily gravitates toward the public yards, where dealing is only in large round lots or car-loads. During the last eighteen years the receipts of cattle, sheep, and hogs, and the exports of the same, have been as follows :

How many million dollars annually are invested in live-stock dealings in this market is readily calculable, but the local consumption demand is not more readily ascertainable than the actual exports, for the latter are largely contingent upon the extent of the demand of the beef-canning companies, the proportion of stock exported alive being still comparatively inconsiderable in this valley.

In his paper on "St. Louis: Past, Present, and Future," Charles W. Knapp does not find the live-stock trade as encouraging as he thinks it ought to be.

"Though it has increased," he says, "during the last dozen years, the comparison with Chicago was more favorable in the matter of cattle ten years ago than to-day, while such gain upon Chicago as has been made in the matter of hogs is more than counterbalanced by the failure of our packers to take ad-

vantage of the increased receipts, as will be made plain by Exhibit No. 32. Connected with this most unsatisfactory record is the further fact that the receipts of packed meats at St. Louis have fallen off considerably in recent years, the receipts of barreled pork in 1861 having been about eighty-four per cent. greater than in 1881, and of mess-pork sixty per cent. greater, while of lard we only got twelve per cent. more in 1881.

St. Louis Beef-Canning Company.—A prominent factor in the enlargement of the provision trade of St. Louis is the St. Louis Beef-Canning Company, whose base of operations is the National Stock-Yards, East St. Louis. This establishment—which in its European exports has with its cooked meats superseded the “roast beef of Old England,” according to a consular report—was organized in 1876, with a capital stock of four hundred thousand dollars, and occupied its present packing and warehouses, covering four acres, in 1879. Its successive presidents have been R. D. Hunter, H. L. Newman, Isaac H. Knox, and G. L. Joy, the latter being the present executive, with the following board of directors: Messrs. Knox, Joy, J. B. Dutcher, A. M. White, T. C. Eastman, S. W. Allerton, and R. W. Donnell.

Beginning with packing twenty-five beeves a day, the company has now a capacity to handle one thousand head, and employs from eight hundred to one thousand hands daily, according to the season. For two years it did not intermit a single day, although it is unusual for packers to operate continuously through the year. The aggregate packing during the three years ending May, 1882, was two hundred and one thousand one hundred and thirty-seven head, about one-half of which product was exported.

The cash value of the daily product is over fifty thousand dollars, and the establishment is the second largest of its kind in the world.

The company buys the choicest cattle at the adjacent National Stock-Yards, where they are cooled and rested before slaughtering. After this the sides of beef are perfectly chilled by an improved process; they are then “cut down,” the ribs and loins shipped all over the country, supplying dealers in Boston, New York, Philadelphia, Pittsburgh, Cincinnati, St. Louis, and the remainder prepared for curing. The curing cellars of the company extend under the main buildings, and cover about three acres. The bulk of the meat is cured, cooked, and packed in cases in due time; the hams are smoked and turned out under the “Star of the West” brand, and the balance packed in barrels as “rolled” and “plate beef.” The tin can department—as an illustration of the magnitude of the business—employs, in addition to numerous labor-saving machines for stamping, soldering, etc., from one hundred to one hundred and fifty hands, and manufactures daily tin cans enough, when filled, to load from

six to ten cars, according to the size of the cans. The company imports its own tin and manufactures its own solder. Another interesting feature is the “fertilizing department,” which is located at some distance from the main works, and utilizes all the refuse, converting it into valuable fertilizers,—azotine, dried blood, bone-meal, etc. The horns and large bones are sorted, treated, and sold to manufacturers of buttons, combs, fancy toilet articles, etc. This department employs about twenty-five hands, and produces about six car-loads of material per day. The chief business of the company is the packing and sale of canned cooked meats, and the correspondents of the company are in all countries. The first operations were the packing of corned beef, but rapid extension has been made, until the list now comprises corned, roast, and boiled beef, whole and compressed beef tongue, lunch tongue, ham, ox-kidney, ox-tail, pigs' feet, and English brawn, or head cheese. These are all packed in tins ranging from one to twenty-eight pounds in weight, and are ready for instant use. The company also packs a beef or lunch sausage cooked. The goods of the company have been exhibited and tested in the fairs of the world, and have gathered trophies at Paris, London, the American Institute of New York, and elsewhere.

Horse and Mule Marts.—Long antedating the history of the army mule the patient beast “without pride of ancestry or hope of posterity” had contributed largely to the commercial growth and importance of St. Louis. In 1856 the firm of A. Shulerr & Co., predecessors of Reilly & Wolfort, commenced the establishment of sale-stables which now outrival in number and capital employed the sales-yards of London, and give to Broadway for many blocks a national reputation as the location of the largest horse and mule market in the United States, and with respect to dealings in mules, the largest in the world. The extent of the trade in the supply of these animals for the Southern plantations and the Western plains, as well as for use by local carrying companies, had been generally known, and there was some knowledge too of the fact that the United States government was a large purchaser of horses and mules in this market; but it remained for the accredited representatives of a foreign government to demonstrate a few years ago, and beyond cavil, that St. Louis leads the world in the number, quality, and monetary value of its mules. Large purchases were made here by both combatants in the Franco-Prussian war. The British found the Mississippi valley mule best adapted by hardihood to service in India; the Turks discovered the same quality of adaptation for the Orient; and the French government, after purchasing here large

numbers of fine horses for its cavalry, added still larger orders for mules for service in the Tunisian campaign.

But while the attainable statistics show a trade of nearly ten millions of dollars annually, it is doubtful whether this sum really represents the actual transactions in horses and mules within forty per cent., for the reason that the larger portion of the stock imported from the vicinage, or within perhaps a hundred miles, is driven direct to the sale-stables, and does not therefore appear upon the tabulated returns of the railroads and transportation companies. For example, a compilation of the returns to the Merchants' Exchange for 1881 shows the receipts of horses and mules to have been forty-two thousand three hundred and sixty-five, and the shipments to exceed that number largely. The same anomaly is exhibited in the reports of former years. Indeed, a single one of the ten larger houses engaged in the business shipped in 1881 upwards of half the number thus recorded, and in the first four months of 1882 the shipments exceeded seven thousand, a large portion of the stock being exported to England, Scotland, and the West Indies. A fact not generally known in this connection is that fine mules bring a higher price than fine horses for exportation, although the home demand keeps the prices of inferior or second-class animals about even. Foreign buyers will pay for choice mules from two hundred and fifty to three hundred and fifty dollars a head, in round lots, and even more, while they would expect to pay for the same grade of horses not more than from two hundred to two hundred and fifty dollars. The longevity and hardihood of the mule is rated a third higher by foreign purchasers. The United States government is the most exacting of American buyers, and the French are the most particular of the purchasers from abroad.

The receipts and shipments of horses and mules at St. Louis from 1874 to 1882, inclusive, were :

Hides and Leather.—There are more domestic hides shipped from St. Louis than from any market in the United States, the aggregate value of the transactions in this commodity approximating four million dollars. The hide product is not only exten-

sively employed in the manufacture of boots and shoes, but is necessarily an important factor in the making of saddles, harness, belting, and a variety of other articles of commerce. In St. Louis there is not only a large product of hides from the cattle slaughtered for local consumption, but the receipts from the cattle-growing regions are immense, this being the natural centre of that interest, which includes in extent of territory Illinois, Missouri, the Indian Territory, Texas, Mexico, New Mexico, Colorado, Dakota, Montana, Utah, and Arizona. The establishment of extensive slaughtering houses, such as that of the Beef-Canning Company, producing 4000 hides a week, and the butchers' yield, about the same figure, greatly increases the product derived from imports, which in 1881 aggregated 20,079,814 pounds. The exports were 28,082,036 pounds, and the amount utilized in local manufacture was nearly as large as both sums together, or upwards of 40,000,000 pounds. In 1834 and earlier there were also large receipts of bison hides from the plains, and this formed an important element in the freighting of the "overland route;" but of late years the extermination of the American buffalo has been so nearly completed that few are now received, or even desired, for bison hide makes very inferior leather as compared with the product of the domestic cattle.

Of the two methods of preparing hides for the St. Louis market, the salting is preferred above drying, although not always practicable, as nearly all the hides coming from the Southwest and West are already cured by drying, after the primitive manner in vogue on the plains. Texas hides rank, in excellence of quality, second only to those of South America.

Up to a very few years ago nearly all the hides received in the St. Louis market were shipped hence to Eastern tanneries, but now St. Louis boasts of several tanners and carriers with establishments possessing the requisites of capital and capacity and doing a thriving business. Indeed, these already outnumber the dealers in hides and pelts, one of them having a capacity of over five hundred hides a week.¹

The hide dealers, however, are among the most solid and prosperous business men of St. Louis, and represent an aggregate capital of nearly two million dollars. In earlier times the custom—begun perhaps almost as early as the settlement of St. Louis—of buying hides directly from the butchers and selling to the tanners was in vogue, but in 1864, B. H. Newell, one of the

¹ "Forty dollars per ton," stated an advertisement in the *Missouri Gazette* of July 2, 1814, "will be given for well-saved shomac (sumac) at the subscriber's morocco manufactory in St. Louis."

largest buyers in the St. Louis market, originated the brokerage system, by which the brokers act as agents for the tanners, and now nearly all the business between dealers and tanners is thus conducted, and, it is claimed, with great advantage to all parties concerned. With the growth of the St. Louis saddlery trade to pre-eminence over that of any other market in the world, the dealings in hides and leather have necessarily increased in proportion, and the establishment of numerous boot and shoe factories has contributed to swell the total dealings in leather for all purposes to the sum of nearly ten million dollars.

The following statistics exhibit the growth of the trade:

HIDES.

Saddlery Trade.—St. Louis leads the world in saddlery, although the fact is not known outside of strictly commercial circles.¹ The market is usually most active, but there is no exchange or central depot for the compilation of statistics. As an exclusive business, saddlery and saddlery hardware date back only to 1859, and not much was done in that line

¹ John Chandler & Co., saddle-, bridle-, and harness-makers, Main Street, advertised their business Feb. 1, 1812, and John Jacoby, saddler, informed his friends and the public generally, Dec. 14, 1816, that he had removed his shop from near Lexington, Ky., to St. Louis, “where he has opened a shop on Front Street, near Governor Clark’s, and opposite T. Hunt’s store.” Aug. 23, 1820, T. Grimsley and William Stark conducted the saddlery and harness business in Jacoby’s old stand, next below Neal & Liggett.

until 1866. Prior to that time the general stores that abounded in St. Louis, as elsewhere throughout the Southwest, dealt in saddlery to some degree in connection with other wares. The territory then supplied by St. Louis was very limited, but now saddlery of St. Louis manufacture is supplied to Missouri, Kentucky, Mississippi, Tennessee, Louisiana, Texas, Arkansas, Kansas, Colorado, the Indian Territory, Wyoming, Montana, Arizona, Dakota, and New Mexico, most of which States and Territories use this ware to so large an extent that the St. Louis export trade in this line in 1831 aggregated in value over three million five hundred thousand dollars. Upwards of fifteen hundred hands are employed in the trade here, and the wholesale firms alone number twelve, while the retailers and the exclusively “tree” manufacturers aggregate twenty-two more.

In 1882 the total number of establishments engaged in the trade was ninety-six. It is also a remarkable fact that the failures in this line have been fewer than in any other trade of similar extent. Since the war the process of manufacture has been greatly changed by the introduction of sewing-machines and other machinery, and the speed in the process of manufacture has so greatly increased that at least a dozen saddles can now be turned out in the time it formerly took to make one. Much of the manufacturing, in so far as elm “trees” is concerned, is done at the State Penitentiary at Jefferson City, and then the appendages of leather, in various styles of artistic finish, are added, giving to the “tree” a neat appearance. Prices of saddlery have been greatly reduced, so that a saddle formerly costing say fifteen dollars can now be purchased for five dollars, and the average price of the finest scarcely goes above ten dollars. The facilities for manufacturing and the large tributary territory give St. Louis great advantages over other markets, and the trade is constantly increasing in extent as well as in the reputation which is accorded the market for the uniform excellence of its saddlery goods.

Boots and Shoes.—The wholesale boot and shoe business is an important factor in the commercial prosperity of St. Louis.²

² Among the early boot and shoe makers of St. Louis were the following:

Young & Bright, who dissolved partnership March 22, 1810, the business being continued by John A. Bright.

Badgely & Stubblefield, “ladies’ and gentlemen’s shoe and boot makers,” who announced on the 11th of April, 1811, that they had commenced business and “would carry on the various branches of their profession.”

John Holbrook, boot and shoe maker, whose place of business (Feb. 8, 1820) was “his new brick house, South Main Street.”

Nineteen wholesale houses were engaged in the trade in 1881, which aggregated about ten millions of dollars. The manufacture of boots and shoes is also carried on to a considerable extent in St. Louis, the number of firms in 1881 being one hundred and eighty-four, with an annual business of one million eight hundred thousand dollars.

Of the wholesale firms engaged in the sale of boots and shoes the house of Hamilton, Brown & Co. is among the most prominent. One of the founders of this great firm, and at present the general manager of its affairs, is Alanson D. Brown. Mr. Brown was

several years, and where he was engaged for three years as clerk in a general merchandise store. He then engaged in business with one of his uncles with such success that in two years he was enabled to dispose of his interest for thirteen thousand dollars. In the spring of 1872 he removed to St. Louis, and engaged in the wholesale boot and shoe business with James M. Hamilton, a gentleman of great experience in the business, who had long been a valued employé of the well-known house of Appleton, Noyes & Co. The firm started under the name of Hamilton & Brown, and it is interest-

FAMOUS SHOE AND CLOTHING COMPANY,
Northwest Cor. Fifth and Morgan Streets.

born in Granville, Washington Co., N. Y., March 21, 1847. His parents are yet living, and his father, who is a prosperous farmer of that section, has been supervisor for several terms, although his party has been decidedly in the minority, and is otherwise prominent in town affairs.

Young Brown's boyhood was that of most farmer lads, working on the farm in summer and attending the district school in winter; he also attended a commercial college at Rutland, Vt. In 1864 he obtained a position as clerk in a store at Granville, where he remained two years, and then removed to Columbus, Miss., where two uncles had lived for

ing, in view of the present dimensions of the business, to recall the circumstance that the joint capital of the two partners was but twenty-three thousand dollars, Mr. Hamilton contributing ten thousand dollars and Mr. Brown the thirteen thousand dollars he brought with him from Mississippi. The business grew rapidly, and its subsequent development has been without precedent and far beyond the most sanguine expectations of its founders. In 1876 two additional partners were admitted, William H. Carroll and E. F. Williams, who had been salesmen in the house, and the style of the firm became Hamilton, Brown & Co., which is its present designation. The house, although

comparatively a young one, was then transacting a business of many hundreds of thousands of dollars annually; but the firm resolved to attempt what their contemporaries declared to be a dangerous experiment, the selling of goods only for cash instead of the usual four and six months' time, a method that seemed to Hamilton, Brown & Co. to be at variance with sound business principles, and therefore in 1877 they instituted the reform indicated, believing it not only safer for themselves in the avoidance of bad debts and the risks involved in the sale of goods on credit, but equally to the advantage of their customers in affording them better bargains for their money. The result proved the thorough soundness of their reasoning, for in 1877, the first year of the experiment, the sales of the establishment were larger than ever before, and amounted to seven hundred and fifty thousand dollars.

The subsequent development of the business of Hamilton, Brown & Co. has been one of the commercial marvels of St. Louis. For five years past the annual sales have not fallen below one and a half millions of dollars, and for 1880 they footed up the princely sum of one million nine hundred and twenty-six thousand dollars. The company occupies a six-story building, with basement, at Washington Avenue and Fifth Street, St. Louis, and here it conducts perhaps the largest wholesale boot and shoe establishment in the city. When asked regarding the secret of his success, Mr. Brown is accustomed to say that there is none, except constant application, a minute looking after details, and incessant watchfulness to prevent leakage and waste. It is no reflection upon the gentlemen associated with him, and who have contributed much to bring about this splendid success, to say that as the active business manager of the firm of Hamilton, Brown & Co., the brilliant reputation of the house is largely due to Alanson D. Brown's energy, enterprise, and assiduity.

In one of his business trips to Boston Mr. Brown became acquainted with Miss Ella Gertrude, daughter of Charles C. Bills, a prominent shoe manufacturer of that city, and they were subsequently married. Three children are the result of the union. Mr. Brown is a member of the Third Baptist Church of St. Louis, and endeavors to contribute his share towards all the worthy enterprises, religious, charitable, and philanthropic, that appeal for aid. He regards it as a pleasurable duty to support, as far as he can, all projects reasonably calculated to advance the prosperity of the city of his adoption, and may justly be ranked among its most active and progressive young business men.

Jewelry.—The manufacture and sale of jewelry, which is now one of the important industries of St. Louis, was established at an early period in the history of the town. As far back as April, 1812, Joseph Bouju, "clock and watchmaker, silversmith and jeweler," in Madame Papin's house, opposite Gen. Clark's office, advertised a variety of wares. Mr. Bouju's establishment was not the only one in the town, as we find that Dr. Farrar's store was advertised in the same year as being situated below Maj. Christy's tavern, next to Danguin's silversmith's shop. In July, 1817, Charles E. Jeanneret pursued the trade of watchmaker at P. Chouteau's house, and in September, 1817, Israel B. Grant opened a shop next door below Mr. Wilts' store, on Main Street, where he manufactured silver-work and jewelry, keeping also "a constant supply of soup, table, dessert, and teaspoons, gold watch-chains, seals and keys, ear- and finger-rings, bracelets, gold and silver sleeve-buttons, thimbles, hooks and eyes, etc. Engraving and hair-work neatly executed." During the same year Joseph Bouju had his shop opposite the store of Mr. Wilt. On the 13th of November, 1818, Charles Billon, clock and watch maker and jeweler, informed "the inhabitants of St. Louis and its vicinity that he has commenced business in the house occupied by Mr. Danguin, on Main Street, where he has for sale an assortment of gold and silver repeaters, plain gold and silver watches, with an assortment of jewelry, consisting of fine gold chains, seals and keys, breastpins, ear-rings, etc., which he will sell on the most accommodating terms.

"N.B.—Watches of every description carefully repaired, and engraving executed with neatness and dispatch."

Mr. Billon had removed to St. Louis from Philadelphia, and his location is further described as "Danguin's old stone house." At the same time Henry Gulager carried on the trade of a clock and watch maker "next to the old Indian office in Clark's stone row." On the 11th of August, 1819, Robert Logan, clock and watch maker, advertised his establishment as being located "in Bouju's old place," and on the 18th, Joseph Bouju announced his removal to "his new house" opposite Paul's auction-room. Dec. 23, 1819, Charles Billon gave notice that he had removed to his new establishment on North Main Street, at the corner, opposite the old Gratiot residence.

The trade in jewelry has gone on expanding until now St. Louis surpasses every other city in the West as a market for this branch of business. In 1881 seventeen firms were engaged in the jewelry trade, whose sales aggregated four million dollars per annum.

A. D. Brown

In the manufacture of jewelry and silver-plated ware eight firms were engaged, employing sixty hands, and transacting a business of two hundred thousand dollars per annum.

The oldest jewelry firm in the city, and one of the oldest in the West, is that of the E. Jaccard Jewelry Company. It was established in 1829 by Louis Jaccard, who emigrated to America from Switzerland, and who was followed by his nephew Eugene in 1837. The house of Louis Jaccard & Co., as it was originally called, was dissolved Dec. 31, 1848, by the withdrawal of Louis Jaccard, who was succeeded by his nephew Eugene, who in 1852 associated A. S. Mermod with him, and in 1855 D. C. Jaccard, the firm then becoming E. Jaccard & Co. In 1864 the partnership was dissolved, Messrs. Mermod and D. C. Jaccard withdrawing and establishing another house. Eugene Jaccard continued the original business until his death, which occurred on the 4th of September, 1871. Mr. Jaccard, who was fifty-seven years old, was born in Ste. Croix, Switzerland, and, as previously stated, emigrated to this country about 1834. Commencing life in St. Louis as a journeyman jeweler at nine dollars a week, he worked his way to fortune, gaining for himself at the same time the marked respect of his fellow-citizens. He was liberal but unostentatious in his charities, a devout member of the Pine Street Presbyterian Church, in which organization he was a deacon, president of the Missouri Loan Bank, and director in the Third National Bank, Continental Life Insurance Company

of New York, and Exceelsior Insurance Company of St. Louis. He left a wife, but no children.

E. JACCARD JEWELRY COMPANY,
Northeast corner Fifth and Olive Sts.

Mr. Jaccard was succeeded in the business in 1871 by his nephew, Eugene J. Cuendet, and the firm is now known as the E. Jaccard Jewelry Company, of

which Mr. Cuendet is president. It occupies the handsome building at the northeast corner of Fifth and Olive Streets, fronting one hundred feet on Olive Street and fifty feet on Fifth Street. It is built of Athens marble, five stories in height, and its architecture is graceful and imposing. The cost of the building and ground exceeded three hundred thousand dollars. The stock comprises, in addition to the ordinary wares of an extensive jewelry establishment, choice importations of pottery, porcelain, rare and valuable gems, bronzes, gilt goods, statuary, French clocks, etc., and the firm makes a specialty of watches and music-boxes, which are manufactured especially for it in Switzerland.

The firm of Mermod, Jaccard & Co. has attained great celebrity in the jewelry trade of the West, and transacts an extensive business. Its founder, D. Constant Jaccard, was born in Ste. Croix, Switzerland, Aug. 22, 1826. He received the usual instruction at the public schools, and when eleven years old began his apprenticeship as a jeweler, being first employed on music-boxes, and afterwards on watches, and dividing his time between his studies and his work at the bench. He remained with his parents until 1845, and then attended the Normal School at Lausanne, where he went through the three-years' course with eighteen months' study, and graduated first in a class of thirty-five. In order to defray his expenses at this institution, he gave two hours' lessons each day, and during the vacation worked at his bench.

After leaving school he taught one year, and then the political disturbances in France and Switzerland in 1847-48 induced him to accept an invitation from Louis and Eugene Jaccard, his cousins, to come to St. Louis and work with them.

Mr. Jaccard left Ste. Croix April 24, 1848, and arrived in St. Louis on the 15th of July. The trip consumed over eighty days, whereas it takes now less than twenty days.

He went to work immediately upon his arrival, and has resided in St. Louis ever since. During the gold fever of 1849-51 he was often urged by friends to go to California, and though frequently solicited to change his business, he has remained steadfast to his first choice, and his perseverance has been richly rewarded.

His ancestors were French Huguenots, who fled to Switzerland after the revocation of the Edict of Nantes, and settled in Ste. Croix, on the very first ground after crossing the frontier. The rest of the family remained in Picardy, France, and spell their name Jacquard, which seems to have been its original

form. The Ste. Croix refugees, however, adopted the spelling Jaccard. From the Jacquard family came the inventor of the Jacquard loom.

Having from a child suffered from sick headache and facial neuralgia, Mr. Jaccard has been prevented from going much into society or joining social organizations. His habits, therefore, have been quiet and retired, but he has nevertheless given, unostentatiously, much time and labor to works of beneficence and trust. As treasurer of the *Société du sou par semaine*, he distributed during the war, in connection with the Sanitary Commission, over twenty thousand dollars to relieve the wants of persons on both sides. In 1868 he was appointed vice-consul of Switzerland at St. Louis, and acted alone as consul for two years, having only lately been relieved, at his own request, on account of ill health.

In politics, Mr. Jaccard is independent and an earnest advocate of civil service reform. He thinks both parties made up of good and bad, and in voting has always selected his candidates with a view of the real fitness of the man for the place, and regardless of the ticket to which he may belong.

In religion, Mr. Jaccard is a Presbyterian. He was formerly an elder in Dr. Brooks' church, and is now a member of Dr. Marquis' Lafayette Park Presbyterian Church.

In 1855 he was married to a daughter of J. G. Chipron, brother-in-law to Rev. Dr. Grandpierre, of Paris, France, where Mrs. Jaccard was born. Her family settled in Highland, Ill., in 1848.

On Dec. 31, 1848, as previously stated, the house of Louis Jaccard & Co. was dissolved, Louis selling his half-interest to his nephew Eugene, who carried on the business alone, under the name of E. Jaccard, until 1852, when he took A. S. Mermod as partner, and then in 1855, D. C. Jaccard as a third partner, forming the firm of E. Jaccard & Co. This continued until May 1, 1864, when the partnership was dissolved under the following circumstances:

In 1863, Eugene Jaccard had formed a partnership with the two Captains La Barge and Harkness (under the name of La Barge, Harkness & Co.), for the purpose of trading and steamboating on the river. This being outside of the regular jewelry business, produced a disagreement among the members of the firm of E. Jaccard & Co. Mr. Mermod and D. C. Jaccard being apprehensive that their interests would suffer, on May 1, 1864, sold their interest to Eugene Jaccard.

Immediately after their withdrawal Messrs. Mermod and Jaccard purchased an establishment under Odd-Fellows' Hall, corner of Fourth and Locust Streets,

D. C. Jaccard

LIBRARY
OF THE
UNIVERSITY OF ILLINOIS.

and taking as partner C. F. Mathey, founded, May 1, 1864, the firm of D. C. Jaccard & Co., who have done business at this place (Odd-Fellows' Block) ever since. The firm soon obtained a good business, and throughout the whole of the subsequent period its progress has been steady and uninterrupted. Even during the period of general commercial depression, from 1873 to 1879, the development of its business was unchecked. In 1873 the firm added to its double store on Fourth Street the large building on Locust Street.

In 1873 the name of the firm was changed from D. C. Jaccard & Co. to Mermod, Jaccard & Co., under Odd-Fellows' Hall, Fourth and Locust Streets. This was done in order to prevent mistakes arising from the similarity of the two firm-names, although Eugene Jaccard had then been dead two years, and D. C. Jaccard was the only one of that name personally engaged in the jewelry business in St. Louis. Goodman King had been admitted as a partner some years before, and contributed no small amount of energy and activity to the establishment. When D. C. Jaccard and his partners separated from the house of Eugene Jaccard, they agreed to establish their business on a definite basis, and all signed a written agreement stipulating that they would never speculate in anything; they would never buy more goods than they could pay cash for; they would not sign any notes or have any drafts drawn on them; that at the end of every month they would carefully examine the condition of their affairs, in order to act intelligently in the purchase of goods. The faithfulness with which they adhered to these regulations was soon discovered by manufacturers, all of whom became anxious to deal with such a house, and consequently the very best offers have always been at their disposal.

Mermod, Jaccard & Co. have their own manufactory for watches (particularly for ladies' watches) at Ste. Croix, Switzerland, Mr. Jaccard's brother Justin being at its head. His cousins are large manufacturers of music-boxes also at Ste. Croix.

Mermod, Jaccard & Co. have also a house in Paris, No. 32 Faubourg Poissonnière, where Mr. V. Verse-puy, a most expert connoisseur, watches the diamond market for them, and selects all their clocks and *objets d'art*. Two of the members also visit Europe regularly twice a year for the purchase of new articles in their line. The house has also representatives in Vienna, Bohemia, London, Birmingham, Sheffield, etc., and is so well known in Europe that it can buy whatever it needs quite as well as in New York, such is its standing among manufacturers and those who supply it with its goods. This high reputation, it is

needless to say, it enjoys as well in the United States and Mexico as in more distant lands.

Mr. Mermod and D. C. Jaccard have each a son, Arthur Mermod and Eugene Jaccard, both of whom have for some years been employed in the store, and will soon be ready to take up the business and carry it on in accordance with the principles adopted by their fathers when they commenced.

Type Foundries.—The first type foundry in St. Louis was established by A. P. Ladew. Mr. Ladew was born in Albany, N. Y., Sept. 13, 1811, and was the son of Stephen Ladew, a prominent merchant, and at one time private secretary of De Witt Clinton. At the age of thirteen A. P. Ladew was placed in an establishment to learn the trade of type-making and stereotyping, and subsequently worked in the well-known foundry of James Conner in New York. After serving his apprenticeship he formed the acquaintance of L. Johnson, of Philadelphia, a leading type founder of that day, and under his patronage and that of George Charles he removed to St. Louis in 1838 and established the St. Louis Type Foundry, the firm being George Charles & Co. In its issue of Dec. 1, 1840, one of the St. Louis newspapers said,—

“We received yesterday a specimen of pica type from the foundry of Mr. Charles, who is just opening on Market Street. The specimen before us assures us that this will prove a most valuable acquisition to the printers of the West.”

On the 1st of July, 1843, it was announced that A. P. Ladew had become the sole proprietor of the foundry, and on the 12th of February, 1852, A. P. Ladew & Co. informed the public that they had established a stereotype foundry, at which they were prepared to execute all kinds of work usually performed in such establishments. “These gentlemen,” added the paper announcing the fact, “are well known to the people of the West as type founders, etc.” In 1850 the capital invested in the type foundry was fifty-one thousand eight hundred dollars, employing ten males and ten females, with an annual product of one hundred and fifty thousand dollars.

Subsequently the firm became known as Ladew, Peers & Co., and its business developed to very large proportions, the foundry supplying the demand for its products throughout the West. Mr. Ladew was prominently associated with various newspapers and other business enterprises in St. Louis, and was one of the most substantial and influential members of the community.¹ He was a director of the St. Louis

¹ Mr. Ladew was twice married. His first wife was Miss Catherine Leets, of New Jersey, and his second wife Mrs. Lizzie E. Clark, whom he married Sept. 3, 1856.

Building and Savings Association, member of the City Council, vice-president of the Commercial Insurance Company, and a director in the Bank of St. Louis, besides holding other positions of trust and honor.

There are now (1882) two type foundries in St. Louis,—the St. Louis Type Foundry, conducted by a stock company, of which William Bright is secretary, at the northeast corner of Third and Vine Streets, and the Central Type Foundry, 15 North Third Street.

Lumber.—With a soil so deep and such an abundant supply of water, the forests of Missouri must needs teem with trees and shrubs and vines useful in industry or as fruit-producers; and in fact the timber supply of Missouri is enormous, although, as experience has taught, unhappily not inexhaustible. The gigantic sylvan wildernesses both of Brazil and Guiana are not protected against the indiscriminate rapacity of man, who always seems to attack the forest with the ferocity of an assault upon a hereditary enemy. In the great forests of Missouri a very wide variety of the useful woods are represented,—oak, hickory, maple, ash, mulberry, locust, linden, poplar, elm, walnut, and pine for carriages, wagons, and agricultural implements; pine, linden, poplar, cottonwood, walnut, cypress, cedar, oak, and gum for houses and other buildings; walnut, poplar, linden, maple, cherry, coffee-tree, locust, gum, mulberry, tupelo, pine, cypress, cedar, birch, hickory, and oak for cabinet-work; cedar, locust, oak, hickory, mulberry, and pine for fences; and Osage orange, thorns, buckthorn, and cedar for hedges. Millions of these varieties of lumber are destroyed every year in opening farms, and meanwhile the people of Missouri are importing millions in furniture and agricultural implements and lumber for the various kinds of carpentry. There is poor economy in importing walnut, pine, cherry, poplar, birch, maple, oak, linden, and cedar manufactured into furniture from the Ohio and its tributaries when Missourians are destroying upon their farms more and better lumber of the same variety every year.

In spite of all the grandeur of growth of the forests, it has only been of recent years that the people of St. Louis have begun to supply themselves with the articles manufactured from the wood products of the country, much less to produce any for export. The absorption of industry in other channels, the scarcity of capital and skilled labor, and the cheap goods supplied by competing communities elsewhere prevented these essentially home manufactures from establishing themselves in the city upon anything like a large scale or one commensurate with the community's needs.

The ancient French *habitans* did indeed contrive to manufacture their canoes and bateaux, their rude

charrettes, and their equally rude houses of posts from native timber, joining their roofs and floors, and framing them, and making their cedar-picket inclosures with a good deal of simple, compact skill. But they did not admire the forest, nor choose to grapple with it; they got their firewood from the débris brought down by the floods of the Mississippi and Missouri, and the old town either bought its sawed and squared and planed lumber or else did without. The *Missouri Gazette* of March 1, 1809, has the following advertisement:

“The subscriber will receive and execute orders for any quantity of plank at the following prices per hundred feet, viz.:

Cherry	\$3.50
Walnut or ash.....	3.25
Oak	3.00

“To those who may forward their bills and receive their plank at any of the landing-places at St. Louis a deduction of twenty-five cents per hundred feet will be made.

“A quantity of the above kinds of plank is deposited for sale at Mr. Stedman's tan-yard at the above prices.

“N.B.—Orders for plank will be received at the printing-office and forwarded to the mill.

“THOMAS KIRKPATRICK.

“GOSHEN TOWNSHIP, INDIAN TERRITORY.”

The following is probably the first notice of an attempt to manufacture furniture in St. Louis. It is from the same journal, 26th of July, 1810:

“Heslep & Taylor, windsor and fancy chair-makers, at their shop, adjoining Mr. J. Coons', St. Louis, inform the public that they have just arrived from Pennsylvania with an extensive assortment of materials necessary for elegant and plain chairs. They will gild, varnish, japan, and paint their work agreeable to the fancy of those who wish to encourage the business in this place.”

Feb. 13, 1813, we find the following:

“Phillip Matile, wheelwright, carriage- and chair-maker (from Switzerland), informs the public that he has for the last two years carried on business in this neighborhood. He has now established a shop six miles from St. Louis, on the road that leads to Camp Bellefontaine.”

In 1818, 3d of January, we read,—

“Pine boards sell here now at the enormous price of eight dollars per hundred feet. Ash, oak, walnut, and every other description of boards rate in the same proportion.”

In the year 1819, Messrs. Laveille and Morton arrived in St. Louis from Pittsburgh on flat-bottomed boats loaded with lumber, on the tops of which were stowed the effects of the emigrants. This is believed to have been the first importation of Eastern lumber into St. Louis. On their arrival they engaged as carpenters, and subsequently became extensive building contractors. With the increase in their business came an increased demand for lumber, and for a good many years the principal supply was drawn from the yellow-pine districts of the Gasconade River and its

tributaries, in what was then Gasconade County, but now Gasconade, Texas, and a half-dozen or more other counties. The principal mills were located on the Big Piney, and were owned by Messrs. Fort & Lynch, Ormsby, Truesdale, Addison, Bates, and Joseph Walton, there being some eight or ten in all. After the lumber was manufactured it was brought down the Gasconade and Missouri Rivers in rafts, and it was from this lumber that the St. Louis arsenal and Jefferson Barracks were built. Every winter the builders or dealers in lumber had to make a trip by horseback to that district, the time occupied in going being six days, and the route by way of Manchester, thirty miles from St. Louis; Union, sixty miles from Manchester, crossing the Burbois, and taking the Shawneetown trail to Strong's, on Little Prairie, thirty miles from Union; then to Clayton's, forty miles from Strong's; then to Bradford's, on Spring Creek, thirty-five miles from Clayton's; and then to the mills on Big Piney, about twenty miles from Spring Creek. The country was sparsely settled, and the points named the only ones where accommodation for either man or beast could be had.

Some lumber was also brought from the neighborhood of Ste. Genevieve, and poplar from the vicinity of a stream south of the city, known as the Big Muddy, and Cape Girardeau, and it was not until somewhere about the years 1825-27 that Messrs. Laveille & Morton commenced making a regular business of bringing lumber from Pittsburgh and vicinity to supply the St. Louis market.

July 2, 1836, we find the following, showing a rapid progress:

"Our readers are referred to an advertisement in another column of a steam planing-machine, recently put into operation in this city by Mr. James Kipp. The machinery is in all respects perfect, and we understood that it was capable of turning out six hundred planks per day completely finished. The whole operation is performed with wonderful velocity."

In 1844 lumber began more regularly to be brought from the Allegheny regions, and about the same time St. Louis lumbermen turned their attention to the pine regions of the upper Mississippi and the northern lakes, the erection of mills there, and the manufacture and shipment of lumber direct by river. During that time, and even yet with some exceptions, the lumber in the St. Louis market was brought in rafts floated down by its manufacturers, or from Chicago yards, the business all the while increasing.

For several years the larger portion of white-pine was brought *via* Chicago, but the cost of transportation operated against Chicago.

The manufacture of pine lumber in St. Louis, that has proved a fortune to some of its citizens, was partially the result of a misfortune to some of the log or lumbermen of the St. Croix region. In 1843, in consequence of the heavy rains in the upper country and the vast accumulation of logs in the Lake St. Croix "boom," the "boom" gave way, and thousands of logs escaped to the river. They were gathered up at different points along the Mississippi, made into rafts and brought down to St. Louis, and some of them sold to Daniel Page, who had a mill on the river-bank, a short distance above what is now known as Mound Street. On the 1st of November, 1841, Messrs. West, Field & Vandeventer started what was known at the time, and as long as it was conducted, as the Pine Mill, which was confined exclusively to the sawing of pine lumber. So successful was this enterprise, and so great the demand, that the supply of logs became inadequate, and they were forced to hire men and send them to the pineries to cut logs for their mill, so that this firm may be set down as inaugurating that branch of business in St. Louis.

In this connection it may not be amiss to say that among other orders they filled was one in 1849-50 for the spars, decking, etc., of the ship "Matilda," built at St. Louis, and designed for the St. Louis and San Francisco trade. This was about the time of the breaking out of the California gold fever, but before the ship was finished Mr. French, for whom she was building, failed, and West, Field & Vandeventer and Gordon & Brotherton, who had a hard lumber mill, and had furnished the oak lumber for the outside and inside siding, ribs, etc., closed their lien, and with some other interested parties caused her to be sold at sheriff's sale and bid her in. After the sale they had her taken down to New Orleans, where she was rigged out, a cargo taken on board, and started for New York, but on entering the gulf she sprang a leak, and was forced to put back and go on to the dock for repairs. The insurance on the hull and cargo did not cover the loss, and her owners put her on the market and sold her at a great sacrifice. She was subsequently sold in New York for twenty-seven thousand dollars.

The firm of Schulenburg & Boeckeler in 1848 purchased their first raft of pine logs, which were brought from the Wisconsin pineries, and hence became the second firm to commence the manufacture of pine lumber in the city. That mill continued the manufacture of native and pine lumber from that time, although a part of the intervening time the mill was mainly run by other parties, Schulenburg & Boeckeler retaining an interest all the time. It finally passed under the entire control and management of A. Boeckeler & Co.,

and since then the bulk of its manufactures has been of pine to fill home orders for bridge material and other heavy work. In 1850 the firm became owners of the now large planing-mill on Mullanphy Street, between Tenth and Eleventh. In 1853, Schulenburg & Boeckeler conceived the idea of establishing mills of their own in the pineries of Minnesota, from which they might supply their yards direct, and the success that attended the enterprise has abundantly proved its wisdom. The site selected was at the town of Stillwater, on the St. Croix River, and in 1854 the mills were completed and put in motion. These mills were propelled by steam, generated by five large boilers, and the machinery driven by two good-sized engines. The saws were run in "gangs," there being three "gangs," in one of which there were twenty-eight saws, in another one twenty-two, and in the other one eighteen, so that the cutting of the largest log was a matter of but small moment. Besides these gang-saws there was one large rotary- or circular-saw, and a number of smaller circulars for manufacturing lath, shingles, palings, etc., the whole machinery giving employment to about one hundred and seventy-five men. From the starting of the mills in 1854 to 1857 the most of their manufactures were sold to different points on the river, only a part being brought to St. Louis, and it was not until the summer of that year that they began "piling" in their yards.

The time occupied in bringing a hand-raft from Stillwater to St. Louis varied according to the stage of the water and the rapidity of the current, but generally was from twenty-five to thirty days. The management of the raft required about twenty-four men and a pilot, each string having two oars and requiring two oarsmen. The time necessary for a tow-boat raft to make the trip was about twelve to fifteen days, and required only one man to each string, besides the regular boat's crew. Laths, shingles, and palings were manufactured at the mills in the pineries, and brought down on the top of the lumber-rafts, a single raft often bringing 150,000 shingles, 300,000 laths, and 25,000 palings, making in all a very valuable cargo, and worth, at a reasonable estimate, about \$25,000.

From Michigan and Canada large numbers of logs were, even at that early day, brought to St. Louis. Yellow-pine from the Gasconade, poplar from South-western Indiana, Southern Illinois, and Tennessee, and cedar from the cedar-rifts of Tennessee were early imported to St. Louis.

Richard Schulenburg, the senior member of the lumber firm of Schulenburg & Boeckeler, and one of the pioneers in the lumber trade of St. Louis, was born in Westphalia, Prussia, in 1837. His father

was an attorney, and gave his son an education suitable for entering on the study of a profession, for which he designed him. At the age of nineteen it was found that his taste inclined toward industrial and commercial pursuits, and, with the approbation of his father, he went to Manchester, in England, where he passed two years in the acquisition of a knowledge of business. He then returned and passed two years in Germany, one of which was devoted to the discharge of his military duty.

In 1861 he came to America and located at St. Louis. Soon after his arrival he engaged in the lumber business in a small way, and this business he has ever since followed. His trade steadily enlarged, and in 1874 he became a stockholder in the Eau Claire Lumber Company.

After the death of Nelson C. Chapman, which occurred in that year, Mr. Schulenburg succeeded him as vice-president and general business manager of the company. Under his management the business of the company in St. Louis has largely increased, and it now reaches the amount of 65,000,000 feet of lumber annually sold here.

Mr. Schulenburg was married in 1864 to Miss Eliza, daughter of Frederick Schulenburg, an old citizen of St. Louis. They have five children, three sons and two daughters. He has devoted his entire time and energies to his business, and has bestowed very little attention on other matters.

It was many years before St. Louis began to supply her own wants in the lumber and timber line, and to manufacture the various wares of wood which occupy so large and important a place in business and domestic service. In 1850 the census statistics showed but two planing-mills, with 35 hands and an annual product valued at no more than \$96,000. There were 55 cooper establishments, having 248 hands, and making \$288,822 of annual products; 9 saw-mills, with \$115,000 capital, 103 hands, and \$248,000 annual product; 1 bucket-factory with 10 hands, turning out \$6000 a year; 8 carriage-makers, \$56,000 capital, 138 hands, and \$130,000 products; 50 cabinet-makers, \$72,700 capital, 195 hands, \$182,800 products; 3 plane-makers, \$5300 capital, 15 hands, \$48,000 products; 1 chair-factory, \$1500 capital, 5 hands, \$3500 output; 1 basket-maker, \$400 capital, 2 hands, \$2160 product; 32 wagon-makers, \$27,275 capital, 121 hands, \$146,585 products; 1 yawl-boat builder, \$150 capital, 1 hand, \$750 product; 1 block-and pump-maker, \$8000 capital, 17 hands, \$9000 product; and 1 ship-yard, \$125,000 capital, 85 hands, \$150,000 products in steamboats.

This, however, was but the beginning. As the

Richard Schulenburg

LIBRARY
OF THE
UNIVERSITY OF ILLINOIS

annual trade review of one of the city newspapers for 1854 puts it,—

“In many articles of manufacture, both of wood and metals, we are dependent upon the industry, enterprise, and ingenuity of other States for nearly the whole supply which our demand requires; this, too, while this section has ample stores of the raw material, superior in texture, and capable of being procured in the cheapest possible manner. With the most inexhaustible quantities of iron and copper ore, we import nearly all the articles manufactured out of these metals, such as nails and castings of every description. Sand is taken from the State, to be returned from Pittsburgh in the shape of glass. Our forests are filled with timber suitable for the finest furniture, and we import bureaus, sofas, chairs, bedsteads, buckets, and a hundred other articles of like character.”

There were, to be sure, many factories, as shown above, but they were on a small scale, and did not meet the city's requirements. During the year 1853, for which this journal's statistics were compiled, for example, there were received from other places 20,063 dozen brooms, 1018 nests of baskets, 98,141 pieces of cooper stuff, 8474 packages of furniture, 771 chicken-coops, 1091 saddle-trees, and about 10,000 packages of woodware, such as washboards, buckets, tubs, pails, etc., besides hub-stuff and hoop-poles and blocks by railroad. The exhibit of lumber from all sources was as follows:

	Feet.
Lumber (sawed) received by the lumber merchants in 1853.....	36,412,451
Shingles received by the lumber merchants in 1853..	30,462,700
Laths “ “ “ “ “ ..	6,947,000
Cedar posts “ “ “ “ “ ..	22,748

During the year there were purchased by the city mills the following:

	Feet.
Logs purchased.....	29,636,808
Lumber manufactured therefrom.....	23,095,545
Laths from same.....	7,975,500
The plank-road stuff received by the county for roads, by way of rafts and the river.....	1,278,336

The above shows, in the receipt and consumption of sawed lumber, 60,786,332 feet.

A comparative statement of the lumber trade for 1868 and 1869 makes the following exhibit:

1868.		Feet.
Upper Mississippi.....		20,000,000
Saginaw and Canada,—Saginaw 5,000,000 and Canada 2,500,000.....		7,500,000
Chicago.....		3,000,000
Poplar from Southern Illinois and Indiana.....		500,000
Yellow-pine, Mobile and Ohio Railroad and steamer from Vicksburg.....		1,500,000
Yellow-pine from Potosi, Mo.....		2,500,000
Total.....		35,000,000
1869.		Feet.
Upper Mississippi.....		20,000,000
Saginaw.....		500,000
Canada.....		1,500,000
Chicago.....		5,000,000
Poplar from Illinois, Indiana, and Tennessee.....		1,500,000
Southern yellow-pine from Vicksburg, Mobile, and Ohio.....		1,000,000
Missouri pine.....		3,000,000
Total.....		32,500,000

The Chippewa, Black River, Wisconsin River, Wolf River, the Green Bay district, and Southeast Missouri were in time made tributaries to the lumber trade of St. Louis.

The receipts of lumber at St. Louis in 1875 were:

	Feet.
White-pine by river.....	89,217,880
“ by railroad.....	9,464,000
Yellow-pine.....	21,326,850
Poplar by river.....	4,496,000
“ by railroad.....	2,149,000
Hard woods.....	12,474,500
Cedar.....	2,729,090
Pieces.	
Shingles.....	43,574,090
Laths.....	15,099,000
Logs of all kinds.....	40,232

The shipments aggregated 56,643,000 feet.

The receipts of lumber for the calendar year 1881 were 434,043,094 feet, nearly twelve times as much as in 1853; shingles, 56,578,785. In carpentering, in 1880, the business done by St. Louis was as follows: Establishments, 185; hands, 2228; wages, \$667,900 (\$300 *per capita*); capital, \$361,840; material, \$1,585,094; products, \$3,005,411,—leaving a net profit of \$716,233 (200 per cent. on capital).

Baskets (rattan and willow-ware).—Establishments, 7; capital, \$9015; hands, 14; wages, \$6140; materials, \$3960; products, \$18,020.

Boxes (cigar).—Establishments, 6; capital, \$57,550; hands, 97; wages, \$34,100; material, \$47,700; products, \$105,600.

Boxes (packing).—Establishments, 11; capital, \$40,000; hands, 98; wages, \$23,601; material, \$75,430; products, \$140,400.

Brooms and Brushes.—Establishments, 25; capital, \$95,175; hands, 328; wages, \$83,349; material, \$140,770; products, \$281,280.

Carriages and Wagons (materials).—Establishments, 3; capital, \$126,000; hands, 203; wages, \$91,638; material, \$134,440; products, \$264,600.

Carriages and Wagons (finishing).—Establishments, 39; capital, \$740,050; hands, 1300; wages, \$447,831; material, \$811,865; products, \$1,614,236.

Cars (railroad, street, and repairs).—Establishments, 7; capital, \$314,200; hands, 704; wages, \$293,384; material, \$732,460; products, \$1,100,809.

Coffins (undertakers' goods).—Establishments, 5; capital, \$30,500; hands, 33; wages, \$12,530; material, \$109,200; products, \$157,396.

Cooperage.—Establishments, 78; capital, \$493,295; hands, 1217; wages, \$377,056; material, \$798,262; products, \$1,431,405.

Furniture.—Establishments, 54; capital, \$920,702; hands, 1315; wages, \$511,915; material, \$1,082,825; products, \$1,979,683.

Looking-Glass and Picture Frames.—Establishments, 19; capital, \$323,900; hands, 280; wages, \$80,251; material, \$102,825; products, \$268,682.

Lumber (planed).— Establishments, 9; capital, \$272,350; hands, 418; wages, \$152,609; material, \$502,742; products, \$756,936.

Lumber (sawed).— Establishments, 3; capital, \$620,000; hands, 194; wages, \$72,086; material, \$251,600; products, \$412,000.

Sash (doors and blinds).—Establishments, 12; capital, \$586,195; hands, 804; wages, \$275,321; material, \$669,871; products, \$1,191,670.

Wheelwrighting.— Establishments, 52; capital, \$51,950; hands, 148; wages, \$47,598; material, \$42,632; products, \$140,121.

Wood (turned and carved).—Establishments, 18; capital, \$28,725; hands, 51; wages, \$19,183; material, \$20,045; products, \$84,207.

These statistics do not include many industries in which wood and lumber play a collateral or subordinate part, such as models and patterns, organs and pianos, pumps, refrigerators, roofing and roofing material, saddlery, show cases, trunks, umbrellas and canes, whips, billiard-tables, bridges, children's carriages and sleds, casks, chairs, washing-machines, wooden-ware, agricultural implements, etc.

Among the lumber merchants of St. Louis few, if any, have enjoyed a larger measure of success and in-

fluence than William G. Clark, who for nearly fifty years has been one of the prominent business men of the city. Mr. Clark was born in Baltimore, Md., Nov. 4, 1818. His great-grandparents emigrated from Argyleshire, Scotland, to York County, Pa., in 1750. His grandfather, Matthew Clark, was in 1802 a member of the Pennsylvania Legislature, representing the county of York. His father (who was also named Matthew) married Miss Tempie Glenn, the granddaughter of Maj. Robert Glenn, an officer under Gen. Washington in the Revolutionary war. Col. Matthew Clark (father of William G. Clark) was one of the defenders of Baltimore in the war of 1812, being a volunteer from the county of York. Subsequently, in 1816, he removed to Baltimore to live. Matthew Clark's mother was a sister of Judge Hugh Breckenridge, of Pennsylvania, one of the most distinguished men of his day.

William G. Clark was educated in the public schools of Baltimore until he was seventeen years of age, when he entered as clerk the dry-goods house of John Taylor, where he remained for one year. In 1836 he accompanied Daniel Trowbridge to St. Louis, to enter into business, and served him as clerk for a period of three years. In 1839, Mr. Clark commenced business for himself as a wholesale clothing merchant, the firm being Jones, Clark & Gill, one of the largest establishments of its kind at that day in the city, and still remembered by the old inhabitants as one of the leading houses on Main Street. Although success crowned his career as a wholesale clothing merchant, he retired from the business in 1842, being convinced that the lumber business presented a wider field for the exercise of his enterprise and ability. Accordingly he entered upon this new occupation with an energy and industry which soon caused him to become one of the most extensive and successful lumber merchants in the city. Having erected a large steam saw-mill on the river-bank in the northern part of the city, he continued in the lumber business until 1874, when he retired with an ample fortune, and a reputation for integrity and uprightness of which any one might be proud.

Mr. Clark's sagacity and forecast as a practical business man are seen in the investments in real estate which he made from time to time while actively engaged in other pursuits. One of these is worthy of mention. In 1850, when as yet there was but little business done on Fourth Street, he purchased the old Methodist Church property on the corner of Fourth Street and Washington Avenue, on which, in 1856, he erected a block of substantial and handsome five-story buildings, which he still owns, and which at the

William G. Slack

LIBRARY
OF THE
UNIVERSITY OF ILLINOIS.

present time occupy one of the most prominent business centres of the city.

As a citizen, Mr. Clark has been identified with many of the leading enterprises of the day. He was a director of the Southern Bank, a trustee of the City University, and a director and leading spirit in the building of the first Lindell Hotel. During the cholera epidemic in 1849, Mr. Clark was selected as one of the "Committee of Safety," to which was committed the management of sanitary affairs during the three months in which the terrible plague rested like a pall over the city. This "Committee of Safety," composed of such other leading men as Hon. Luther M. Kennett, Hon. Trusten Polk, Judge T. T. Gantt, and A. B. Chambers, discharged the important trust confided to it with marked fidelity, and to its action the city is indebted for the first establishment of quarantine.

Through life Mr. Clark has been a pronounced and active Christian man. He has long been a ruling elder in the Pine Street (now Grand Avenue) Presbyterian Church, and is chairman of the building committee charged with the erection of the handsome church edifice on the corner of Grand and Washington Avenues, and is identified with other departments of church work.

Mr. Clark has been twice happily married,—first to Miss Julia Miller, of Baltimore, Md., who bore him six children. His second wife is Miss Mary Bell Parks, daughter of Joseph Parks, of St. Charles, Mo., by whom he has had four children, all of whom are still living.

No citizen of St. Louis stands higher as a man of sterling integrity and high-toned Christian character than does William G. Clark.

Wood- and Willow-Ware.—Included under this trade nomenclature is a vast range of articles and utensils, such as buckets, casks, tubs, ladles, bread-bowls, and other household appliances or furnishings in wood, while willow-ware includes baskets, chairs, and the like constructed of this light material. But with the sale of these have become associated in the trade cordage, rope, brooms, wrapping-paper, paper bags, stove polish, axle grease, and, in the case of one of the largest firms, playing cards also. Indeed, the trade now comprises probably a greater number of articles in daily use than any other business. Precisely when dealing in wooden-ware became separated from the hardware trade proper, of which it may be said to be the counterpart, cannot now be ascertained. From the reminiscences of old inhabitants of the city, however, it appears that the wooden-ware trade existed as early as 1835, but it was in connection with the hard-

ware trade. As a separate industry, the branch is of comparatively modern origin here as elsewhere. In St. Louis, however, the wood- and willow-ware trade has obtained the ascendancy over that of any other city in America or Europe. St. Louis, in fact, is the ruling market, and prices for every other city on the continent are fixed here. In the manufacture of these wares, of themselves apparently insignificant, a capital approaching, in the aggregate, three million dollars is utilized, and upwards of a thousand hands are employed in the conduct of a vast system of machinery. Dealers in wood- and willow-ware transact a business often exceeding in value two million dollars a year; and as to the general volume of the trade, it is officially established that one St. Louis firm sells more annually than the combined trade of any other four houses in the same line in the world, and more than the aggregate sales of all the houses in this line of business west of the Alleghenies. Thus St. Louis is absolutely beyond competition in this line, having also the largest manufactory of this character in the world. Not only are these goods, chiefly derived from home manufactories, shipped to every considerable city and town in America, but there is considerable export to Cuba, South and Central America, and to Australia. The great excess of shipments over imports is thus explained, as well as in the utilization of the supply of raw material found convenient to the market.

In the manufacture of wooden-ware proper, pine and oak are chiefly used. One of the larger establishments supplies the West with water buckets and the like, and there are three oakware manufactories whose product is larger than that of any other establishment in existence. Axe handles, hoe handles, shovel, pick, and other varieties of hard-wood handles are supplied by a manufacturing company having the largest establishment of the kind in the world. An element entering largely into this peculiar trade is axle grease, all of which is manufactured in St. Louis, the product of four lubricating companies aggregating nearly half a million dollars annually.

The paper bags entering into the wood- and willow-ware trade are also manufactured in St. Louis, one factory, sixty by one hundred and seventy-five feet and five stories high, thus utilizing ten tons of paper daily, and giving employment to over a hundred hands, as appears from the labor commissioner's statistics.

A still more wonderful feature of the trade, however, is the manufacture of brooms by machinery. The only establishment of the kind in the world was put in operation in St. Louis about the year 1876, and it consumes or utilizes more broom-corn than all

other broom-factories (hand) in the West. It turns out six hundred dozen complete brooms daily, uses seven thousand two hundred handles, and works up six tons of the raw material. The product thus aggregates about three hundred and fifty thousand dollars a year, or over twelve hundred dollars each working day. This extensive trade is constantly increasing.

Furniture.—In a review of the manufactures of St. Louis at that time, a local journal of Sept. 7, 1854, said, with reference to the furniture industry, "There are many residents of St. Louis, probably the majority of the inhabitants, who are not aware of the progress and already advanced state of St. Louis manufactures. The time was when we looked to Cincinnati and the Eastern cities for almost everything we wanted in the line of manufactures, either because the article we wished was not to be had here, or if it was the Eastern manufacture could be had at a cheaper rate. As in any other growing, struggling city, our mechanics were not able to compete with Eastern work, and it always requires a vast deal of enterprise, determination, and hard labor to break up a trade that has once been established, no matter in what line of business. Many really enterprising mechanics have failed in producing this result and have become bankrupt, almost martyrs to the cause of home manufactures."¹

Prior to that date, Paris H. Mason, in 1847, associated himself with Russell Scarrett, at 214 Washington Avenue; Conrades & Logeman established their business in 1853; Joseph Peters was making, in 1854, a specialty of bureaus and cabinet-work; John H. Crane commenced the furniture business in 1855; William Mitchell opened his shop in the same year, and in 1871 the establishment was incorporated as the "Mitchell Furniture Company," and in 1860, Martin Lammert began business. From this year the business rapidly increased, until now it is one of the most important industries in St. Louis. In 1881 there were seventy-two houses engaged in the furniture-trade, whose sales aggregated three million dollars per annum.

Joseph Peters, who, as we have seen, was one of the early furniture manufacturers of St. Louis, was born in Prussia, May 9, 1832. He learned the trade of a cabinet-maker, and at the age of twenty-two, desiring to better his condition, emigrated to America, settling in St. Louis in 1854. For nine years he

worked at his trade, and in 1863 established a manufactory. Having little or no capital, he employed at first a few hand-workers, but with hard labor and economy the business prospered, and in the lapse of time horse-power was introduced, and finally steam. Mr. Peters managed the business personally and under his own name until 1880, when the "Joseph Peters' Furniture Company" was organized, he becoming its president. It is one of the largest concerns of the kind in St. Louis, but is distinguished not so much, perhaps, for the extent of its operations as for the fine quality of its manufactures. Hitherto St. Louis has been obliged to look elsewhere for its fine furniture, but there is a prospect, under the enterprising lead of such men as Joseph Peters, that the demand for elegant and expensive goods will be met by the home manufacturer.

Distilleries.—In former years St. Louis had more distilleries operating in her midst, but the product of the two remaining—the St. Louis and the Teuscher Companies—is greater, according to the testimony of the Internal Revenue Department, than that of their more numerous predecessors. In 1854 the production was seventeen thousand five hundred barrels, and during the five years from 1877 to 1881 the production, estimated on the basis of the stamp-tax paid (at ninety cents a gallon), was, in value, as follows:

1877.....	\$1,883,462	1880.....	\$1,755,525
1878.....	2,101,556	1881.....	2,168,433
1879.....	1,877,510		

The product of 1881 aggregated upwards of twenty-four thousand gallons, a trifling quantity as compared with the large imports. St. Louis, however, has ownership in several Kentucky distilleries, the product of which is handled in the St. Louis market, and there are also a large number of distilleries, agents, and rectifiers doing business in St. Louis, so that the entire movement of the whiskey interest represents perhaps two million five hundred thousand dollars a year.

The following table shows the condition of the distillery business:

RECEIPTS OF HIGH-WINES.		SHIPMENTS OF WHISKEY.	
	Bbbls.		Bbbls.
1882.....	9,152	1882.....	104,790

and climate of the State are suitable to the production of grapes yielding a "must" full of body and having saccharine enough in it to prevent the acetic fermentation. On this point Rev. Mr. Peabody, an admitted expert, says,—

"The two important natural conditions demanded by the grape are climate and soil. Given these two, all the rest will eventually follow from the application of the skilled industry of the vine-dresser. In this portion of the valley of the Mississippi we find these two elementary conditions, climate and soil, existing together. That the soil and climate of Missouri and the adjacent parts of other States, especially those on its eastern and western boundaries (Illinois and Kansas), are eminently adapted to the growth of the grape is a point too well established to need discussion here. The fact is well known and universally acknowledged throughout the entire district, and perhaps, I may venture to add, throughout the United States. Compared with other sections of the United States (at least all those east of the Rocky Mountains), so far as their capabilities have been tested, our advantages for the production of wine are certainly superior."¹

All the experiments at Hermann have been satisfactory and remunerative, and there are said to be fifteen million acres of land in Missouri suitable for vineyards.

In 1853 the native wine received in St. Louis was contained in nine casks, seven barrels, and eight boxes,—less than the product of Kaskaskia and Cahokia a hundred years before that. The census of 1870 returned four wine-makers and an annual product exceeding \$800,000. The census of 1880 gives three establishments, \$380,000 capital, thirty-one hands, \$18,830 wages, \$52,000 material, and \$131,000 product. These figures are not encouraging, and yet the grape-growing interest is not disheartened. On the contrary, it rests confident that Missouri must be the centre of wine-making in this country, because it has six varieties of grapes native to the soil, and which, unlike the California grapes, are claimed to be phylloxera-proof.

The native wine interest has largely exceeded the whiskey manufacture and trade in volume of late years

Wines.—Fifteen or twenty years ago it was thought that Missouri would become a great wine-growing State and St. Louis a wine market of consequence. These expectations have not been fully realized, owing, in part, to the rapidly-developed vineyard interests of California, and in part to the preference given in St. Louis to the beer market. But the wine-making trade is still productive, and promises to become a very substantial manufacture when the vine-plantings are more extensive and the plant for fermenting and ripening the grape-juice is larger.

Great intelligence and thought have recently been given to grape-culture and wine-making in Missouri, with the result of eliminating much error and many absurdly false expectations of yield and profit, at the same time getting the industry closer down to a business-like basis. Missouri wines have an admitted excellence in flavor and keeping qualities, and the soil

¹ In 1848, Alexander Kayser, of St. Louis, offered three premiums of one hundred dollars each for the best specimens of Missouri wine, the vintage of three consecutive years. The first premium was awarded in 1849 for the vintage of 1848, the second in 1850 for the vintage of 1849. For the latter prize there were twenty-seven samples of wine produced for competition, but the premium was awarded to Jacob Romel, of Hermann, for "a wine of pure Catawba grapes."

in St. Louis, although a much more recently-established branch of trade. One St. Louis brand of champagne alone exceeds in volume and value of trade the purely spirit interest, and the growth of the trade in Missouri, California, and other native wines has exceeded the anticipations of those engaged in it. The bottled wine export last year reached nearly twenty thousand cases. The value of foreign wines and liquors which passed through the St. Louis custom-house in 1881 was \$60,639, on which a duty of \$26,990.39 was paid. Of the forty firms engaged in the wholesale whiskey trade in 1881, many deal in wines and other liquors, and the sales aggregate probably over \$2,000,000 per annum.

Breweries.—The period when lager-beer brewing, which has become an industry of immense proportions, was established in St. Louis is more readily ascertainable than the precise time when brewing generally was inaugurated. The early files of the *Missouri Gazette*, however, fix the date of the beginning of beer-brewing in St. Louis in the month of May, 1810, when that paper “congratulated” its readers

“on the acquisition of a new establishment for making porter and strong beer. Mr. St. Vrain, of Bellefontaine,” it added, “has erected a manufactory and taken into partnership an experienced European brewer, and has commenced business in a handsome style. The lovers of malt will now have an opportunity to foster an undertaking so much wanted in this Territory.”

Subsequently the same paper published the following advertisement :

“Table beer and porter, manufactured by St. Vrain & Habb, at Bellefontaine, near St. Louis. Those who wish to be supplied will please direct their orders to the brewery, or to Edward Hempstead, Esq., St. Louis, who will always have a quantity in his cellar ready for sale. Customers who may want a large supply will please to give timely notice.”

The following from the same source fixes the price at which beer was sold to the early inhabitants of St. Louis :

“Strong and table beer, manufactured by St. Vrain & Habb, at Bellefontaine, near St. Louis. The price of strong beer will be ten dollars in cash or twelve in produce, five dollars in cash for table beer or six in produce, delivered at the brewery at the following prices :

Wheat.....	at 62½ cents.
Barley.....	at 50 “
Rye.....	at 62½ “
Corn.....	at 25 “
Green hops.....	at 10 “

“Cattle and pork at the market price will also be taken, and three months’ credit shall be given to purchasers, provided they give an indorsed note to the satisfaction of the brewers. Those who wish to be supplied will please direct their orders to the brewery, or to Edward Hempstead, Esq., St. Louis.”

In May, 1810, the St. Louis brewery of Jacob Philipson went into operation, and he was “ready to sell beer at the price of eleven

dollars for the barrel and six dollars for the half-barrel, one dollar of each to be returned to the purchaser on his redelivering within a reasonable time the empty barrel in good condition, and bearing the stamp of the brewery.” Mr. Philipson also agreed that the above price should “be reduced whenever grain can be obtained in this country in quantities sufficient to give the brewery a continued employment, and whenever our farmers, by attending to the cultivation of hops, will do away with the necessity of procuring this article from a great distance and at considerable expense. The brewery will keep no books, and will deliver beer only for immediate payment. This invariable rule is imposed on the proprietor by the necessity of his paying cash (frequently in advance) for every ingredient and every part of labor. Beer will be retailed at the rate of twelve and a half cents per quart at the stores of Messrs. Sylvestre Labadie and Michel Tesson, and at various other convenient situations in this place, and at Ste. Genevieve a constant supply will be kept up at the store of Jacob Philipson.”

In 1826 the “new brewery” of Lynch & Co. was advertised, and in 1827, John Mullanphy had “St. Louis ale at his brewery in whole or half-barrels.”

Descendants of the old French residents prior to 1800 speak of a fermented liquor made in St. Louis at that early period, and of the existence of at least one primitive place of brewing. The venerable Ezra English manufactured a malt liquor better known as ale than beer half a century or more ago, and upon an extensive scale, judged by the storage capacity of the “English Cave,” not far from the present site of Benton Park, and which was then used, as subsequently, for the storing of beer. The cave itself has a romantic history, and while it is believed to lead to the river, has never been thoroughly explored in its inmost recesses, nor further than sufficient to afford capacity for storing three thousand five hundred barrels. English & McHose were the firm subsequently engaged in the manufacture of beer in this connection. The St. Louis Ale Brewery is the only one of that character yet existing.

Probably the first lager-beer brewery established in St. Louis district was put in operation in 1841 by the father of William J. Lemp, who succeeded to the business, after being engaged in malting for a while, upon the death of the elder Lemp. This brewery was in rear of the site of the present Lemp sample-rooms, on Walnut Street near Second. With the immigration of German citizens familiar with brewing, the erection of breweries and malt-houses increased in number, until there are now twenty-three of the former and thirteen of the latter, six independent of the breweries, and in all producing yearly about one million bushels. Many of the brewing establishments are very extensive, and represent an aggregate value of over nine million dollars. St. Louis has become, with the growth of the American taste for lager, the third city in its production in this country, and in excellence of the product rivals Bohemia, hitherto

conceded to be the headquarters of the best beer in the world.

The growth of the industry, in respect to its contribution of revenue to the general government, at the rate of ninety-two and a half cents per barrel, makes the official exhibit for five years :

1877.....	\$438,889.60
1878.....	482,557.70
1879.....	567,642.01
1880.....	674,282.95
1881.....	816,226.51

The following exhibit, although differing somewhat from that collected by the State Bureau of Labor Statistics, is of later date, and believed to be more comprehensive :

The political influence exerted by German immigration has not been more potential than that exercised by the same element in modifying popular habits. The *Republican* of June 21, 1857, commenting upon the influence of lager beer upon the habits and customs of the people of St. Louis, remarks that about 1840,—

“When our city was in its infancy, and the German infusion had not poured in, no one spoke seriously of a German vote, and the papers never entertained such a subject as a German element; no aspirant for congressional honors ever then modeled his opinion by the German standard or courted German favor. There was no German paper, because there were none to read it; no beer gardens, because there were none to frequent them. We do not remember having seen in those days such a thing as a sausage-shop, a *gasthaus*, or a *handlung*. There was one *apotheker* and a *deutscher arzt*, and, if we mistake not, the sign of a *hebamme* swung at that period over the door somewhere in the region known then as Frenchtown. There was nothing that indicated that there was a German population requiring more than one doctor, a drug-store, and midwife.

“The only garden which had any pretensions as a place of resort was known at that time to the very limited number of young ladies and gentlemen who took summer-evening strolls as the ‘Broadway Garden,’ and was, as well as we can recollect, dimly lighted by variegated oil-lamps, and solely devoted to ice-cream and ‘mead.’ The Broadway Garden went out just about the time that beer gardens came in. And when they did come in it was tumultuously; a sudden and almost unexpected

wave of emigration swept over us, and we found the town inundated with breweries, beer-houses, sausage-shops, Apollo gardens, Sunday concerts, Swiss cheese, and Holland herrings. We found it almost necessary to learn the German language before we could ride in an omnibus or buy a pair of breeches, and absolutely necessary to drink beer at a Sunday concert.

“In nothing, perhaps, has the German influence been more sensibly and, we will add, more beneficially felt than in the introduction of beer as a common beverage. It is not only used by the Germans, but it has been wellnigh universally adopted by the English-speaking population, and the spacious beer halls and extensive gardens nightly show that the Americans are as fond of the Gambrinian liquid as are those who have introduced it. . . .”

In 1854 the *Republican* of September 20th said,—

“St. Louis has about twenty-four breweries, and every one of them has stored nearly twice the quantity of ‘ale’ for this summer that has been made in any preceding one. As we are informed by one of the largest dealers of this article, the quantity may be safely reckoned at 40,000 barrels of lager beer, and perhaps 20,000 barrels of common beer. By an average count, one barrel of thirty gallons gives about 300 glasses. Thus we have about 12,000,000 glasses of lager beer, and about 6,000,000 of common beer; in all, 18,000,000 glasses of beer drank in St. Louis from the 1st of March last up to the 17th of September, the time the lager beer gave out. Common beer is sold at five dollars per barrel, and lager beer at seven dollars, that is at wholesale. This will make the amount received by the brewers for lager beer \$290,000, and for common \$100,000; together, say \$380,000. The retailers, at five cents a glass, took in \$600,000 for lager beer and \$300,000 for the common article. Just think of it, nearly a million of dollars (\$900,000) spent in St. Louis during one summer for beer, and that chiefly among the Germans themselves!”

In 1810 the table beer of St. Vrain & Habb, brewed in St. Louis, sold at ten dollars cash, or twelve dollars in produce, per barrel, and that of the St. Louis brewery at about the same. In 1854 the price of common beer was five dollars per barrel, and seven dollars for lager. In 1860 the average price of lager was eight dollars per barrel. The beer garden followed quickly upon the general introduction of lager as a beverage. In 1857, Lemp’s saloon is mentioned as “one of the largest of the class,” and “about nine o’clock at night a perfect beer babel,” where around a number of tables excited *coteries* were assembled, “quaffing incredible quantities of beer and uttering almost impossible successions of vocal sounds, and boys rushing enthusiastically from the bar to the tables with more glasses of beer than it would seem within the power of two human hands to carry.”

Since 1857 the consumption of beer has increased enormously. It was estimated by Henry H. Rueter, president of the United States Brewers’ Association, that the beer production of the whole country for 1879 reached 10,000,000 barrels, and that of Missouri 507,963 barrels, which, according to the tax paid, had increased to 877,663 barrels in 1881. We have seen that in 1854 the *Republican* ascertained

that "one barrel of thirty gallons gives about three hundred glasses," and that then St. Louis consumed eighteen millions of glasses in a single spring and summer. Applying the same calculation to the production for 1881, we find that the \$816,226.51 paid for stamps, at ninety-three cents per barrel, gives a production of 877,663 barrels, which, at three hundred glasses per barrel, would allow 263,298,900 glasses. This would give a consumption, assuming the population to be 400,000, of 658 glasses for every person during the year. In addition to this 1,252,344 packages of ale and beer were shipped from the city.

The following table of statistics is translated from the *Mississippi Handels-Zeitung*, a German commercial newspaper published in St. Louis. It exhibits the names of the breweries existing in that city in 1860, the names of their several proprietors, and the amount and value of the beer manufactured by each :

" Name of Brewery and Proprietor.	Bbls. Lager Beer.	Bbls. Common Beer.	Bbls. Ale.
Arsenal, G. Steinkauler.....	4,000	3,000
Bavarian, Gottschalk & Co.....	2,700	500

Total.....	122,400	85,500	4400
In 1858 the whole number of barrels amounted to.....	110,800	74,400	4200
Increase in the number of barrels over last year.....	11,600	11,100	200
The average price of lager beer last year was \$8 per barrel, making a total of.....	\$979,200
85,000 barrels common beer, at \$6 per barrel.....	5,100
4400 barrels of ale, at \$3 per barrel.....	35,200
Altogether.....	\$1,523,400

" Now, reckoning the working capital of each brewery represented at an average of \$15,000, we get the further sum of \$600,000 invested in beer, making a grand total of \$2,124,400.

" It may then be taken for granted that a capital of

at least \$2,000,000 is annually expended in the production of beer in this city."

We have spoken of the people of St. Louis and their calm composure in adversity, their steadfast assurance that every cloud had its silver lining. We have shown in part how capital and energy have rallied to the support of struggling industries, and how every trade, and every encouragement to trade, has been at once worked up to its full capacity and utmost tension. The history of her manufactures shows how continual this power has been of utilizing every resource; how the cotton trade sprung up out of Southern railroad extensions, bringing in its train an immense expansion of the general business in merchandise. In the same way the manufacture of hog and beef products has grown up about the Texas cattle trade and the live-stock and distillery business, and the development of the brewing business and the export of malted liquors have sprung up from the grain trade. This brewing business and its correlated industries of bottling and exporting beer are, as we have shown, enormous, and so extensive an industry as beer-brewing necessarily requires the products of many trades and manufactures to supply its wants. Boilers, engines, pumps, ice-machines, mashing-tubs, tanks, and mills, and other copper, iron, and brass works are necessary in the first instance, and need repairs and renewal, thus giving employment to hundreds of workmen.

Again, cooperage is daily required, and the extent of the demand may be inferred from the simple statement that the Missouri breweries have 267,800 packages in constant use.

They also require the services of bricklayers, cement- and asphalt-workers, wagon- and harness-makers, bung- and cork manufacturers, painters and label-printers.

As nearly as can be ascertained, the capital invested in the several trades and manufactures comprised in the above enumeration over and above what would be required were it not for the wants of the brewing business amounts to \$500,000, and making and constructing what the breweries require gives constant occupation to 1000 skilled workmen.

If, then, all the facts be brought together in one comprehensive view, it will be found that the lager-beer brewing industry of Missouri supports 16,210 persons (without taking at all into account the retail venders), and directly sets in motion annually, in purchase and sale, over \$20,000,000. It seems to be the most important industry in the State.¹

Among the brewers of St. Louis one of the most

¹ Report of Bureau of Labor Statistics.

LIBRARY
OF THE
UNIVERSITY OF ILLINOIS.

1857

Joseph Schrader

prominent and successful was Joseph Schnaider. Mr. Schnaider was born at Zell am Hammersbach, Baden, Feb. 2, 1832. At the age of fifteen he went to Rastadt, where he was apprenticed to a brewer, and at the age of eighteen removed to Strasburg, where he became the foreman of a large brewery. He remained but a short time in that position, and being desirous of seeing more of the world, he made a tour through France, working at his business in various places.

In 1854 he embarked for America, settling in the city of St. Louis, where he soon became foreman of the Philadelphia Brewery, then located on Morgan Street. In 1856 he erected the Green Tree Brewery, on Second Street, associating himself with Max Feuerbacher. In 1863 the firm built a new and larger brewery on Sidney Street. In 1865, Mr. Schnaider sold his interest in this establishment to his partner, and erected a brewery on Chouteau Avenue, between Mississippi and Armstrong Avenues. In 1865 he established, adjacent to the brewery, a large beer garden, which, together with the brewery, was subsequently enlarged until they both reached their present dimensions.

In 1879 the Joseph Schnaider Brewing Company was organized, mainly in order that, in case of death (Mr. Schnaider then not enjoying good health), the business should continue without the disturbance or hindrances frequently consequent upon the sudden death of the head of a large concern. Unfortunately the apprehensions then entertained by him found a speedy realization. While seeking health in the congenial climate of the Fatherland he succumbed, in October, 1881, to the ravages of an ailment of protracted standing, closing his in many respects remarkable career in the prime of his life, at the city of Heidelberg, Germany, far away from the scenes of his earthly usefulness and success. He was nursed by a loving wife until all human aid proved in vain and death ensued, and his remains were carried across the ocean to his once happy home, from where they were interred with honors bordering on a public demonstration. In him St. Louis lost one of her most enterprising citizens, and a man who, by his kind and humane impulses, had won for himself the affection and sympathy of his fellow-citizens and the name of public benefactor.

Mr. Schnaider was married in 1856 to Elizabeth Sedler, and leaves seven children, three sons and four daughters, the oldest son, Joseph M. Schnaider, being one of the managing stockholders in the brewing company.

Another representative brewer of St. Louis was Eberhard Anheuser. Mr. Anheuser was born in Germany in 1805, and came to the United States in

1843, locating first in Cincinnati. Two years later he removed to St. Louis, and engaged in soap manufacturing with Nicholas Schaeffer and others. He continued in this business fifteen years, and about 1860 established himself in the brewing business with William D'Oench. Out of this alliance grew the immense business subsequently carried on by Mr. Anheuser and his son-in-law, Adolphus Busch, under the corporate name of the Anheuser-Busch Brewing Association. Mr. Anheuser was known far and wide throughout the country, and in the summer of 1879, when it was announced in the National Brewers' Convention that sickness would prevent him from attending the session, a resolution of regret was unanimously adopted. His business gave employment to many hundred men, and made St. Louis enterprise known in all quarters of the globe. Mr. Anheuser, who died May 2, 1880, left five adult children, three daughters and two sons, the daughters being Mrs. Ulrich Busch, of Chicago; Mrs. Adolphus Busch, of St. Louis; and Mrs. Peter Shoettler, of Chicago; and the sons William and Adolph Anheuser.

Beer Bottling.—Beer bottling has lately become entitled to recognition as a business almost distinct from brewing. The industry is of comparatively recent origin, but already St. Louis is the largest bottling point in the United States, and probably in the world. The "Budweiser" beer of C. Conrad & Co. is not only shipped to all parts of the United States (including the Territories), but exported to Canada, Mexico, South America, and large quantities to Europe, Asia, and to the Cape. Indeed, one St. Louis establishment has more than a score of agents on the Continent, and boasts an annual product of nearly five million bottles. The total bottling product of the brewers and others engaged in this industry is 20,000,000 a year, and the sales in 1881 aggregated \$2,598,783. The number of hands employed is 700. The exports during the same period aggregated 1,252,344 packages.

Ice Company.—The St. Louis Ice Company was organized in September, 1854, with a capital of twenty-five thousand dollars, in shares of twenty-five dollars each, "and no one person to be allowed more than eight shares." This, we are told, was the original proposition, and it was thought that if this could be done the scheme would be practicable. The gentleman proposing it accordingly started out to see what could be done in the way of subscriptions. The plan was universally applauded, and in the space of six days from the time the subscription-list was open the whole proposed stock of twenty-five thousand dollars was taken.

A meeting of stockholders was then called at the Merchants' Exchange, on Main Street. William M. McPheters was called to the chair, whereupon he stated the object of the meeting, which then proceeded to the appointment of trustees, and the following were elected :

Asa Wilgus, Kenneth Mackenzie, William M. McPherson, John J. Anderson, William W. Green, W. Patrick, Edward Brooks, John McNeil, T. E. Courtenay, S. Dorsheimer, John B. Carson, George Knapp, and B. F. Stout.

The board subsequently elected Asa Wilgus president, and B. F. Stout secretary and treasurer of the company. At a subsequent meeting of the board a resolution was passed to increase the capital to fifty thousand dollars, and the books were opened for that amount. Subscriptions were promptly made, and forty thousand dollars was taken, leaving the amount of ten thousand dollars to be subscribed.

The company "leased Mr. Finney's large ice-house on Fifth Street, and also leased a lot of ground from the public schools on the Levee, between Plum and Cedar Streets," on which they erected a spacious building for the purpose of storing ice.

In 1881 there were eight wholesale and thirty-three retail ice dealers in St. Louis, and the volume of business, both wholesale and retail, is estimated at between four million and five million dollars.

Engraving, Photographing, etc. — Seventeen firms were engaged in 1881 in the business of engraving, die-sinking, etc., in St. Louis, with a capital of eighty thousand dollars, giving employment to sixty-five hands, and paying wages annually amounting to seventy-three thousand dollars. The business transacted was estimated at about one hundred and fifty thousand dollars. In wood-engraving St. Louis has long enjoyed a special pre-eminence. In 1881 there were three large establishments in active operation, whose products realized the sum of forty thousand dollars, the industry employing twenty-four skilled workmen. There are also a number of photographers, some of whom enjoy a wide celebrity for the superiority and nicety of their work. Among the latter the well-known establishment of John A. Scholten is specially worthy of mention. Mr. Scholten was born in Rees, a town on the Rhine, in Prussia, and attended the schools of his native place until fourteen years old, when he emigrated with his parents to America, settling at Hermann, Mo. Here he remained for three years, and then removed to St. Louis, where he spent some time in the dry-goods store of Trueworthy Hoyt, a respected and highly successful merchant. In 1857, however, he aban-

doned commercial pursuits and turned his attention to his present calling, in which he soon won an extensive local reputation for the correctness and artistic beauty of the likenesses which he produced. His success prompted him to choose a more central location, and he removed to Fourth Street, between Olive and Locust, and subsequently to the northwest corner of Olive and Fifth Streets. His rooms at the latter location were models of elegance and good taste.

In 1874 he removed to his present location, near Olive and Tenth Streets, which he had fitted up especially for the delicate requirements of his profession. On New Year's night, 1878, his establishment was burned, but in May, 1879, he resumed business at the same location, in a studio erected specially for him, and combining all the approved features of the most celebrated Eastern galleries, modified in such particulars as Mr. Scholten's long and varied experience had shown to be desirable. He not only built a structure suitable in every way to his art, but procured the most costly and perfect apparatus yet invented.

Mr. Scholten has applied himself to his calling with unreserved devotion, and has been an enthusiastic laborer, constantly experimenting and perfecting. Instead of being content with the accepted methods of others, he has investigated for himself, and in so doing has been the introducer of improvements having a permanent value. He was the first to introduce into St. Louis the popular *carte de visite*, and by liberal yet judicious expenditure has contributed materially to the development of the photographic art in St. Louis. The estimation in which he is held by leading citizens appears in the following testimonial :

"MERCHANTS' EXCHANGE OF ST. LOUIS.

"John Wahl, *Pres.*

George H. Morgan, *Sec.*

"St. Louis, May 3, 1879.

"MR. JOHN A. SCHOLTEN :

"Dear Sir,—The undersigned, president and ex-presidents of the Merchants' Exchange, desiring to express to you their appreciation of your kindness in contributing to the 'records' of the Exchange the handsomely framed portraits of the 'presidents,' have had prepared the accompanying medal, which they beg you to accept as a token of the esteem in which you are held by them individually, and as a recognition on the part of the Exchange of your liberality and courtesy. They desire also to congratulate you on the opening of your new rooms, and trust you may receive the generous patronage which you so richly deserve as an artist and a gentleman.

Copper and Tin.—In 1816, John Dowling commenced the business of a copper and tin manufacturer in St. Louis, in a shop “in the rear of Mr. Robidoux’s store, and near Matthew Kerr’s store.” Copper and tinware were made and repaired. In 1817, Reuben Neal “commenced the manufacturing of copper and tinware in the house lately owned and occupied by Mr. Joseph Brazeau, opposite Mr. Hempstead’s, in Church Street, St. Louis,” where he made stills, fullers’, hatters’, wash-, stew-, and tea-kettles, and copper, tin, and sheet-iron ware of all descriptions. In 1820, Neal & Liggett carried on a copper- and tin-shop on South Main Street, opposite Antoine Dangin, Block 36. According to the census of 1880, the number of manufactories engaged in the production of tin, copper, and sheet-iron ware was one hundred and twenty, but it is probable that there are over two hundred establishments in the city where tinware is manufactured. The value of the business has been estimated at one million two hundred thousand dollars per annum.

Lithographers.—There were eleven firms engaged in the lithographing business in 1882, and St. Louis enjoys facilities in this respect possessed by few other cities in the country. One of the pioneer firms engaged in this industry is that of August Gast & Co. Its founder, August Gast, was born in Belle, a village in the principedom of Lippe-Detmold, Germany, March 10, 1819. He was educated at the Gymnasium at Detmold, and with his brother Leopold learned the trade of lithography, and worked at this business in Germany for several years. The disturbances of 1848 prostrated business in that country, and the brothers determined to emigrate to America. They had very little money, their chief possession being a press and a small lithographic outfit which belonged to Leopold. They spent some months in New York, and about one and a half years in Pittsburgh, and finally, in 1852, arrived in St. Louis, and commenced business as lithographers in a little shop on Fourth Street, between Walnut and Elm Streets, where the “Southern Hotel” now stands. They started with the small outfit above mentioned, and the name of the firm was Leopold Gast & Brother.

Up to that time there had been but one lithographer in St. Louis, Julius Hutawa, who confined himself chiefly to the production of maps. His trade was small, and he soon went out of business, leaving Gast & Brother in sole possession of the field.

The brothers began on a very modest scale, but they did good work and soon began to prosper. In 1866, August Gast purchased his brother Leopold’s interest, and from 1866 to 1877 he had two partners.

In the latter year he purchased their interest also, and admitted E. F. Wittler to this firm. Wittler had been for some years traveling agent, and had distinguished himself by his industry and efficiency. In January, 1878, the firm was further enlarged by the admission of Louis Wall. Since that time the business has expanded rapidly, and the house now employs four color artists, fifteen engravers, fifteen transferers, ten steam-presses, several compositors, and hand-press printers, bookbinders, etc., and in May, 1882, the business of steel-engraving was added, the whole requiring a force of about one hundred and ten hands. It is one of the largest establishments of the kind in the West. It has devoted itself to the higher class of work, and enjoys a wide-spread reputation for the beauty and elegance of its manufactures.

Mr. Gast landed in St. Louis without a penny in his pocket, and when he started in business he did no small share of the work with his own hands. What thirty years of industry have accomplished may be seen by going through his mammoth establishment in St. Louis and viewing the army of workmen employed there.

In March, 1853, Mr. Gast was married to Sophie Von Laer, a native of Schleswig. She died in 1864, and in November, 1865, Mr. Gast again married, his wife being Marie Barthel, a native of Leipsic, Saxony. Both are members of the Evangelical Lutheran congregation.

Early Trade Notes.—From the advertising columns of the newspapers, from pamphlets, and other sources not directly in the line of historical data many interesting facts are to be learned. On Aug. 24, 1808, C. Burns advertised for two or three journeyman tailors, “to whom constant employment and good wages will be given.” On September 14th of the same year F. Hinkle “wanted to hire a negro woman,—one without children will be preferred,” and on September 17th, William Harris, hatter, respectfully informed “his friends and the public in general that he has commenced the hatting business in all its different branches on Main Street, next door below Dr. Saugrain’s, where any person may be supplied on the shortest notice and on moderate terms.” On the 14th of the following month a house was to be rented on application to M. P. Leduc, and the same day Samuel Solomon had twelve hundred gallons of good old whiskey for sale for cash. On Jan. 11, 1809, we find that “Joseph Coppinger proposes setting off for New Orleans, New York, Philadelphia, and Washington on the 1st of February, to return in May. He takes this method of offering his agency to his friends and the public, and expects reasonable compensation

for any trust undertaken." Aaron Elliott & Son, of Ste. Genevieve, on the 7th of June, advertised in the St. Louis papers to the effect that "all those who have open accounts with Aaron Elliott, or Aaron Elliott & Son, are requested to call and close the same prior to the 1st August, 1809. Those who neglect this call will have their accounts to settle with an attorney," with a postscript stating that they had constantly on hand a complete assortment of drugs and medicines, "which they will sell either wholesale or retail on as good terms as can be purchased in this country." On July 5th, Michael Dolan, "tailor and habit-maker," Main Street, announced that he had opened a shop at the house then occupied by Mr. Hampton, "breeches-maker." Cornelius Burns, also a tailor, begged leave, on November 2d, to acquaint his friends and the public that he had commenced business on his own account at the house formerly occupied by Wilson & Price. On the 16th of the same month, Bernard Lalende made it known that he manufactured gentlemen's coats for \$4.50, and pantaloons at \$1.75, "well made and in the newest fashion." In 1811, Norman McKenzie wanted a few carpenters, and Robert Wash announced himself as administrator of James A. Graham, and offered a reward of \$20 for a fine cloak that had been stolen. J. Septlivres, on the 2d of June, 1812, published his card as house and sign painter. In an advertisement dated Aug. 5, 1813, we find that there "arrived a few days ago from the mouth of the Columbia River, Robert Steuart, Ramsey Crooks, Joseph Miller, and Robert McClellan, and three hunters," whose narrative would appear the following week. In 1815, William Sullivan kept a livery-stable in St. Louis, and his terms were ten dollars per month, with no deduction for any horse taken out unless he remained out a week or more, \$3 per week, 75 cents for twenty-four hours. Auguste Chouteau advertised at private sale, May 18, 1816, his lots lately laid out on the hill west of town, a plot of which might be seen at the printing-office. On the 8th of June of the same year, John Keesacker informed the "gentlemen of St. Louis that he has opened a barber-shop in Front Street, near Mr. Paul's store building, and pledges himself he will give satisfaction in his line of business. Price of shaving per month, \$1." On the 18th of June, Mrs. Baker started the millinery business in the brick building opposite Mr. Savage's auction-room. In 1829 the announcement was made that "the new bathing establishment of Mr. J. Sparks & Co. has about thirty-five visitors, and of that number not one has experienced an hour's sickness since the bathing commenced; we should, for the benefit of the

health of the city, be glad there were more encouragement, and as the season is partly over, tickets have been reduced to one dollar the season."

Miscellaneous Trades and Industries.—In addition to the foregoing there is an immense variety of trades and industries in St. Louis, of which it is impossible to give a particular account within the limits of this work. Among the more important may be mentioned the trade in wall-paper, carpets, etc., in which thirty-one houses were engaged in 1881, their business aggregating one million nine hundred thousand dollars; books and stationery, in which five wholesale and seventy-five retail houses were employed in 1881, the aggregate business being estimated at six million nine hundred thousand dollars; news and book paper, etc., represented in 1881 by nine wholesale dealers, transacting a business of three million nine hundred thousand dollars;¹ music and musical instruments, transacted by eleven houses, whose business was estimated in 1881 at one million six hundred thousand dollars; produce, seventy-nine houses, with annual sales estimated in 1881 of two million dollars, besides four firms engaged in the sale of seeds of various kinds; powder, guns, and sporting goods, five wholesale firms, who confine their business to gun, rifle, and blasting powder and similar goods, and three firms who deal in guns, pistols, fishing-tackle, and sporting goods; aggregate value of business in 1881, six hundred thousand dollars.

In addition to the manufactures already described there were in 1881 the following among other industries in active and successful operation: Agricultural implements, seven firms, 500 hands employed, \$900,000 value of annual product; artificial feathers and flowers, three firms, 79 hands, \$150,000 annual sales; awnings and tents, ten firms, 250 hands employed, \$400,000 annual sales; bags, paper, flax, hemp, and jute, seven firms, 500 hands employed, \$1,100,000 annual sales; box manufactures, twelve firms, 250 hands employed, \$400,000 annual sales; brass foundries, fourteen firms, 157 hands employed, \$580,000

¹ "At a meeting of the directors and stockholders of the 'Missouri Paper Manufacturing Company,' held at their office, No. 46 Chestnut Street, St. Louis, Tuesday, Oct. 30, 1860, the organization of the company, under the laws of the State of Missouri, was completed, and the following-named gentlemen confirmed as directors of the company for the first year from the 7th of July last, and the persons named in connection with the same elected officers for the same term.

"Directors, as named in the license from the State, R. H. Hubbell, E. Stafford, Bernard Poepping, George Spear, V. B. S. Reber; President, Hon. Bernard Poepping; Vice-President, Thomas H. Paschall, Esq.; Secretary, Edward Stafford, Esq."—*Missouri Republican*, Nov. 2, 1860.

annual sales; carriages and wagons, forty firms, 1100 men and boys employed, nearly \$2,000,000 annual sales; confectionery, three hundred dealers, value of business \$1,200,000 per annum; cooperage, eighty establishments, 900 hands employed, \$500,000 capital invested, total annual sales \$1,500,000; cordage and twine, fourteen firms, 77 hands employed, \$75,000 estimated value of business; corsets, three firms, \$10,000 annual sales; cutlery and tools, four firms, 20 hands employed, \$24,000 annual sales; engraving, die-sinking, etc., seventeen firms, 65 hands employed, \$151,000 annual sales; wood-engraving, three firms, 24 hands employed, \$40,000 annual sales; files, six firms, 35 hands employed, \$42,000 annual sales; glass, six firms, 400 hands employed, \$600,000 annual sales; glue, five firms, 30 hands employed, \$75,000 annual sales; machinery, forty-six firms, 1600 hands employed, \$2,500,000 annual sales; marble- and stone-work, fifty-six firms, 475 hands employed, \$800,000 annual sales; mattresses and spring-

beds, nine firms, 55 hands employed, \$150,000 annual sales; mineral and soda waters, ten firms, 100 hands employed, \$175,000 annual sales; paints and varnishes, total capital invested \$2,000,000, 532 hands employed, \$2,700,000 annual sales; refrigerators, three firms, 101 hands employed, \$309,000 annual sales; roofing and roofing materials, five firms, 75 hands employed, \$177,000 annual sales; show-cases, four firms, 79 hands employed, \$90,000 annual sales; shirts, seventeen firms, 274 women and 52 men employed, \$280,000 annual sales; stone and earthenware, five firms, forty-one hands employed, \$50,000 annual sales; tin, copper, and sheet-iron, about 200 firms, with an estimated business of \$1,200,000 per annum; vinegar, fourteen firms, 120 hands employed, \$575,000 value of annual product; wheelwrighting, fifty-two firms, 130 hands employed, \$155,000 annual sales; whips, four firms, annual business \$20,000; wire-work, 600 hands employed, \$1,300,000 annual sales.

In 1871 a carefully prepared statement by William A. Johnson showed the increase in manufactures in twenty of the leading articles to have been nineteen per cent. in the capital employed, and thirty per cent. in the value of the products.

Mr. Charles W. Knapp, from whose very able paper on St. Louis, read before the “Round Table” in October, 1882, we have frequently had occasion to quote, thus groups the manufacturing cities, according to the census of 1860, 1870, and 1880:

MANUFACTURING OF LEADING CITIES IN 1860.

CITY.	Number of Establishments.	Capital.	Average Number of Hands.	Wages.	Cost of Material.	Product.
Baltimore.....	1310	\$3,789,757	21,821	\$4,351,244	\$18,068,683	\$29,591,958

¹ The eighty establishments classed as "miscellaneous industries" are grouped in order that the business of individual establishments may not be disclosed to the public. In this group are embraced artificial limbs; Babbitt-metal and solder; bags, other than paper; belting and hose; leather; billiard-tables and materials; bluing; bone, ivory, and lamp-black; bridges; carriages and sleds, children's; cordials and syrups; cork-cutting; explosives and fireworks; fertilizers; flavoring extracts; furniture; chairs; furs, dressed; iron-forgings; ice, patent process; jewelry and instrument cases; lard, refined; lead, bar, pipe, sheet, and shot; malt; mantels, slate, marble, and marbledize; oil, animal; oil, castor; oil, cotton-seed; oil, lubricating; paving materials; perfumery and cosmetics; photographic apparatus; plated and Britannia ware; regalias and society banners and emblems; safes, doors, and vaults, fire-proof; saws; silk and silk goods; silver-mithing; sporting goods; stamped-ware; stationery goods; steam-fittings and heating apparatus; stereotyping and electrotyping; sugar and molasses, refined; surgical appliances; tar and turpentine; telegraph and telephone apparatus; terra-cotta ware; toys and games; type-founding; upholstering materials; washing-machines and clothes-wringers; watch-cases; window-blinds and shades; wire; wooden-ware; woolen goods.

Information derived from the United States Census Bureau as late as December, 1882, gives the following as the proper figures in regard to the manufactures of St. Louis:

Number of establishments.....	2,922
Capital employed.....	\$50,672,885
Number of males employed above sixteen years of age.....	33,948
Number of females employed above fifteen years of age.....	4,761
Number of children and youths employed.....	3,079
Amount paid in wages.....	\$17,713,532
" for materials.....	75,068,467
Value of products.....	113,874,875

CHAPTER XXXI.
COMMERCIAL EXCHANGES.

Chamber of Commerce and Merchants' Exchange.—The first movement for the formation of a merchants' association in St. Louis was made in the summer of 1836, and the original organization was effected at a meeting of "merchants and traders," held at the office of the Missouri Insurance Company, on the 15th of July in that year. Edward Tracy was chairman, and Daniel Lamont acted as secretary. Preliminary meetings had already been held, and the record of the proceedings having been read, the committee appointed to draft a constitution and by-laws

reported through their chairman, George K. McGunnele. After the report had been read and considered it was unanimously adopted. The meeting then proceeded to the election of officers, and the following were chosen: President, Edward Tracy; Vice-President, Henry Von Phul; Secretary and Treasurer, John Ford; Annual Committee of Appeals, George K. McGunnele, William Glasgow, John W. Reel, J. P. Doan, John Walsh, Daniel Lamont; Committee for the month of July, E. H. Beebe, Wayman Crow, C. Doan, G. Erskine, W. Finney.

The association was styled the "St. Louis Chamber of Commerce," and its rules, as adopted at the first meeting, provided for the following fees and commissions:

"RULE 8. The fees of arbitration under the sanction of this Chamber shall be as follows:

For each award over \$100 to \$500.....	\$7.50
" " 500 to 1000.....	10.00
" " 1000 to 1500.....	15.00
" " 1500 to 2500.....	20.00
" " 2500.....	25.00

"Tariff of charges, etc., established by the Chamber of Commerce of the city of St. Louis, and recommended for general adoption when no agreement exists to the contrary:

Commissions.	Per cent.
On sales of merchandise or produce.....	5
On sales of lead.....	2½
On guarantee of sales on time.....	2½
For purchasing and shipping merchandise or produce, with funds on hand, on the aggregate cost and charges.....	2½
For accepting drafts or indorsing notes or bills of exchange, without funds, produce, or bills of lading in hand.....	2½
For cash advances, in all cases, even with produce or bills of lading (and interest from date).....	2½
For shipping to another market produce or merchandise upon which advances have been made.....	2½
For negotiating drafts or notes as drawer or indorser.....	2½
On sale or purchase of stocks.....	2½
On sale or purchase of hoats, without guarantee.....	2½
For procuring freight, on the amount of freight.....	5
For chartering boats.....	2½
For collecting freights or accounts.....	2½
For collecting delayed or litigated accounts.....	1
For collecting dividends on stocks.....	½
For adjusting insurance losses.....	2½
For receiving and remitting moneys from which no other remuneration is derived.....	1
For effecting insurance, when the premium amounts to forty dollars or less.....	\$2
For effecting insurance, when the premium exceeds forty dollars on the amount of premium.....	5
On outfits and disbursements.....	2½

"The above commissions to be exclusive of storage, brokerage, and every other charge actually incurred. The risk of loss by fire, unless insurance be ordered, and of robbery, theft, and other unavoidable occurrences, if the usual care be taken to secure the property, in all cases to be borne by the proprietors of the goods.

"Interest to be charged at the rate of ten per cent. per annum on all debts after maturity until paid.

Agency for Steamboats.	Per Trip.
Under 150 tons.....	\$10
Over 150 and less than 300 tons.....	20
Over 300 and less than 400.....	25
Over 400 and upwards.....	30"

The meetings continued to be held in the office of the Missouri Insurance Company until the membership had increased to such proportions that the accommodations became inadequate, whereupon the association removed to the building occupied by the *Missouri Republican*, on Main Street near Pine. In the following winter George K. McGunnele, one of the leading originators, obtained from the General Assembly of Missouri, of which he was a member, the following act of incorporation:

"Be it enacted by the General Assembly of the State of Missouri, as follows:

"SECTION 1. That the persons composing the association in the city of St. Louis styled the 'St. Louis Chamber of Commerce' are hereby created a body politic and corporate under the name of the 'St. Louis Chamber of Commerce,' and by that name may sue and be sued, implead and be impleaded, receive and hold property and effects, real and personal, by gift, or demise, or purchase, and dispose of the same by sale, lease, or otherwise; said property so held not to exceed at any one time the sum of twenty thousand dollars; may have a common seal, and alter the same from time to time, and make such rules, regulations, and by-laws as may be within the scope of their association and not contrary to the laws of the land.

"SEC. 2. That the rules and by-laws of the said association shall be the rules and by-laws of the corporation hereby created until the same shall be regularly repealed or altered, and that the present officers of said association shall be officers of the corporation hereby created until their respective offices shall regularly expire or be vacated.

"Approved, January 9, 1837."

In December, 1837, the following persons were the officers:

Edward Tracy, president; Henry Von Phul, vice-president; John Ford, secretary and treasurer; Committee of Appeals, William Glasgow, John W. Reel, T. L. Doan, Augustus Kerr, George K. McGunnele, George Collier; Monthly Committee on Arbitration for December, J. M. Corse, T. D. Fontaine, Alfred Tracy, Stephen Gore, James L. Lane.

On the 23d of December of the same year the proprietors of the *Republican* announced that,—

"At the solicitation of a large number of merchants and business men of the city, we have issued a prospectus for opening an exchange and news-room, which may be seen at all the principal book-stores, hotels, and in the hands of several gentlemen of the city. We contemplate opening the rooms in January next. Our arrangements for the receipt of papers, periodicals, magazines, etc., will not be complete by that time, but will be perfected as soon as the speed and regularity of the mails will admit. Our object is not revenue alone: we hope by this to benefit the community and extend the usefulness and circulation of our paper, and it now remains with the public to see whether they are willing to sustain such an institution. The exchange room will be opened to the public generally, and will be furnished as is usual to furnish such apartments. The reading-room will be supplied with all the principal newspapers of the United States, without regard to politics, and the principal standard literary reviews, magazines, and periodicals, properly arranged."

In February, 1838, the *Republican* added,—

“The exchange rooms will be free to the public at all times, except when occupied by the Chamber of Commerce. The reading-room will be open only to subscribers, or to such persons as they may introduce, not being resident of the city, to the transient officers of the United States and State governments, to the captains, clerks, and officers of steamboats, to the subscribers of the *Republican*, not residents of the city, and such persons as the proprietors may think proper to permit. Merchants will be at liberty to introduce their clerks, and mechanics their apprentices; keepers of hotels and boarding-houses, who may become subscribers, will be permitted to introduce their transient guests. The price has been established at \$10 for a single subscriber, \$15 for a firm of two persons, and \$20 for a firm of three or more, payable half-yearly in advance. No subscription will be received for less than a year.

“We have received the following flattering notice from the Chamber of Commerce :

“CHAMBER OF COMMERCE,
“ST. LOUIS, JAN. 5, 1838.

“At a meeting of the members of the St. Louis Chamber of Commerce, held on the 28th ult., the following resolution was adopted and ordered to be published :

“Resolved, That this Chamber, purporting to represent the mercantile and trading interests of this community, cordially recommend to the individuals composing this body to give their hearty co-operation in carrying out the views of Messrs. Chambers, Evans & Knapp in establishing a “Merchants’ Exchange and News-Room,” and that this body also respectfully recommend to their fellow-citizens generally, who are not members of this Chamber, to lend their moral and pecuniary aid in carrying the plan of the proprietors into complete effect.

“By order of the Chamber,
“JOHN FORD, Sec.”

On the 1st of January, 1839, the annual election of the Chamber of Commerce was held at the office of the St. Louis Perpetual Insurance Company, and the following officers were elected: Edward Tracy, president; Henry Von Phul, vice-president; John Ford, treasurer and secretary; William Glasgow, John W. Reel, T. P. Doan, Augustus Kerr, George K. McGunnege, and George Collier, committee of appeals; Charles P. Billon, Joseph Charless, John D. Daggett, John H. Gay, and William Hempstead, monthly committee on arbitration for January.

The first proposition for the erection of a Merchants’ Exchange building was made by a writer in the *St. Louis Bulletin* of Oct. 5, 1838, who suggested that the erection of such a building might be effected by a union of the insurance companies. No action seems to have been taken in the matter, although the *Republican* of November 2d stated that the proposition had been “favorably responded to by a majority of those interested.” The meetings of the Chamber were held for some time in the *Republican* building, and afterwards in the basement of the Unitarian Church, at the northwest corner of Pine and Fourth Streets. The Merchants’ News-Room, in October,

1838, was situated at No. 45 Main Street, immediately under the *Republican* office, and it was announced (October 17th) that “for the remainder of the season the Exchange and News-Room will be regularly lighted from sundown until between nine and ten o’clock.” The germ of the present exchange system was developed in the fall of this year by a suggestion in the *Evening Gazette*, which was indorsed in the *Republican* of October 23d, to the effect that the merchants should assemble at regular hours for the transaction of any business that they might have with one another. “We think the idea a good one,” remarked the *Republican*. “If a certain hour is established for ‘Change, say twelve or one o’clock in the day, every merchant having business to do with another would know where and when he could be found.” The officers of the Chamber of Commerce in February, 1839, were Edward Tracy, president; Henry Von Phul, vice-president; Daniel Hough, secretary and treasurer; William Glasgow, George Collier, Augustus Herr, J. P. Doan, George K. McGunnege, John Walsh, committee of appeals; Committee of Arbitration for February, Charles F. Henry, John Lee, N. E. Janney, A. Mieur, A. Ricketson.

The subject of erecting an Exchange building was revived in the spring of 1839, and on the 22d of April a meeting was held at the Merchants’ Exchange and News-Room for the purpose of taking formal action in the premises. On motion of Col. René Paul, the meeting was organized by the appointment of Henry S. Coxe as president, and William G. Pettus as secretary.

The object of the meeting having been explained by Col. René Paul and A. B. Chambers, the following resolutions were submitted by Mr. Chambers, and, after two slight amendments had been agreed to, were unanimously adopted :

“1. Resolved, That it is the opinion of this meeting that an Exchange building should be erected in this city, and that the business of the city and its commerce require the immediate commencement of the work.

“2. Resolved, That we approve of the plan submitted to the consideration of this meeting of a union of the city authorities, insurance companies, brokers, societies, and individuals in the erection of this building, and earnestly commend the same to the consideration of the mayor and City Council and of the citizens generally.

“3. Resolved, That a committee of persons be appointed to prepare a report of the plan submitted, or any other plan, with such additions and illustrations as may contribute to a perfect understanding of the same, and that they cause the same to be printed, with the charter of the Exchange Company, and submitted to the consideration of the persons, companies, and societies embraced in this plan, and request their early action upon it.

"4. *Resolved*, That the city authorities, the insurance companies, other societies, brokers, and individuals be respectfully requested to confer with the committee appointed by this meeting, and signify to them their decision upon the plan which shall be submitted.

"5. *Resolved*, That whenever the committee appointed by this meeting shall have ascertained that a sufficient amount of stock will be taken to secure the erection and completion of the building, they shall request the commissioners named in the charter of the Exchange Company to open the books for the stock of the same."

On motion of John D. Daggett, the blank in the third resolution was filled with "seven," and it was decided that the president appoint the committee.

The president appointed the following gentlemen on the committee, viz.: John D. Daggett, René Paul, Nathaniel Paschall, Adam B. Chambers, John B. Camden, William Glasgow, and Edward Tracy.

In 1840, Edward Tracy, who had been president of the Chamber from its organization, prompted by a nice sense of mercantile honor, arising from the fact that he was then involved in mercantile embarrassments, resigned. The members declined to accept his resignation, but Mr. Tracy having refused to withdraw it, Henry Von Phul, who had been vice-president from the beginning, was chosen by acclamation. He declined, however, to serve, and Wayman Crow was elected, serving from 1841 to October, 1849, with George K. McGunnege as vice-president. During Mr. Crow's term of office the secretaries were Daniel Hough, F. L. Ridgely, and Edward Barry. In September, 1842, the officers were Wayman Crow, president; George K. McGunnege, vice-president; F. L. Ridgely, secretary and treasurer; Committee of Appeals for 1842, John D. Daggett, N. E. January, H. L. Hoffman, John Stagg, George K. Budd, William Glasgow; Committee of Arbitration for September, Benjamin Clapp, C. F. Hendry, A. Kerr, J. G. Lindell, and Joseph S. Pease.

The officers in May, 1844, were Wayman Crow, president; G. K. McGunnege, vice-president; F. L. Ridgely, secretary and treasurer; Committee of Appeals for 1844, George K. Budd, Edward Brooks, Henry Von Phul, J. S. Thompson, John Simonds, P. G. Camden; Committee of Arbitration for May, J. C. Abbott, W. G. Haun, A. Meier, Charles I. Tucker, Charles T. Wheeler.

The project for the erection of an Exchange building appears to have lain dormant until July, 1847, on the 21st of which month it was announced that "two gentlemen of the city" had purchased "the property owned by the Baptist Society at the corner of Chestnut and Third Streets, with the intention of erecting an Exchange building upon it." The ground extended seventy feet upon Third Street and ninety upon Chest-

nut. On the 3d of January, 1848, books were opened for subscriptions to the capital stock of a company then about to be organized for the erection of an Exchange, and on the 20th of May following the fact was noted that the proposition had progressed so far that a lot on Fifth Street, "in the central part of the city," had been secured, and subscriptions to the stock were "rapidly filling up."

In the spring of 1848 an Exchange was established in connection with the Chamber of Commerce, where merchants met regularly to interchange views and transact business. The enterprise met with general support and favor, a very large proportion of the business men subscribing to it. Rooms were secured on the northeast corner of Main and Olive Streets, upstairs, and fitted up for the purposes of the Exchange. Edward Barry was appointed secretary, and the rooms were supplied with newspapers, price-currents, etc., and telegraphic dispatches giving the state of the market up to twelve o'clock noon in all the Atlantic and Southern cities. The subscription price was ten dollars per annum, and subscribers possessed the privilege of introducing strangers and non-residents into the Exchange and reading-rooms. On the 14th of May, 1849, it was announced that another effort was about to be made for the organization of a Merchants' Exchange. At a special meeting of the Chamber of Commerce held on the 11th of September, 1849, George K. McGunnege, vice-president, stated that it had been called to take into consideration the establishment of a Merchants' Exchange and the procuring of rooms which would answer that purpose for the present, with the ulterior view of erecting an edifice suitable to the object. After some discussion the matter was referred to a committee, of which James E. Yeatman was chairman. On the 17th of September the committee reported that it was impracticable at that time to build a Merchants' Exchange, and recommended the leasing of the second floor of the building owned by Mr. Charless, next door to the corner of Main and Olive Streets. The report was adopted, and a committee appointed for the purpose of establishing a Merchants' Exchange. On the 27th of December following it was announced that the rooms intended for the use of the Chamber of Commerce and of the merchants generally had been completed. They were located in the second story of the building occupied by Charless & Blow. A meeting of merchants and other subscribers to the new Exchange was held in their new rooms on the 2d of January, 1850, and the rules prescribing the terms of membership and the various committees and for the regulation of business were adopted. A resolution was also adopted

that the Exchange be regularly opened at the hour of eleven o'clock on Monday, January 7th, and that the 'Change hour be from eleven to twelve o'clock every day, except Sundays and holidays.

Nearly two hundred of the principal merchants of the city were members of the Exchange and Reading-Room, at an annual contribution sufficient to cover the expenses of the establishment. A secretary and clerk were employed, whose duty it was to keep an accurate record of the state of the market in St. Louis and other important cities, procure the latest accounts of sales and other information calculated to influence commercial transactions, obtain telegraphic dispatches, and keep at all times, as far as practicable, tables of the state of the supply and demand in leading articles of the St. Louis market.

This intelligence was kept in appropriate books, but was only open to the inspection of members. All persons were admitted to the Exchange room, but no resident of the city, engaged in mercantile pursuits, and not a member of the association, was permitted to buy or sell produce or merchandise at the Exchange, or avail himself of the information which was collected for the use of members. Non-residents of the city might be introduced by any member, and when so introduced had free access to the privileges of the Exchange and Reading-Room for a limited time. Others not resident might also purchase any produce or merchandise offered for sale, but might not be sellers. Manufacturers and mechanics might sell their commodities without the necessity of membership. Any person of any profession or pursuit, of respectable standing, could become a member by subscribing and paying the annual charge for its support, and auctioneers at a small charge obtained the privilege of selling stocks and real estate in the Exchange, except during the 'Change hour.

The Merchants' Exchange and Reading-Room were open to members at all times (Sundays and holidays excepted) from seven o'clock A.M. to eight o'clock P.M. in summer, and from eight o'clock A.M. to nine o'clock P.M. in winter, commencing the 1st of October and ending the 1st of March.

The commercial year was considered to commence on the 1st of September, and end on the 31st of August following.

The Merchants' Exchange, though closely allied with the Chamber of Commerce and conducted in conjunction with it, was a distinct organization. The Chamber of Commerce controlled the affairs of both associations, and its members were known as the "voting members." The Merchants' Exchange was composed of persons who simply had the right to

transact business in the Exchange rooms, without a vote in the government.

In the mean time the millers of St. Louis had organized an Exchange of their own. Previous to this action, being continually in the market, they had to go on the Levee and sample all the piles of wheat they might find, and then wait an indefinite time for the sellers to make their appearance, some of whom might be there ready to sell by ten o'clock, others not before four o'clock in the afternoon. Thus the millers were from day to day from four to six hours exposed the year round to all kinds of weather and the intolerable dust or mud. Having suffered from exposure on the Levee in previous years, James Waugh and T. A. Buckland determined in February, 1849, to call a meeting of all the millers, in order to remedy the inconvenience and exposure in transacting their business. With that in view they wrote a request to each miller in the city to meet at C. L. Tucker's office. Theodore Papin, being present, agreed to deliver the notices, and on the day appointed for the meeting they were greeted with the presence of nearly all the mill-owners in the city, among them the following: Gabriel S. Chouteau, Joseph C. Shands, John Walsh, — Robinson, Joseph Powell, Mr. Tibbits, Dennis Marks, George P. Plant, Henry Whittemore, Alphonso Smith, T. A. Buckland, C. L. Tucker, Henry Pilkington, James Waugh.

T. A. Buckland was called upon to state the object of the meeting, after which those present organized the Millers' Association by electing the following directors: Gabriel S. Chouteau, John Walsh, Joseph Powell, C. L. Tucker, Dennis Marks, Mr. Tibbits, T. A. Buckland, and James Waugh, with Joseph Powell president, and C. L. Tucker secretary. The board was then called together by the president, and after consultation the following committee was appointed: Messrs. Powell, Marks, and Buckland, with instructions to rent rooms and procure the necessary tables and other furniture. As soon as the rooms were ready the merchants were invited to bring to them samples of any produce they might have for sale. Thus about the 1st of March, 1849, the Millers' Exchange was opened over Nos. 9 and 11 Locust Street, and is said to have been the first Exchange established in the United States for the buying and selling of produce. It continued for two years, during which time nearly all the produce seeking a market in St. Louis was offered for sale. When the merchants established a general Exchange, and for that purpose rented rooms adjoining the corner of Main and Olive Streets, the millers were invited to join them. In response the millers appointed Messrs. Marks, Tibbits, and Buck-

land to confer with the officers of the Merchants' Exchange, and at the conference it was agreed that the secretary of the Millers' should be the assistant secretary of the Merchants' Exchange, with which arrangement the Millers' and Merchants' Exchanges were united.¹

In March, 1851, the following officers of the Chamber of Commerce were elected: President, William M. Morrison; Vice-Presidents, Alfred Vinton, David Tatum; Secretary and Treasurer, Edward Barry; Committee of Appeals, T. H. Larkin, J. J. Roe, Adolphus Meier, J. D. Osborne, Dennis Marks, George Partridge, P. R. McCreery, R. M. Henning, Neree Vallé, J. H. Alexander, E. M. Ryland, H. T. Chiles; Committee of Arbitration for March, John C. Bull, R. M. Funkhouser, J. T. Chappell, Alonzo Child, Solon Humphreys, James W. Finley, Henry Ames, N. Ranney, Morris Collins, Robert Barth, J. D. Houseman, A. W. Fagin, Henry Whittemore.

In December, 1852, the following gentlemen were appointed by the president of the Chamber of Commerce as delegates to the "Commercial Convention" held in Baltimore on the 18th of that month: Joseph Stettinius, P. Herman, W. H. Barksdale, James A. Bryan, T. J. Homer, William Bennett, Taylor Blow, O. Wales, Thomas M. Taylor, J. D. Houseman, E. W. Blatchford, A. J. McCreery, James Christy, W. Ballentine, E. Livermore, John Knapp, William Low, W. S. Gilman, R. K. Woods, Henry White.

The project of erecting a building for the Chamber of Commerce and Exchange was again revived in 1855, and with better success than had attended the previous efforts in this direction. On the 13th of September of that year, on motion of Hon. Henry T. Blow, a committee, consisting of Henry T. Blow, R. J. Lackland, Charles P. Chouteau, A. F. Shapleigh, and Thomas E. Tutt, was appointed to procure a charter for an Exchange Building Company, to solicit proposals for a suitable lot, and to procure plans for a building for an Exchange. On the 15th of November, 1855, Edward J. Gay and Robert Barth, on the

part of and representing the owners of property on the east side of Main Street, between Market and Walnut Streets, submitted a proposition for the erection of a building on the site named, fronting one hundred and twenty-three feet on Main Street, the second story to be appropriated exclusively for the use of a Merchants' Exchange hall, at a rental of two thousand five hundred dollars per annum for ten years, and at a meeting held on the 24th of November, 1855, the president of the Chamber of Commerce was instructed to enter into a lease of the premises offered by Messrs. Gay and Barth. At a meeting of the stockholders "who have engaged in a building for a Merchants' Exchange on the ground recently occupied by the Centre Market," which was held Jan. 5, 1856, the following trustees were chosen: James H. Lucas, George R. Taylor, Louis C. Garnier, Edward J. Gay, Neree Vallé, Felix Coste, and Lawrason Riggs.

A resolution was also passed that the trustees proceed immediately to consummate the agreement entered into with the Chamber of Commerce for the leasing of the second story of the new building.

On the 25th of February the stockholders held another meeting, at which the plans for the building were presented for approval. The following committee to solicit additional subscriptions was appointed: G. W. Dreyer, Isaac S. Smyth, T. A. Buckland, Joseph E. Elder, Adolphus Meier, Robert Campbell, Samuel Bonner, John C. Powell, S. B. Wiggins, John Kern, Adolphe Paul, J. G. Shelton, and Joseph C. Barlow. The committee organized by the election of Adolphus Meier as chairman.

The work was prosecuted successfully, and the construction of the proposed Exchange begun. At a meeting of the stockholders held on the 9th of March, 1857, on motion of Col. Robert Campbell, Adolphus Meier was called to the chair, and John E. Yore appointed secretary. The chairman explained the objects of the meeting to be to receive the report of the trustees of their transactions for the past year, to receive and approve the charter granted by the Legislature to the company, and to elect a board of seven trustees to serve for the ensuing year. The reports of the president and secretary were then read, and on motion of Samuel B. Wiggins were adopted. The charter for the St. Louis Merchants' Exchange Company was then read, and on motion of Mr. Lucas it was resolved that the said charter be approved and accepted, and that the stockholders of the company signify their acceptance of the same by signing their names to it. The meeting then proceeded to the election of seven trustees to serve for the ensuing year. Messrs. George Knapp and Taylor Blow were

¹ In his address at the opening of the new Exchange, Dec. 21, 1875, Mr. Wayman Crow, second president of the Chamber of Commerce, said, "The Chamber rented the commodious room adjoining the St. Louis Insurance Company on Main Street, where they established a daily reading- and assembly-room with convenient arrangements. Subsequently they invited the Millers' Exchange, which had just organized, to unite with them and bring samples of grain, flour, etc., 'on 'Change,'—an important step of progress, for, if I am not mistaken, this was the pioneer Corn Exchange in this country, our Chamber taking the lead in thus bringing together the buyers and the sellers with their samples for the purpose of facilitating their daily intercourse and trade."

appointed tellers. The votes having been counted, the following gentlemen were declared elected as trustees: James H. Lucas, George R. Taylor, Louis C. Garnier, Nereé Vallé, Lawrason Riggs, Felix Coste, and Edward J. Gay.

The first annual report of the trustees to the stockholders was as follows:

"The contract for the entire building was awarded to Messrs. Barnett & Weber, at the sum of sixty-four thousand five hundred dollars, and the contract carefully guarded as to the time for its completion and security for its faithful performance.

"The building was to have been completed and ready for delivery on the first day of last December, but it is regarded as a fortunate circumstance that it had not progressed as rapidly as the contract required, for it is well known to the association that the conflagration on the 19th of November last entirely destroyed that imposing structure known as the City Buildings, immediately in the rear of the Exchange; and there can be but little doubt but that the Exchange building would have shared a similar fate, even if it had progressed so far as to be ready for the roofing.

"The trustees, as soon as they had fixed upon a plan and made selection of a design, secured the services of Mr. Oliver A. Hart, architect and superintendent, who was employed to revise the specifications for the entire structure and superintend the building from its foundation to its entire completion.

"The building has been progressing under the personal supervision of Messrs. Garnier, Coste, and Taylor, constituting the building committee, who, together with Mr. Hart, it is believed, have supervised the entire construction from its excavation to the present time.

"The building is on an entire rock foundation, care having been observed in going down to the solid rock in all places where it was not reached according to the excavation made for the cellars, and in this connection it is believed to be a most substantial job of rubble masonry, as the utmost care was observed by Messrs. McFadden & Lynch, the contractors, whose names alone are a sufficient guarantee that the work has been faithfully done. The outer walls on Main and Commercial Streets, constructed of brick and stone, are two and a half feet in thickness from the top of the lintels to the bottom of the two massive trusses, and from thence up to the cornice one and a half feet in thickness.

"The gross amount of subscriptions, both in money and kind, amount to the sum of eighty-seven thousand two hundred dollars, and the subscriptions in kind or property have all been advantageously used in the contracts for the building.

"The lease from the association to the Chamber of Commerce of the second story for the term of ten years, has been executed by both parties, and it is most confidently believed that the whole building will be finished complete between the 1st and 15th of the ensuing May; the stores, however, will be ready by the 10th of April."

The ground for the building was broken on the 1st of March, 1856. The erection of the structure was pushed rapidly forward, and business "on 'Change" was transacted for the first time in the new hall on June 8, 1857. The edifice was of the Venetian style of architecture. The front was of the "Allen stone," and the main and partition walls were of brick. The space occupied on Main Street was one

hundred and twenty-three feet, the building running back eighty-six feet to Commercial Street. On the main floor were four stores, each having a front of twenty-seven feet in the clear by eighty-five feet deep and fourteen high. Three of these stores were leased as follows as soon as finished: One to the Franklin Savings and Insurance Company, one to Peter Ames for a wine and liquor store, and the other to the Merchants' and Manufacturers' Savings Institution.

The Exchange Hall was one hundred and one feet in length and eighty feet in depth. The extreme height to the apex of the dome was sixty-three feet, and the galleries twenty-six feet. The panels of the dome were beautifully decorated in fresco by the artist, L. D. Pomerode, with paintings representing the four quarters of the globe, and the hall was well lighted by ample windows and by a skylight in the dome. Connected with the main hall was a room for the use of the secretary of the association. The south end of the hall was fitted up as a reading-room, elevated about seventeen feet above the main floor, and reached by a circular iron staircase. The room was eighteen feet by eighty, supported by eight Corinthian columns, and inclosed by a second tier of columns and tasteful iron railings. This reading-room was exposed and visible from the main floor.

The third story of the building was devoted to offices, twenty-two in number, arranged so as to form a square around the basin of the rotunda, with a gallery four feet wide, protected by an iron railing running around the entire square.

The exterior of the building was of a handsome and imposing character, the stone used being a finely grained and shaded limestone from the quarry near Allentown, on the Pacific Railroad. The building was three stories high, and the north and south entrances had projecting porticoes, supported by fluted and carved Corinthian columns with bold moulded capitals, and an entablature surmounted by a large carved work, in the centre of which was a medallion with the device or coat of arms of the Chamber of Commerce.

At the time of its erection the structure was one of the handsomest and most imposing of its kind in the country.¹

About eleven o'clock on the day of its formal occupation by the Exchange the visitors began to assemble, and in less than an hour the hall was thronged almost to its capacity. Considerable business was transacted, but calls were made for a speech from

¹ Among those especially prominent in aiding the erection of the building were James H. Lucas and George R. Taylor.

Henry Ames, president of the Chamber of Commerce. That gentleman declined making any remarks, but taking the stand, offered the following sentiments :

"St. Louis has long been married to New York and Boston: the Western people have now adopted the Utah principle and taken Baltimore into the alliance."

Judge Z. Collins Lee, of Baltimore, then took the stand, in answer to a generally expressed desire, and compared the past of St. Louis with her then present greatness. From this time the Chamber of Commerce held its meetings in the new building.

A movement was set on foot in June, 1860, for the removal of the Exchange to other quarters in a new building then about to be commenced by F. P. Blair, Thomas C. Reynolds, and Thomas Walsh, on Third Street, south of the post-office, but nothing came of it.

Dissensions, engendered by political excitement, arose among the members of the Chamber of Commerce during the early period of the civil war, and culminated at the annual election on the 8th of January, 1862. A contemporary version of the affair gives the following particulars :¹

"The annual election of officers for the Chamber of Commerce took place yesterday and resulted, unhappily, in an unfriendly division of the members, the withdrawal of part of them, and a movement to establish a new Chamber, which movement was half consummated in the excitement of the moment. It has heretofore been customary, during the two or three weeks immediately preceding an election, to fix upon proper persons as candidates, nominate them at a preliminary meeting, and elect them with but nominal opposition when the day for balloting came on. This season the offices of president, vice-president, and committee-men were unsought for. Several gentlemen who were solicited to become candidates declined, and the usual primary mode of nominating was, we believe, dispensed with altogether. Still a full ticket was offered by general consent to the Chamber voters, and bid fair to be elected without regular opposition. It bore the heading 'Commercial Ticket,' and contained the following names :

"For president, Henry J. Moore; for vice-presidents, Carlos S. Greeley, Aaron W. Fagin; for flour inspectors, William Stobie, James L. Benson; for committee of appeals, J. W. Booth, Thomas Richeson, Natban Cole, George D. Hall, Gilbert Pryor, F. A. Reuss, Alexander H. Smith, Henry A. Homeyer, E. O. Stanard, Isaac V. W. Dutcher, Robert G. Greer, Sylvester H. Laffin.

"The office of secretary, which pays a liberal salary, was the only one which invited or promised a contest. Mr. W. B. Baker, who has been the incumbent for several years, was placed upon the commercial ticket for re-election. It became evident some weeks ago that he would meet a determined opposition, and friends and opponents of this gentleman set themselves to work actively, *pro* and *con*, in the canvass. His friends said his defeat was sought on political grounds, and that he was to be forced from office because he was a Union man. His opponents, on the contrary, claimed to base their objections on personal grounds, said they had solicited Union men to run for the secretaryship, and that they would support

any one in opposition, laying all political considerations aside. Many of the friends of Mr. Baker, however, viewed these professions with distrust, and determined to rally in his behalf, the other party having found a candidate in the person of R. H. Davis.

"The old plan of making new members on election-day to secure additional votes was called into requisition in this instance. A list of eighty new names was offered for membership, and composed, says rumor, of friends of Baker. The opposite party had not been industrious in preparing a list of their own, and defeat or victory hung upon the exclusion or admission of these candidates. To save themselves they had, of course, to accomplish their exclusion. Under an old standing rule of the Chamber, which requires but five adverse votes to 'black-ball' a candidate, this was easily done. The names were offered *en masse*, and rejected *en masse*. Upon this rejection the supporters of Mr. Baker felt that the day was against them and gave up the contest. Capt. Moore withdrew as a candidate for president, and the friends of the commercial ticket generally declined to vote and retired from the hall. A portion met in the secretary's room, and with S. M. Edgell in the chair, resolved to take steps towards establishing a new Exchange, the chairman being authorized to appoint a committee to report at a future meeting on the subject.

"Those who remained in the ball completed the election, and voted for an irregular ticket, which was chosen as follows :

"President, Albert Pearce; First Vice-President, William Matthews; Second Vice-President, Edgar Ames; Secretary and Treasurer, R. H. Davis.

"Committee of Appeals, T. H. Larkin, N. Schaffer, T. Betts, John Tolle, H. McKittrick, John F. Baker, J. Jackson, W. S. Moffett, Willis J. Powell, T. Ferguson, J. W. Booth, Samuel Johnson, Jr.

"Flour Inspectors, W. Stobie, Joseph Powell, J. L. Benson.

"It was rumored last evening that Messrs. Pearce, Ames, and one or two others of those elected had declined to accept, but we hear that they consider the best means of preserving the Chamber of Commerce and the excellent mercantile organization of St. Louis will be best assured by their acceptance. We think it is likely that they will retain the places to which they have been invited. The leading members of the ticket-elect, we may say, are Union men of the strongest cast, but this fact we cite merely to prove that politics played a less conspicuous part in the Chamber election of yesterday than many of the members themselves would have believed. Mr. Pearce, the new president, is the present head of the old and important house of Hening & Woodruff, and possesses the mercantile experience and elements of general character necessary to fill the office with credit to himself and the Chamber of Commerce."

At the meeting of the "bolting" members, Stephen M. Edgell was called to the chair as president, and Clinton B. Fisk was chosen secretary.

The president was instructed to appoint a committee of five persons, whose duty it should be to report at a subsequent meeting a plan of organization of "The Union Merchants' Exchange of St. Louis," and to make inquiry for suitable rooms for the accommodation of the organization, and report location and terms of lease. The meeting adjourned to meet at the call of the president and committee.

On the 11th of January the secretary issued the following :

¹ Missouri Republican, Jan. 9, 1862.

"ELECTION NOTICE.—The Union Merchants' Exchange of St. Louis will elect permanent officers for the year 1862 on Saturday, the 11th inst., at twelve o'clock noon. The secretary will be at the rooms of the Exchange, corner of Main and Elm Streets, at ten o'clock this (Saturday) morning to receive names and fees for membership. Parties engaged in mercantile or manufacturing pursuits, hanks, bankers, and insurance companies are invited to an examination of the proceedings of the Union Merchants' Exchange as published in this paper this morning, and to membership in the Union Exchange.

"CLINTON B. FISK, *Secretary.*"

"The Union Merchants' Exchange convened for the transaction of business this day under the United States flag at their temporary rooms, corner of Main and Elm Streets. The committee on permanent organization, through Thomas Richeson, made report as follows:

"Gentlemen,—Your committee would suggest to this meeting the following as the necessary steps to be taken for the permanent organization of the Union Merchants' Exchange of St. Louis:

"1st. That all good loyal Union men of the city of St. Louis engaged in mercantile or manufacturing pursuits, who desire to become members of the Union Exchange, he and they are hereby requested to come forward and signify their intention by giving their names to the secretary of this meeting.

"2d. That this body will proceed to the permanent organization of the Union Merchants' Exchange of St. Louis by the election of permanent officers for the ensuing year at twelve o'clock noon on Saturday, the 11th inst., and that each member be required to pay the sum of ten dollars to the secretary *pro tem.* before casting his vote.

"3d. That the president appoint a committee of five persons, whose duty it shall be to prepare suitable rules and regulations for the government of this Exchange.

"4th. That your present committee be continued for the purpose of procuring rooms for the permanent occupancy of this Exchange."

"The report of the committee was received and adopted by acclamation.

"James Archer tendered to the Exchange a 'flag of the Union,' to be displayed from the rooms on Saturday, the 11th inst.

"H. M. Woodward proposed to place an iron safe in the rooms free of rent.

"The meeting passed a vote of thanks to Messrs. J. H. Lucas, L. W. Patchen & Co., Teichman & Co., Wattenberg, Bush & Co., James Archer, and H. M. Woodward for their generous courtesies to this body.

"Parties desiring membership in the Union Merchants' Exchange were then invited to make application to the secretary.

"One hundred and fifty firms enrolled their names, when the Exchange adjourned to meet at eleven o'clock on Saturday, the 11th inst.; election of permanent officers to take place at twelve o'clock.

"Judges of Election, Clinton B. Fisk, Alexander H. Smith, and Henry S. Reed.

"The secretary will be present at the Union Exchange Rooms at ten o'clock Saturday morning to receive additional names and fees for membership. List of members will be published in the city papers of Monday morning, Jan. 13, 1862.

"S. M. EDGELL, *President.*

"CLINTON B. FISK, *Secretary.*"

In its issue of January 11th the *Republican* said,—

"So far as we can understand, the differences which have taken place between the merchants and business men who have

heretofore met at the Merchants' Exchange remain unadjusted, the committees in their meetings for that purpose having manifested very little disposition to meet each other on reasonable terms. This is to be regretted on several accounts. It not only tends to break up an association which has been the pride of the city, and to which all have looked for aid and counsel in times of difficulty, but it is likely to be productive of bad feeling, and to interrupt the transaction of business of every kind. It may well be doubted whether the feud can stop here, for there are traces of a disposition already visible to carry it into social life, and make it the cause of unpleasant differences between men who have been friends for years. Can it be possible that there is not good sense and kind feeling enough among the men who have been, perhaps by accident, made prominent actors in this affair to put a stop to action likely to lead to these results?

"From the papers published below it will be seen that all the officers elected by the Chamber of Commerce on Wednesday have resigned their places; that the president (Mr. January) and one of the vice-presidents, Mr. W. Matthews, have also resigned, leaving the other vice-president (Mr. Pottle), under a former election, the only officer of the association. This has been done, as we understand it, to give an opportunity to the members of the Chamber of Commerce to begin the work of organization anew, to retrace their steps, and to enable them to select officers who will be acceptable to the great majority of the members. If errors have been committed, if political tests have been made by any one, a matter about which we have not the evidence upon which to form a correct judgment, if it be deemed essential to continue the existence of the association, and this is admitted, the resignation of all the officers ought to be regarded as highly honorable, and as the best mode of restoring harmony to the Chamber. Whatever else may be done, the action of these gentlemen cannot fail to meet the approval of the thinking and conservative portion of the members of the Chamber of Commerce.

"St. Louis, Jan. 10, 1862.

"To D. A. JANUARY, *President Chamber of Commerce:*

"Sir,—The undersigned, elected by the Chamber of Commerce on the 8th inst. to the offices of president, vice-president, and secretary, respectfully decline to fill said offices.

"ALBERT PEARCE.

"WILLIAM MATTHEWS.

"EDGAR AMES.

"R. H. DAVIS."

"St. Louis, Jan. 10, 1862.

"To THE SECRETARY CHAMBER OF COMMERCE, *St. Louis:*

"Sir,—The undersigned, president and first vice-president of the Chamber, respectfully tender the resignation of these offices.

"D. A. JANUARY, *President.*

"WILLIAM MATTHEWS, *First Vice-Prest.*"

"St. Louis, Jan. 10, 1862.

"To D. A. JANUARY, *President Chamber of Commerce:*

"Sir,—The undersigned, elected by the Chamber of Commerce on the 8th inst. as the committee of appeals to serve for the ensuing year, respectfully decline to serve.

"THOMAS H. LARKIN. THEO. BETTS.

"J. F. BAKER. JOHN F. TOLLE.

"W. S. MOFFETT. THOMAS FERGUSON.

"JAMES W. BOOTH. H. MCKITTRICK.

"SAMUEL JOHNSON, JR. WILLIS J. POWELL.

"J. JACKSON. N. SCHAEFFER."

The breach in the organization seems to have had its origin in the political differences and animosities of

its members, and the election of the secretary was the excuse rather than the cause of the division.¹

Strenuous efforts were made to heal the breach, but without avail. Among these was the appointment by the Chamber of Commerce of Messrs. Francis Whittaker, J. J. Roe, Edgar Ames, William Matthews, and N. Wall as a committee to confer with the seceding members. A similar committee was appointed by the Union Exchange and a conference held, but no compromise was effected.

The two committees subsequently held another meeting, at which the following paper was presented by the committee of the regular organization to the Union committee:

"ST. LOUIS, Jan. 10, 1862.

"S. M. EDGELL, Esq., *President*:

"SIR,—We, the committee chosen with full powers to wait on your body, beg leave to inform you that the officers elected at the annual meeting of the Chamber of Commerce on the 8th inst. have all declined serving, that the president, Mr. January, and vice-president, Mr. Matthews, have also resigned, leaving Mr. Pottle the only executive officer of the Chamber of Commerce proper.

"We therefore tender to you the Chamber of Commerce, you assuming all its liabilities.

"Hoping this course may reconcile and harmonize all past grievances, and bring the commercial interests of our city together in peace and quiet, and asking your consideration of this communication, we are,

Respectfully,

"FRANCIS WHITTAKER, *Chairman*.

"JOHN J. ROE.

"EDGAR AMES.

"WILLIAM MATTHEWS.

"N. WALL."

On the 11th of January a meeting of the Union Exchange was held, at which John J. Roe, on behalf of the Chamber of Commerce, addressed the members of the Union Exchange touching the importance of union and harmony among the merchants of St. Louis, and desired to know whether the proposition from the Chamber of Commerce to surrender their rooms and other property to the Union Exchange, with the provision that the members of the Chamber

¹ The complication was aggravated by the dissemination of the following circular:

"CHAMBER OF COMMERCE,
"ST. LOUIS, Jan. 7, 1862.

"SIR,—Inclosed you will find the nomination of officers for the St. Louis Chamber of Commerce for the present year, 1862. Unfortunately, a certain set of the members of said Chamber have sought to introduce politics into that organization, and we find an opposition, through which a violent secessionist, claiming to be a relative of Mr. Jefferson Davis, is presented for the important position of secretary simply upon the ground that the old incumbent has proved himself a loyal citizen. Such an issue cannot but work great evil to the interests of the Chamber, and we inclose the within ticket, asking your consideration to its merits, and trusting you will give it your cordial support."

of Commerce should be admitted as a body *en masse* to the new Union Exchange, would be favorably received. A negative response was given to the interrogatory. S. M. Edgell, president, stated that the new organization would refuse admission to no one who was willing to stand upon the platform which had been adopted by the Union Exchange; that the institution was to be known as truly loyal to the United States government, but that from its rooms political discussions and disputes should be banished.

Maj. Edwards, chairman of the committee on permanent organization, indorsed the views expressed by the president, counseled steadfastness to the principles already adopted, and presented as candidates for the offices of the Union Merchants' Exchange for the year 1862 the following persons:

President, Henry J. Moore; Vice-Presidents, Carlos S. Greeley, Aaron W. Fagin; Committee of Appeals, J. W. Booth, Thomas Richeson, Nathan Cole, George D. Hall, Gilbert Pryor, F. A. Reuss, Alex. H. Smith, Henry A. Homeyer, E. O. Standard, Isaac V. W. Dutcher, Robert C. Greer, Sylvester H. Lafflin; Secretary and Treasurer, William B. Baker; Flour Inspector, Joseph Powell.

All the candidates were elected.

The membership list of the Union Merchants' Exchange of St. Louis at the date of its permanent organization was as follows:

- | | |
|--|-----------------------------|
| Archer, James. | Clarke, D. A. |
| Anglerodt & Barth. | Cogswell & Co. |
| Ames, Henry & Co. | Cranwill, Castle & Peters. |

At a meeting of the Union Merchants' Exchange, held January 13th, the following resolution was adopted :

"Resolved, That all persons engaged in mercantile or manufacturing pursuits, banks, bankers, and insurance companies who can subscribe to the following obligation are cordially invited to membership in the Union Merchants' Exchange in St. Louis, and that all the members heretofore enrolled shall be required to subscribe to said obligation :

"We, the undersigned, solemnly pledge our honor that we will bear true allegiance to the United States and to the provisional government of the State of Missouri, and support and sustain the Constitution and laws thereof; that we will maintain the national sovereignty paramount to that of all State, county, or confederate powers; that we will discourage, discountenance, and forever oppose secession, rebellion, and disintegration of the Federal Union; that we disclaim and denounce all faith and fellowship with the so-called Confederate authorities or armies, and pledge our honor to the sound performance of this our solemn obligation."¹

At a meeting of the Union Exchange, held Jan. 23, 1862, the committee appointed by the Union Merchants' Exchange to meet a similar committee from the St. Louis Chamber of Commerce reported that they had met, and after consultation in regard to the differences between the two organizations, were unable to effect any satisfactory adjustment, whereupon the following resolutions were offered :

"Resolved, That no member of the Union Merchants' Exchange shall, after the 1st of February next, be a member of or transact business at the rooms of any similar organization in this city; and the president of this association shall cause the name of any member violating this rule to be stricken from the roll of membership, and announce the same at the first meeting of the Exchange thereafter.

"Resolved, That no member of any similar organization in the city of St. Louis shall be admitted to the membership of the Union Merchants' Exchange after the 1st of February next, except by ballot, and any applicant failing to receive two-thirds of the whole number of votes cast shall be rejected."

Action upon these resolutions was postponed to a subsequent meeting.

The new Exchange occupied quarters in the building south of the post-office, on Third Street, belong-

¹ "The Merchants' Exchange building is emphatically running under the Stars and Stripes. An old American flag which had seen service in the war of 1812 was unfurled to the breeze yesterday from the Exchange."—*Republican*, Jan. 14, 1862.

Wm. A. R. Smith

J. A. Jannay.

ing to Mitchell, Rammellsburg & Co. Feb. 4, 1862, there were two rooms (about eighty by twenty-five feet) where the principal business was transacted, connecting with each other by three doors in each, opening into a hall nine feet in width, running nearly the full length of the building. Besides these there were two ample committee-rooms in the rear, and the secretary's office.

At the election for officers of the Chamber of Commerce, held on Jan. 15, 1862, the following were chosen: President, William Matthews; First Vice-President, James Mackoy; Second Vice-President, George Bayha; Secretary and Treasurer, Robert H. Davis; Committee of Appeals, T. H. Larkin, John F. Tolle, John F. Baker, Mackot Thompson, N. Schaeffer, Willis J. Powell, Thomas Ferguson, Edward Ring, Samuel Johnson, Jr., G. L. Hughes, David Anderson, Charles L. Thompson; Flour Inspectors, James L. Benson, William Stobie, Joseph Powell.

D. A. January, the late president, in announcing the vote, took occasion to deliver a short valedictory, assuring the Chamber of his hearty co-operation, and indulging in hopes for its prosperity and usefulness in the future. The new president, on being introduced by Mr. January, made a few remarks, tendering his thanks for the honor conferred upon him, and in the name of the Chamber complimenting the late incumbent upon the fidelity and success of his administration.

Mr. Mackoy, the first vice-president, was next introduced. He alluded to the influence over the business of the West, and, indeed, over the commerce of the world, that had been exerted in the past by the Chamber, and said he trusted that, with the single purpose of developing the commercial interests of the country, knowing no North, no South, no East, no West, it would be enabled in the future to maintain its proud position.

Derrick A. January, whose retirement from the presidency of the Chamber of Commerce has been mentioned, was born in Lexington, Ky., in August, 1814, and lived there until he was about sixteen years of age, when he removed with his widowed mother to Louisville, Ky., where he worked in an humble capacity in the printing-office of the *Advertiser* newspaper. In 1832 he removed to Jacksonville, Ill., where in connection with his brother he opened a general store. The business grew and prospered, and was continued without interruption until the winter of 1836-37, when the family removed to St. Louis. Here Mr. January opened the wholesale grocery house of January, Stettinius & Co., on the Levee. The uniform prosperity which had always attended his mercantile career received a new impetus in St. Louis,

and continued without interruption for nearly forty years. Although he was surrounded with younger associates, his name was the bulwark of the firm. During the existence of the house whose head he was it occupied a leading position, and remained unshaken even in the disturbing period of the civil war. He retired from this business in 1875.

Mr. January was prominently instrumental in building the first "Lindell Hotel," and subscribed largely for that purpose. In the movement for rebuilding that structure he took the same active part, and his subscriptions were equally munificent. He was one of the originators of the Merchants' Bank; was president of the Chamber of Commerce, as we have seen, at the beginning of the war; was for four years president of the St. Louis Mutual Fire Insurance Company, and was one of the founders of the United States Insurance Company. Many other prominent corporations had the benefit of his wise counsel in their boards of directors.

Mr. January died July 19, 1879. Upon his death the Merchants' Exchange adopted highly eulogistic resolutions, in which it was stated that "No man less ostentatious, less attracted by the allurements of personal ambition, ever attained a position of more influence or possessed a more commanding hold upon the affectionate regard of his fellow-citizens. With no desire for political place, he was far from indifferent to the cause of public affairs, and by all the means in his power he aided every movement designed to purify and elevate the government of city, State, and nation.

"In business he was the embodiment of the soul of honor and the spirit of enterprise. The growth and prosperity of our city and State, the extension of our commercial relations, the promotion of every element of progress, and the encouragement of all influences tending towards culture and refinement seemed ever present in his brain and heart. Coming to St. Louis in 1837, he soon took a leading position among the merchants of the city, and his house became known all over the country as standing with the highest in the magnitude of its transactions and in point of honorable dealing. His manners were dignified, courteous, and elegant, and in social life, no less than in the walks of commerce, he was conspicuous for his urbanity and modest bearing. At home he was considerate, kind, and cheerful; at all times he was even-tempered, benevolent, and just. . . . In all relations of life the deceased was a true man."

Mr. January was twice married,—first in 1842 to Miss Mary Louisa Smith, step-daughter of the late Jesse G. Lindell, by whom he had three children, the first of whom died in infancy. In 1860 he was

again married to Miss Julia C. Churchill, of Louisville, Ky., who, with five children, survives him.

At a special meeting of the Union Exchange, held on the 3d of April, 1862, the following communication was read and submitted to the members :

"OFFICE ST. LOUIS
"MERCHANTS' EXCHANGE COMPANY,
"April 2, 1862.

"To Henry J. Moore, Esq. :

"DEAR SIR,—I have the honor to present the following resolution of the company I represent, with an earnest request that the committee asked for will be granted, and that mutual concessions may lead to good results.

"I am, respectfully yours,
"GEORGE R. TAYLOR,

"President Merchants' Exchange Company.

"Resolved, That the president be and he is hereby instructed to request of the two Chambers of Commerce the appointing of a committee of five members of their respective bodies to meet this board on Friday next at 10 o'clock A.M., with a view of avoiding, if possible, the sacrifice of this company's interests, and the adjustment of the present unfortunate difficulties."

A motion to comply with the request was adopted, and the president appointed the committee as follows : George Partridge, Thomas Richeson, Dennis Marks, Charles Holmes, Henry A. Homeyer.

The conference failed to procure an adjustment of the difficulties, but on the 27th of October another proposition was submitted. The letter of the president embodying this proposition was as follows :

"OFFICE OF THE ST. LOUIS MERCHANTS'
EXCHANGE COMPANY.

"ST. LOUIS, Oct. 27, 1862.

"TO THE UNION MERCHANTS' EXCHANGE OF ST. LOUIS, MO. :

"As president of the St. Louis Merchants' Exchange Company, I have the honor to address your body, and sincerely hope that you will view with liberality, as well as equitably, the following proposition, the more especially as the stockholders of the Exchange Company are neither directly nor indirectly responsible for the unfortunate division that has so seriously involved the company's interest, and proximate ruin of their property. And in this connection allow me to call your attention to the company's earliest history, and the great liberality that characterized the action of those having then, as at this time, the building and the company's interest in charge.

"The St. Louis Chamber of Commerce then occupied rooms, wholly unsuited for their purpose, over the drug store of Messrs. Charless & Blow, being contracted, dark, and ineligible in every particular. At this time the Chamber entered into an agreement with a few of their own members, proposing, among other things, that if a room sixteen feet in the clear, and not less than one hundred feet in front by eighty feet in depth, with as few obstructions as practicable was prepared, the same would be leased for ten years, at an annual rent of two thousand five hundred dollars. Now, at this time the property represented by this company was vacant, and at the instance of a few persons an association was formed, the ground purchased, and the building now the company's erected, the association subsequently obtaining a charter. Instead of a room of the dimensions specified in the agreement referred to, the present building was

erected, and the most elegant apartments to be found in the whole range of commercial cities in the United States placed at the disposal of the Chamber of Commerce. The building is known to be complete in all its appointments, was occupied by the merchants for whom and at whose instance it was built, and continued to be occupied by them until the inauguration of this cruel war, when difficulties, in which this company was in no wise involved, arose, eventuating in a separation, and ultimately in the closing of the apartments so leased to the Chamber and parties for whom it was built.

"The foregoing is a plain statement of facts, with the additional one that the company, in its liberality, desiring to serve the merchants, have wellnigh ruined their property, for it is almost useless for other purposes. Now, in view of all the circumstances, and with the hope and reasonable expectation of harmonizing ultimately the unfortunate division between parties for whom the building was erected, the undersigned submits the following proposition : We will place your honorable body in peaceable possession of all the original apartments occupied by the Chamber of Commerce, including the use of all the furniture, fixtures, and property on the premises, on the first day of the ensuing November, for the term of fourteen months, at the same rental specified in the lease to said Chamber, upon condition, first, that your honorable body admit such members of the old Chamber to your organization on their complying with all the requisites of your rules and organization ; or,

"Secondly, that, should you refuse them membership, then your honorable body admit such of them as may choose to visit your meetings and participate in the sale and purchase of produce, upon their paying the regular and customary fees prescribed by your rules,—not voting nor participating in the management of your organization, but to conform in all particulars, in their intercourse with the members and each other, as is prescribed by rules in the premises :

"I honestly entreat your honorable body, on behalf of the interests of all parties involved, so detrimental to this company, and the interests directly and most injuriously affected, to accept the within and foregoing proposition, thus harmonizing all conflicting opinions without sacrificing principle, and avoiding the injury, if not ultimate destruction, of this company's property.

"I am, very respectfully,

"G. R. TAYLOR, President.

At a meeting of the Union Exchange, held on the 18th of November, 1862, the directors were authorized by a unanimous vote to make a proposition to George R. Taylor, president of the Exchange Company, to lease the Chamber of Commerce building for five years, at two thousand five hundred dollars per annum, and make no conditions as to membership. The terms suggested were accepted, and on the 26th the Union Exchange removed from the rooms near the post-office which it had occupied to the old quarters in the Chamber of Commerce building. At an election held on the 7th of January, 1863, the following officers of the Union Exchange were chosen :

President, George Partridge ; Vice-Presidents, C. S. Greeley, A. W. Fagin ; Directors, N. Schaeffer, John J. Roe, E. O. Starnard, S. M. Edgell, Barton Ahle, George P. Plant, William D'Oench, Thomas Richeson, J. O. Pierce, H. A. Homeyer ; Committee of Appeals, J. W. Booth, Nathan Cole, C. L.

Tucker, Samuel McCartney, John C. Rust, F. A. Reuss, Robert C. Greer, C. O. Dutcher, M. C. Teasdale, George H. Rea, G. W. Chadbourne, G. Woltman; Committee of Arbitration, S. Jacoby, T. A. Buckland, J. G. Nulsen, G. W. Banker, A. L. Holmes, W. Heinrichshofen, A. B. Marean, Charles F. Meyer, N. Stevens, W. H. Pulsifer.

On the 4th of March, 1863, the Exchange was chartered, the incorporators being all the members of the association.

In the spring of 1871 the question of obtaining more spacious accommodations presented itself, and at a meeting of the directors held on the 12th of June, 1871, Gerard B. Allen presiding, the following propositions were submitted:

“Third and Chestnut Proposition.”

“ST. LOUIS, June 12, 1871.

“GERARD B. ALLEN, ESQ.,

“President of the Union Merchants’ Exchange:”

“*Dear Sir,*—The undersigned have agreed to form a company with ample capital for the purpose of erecting an Exchange building, fronting two hundred and forty-three feet on the west side of Third Street, between Chestnut and Pine Streets, with a depth of one hundred and fifty feet on Chestnut Street, between Third and Fourth Streets, and desire to lease to your association suitable accommodations therein.

“The location, in reference to the business of this city, and to the positions of the custom-house, post-office, court-house, banking-houses, and hotels, is one of the most central that can be secured, and is likely to remain so for a number of years to come. We design to erect a first-class edifice, which will be, architecturally, an ornament to the city, and fit up the second story for an Exchange, with its reading-rooms, secretary’s and directors’ rooms. The details of arrangements of the rooms will be made to suit the views of your association, as it is the design of the company to devote the entire front on the western side of Third Street, if required, to the purposes of the Exchange, and not only to construct an edifice ample for the present wants of trade, but also to provide for extending it so as to accommodate the manufacturing, mechanical, and banking interests as well as the commercial. It is also intended to set the building sufficiently hack so as to widen the adjoining streets.

“The style of the edifice will accord with the present European taste, and it will have all the necessary accommodations for the purposes of your association; a room will be furnished on the second floor, double the size of the present Exchange room, with the privilege of making it nearly four times as large; it will be from forty-five to fifty feet in height, with acoustic advantages unsurpassed. The construction of the building will be such that light and ventilation will be obtained on the four sides or points, with the principal points south and east, these being the most sought after, even in our domestic buildings. Another grand feature of the arrangement is that a summer Exchange can be had on the ground floor, on the west side of the building, covering it over with glass sustained by iron-work, flagging it with marble tiles, forming an arcade from Chestnut to Pine Streets, with brokers’, bankers’, real estate, and insurance offices on both sides of it. Those who have traveled abroad can readily see the effect and importance of this feature in the arrangement of an Exchange building, and the ready facilities it would give for the transaction of business would be unequalled on this continent.

“We respectfully request the appointment of a committee to confer, on the part of your association, with Messrs. George

Knapp, James H. Lucas, B. W. Alexander, R. J. Lackland, and H. L. Patterson, a committee on our part, respecting the terms and other arrangements which would be acceptable to it in regard to the proposed Exchange.

“We remain, dear sir, yours respectfully,

“James H. Lucas, J. G. Weld, George Knapp & Co., B. W. Alexander, Ann L. Hunt, Erastus Wells, Thomas Allen, Joseph Brown, Adolphus Meier, Franklin O. Day, George R. Taylor, R. J. Lackland, Henry Blaksley, J. H. McLean, Joseph Weil, John Finn, James J. O’Fallon, Elois P. Kayser, William C. Taylor, R. W. Mitchell, William Keiler, Frederick Hill, John H. Gay, Edward J. Gay, William T. Gay, J. R. Pullis & Brother, Z. F. Wetzell & Co.”

Third and Locust Proposition.

“ST. LOUIS, June 12, 1871.

“TO THE CHAMBER OF COMMERCE OF THE CITY OF ST. LOUIS:

“For myself and associates, I propose to erect a Merchants’ Exchange building in Block 64 of the city of St. Louis, at the northeast corner of Locust and Third Streets, the building to be two hundred by one hundred and eight feet; the Exchange room to be one hundred by one hundred and seventy feet in the clear and forty-six feet high, to have entrances from Third Street and Exchange Street. The large room will leave committee-room, secretary’s room, reading-room, directors’ room, and ample accommodation for washing, etc. For particulars, see plans.

“We propose to lease to the Chamber of Commerce for thirty years, the first ten years thereof for fifteen thousand dollars, the second ten for twenty thousand dollars, and the third ten years for twenty-five thousand dollars.

“For myself and associates,

“P. B. GERHART.”

A plan for erecting a similar building at Sixth Street and Washington Avenue was also submitted by John A. Scudder, Catherine Ames, and William H. Scudder.

Architectural drawings of the proposed buildings accompanied the first two propositions.

The board, after an informal consultation, ordered the propositions to be laid upon the table for one week, and directed the secretary to request the parties to amend their propositions by including in them all particulars respecting the locations, dimensions, prices of rent, and the time at which they would obligate themselves to have the building ready for occupancy in the event of the acceptance of any of the propositions.

At a meeting of the directors on the 19th of June the following amended propositions were submitted by the same parties:

Third and Chestnut Location.

“ST. LOUIS, June 19, 1871.

“GERARD B. ALLEN, *President Union Merchants’ Exchange:*

“*DEAR SIR,*—We propose to furnish the Union Merchants’ Exchange with suitable apartments for all the purposes of an Exchange building, including large chamber, reading- and committee-rooms, offices, etc., located on Third Street, between Chestnut and Pine Streets. The size contemplated for the
